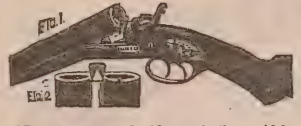
Old Judge Smoking Tobacco.

The Only Tobacco Ever Manufactured that does not Bite the Tongue.

Something Important for Cigarette Smokers to Know.



THE MAJORITY OF SMOKERS are perhaps not aware, that in smoking Cigarettes made of the ordinary pure rice paper, they have been inhaling THE MOST DEADLY OF POISONS, thrown off by all burning paper, namely: The Oil of Creosote. CHARLES G. EMERY, of the firm of GOODWIN & CO., manufacturers of "OLD JUDGE" Cigarettes and Smoking Tobacco invented and patented a process, March 5th, 1878, by which the Rice Paper used as wrappers for "OLD JUDGE" Cigarettes has been so prepared that the unpleasant ODOR and the injurious effects of the Oil of Creosote are completely neutralized or destroyed, and the paper made saliva proof to prevent its breaking or melting in the mouth. The unprecedented popularity of "OLD JUDGE" Cigarettes is owing to the fact that this process has been used exclusively in their manufacture, no one else having the right to use it. The great advantage and importance of this invention will at once be recognized by all smokers, and its truth demonstrated by the first "OLD JUDGE" Cigarette they smoke.

Try them and you will use no others.

Sold by all leading dealers.

Manufactured by GOODWIN & CO., 207 and 209 Water st., NEW YORK

THE BAKER GUNS.

Our New Model Three-Barrel Gun, of 1880

We make the best double gun in the world for the money—choke-bore, rebounding locks, extension rib. Our $40 gun has the best twist barrels, and the best material throughout. All guns sent on trial and guaranteed. Price—Best English Twist Barrels, $40. Damascus Steel, $55 to $200.

A new feature in the Gun line. It is light, compact; from 8 to 10 lbs. in weight. The rifle is perfectly accurate. It has proved a great success for all kinds of shooting. An owner of this valuable gun cannot make a mistake and take the wrong one when he goes out for game. All guns shipped on trial and guaranteed. Price, $75 to $250.

L. C. SMITH, Syracuse, New York.

SEND STAMP FOR DESCRIPTIVE CIRCULAR.

From JOHN W. DUTTON.

QUEBEC, Can., March 23d, 1880.

MESSRS. W. H. BAKER & CO.—*Gents*:—The gun I used in the gun trial published in FOREST AND STREAM of March 4th, 1880, was one of your $40 grade, and I am glad to be able to testify to the splendid shooting it made. I used 1¼ oz. of No. 7 Canada soft shot, containing 465 pellets, or 370 to the oz., by actual count. With this charge and 4 drs. of powder, the penetration was splendid, fully equal to that of the most expensive grades of guns I used, domestic or foreign made. You will see from the trials published that the average pellets made with your gun is higher than that of any other of American make used. I am highly pleased with this gun; it is the second of your make I have owned, and in my opinion they excel any other gun in the market in quickness strength, simplicity of action, general solidity, and good finish, while in their shooting powers nothing is left to be desired. Yours truly, JOHN W. DUTTON, (Au Sable)

GUNPOWDER!

Dupont's Rifle, Sporting and Blasting Powder.

THE MOST POPULAR POWDER IN USE!

DUPONT'S GUNPOWDER MILLS, established in 1802, have maintained their great reputation for seventy-eight years. Manufacture the following celebrated brands of powder:

Dupont's Diamond Grain.—Nos. 1 (coarse) to 4 (fine) unequalled in strength, quickness and cleanliness; adapted for glass ball and pigeon shooting. Packed in 1lb canisters.

Dupont's Eagle Ducking.—Nos. 1 (coarse) to 3 (fine); burns slowly, strong and very clean; great penetration, with a close pattern; adapted for glass ball, pigeon, duck and other shooting, with either muzzle or breech-loaders. Packed in 1lb and 5lb canisters and 6¼ and 12½lb kegs.

Dupont's Choke Bore.—Specially adapted for "Choke Bore" Guns, and particularly for prairie and upland shooting. Burns slowly, strong and moist; does not cake or burn on the barrels, gives both a good penetration and a close pattern, will be found well adapted for glass ball and pigeon shooting. Made of two sizes, only No. 7 and No. 6, No. 7 being the coarsest. Packed in 6¼lb kegs and 1lb canisters.

Dupont's Eagle Rifle.—A quick, strong and clean powder, of very fine grain for pistol shooting. Packed in 1lb canisters and 6¼ lb kegs.

Dupont's Rifle Fg. "Sea Shooting."—FFg. and FFFg. The Fg. for long-range rifle shooting, the FFg. and FFFg. for general use, burning strong and moist. Packed in ½lb, 1lb and 5lb canisters, 6¼, 12½ and 25lb kegs. Fg coarse, FFFg. fine.

Dupont's Sporting, Mining, Shipping and Blasting Powders of all sizes and descriptions. **Special Grades for Export.** Also Rifle, Cartridge, Musket, Cannon, Mortar, Mammoth, Hexagonal, Cubical and Pellet Powder, U. S. Government Standard.

Powder manufactured to order of any required grain or proof.

Agencies in all the cities and principal towns throughout the United States. Represented by

F. L. KNEELAND, 70 Wall Street, N. Y.

N. B.—Use none but DUPONT'S Fg. or FFg. for long-range rifle shooting.

The Hazard Powder Co.,

MANUFACTURERS OF

GUNPOWDER.

Hazard's "Electric Powder."

Nos. 1 (fine) to 6 (coarse). Unsurpassed in point of strength and cleanliness. Packed in square canisters of one pound *only*.

Hazard's "American Sporting."

Nos. 1 (fine) to 6 (coarse). In 1 lb. canisters and 6¼ lb. kegs. A fine grain, quick and clean, for upland prairie shooting. Well adapted to shotguns.

Hazard's "Duck Shooting."

Nos. 1 (fine) to 5 (coarse). In 1 and 5 lb. canisters and 6¼ and 12½ lb. kegs. Burns *slowly* and very clean, shooting remarkably close and with *great penetration*. For field, forest, or water shooting, it ranks any other brand, and it is equally serviceable for muzzle or breech-loaders.

Hazard's "Kentucky Rifle."

FFFG FFG, and "Sea Shooting" FG in kegs of 25, 12½, and 6¼ lbs. and cans of 5 lbs. FFFG is also packed in 1 and ½ lb. canisters. Burns strong and moist. The FFFG and FFG are favorite brands for ordinary sporting, and the "Sea Shooting" FG is the standard *Rifle* Powder of the country.

Superior Mining And Blasting Powder.

GOVERNMENT CANNON and MUSKET POWDER; also, SPECIAL GRADES FOR EXPORT, OF ANY REQUIRED GRAIN OR PROOF, MANUFACTURED TO ORDER.

The above can be had of dealers, or of the Company's Agents, in every prominent city, or wholesale at our office.

Registration of Small Canadian Yachts; My First Canoeing Cruise; Flagship of the S. F. Y. C.; Yacht Stoves..... 17

ANSWERS TO CORRESPONDENTS..... 18

FOREST AND STREAM.

THURSDAY, FEBRUARY 3, 1881.

A GROWING INTEREST.

THE present number of this journal, which is the first of our sixteenth volume, contains more matter than any of the 390 issues which have preceded it. A more compact type has been adopted in several of the departments, whereby an additional amount of reading, equivalent to two pages, is furnished every week.

This is substantially an enlargement of the FOREST AND STREAM.

Such a step has been made imperative because of the broadening of our field and consequent greatly increased demand upon our space. It has been found impossible to compress into the space at our command the contributions sent to us each week by our friends, and we have therefore determined to increase the amount of matter furnished to our readers.

In the initial announcement of this journal, seven years ago, it was stated as the aim of its projectors to make it "a medium of useful and reliable information between gentlemen sportsmen from one end of the country to the other." That purpose has been accomplished. The columns of the FOREST AND STREAM are to day the recognized repository of all that pertains to legitimate field sports. Its correspondents represent every State and Territory in the Union and every Province of Canada. The FOREST AND STREAM has gathered its riches from the uttermost parts of the earth. During the past year we have published letters from Alaska and from South Africa, from Russia and Australasia.

The diversity of professions and occupations represented by those who read the paper and contribute to its columns affords a suggestive commentary upon the very general interest taken in the pursuits of the rod and gun. Men of all classes and of all occupations read the paper and contribute, each one his mite, to add to the general fund of good things which we offer to the great constituency which it reaches.

The departments of the FOREST AND STREAM are now confined strictly to the specialties represented in the table of contents. It is the only paper in the world devoted exclusively to these subjects, and presents more reading of a sterling character on each one of these topics than has ever been attempted by any other journal of field sports.

The editorial policy of the FOREST AND STREAM is guided by the single purpose to advance the interests of its constituents by contending for that which is in accord with genuine sportsmanship. The paper is honest, independent and fearless. It claims and will always exercise the right of exposing the pretension of a dangerous fraud when it becomes cognizant of it; and if in the pursuit of such a policy bitter opposition is provoked, there is yet the satisfaction which ever attends the discharge of duty and the knowledge that by a manly course we have gained the increased respect of our patrons.

The paper has no secondary interests to serve. It will not permit its columns to be used for bolstering up the sale of injurious articles, nor is it paid to advance any one strain of dogs to the front.

We make here a kindly acknowledgment of the innumerable and courteous expressions of good will and esteem which come to us in our mails. We try to deserve such expressions, and to have the good will of all men. We strive to treat all alike and all well. We may sometimes, in attacking a principle, be unable to separate it from the individual who represents it, but we have always endeavored to keep the personal element out of our columns.

In providing these increased facilities the expenses of publishing the FOREST AND STREAM have been largely augmented. The change is our earnest that we mean to keep abreast of the times. Whether or not the publishers are justified in assuming this expense will depend altogether upon how the change is appreciated and substantially indorsed by the fraternity of American sportsmen.

REVISION OF THE PACIFIC COAST SALMONIDÆ.

WE recently had the pleasure of meeting Prof. D. S. Jordan in the basement of the Smithsonian Institution where he was arranging and labeling his recent valuable collection of Pacific coast fishes, and the conversation naturally turned to the vexed question of the number of species of the numerous salmon family of that region. Many of our readers are aware that some thirty or more species were described by the earlier workers in this field who gave distinct names to the different sexes and ages, to say nothing of naming skins and specimens which could not readily be placed anywhere in their already full list. Later workers have had the advantage of a great number of specimens, and it is a fact worthy of note that in this last revision Prof. Jordan and Dr. Bean working from different points have arrived at the same conclusions.

There are five salmons, four trouts and one red-spotted trout on the Pacific coast. Suckley's name *Oncorhynchus* (hook-jaw) will stand as the generic name of all the salmons. The name *Salmo*, of Linnæus, will be the generic name of the four black-spotted trouts, and *Salvelinus*, Richardson, the generic name of the red-spotted one.

The salmons are: The "King salmon," *Oncorhynchus chouycha* (a Russian name pronounced chow-e-cha), formerly *O. quinnat*, it having been found that the fish to which the Indian name *quinnat* was applied is identical with the *chouycha* formerly described by some Russian naturalist under this name.

"Silver salmon," *O. kisutch.*

The "Dog salmon," *O. keta.*

The "Hump-backed salmon," *O. gorbusha.*

The "Red salmon," *O. kennerlyi.* This latter fish is now known to be identical with the famous "Red fish of Idaho," as specimens were received by Prof. Jordan directly from our correspondent, Capt. Bendire, whose articles on the red fish attracted so much attention from our readers. It is also the "red fish" of Alaska, and identical with the *O. nerka* of Walbaum, which is merely the grilse form of it. The vastly different appearance of the not uncomely female from her slab-sided, hideous mate is certainly an excuse for the mistake of former investigators in making two species of them, the female being fat and fair, while none but a dog or a starved Indian would touch the famished, fiendish looking males. The male grilse of this species bears little resemblance to his respected parent, and so he was given a distinct cognomen.

The black-spotted trouts are: "Mountain trout," *Salmo purpuratus*; "Steel head," *S. gairdneri*; the "Rio Grande trout," *S. spilurus*; and the "Rainbow," or "California trout" *S. iridens.* The single red-spotted trout is the "Dolly Varden," *Salvelinus malma.*

It will come hard to write *chouycha* instead of *quinnat*, to which our fishculturists have so long been acdustomed, but if science says that the fishes are the same and that the Russian name was first given, of couse *quinnat* must be relegated to a synonym and we must sneeze out *chow-e-cha—ca-chew!*

THE REFRIGERATOR AGAIN.

AT the meeting of the Long Island Sportsmen's Association to-morrow night, the proposed amendments of the New York game law will be brought before the members for their indorsement.

Among the amendments talked of by the committee, having the revision in charge, is one which will allow game killed in season and stored in refrigerators to be sold out of season.

We have already pointed out the pernicious working of such a law. It is not necessary to rehearse the arguments now. The views expressed by this journal have been indorsed by individual sportsmen and game clubs throughout the State. The opposition aroused is serious, active and determined. Out of deference to this decided and unequivocal disapproval of the vast majority of clubs composing the State Association, and for the sake of reasonable game protection, it is to be hoped that this amendment may not even be brought before the association to-morrow night.

If it is presented the Long Island Sportsmen's Association will gain for itself credit throughout the State and country by refusing to sanction it.

THE AMERICAN JOURNAL OF SCIENCE.—With the January number the *American Journal of Science* begins the twenty-first volume of its third series. As for many years in the past, so now it is the first authority on matters of science in this country, and yields to no periodical in the world in importance and value in its own field.

The *Journal* was founded in 1818, by Professor Silliman, and as the scope of scientific research has since that time been growing wider and wider, the influence wielded by this monthly has been constantly increasing. It ended its first series of fifty volumes as a quarterly in 1845, and its second series of fifty volumes as a two-monthly in 1870, since which it has been issued as a monthly. The twelve numbers of the year make up two volumes of 480 pages each. Among its contributors are numbered all the leading workers in science in this country and many of the best minds among European investigators.

The January *Journal* contains an important article by Professor Loomis, entitled Contributions to Meteorology, illustrated by three plates; an account of the Albany Granite of New Hampshire and its Contact Phenomena, by G. W. Hawes; Theory of the Constitution of the Sun, by Charles S. Hastings; Review of Professor Hall's Devonian fossils of New York, by Charles Barrois; Earthquake at the Philippine Islands of July, 1880, and other papers. The miscellany contains as usual a great amount of new and interesting matter.

WESTERN RIFLE ASSOCIATION.—It is proposed for the encouragement of long-range shooting in the West to organize a Western Rifle Association, with headquarters either at Chicago or Milwaukee. By all means let us have such that our shooters at Creedmoor may be able at last to find out and meet the long-talked, but rather mythical marksman of the prairies. Nothing would please the Eastern riflemen more than a real East vs. West contest, and even in the Wilwaukee Rifle Club there are a sufficient number of long-range experts to make up a good team; but all the time let it be borne in mind that we have a "National Rifle Association of America."

MODESTY WOULD BE BECOMING in a young and inexperienced editor, but we do not always look for it in older men. "Virginianus," who writes of pipes and smoking, is a veteran editor and should therefore have no hesitation about seeing his name in print; but he forbids our publishing it, even in acknowledgment of the box of curiously carved and

fantastic briar-wood pipes, which he gathered, whittled out with his own jack-knife and sent to the editorial corps of the FOREST AND STREAM. The essay, in another column, will be appreciated by all who have shared the calm pleasures of a smoke about the camp-fire at night.

UNSIGNED CONTRIBUTIONS.—Some of our correspondents are notified that they are only wasting time, postage and stationery by forwarding to this office anonymous or pseudonymous contributions. We have not the slightest wish to print the names of those who, when writing to us, desire to conceal their identity, but we must have those names if their letters are to appear.

This statement may well explain to a number of correspondents why their unsigned letters have not appeared, and to a number of seekers after knowledge why their questions have not been answered.

NEW HAMPSHIRE GAME COMMISSIONERS.—In our notice of the Maine system of game protection, we might have mentioned the fact which is familiar to our readers, that this was the first State to adopt the plan of adding the protection of game to the other duties of her fish commissioners. Messrs. Webber, Hayes and Powersan, are the members of the present very efficient commission.

THE flight of a rifle ball is a subject concerning which we have had of late many inquiries. The excellent paper by Maj. H. W. Merrill on another page is a revision of an article on the same topic, contributed by him to this paper some years ago. In its present shape it embodies the results of recent studies by the author, and is a most valuable exposition of the principles involved.

THE PISTOL TOURNAMENT.—To lovers of pistol shooting the tournament now in progress at Conlin's gallery, 1,222 Broadway, will prove an immensely interesting exhibition. Every variety of shooting with the petty arm may be seen, and the man who comes out victor in the several tests would prove a very uncomfortable antagonist under the code.

OUR KENNEL NOTES are a good index of how the FOREST AND STREAM stands among dog men. We publish to-day a column and a half of them, set in the smallest type and solid. The weekly average is greater than that ever attempted by any other paper in the world. Owners and breeders of dogs are invited to register their notes in our columns.

OUR CAPE TOWN CORRESPONDENT, Mr. E. B. Biggar, concludes this week his graphic picture of ostrich farming in South Africa. We hope that at some future time he may supplement these papers with a further description of life in that far off land.

WE publish elsewhere a report of the second day's proceedings of the Michigan Sportsmen's Association, and have made arrangements to print the full minutes of the meeting as early as Secretary Riney can furnish them to us.

WE HAVE RECEIVED the circular of the Petersburg Fish and Game Protective Association, of whose admirable method of work we shall speak further.

PERSONAL.—Mr. Theo. Morford, of Newton, N. J., has gone to Florida where he will spend several weeks.

AMONG the callers at this office the past week was Mr. J. H. Whitman, of Chicago, Ill

The Sportsman Tourist.

QUAIL SHOOTING IN VIRGINIA.

OUR old stand-bys, Dash and Cora, were comfortably coiled up sleeping on the rug in front of a roaring old-fashioned wood fire, only giving signs of life occasionally by a nervous twitching of the muscles, and hysterical little yelps as they dreamed, perhaps, of "ole hars" jumping from under their very noses, then suddenly remembering the rawhide whip, which in their younger days, before they had learned discretion, so often impressed upon their minds that "Mollie Cottontails" were game for hounds but not for bird dogs. The lesson had been well learned, and now, except maybe in their dreams, both dogs treat such temptations with, at least, pretended contempt. My friend Tom and myself sat smoking our cigars, with our legs stretched over the dogs, toasting our feet by the fire in his cosy bachelor quarters, discussing the prospect of fall shooting and kindred subjects so dear to the heart of sportsmen.

After a meditative silence of several minutes, Tom broke the spell with "What say you, Charlie, to going out to Brown's to-morrow and trying the quail?"

This struck right home, and I replied, "I'm with you, old fellow," as the terrapin said to my pointer pup when it caught him by the paw.

At once there began an examination of necessary outfit; hunting-shoes, leggi s, dog-whips, spurs, riding-whips, powder-cans, shot-bags etc., were soon scattered in endless confusion about the room. The dogs, roused from their slumbers, were frisking about smelling game-bags, guns, etc., knowing it all meant fun for them as well as us. "Down, Dash, you rascal, if you don't stop chawing up that whip I'll break every bone in your body. You, Cora, charge. Tom, you must put these dogs out, or I shall be slobbered all over, and the only clothes I have with me fit for civilized society will be ruined. By the way, have you a needle and thread with which I can sew up this rip in my corduroy pants?" After putting the dogs out, we succeeded in getting everything ready for an early start.

Next morning we were up at 5 o'clock; breakfast was waiting. After a hot cup of coffee and some nice buckwheat cakes and sausage, we found our horses awaiting us at the door. We mounted and whistled for the dogs, who answered our call with a series of yelps and barks, plainly telling their distress at finding an eight-foot board fence between them and us. Dash, however, did succeed in getting over the top of it, just as old "Aunt Roxy" opened the gate, and was knocked flat by the rush of insuppressibles from within. The old woman picked herself up, exclaiming: "Lor', Mars Tom, dat ole fool dog Dan done most toe my clocs off; and dat ole mean musk-rat puppy done step his ole foot in my eye, and kicked my mouf full ob rocks." I had to dismount to assist "Aunt Roxy," and get the dogs we did not want to "carry" with us, back into the yard. We decided to take Dash, Cora and a ten-month puppy, "Bang," with us. Bang had been hunted several times, was of good stock and pretty well broken, but very hard-headed. On several previous occasions he had shown promise of making a remarkably fine dog.

Just after light, as the ruddy glow in the East proclaimed sunrise near at hand, and a clear day, we started at a brisk pace, with a cold, nor'-west wind in our faces, that brought tears to our eyes, and soon filled our beards with icicles and our checks with color that art would find it hard to imitate. The ardor of our dogs made it hard to keep them "to heel," every piece of stubble and every inviting "branch" we passed were temptations hard for them to resist. After riding about four miles we came to a fine stubble field of about two acres. The road at this point being sufficiently elevated to command a view of nearly all the field, we did not dismount but put the dogs in. Dash and Cora started around the field in opposite directions. Bang ranging out finely in the middle, when suddenly he came to a stiff point. Being afraid he would not stand very long, we dismounted, but before we got over the fence up went a lark just in front of him, and he started after it as if heaven and earth depended on his catching that bird. However, at a sharp command from me he came in cringing and begging, well knowing what to expect. Two or three sharp taps with the whip, and the command "Take care, sir," toned him down. He soon saw Dash and Cora both working slowly up a little hollow and started for them as if he had a whole fourth of July celebration tied to his tail. No command would he heed. No vision of raw-hide was before his eyes, only his uncontrollable ambition that his nostrils might sniff the first scent of the birds governed his actions, and I feared the result. But my fears were vain; just as he got half way to the other dogs he suddenly wheeled to the right, going with head up, cautiously, yet fast, to the head of the hollow, where he "froze" stiff and rigid as a statue cut out of stone. We hastened up to him, the two old dogs following at our heels, "back standing" all the way. When we got to the puppy Dash made a detour and pointed on the other side. This excited Bang and he started, but at command "charged" close. Whirr, whirr; up went the birds, and away went Bang after them full tilt. Both old dogs charged at shot where they were. We killed four birds. Tom one with each barrel, and I two with my first, but missing my second through my annoyance at Bang. He came back, after having his run, and took his thrashing with philosophical stoicism. The covey flew to a dense pine thicket. We followed them, making Bang stay close to my heels. I killed one bird in the pines, over Cora's point, and missed three, two of which Tom killed. We then remounted and rode until we came to a pea patch and small oat stubble, in the edge of which we found a small covey, only killing two on the rise, though I feathered my second bird so badly that I concluded to follow it. Some 300 yards in the woods Cora pointed; Dash ran in, got the dead bird and brought it to me. We were unable to mark the others, so left them. On our way back to the horses, Bang pointed a rabbit in its bed, and when it started he started to chase it, but timely remembrance of consequences stopped him at my first command. In a little piece of springy ground through which we passed Cora pointed a woodcock which I shot.

Our next stop was at Capt. Brown's, where we were met by a little bow-legged "yellow nigger," with a head big enough for two Daniel Websters. After he had "carried" our horses to the stable, I asked, "What is your name, my worthy son of Ham?" "Lor' goodness! Mars Charlie, has you done forgot Washington Clay Brown, what tote the dinner, an all de ole hars las time you an Mars Joe was heah?" "Well! well! well! I declare, Washington, I did almost forget you; you 'done' grown so handsome; where is Capt. Brown?" "Mars Brown done gone to mill wid a turn of corn; I reckon he be back bout a hour, an be mighty glad to see you gemmen."

Just then we heard some one pulling down the draw-bars, and looked around; there was the captain in all his glory of six feet two, and 238 pounds avcirdupois. "Dad bone my buttons, but that is a powerful good-looking pup," said the captain, and continued, "Well, I am mighty glad, for certain, to see you all. Go into the house by the fire." We needed no second invitation, and were soon seated in the sitting room with a plate of apples and decanter of blackberry brandy by us on the table; the children beginning to climb all over us, and Mrs. Brown telling us how many fine chickens she had lost by the hawks, when, followed by his black setter, in walked the captain, carrying his old muzzle-loader, barrel in one hand and stock in the other. He pulled some tow out from behind the old-fashioned clock and proceeded to wipe out his gun. In less than half an hour we were again in the field. The captain knowing the location of every covey, we found plenty of birds, starting seventeen coveys during the day, all of them except one going to thick cover at first flight. One covey, however, scattered nicely in an open field of broom straw, and I verily believe we got the last one of them, Cora working fast and splendidly on single birds, in spite of old age. The puppy got some good points, and after his whipping in the morning worked well. But Cora, with her years of experience, was too quick for all the other dogs to get many points. All three of our dogs twice pointed separate single birds, the captain's dog back-standing. Washington Clay B. accompanied us all day on horseback "to tote de dinner and de game." When the sun was about "half an hour" high, we instructed him to proceed home by a short cut, and have our horses and things ready for an immediate start when we came. Old Cora was pretty well broken down and limping badly, so we started home. As we were crossing a log over a "branch," Tom being nearly across, and I, just with one foot on the log, looked down, and there was Bang right in the branch under the log pointing. I was tangled in blackberry briars, so I called to Tom to look out, when up went one bird from sight under our feet, and flew over my head back of me. Tom wheeled where he stood on the log, and fired both barrels. He missed the bird, but fell flat on his back, full length in the water. As it was almost freezing we did not waste much time into getting the house. There we found a nice warm supper of the best the country afforded prepared for us.

After allowing Tom time to change his wet suit for a dry one of the captain's, the sleeves and ankles having to be turned up some three inches, we fell to and demolished our share of the eatables. Upon counting up we found our bag to contain forty-seven quail, one woodcock and seven rabbits, shot by Tom and myself. We took an after-supper smoke, and bid our genial captain and his wife good-bye, mounted our horses, and were soon galloping toward home. Poor old Cora was so tired that I had to let her ride in my lap to town, where we arrived in good bedtime. On the way we made up another hunt for the following week, at a place where we knew we could get some fine turkey shooting as well as plenty of quail.

BEDFORD.

TROUTING IN THE VALE OF ARNO.

BOSTON, Jan. 8, 1881.

EDITOR FOREST AND STREAM:

THE following incident apropos of snakes eating fish may seem to you worth putting on record. In the summer of 1863, I made a pedestrian tour with three friends through the Tuscan Appenines, and for three or four days enjoyed the hospitality of the Monks of Camaldoli. This celebrated monastery is situated on the western slope of the main ridge of the Appenines, and at that time was one of the richest and most prosperous of the religious fraternities. The convent owned large farms on the slopes, and in the fertile bottom lands of the Val d' Arno, which literally overflowed with corn, wine and oil. The upper regions of their land was kept as forest and was celebrated for the size and quality of its pines, on the judicious cutting of which by no means a small part of the Monks large revenues depended. I remember being shown the stumps of four huge trees that had been cut and shipped to the East to be used as columns for some mosque. I should be afraid to state my recollection of what the diameter of the largest was, but we were told, and readily believed, that a party of travelers who were visiting the monastery danced a quadrille on the flat stump of one of them.

By-the-bye a most striking proof of the benefit of wise protection of forest lands is to be seen there. That part which is owned by the monastery has been kept in wood, especially on the steep heights, and the openings and clearing that have been made are probably as fertile pastures, grain-growing fields and vineyard, as are to be found. All around their domain are to be seen bare sterile hills, washed down to rock by the heavy showers, which, until the short-sighted cupidity of the ignorant owners had cut off every stick, were as productive as what belonged to the convent.

On mounting the ridge behind the monastery one of the highest points of the back-bone of the Appenines is reached, and on climbing into the branches of a tree, on a clear day the Adriatic sea can be seen to the eastward, and the Ligurian sea, or Mediterranean, to the West. On the western slope of this chain of hills there are many brooks, which, in the upper part of their course, run through the woodland, and as the ground is very steep, they form a series of small cascades, with little pools below each fall which were full of trout. These small brooks all run together, and by the time they reach the tableland on which the monastery stands, they have united to form a good sized stream, which, for a half mile or so, runs alongside of the road, and after passing the convent pitches down the decline to join the Arno. Along this comparatively level point the brook was divided up into a series of sandy shallows and rocky pools, all of which were swarming with trout.

The Abbot having paid us the compliment of coming in to see us after our dinner (they had a set of most elegant apartments which were kept for lodging tourists, travelers, etc.), on my mentioning having seen trout in his streams, turned out to be a most enthusiastic admirer of the trout species. The streams were very strictly preserved, and the Prior after ward told me that it was an unheard-of thing to have the Abbot do what he did, that is, tell me that I might catch some. This was a prerogative of his office which he had always kept to himself. Unfortunately there was not a fishhook to be had in the whole neighborhood. The Abbot himself always caught as many as were needed on their fast days, and his method was the same as I had seen practiced in the mountain streams of a small village in Austria, where as a boy I had passed a spring and summer. He would take off his sandals, roll up his gown, and wade into the clear stream, and working up against the current would see the trout darting under a stone for shelter, and then going up to it very quietly, would put his hands down on the side on which the trout ran under, and feeling very carefully underneath, would finally get a grip on the fish and throw him on the bank. As I said before, I had seen the same thing done in Austria, and a few years ago a young Scotchman whom I met on the Umbagog waters not only told me that that was a very favorite and successful method of poaching in Scotland, but actually proved to me that it could be done. This process is known in Great Britain as "tickling" a trout.

Not having had any experience in this form of sport, I naturally devoted one of the few days we spent at Camaldoli in trying to rig up a rod, and if Seth Green had at that time written as much as he has since about the beauties of needle-pointed hooks, I should have managed to bend a needle, and from the populous barn-yard got hackles to make some apology for a fly. But I was in those days in such a state of ignorance as to suppose that in order to catch a trout *secundem artem*, you must have a fishhook, and a fishhook was not to be had. Every anglar will appreciate the aggravation of my position, being surrounded by beautiful brooks, actually teeming with fine trout, on which a fly had never been cast, and not only not being able to avail myself of the chance of a couple of days' splendid fishing, but losing the opportunity of initiating the Abbot, who was a splendid fellow, into a method of sport in comparison with which his "tickling" would have dwindled to nothing.

The gist of the matter, however, is the fact that one morning while walking along the bank of the brook, and having my mouth water at the sight of the noble fellows that were darting here and there in the pools, I saw a snake in the water, about three feet long. He was on a shallow sand-bar, and with a stick I was carrying, I soon straightened him out. He was, as I remember, very much the same sort of a gentleman as our common black snake, but about six inches from his head his body was swollen to over three times its natural dimensions for the space of eight or nine inches further. The blade of my penknife having been put into the service of ripping him up, a fine fresh trout of nearly a half pound was found to be the cause of the deformity in his symmetry. Not knowing as much as I do at present about comparative anat-

omy, I remember wondering how this good-sized fish could have ever passed through the snake's jaws.

Besides his trout streams the Abbot had several large and rather shallow ponds, that were filled with huge carp and tench in whose fattening and growth he took much interest. In those religious communities that are inland, and far from all railroad connection with the coast, the supply of fish is a matter of importance, as many days of the year they are not allowed to eat any animal-food—the word "fast day" is not at all an equivalent of the Italian term "*giorno di magro*," as it is not of necessity a day of fasting at all, but simply one on which no animal food can be eaten. We were lucky enough on this same excursion to arrive at the convent of Vallombrosa on the day of the patron saint of that order of Monks. This day is a *giorno di magro*, and they cannot have any strangers over night in the convent (which, by-the bye, was the cause of our doing nearly twenty-five miles over the mountains after dinner), but so far from its being a fast day, it is the day of all the year when the brothers who have charge of the pots and kettles strive to give a great variety of dishes. I do not think that I ever took a better dinner, although there was no meat, butter, eggs or milk used in the cooking. But with virgin olive oil to take the place of butter, with trout, carp and eels, salt fish cooked in the Spanish way, *i. e.*, with olive oil, tomatoes, anchovies and a trifle of garlic, crisp lettuce and celery, preserved fruits and fresh grapes, figs and pomegranates, fresh olives, and last, but not least, a flask of wine from the vineyard on the southern slope that had been ripening in the cellar since the comet year, we did anything but fast. It may be that the excellence of this last item of the bill of fare had something to do with the fact that the French gentleman who was with us, and who, on the strength of having been over the ground before, acted as guide, lost his way, and it was not until after three o'clock the next morning that we arrived at the old town of Pratz just able to crawl.

There is one fact with regard to this matter of diet on fast days, which I do not think is generally known—at least I never heard of it until I camped out in Canada with French habitants for canoemen, and it is rather interesting as a matter of natural history. That is, that the sea fowl, or what they call "*gibier de mer*," are not considered as game but as fish. The distinction is that they do not go to fresh water to drink. Thus the black duck, the wild goose, the teal, mallard, etc., have to get to fresh water once a day at least, and therefore they are "flesh," and on fast days cannot be eaten; but the white-winged coot, old squaws, whistlers, skunk heads, etc., not going to fresh water—at least so they say in Canada—are considered as fish. The above list is not an appetizing one, but the brant belongs to the same class, and surely one could fast very satisfactorily on a well-roasted brant.

I have, I fear, taken up more space than you will be inclined to give to me in order to say that I had seen a snake that had swallowed a trout; but that is really all I meant to write.

MIC MAC.

THE LOG OF THE FAVORITE, NO. 4.

SWANSON'S HARBOR, CROSS SOUND,
August 23, 1880.

A FRESH northwest wind, with its usual accompaniment of bright clear weather, subdued the southeaster about the change of tide, and enabled us this morning to make so early a start that by breakfast time we had crossed the sound, and ran to the eastward, nearly to its junction with Chatham Straits, where sheltered almost completely by a great island which blocked its mouth, we made the narrow and safe channel, which just to the eastward of "Couverdeen" Island, leads into this magnificent harbor. Just to the westward of the island there was apparently a wider and easier entrance, but the assurance of our pilot that it was shoal and full of dangers was subsequently confirmed—when at low tide, the bottom was exposed.

Our object here is to interview the Indians, who have here a ranch, which is occupied in common by Chilcats, Hoonahs and Sitkas and others, for it constitues a sort of half-way house for nearly all the tribes on their trading voyages.

Sitka Jack makes here his summer home; in winter he prefers Sitka, where he varies the monotony by alternate spells of drunkenness and Christianity, for Jack is a shrewd Indian, and fully appreciates the petting he receives at each such successive conversion, and has among his "papers" several extracts from the Rocky Mountain *Presbyterian*, in which his turning from his sinful life is recorded as among the first of the successes of newly-arrived missionaries.

Although as "low down" a Siwash as Sitka produces, Jack is very useful. As an awful example, when after a set-to with Hoo-che-noo, his naturally big head is swollen so big that he cannot wear his little gold-laced cap, and rheumy tears run down his pock-marked face, as he describes to the other Indians the evils of intemperance.

And then when thus softened he seeks consolation by becoming again a Christian. The example is doubtless valuable. Jack is rich though, or rather his wife is, and through her he is connected with several powerful tribes, to whom, on his spring visits, he dispenses much hoo-che-noo, and from whom, when under its influences, he procures at a cheap rate their skins and oil.

Jack has made a record for himself in more ways than one. It was he who superintended the destruction of all the stills in Old Sitka, except one as I afterwards learned—that one his own, and whose halibut club, used on that occasion, is pictured in your paper of July 30, 1879. And it is to his credit that on the occasion of the completion of his house he gave the most magnificent potalatch Sitka had ever been favored with, at which hoo-che-noo, and subsequently blood flowed like water, and five hundred blankets were given away to the guests.

Since then Jack has been poor, and spends his substance about as fast as he earns it, in paying for damages to various siwashes which took place at this feast. Jack was absent, but we got together several other Tyhees, and gave them the usual talking to. While the pow-wow progressed, Captain Vanderbilt made good use of the time by setting a gang of Indians at work wood chopping, for on the shores of this bay there is no end of excellent firewood growing close to the water.

This the Indians cut and deliver for two dollars (trade) per cord. It was pleasant to see the confidence which the Indians placed in the honesty of the whites; for instead of taking their pay in goods, those who brought the wood received in preference tickets for the amounts due, which were good at either of the stores of the "Northwestern Company," and served as cash in their trades with each other.

Captain Vanderbilt has, in one respect, taken a wide and wise departure from a custom prevalent among the Sitka traders in dealing with the natives. With them an Indian pound is about fifteen ounces, and thirty-five inches make a yard, differences which they pretend to make good by complying with the always-expressed wish of the Indians for a scale way down and a little cloth thrown in. "The "Northwest Company" follow up the custom of throwing in, but they give full measure as well.

At low tide there was exposed in this bay flats of many square miles in area, through which creeks made their way. The Doctor and I, after the pow-wow was over, took a long tramp over these flats, but got no birds, although we were assured that in spring and fall all kind were in great numbers. Two miles from where we landed there was a grove, and in its vicinity we heard the honking of geese, and we waded ankle deep in mud a good long mile in hopes of a shot at them. But we were not alone on the flats. Indians were hunting also, and they did some shooting; for birds that were foul to us were fair fowl to them; and coots and gulls rewarded their shots, which made the geese very shy and wary, and before we were within rifle range an enormous flock got up and made its way through an opening to the sea, leaving us to to stand mud-bound and wish ourselves back to our boat.

Quite a number of canoes came alongside for trading purposes. They brought seal oil, hair seal pelts, and baskets woven from grasses. All, however, ruled at higher prices than at Sitka.

WILLIAM HENRY BAY,
LYNN CANAL—P. M.—22.

Our longing for glaciers has been fully satisfied to-day, and to-morrow we have many more in store for us. We left Swanson's Harbor at 5 A. M., passed "Hanus Rock," which was projecting above the surface, and turned around Point Couverdeen for a straight run up Lynn Canal to Chilcat, but the fresh northwest wind, while it has cleared the air and revealed to us some of the grandest scenery that I have ever gazed at, has also kicked up a head sea sufficiently strong to seriously retard our progress, which with the tide was not over six miles an hour, and when the tide turned not over three.

As we can't reach Chilcat till late this evening, we have concluded to hold on here until early to-morrow, when the tide will be with us.

The entrance to this pretty little bay is on the north side, marked by one of the highest and steepest hills we have encountered. As our little boat ran by close to the shore, we nearly broke our necks trying to look at the summit, which, although fully four thousand feet distant vertically, was not, I believe, four hundred horizontally. It was like examining the frescoes on the ceiling of St. Paul's. This hill was densely wooded to the summit, and somewhere in the woods we could hear the axes of the Indians cutting firewood for the company. One can but wonder how the trees, growing as they do in a thin soil, manage to keep their positions and grow upward. In places it seems as though they grew on top of each other.

It is probable that the six or eight-inch deep carpet of perpetually wet moss which covers the soil gives to the roots, by constant moisture, great size and strength; so that by interlacing and seeking crevices they are able to support the trunks. Not always though, for here and there we have passed great land-slides, where a broad glistening rollway of bare rock marked the course of hundreds of large trees, which in a confused heap of roots and branches lay at its base.

The southern point of this bay is evidently the terminal moraine of an extinct glacier. Our journey to-day has been one of unqualified enjoyment; warm, clear weather, bright sunshine, and not a bit of fog or cloud to obscure the scenery, which was grand.

From Point Couvendeen to Chilcat, Chatham Strait, is called Lynn Canal. Why so called, I do not know, for its average width, six miles, is as great as that of the southern portion of the straits. The head of the canal is, as shown on chart, eight or nine miles wide, but split into two inlets by a peninsula. As far as we have come the banks on both sides consist of high hills, covered to their summits with dense forests of spruce and hemlock, through which at short intervals streams of water come dashing down with such impetus that every drop seems turned to silvery foam. The range of hills is not continuous, and they are divided by deep canyons into groups, and each of these canyons is filled by a great river of ice, and between each couple of peaks which form the group a brook of ice converges to the river.

Until to day I had not in my mind a clear conception of a glacier; the name conveyed to me simply the impression of a frozen, ice-bound river. Such there are, broad and smooth, their surface but slightly inclined, winding their way around each obstruction, and dazzling the eye with an unbroken sheet of white; but there are also Niagaras of ice and maelstroms! The river comes plunging down steep inclines, shattering into chasms as it leaps precipices, and rearing up into great corrugated battlements, crowned with gigantic spires of crystal, where it has encountered obstacles; the surface marred with streaks, like muddy wagon roads, of earth, and sprinkled with huge boulders which have been wrenched from the mountain sides.

We saw but little of the beautiful colors which I had imagined characterized these rivers—black earth and white snow predominated, but now and then the sun's rays reflected from a fractured surface all the hues of the rainbow. We could not see the lower end of those which came down gentle slopes, for these were hidden by the thick bushes and high grass, which flourished on the flat moraines which the glacier had pushed in advance or left as its lower end melted.

At 1 P. M. we saw our first glacier, and it was a good one to begin with. After it we passed so many that there was hardly a five minutes in which at least five were not visible at once. Our first was on the eastern shore and opened out as we passed the north point of Admiralty Island. It was surmounted by a rocky crag which resembled our national bird so much more than does the figure on the new dollar that we christened it "Eagle Glacier," and as such it will remain in our note-books and memories.

This day we mark with a white stone. Our enjoyment of nature has been uninterrupted, except by a remark made by the punster of the party, in contra-ting this day with the foggy, rainy ones preceding, he asked us in what respect they differed, and we gave sensible answers, but he said this was a scenery and they see nary days, and was immediately suppressed.

At one place on the route we had, in addition to the peaks, canyons and glaciers, a distinct view in the distance of the eternally snow-crowned peaks of Fairweather, Perouse and Crillon, all over fifteen thousand feet in height, and of their eight-thousand-feet-high foot-hills. Such a day is worth many of ordinary life, and I wonder how long it will be before our summer tourists will find it out and take one for themselves.

This evening, as I think over the day's experience, I am prepared to not only accept as true the theory of Professor Muir, that the island and channels of Southeast Alaska are produced by glacial action, but, undeterred by fear of forfeiting reputation for scientific accuracy, and dealing with facts alone, go easily way beyond his conclusions. I think—but am not prepared to prove it—that on the occasion of that famous shower which in forty days succeeded in depositing an amount of water, which, compared by the best Alaska results in ten times the period, as shown by rain gauges, was indeed a deluge, the effect of such a surplus must have been to fill up pretty well the basin of what was then, I believe, a land-locked sea—the Arctic Ocean—and that the enormous pressure was increased by the melting of the icebergs, floes, peaks and banks through the higher temperature of the rain, and that one windy day a leak started in some low place between East Cape of Siberia and Cape Prince of Wales, in Alaska, which rapidly increased, and through it, drawn by the current, came huge icebergs and glaciers, which cut out Behring's Strait and, rushing southward, cut the long ridge which in those days probably connected Asia and America and over which the native Alaskans found their way from the Orient, into the chain of islands known as the Alentiens.

Laurence Island, then possibly a high mountain, stood directly in the wake of this advancing flood and deflected it to the eastward, when, with a whril and eddy, it dug out Norton Sound and then the Gulf of Alaska, sweeping down the coast perhaps to the lower end of Puget Sound.

Behring's Sea is everywhere shallow and a muddy bottom is found at from forty to one hundred fathoms. The only fact to support my theory is given in the veracious narrative of Sue, in which he relates the wanderings of a Jew, who at one time stood on the East Cape of Asia talking to a wandering female on the western bank of America. As this was previous to the invention of the telephone this strait could have been little more than a trout brook then.

But I may be wandering a little from the legitimate track of a Forest and Stream letter, so will drop speculating and come down to facts and a subject better adapted to your columns, viz., salmon. For several miles of the latter part of to-day's journey we steamed through a pea-green sea, which was dotted here and there with the backs of salmon, which were in the most aimless manner swimming about close to the surface, from which their backs, they being nearly all garboshas or hump-backed, protruded. The peculiar color of the water was due to a surface layer of glacier water which flows into William Henry Bay through a very large creek, and into many smaller coves through smaller ones; and these sick salmon were such as had survived the process of spawning and found their way again to salt water to perpetuate their species. I saw so many that I thought that a very large percentage thus became saved, but when I landed on the moraine and skirted the brook, at times wading, I could readily believe that if in the salt water, within five miles, there was a hundred thousand of these "fittest" which had survived, they did not amount to a fraction of one per cent. of those which had perished.

The moraine was covered with timothy and wild barley five or six feet in height. Much of this had been pressed down by high water from the creek, and in all directions there lay great heaps and windrows of decomposing salmon. Thousands of gulls were cackling and laughing as they feasted upon the eyes of these fish, and the soft mud was pitted in all directions with bear tracks, and bodiless heads of salmon indicated where they had breakfasted. I had my gun with me and was hoping for birds of some kind, but except a few pipers none presented themselves for inspection. The banks of the creek were lined with dense alders and high grasses, and I thought it likely that by taking its centre and wading up I might start a mallard or teal. This I did not do, but that wade was one to be remembered. In advance of me pushed through the shoal water, struggling and splashing it into foam, an almost solid mass of salmon; and at times, when by a short turn I intercepted the rushing host, it was like trying to wade through a flock of sheep while carrying a plate of salt. They were under me, twisting through my legs, and once, I think likely over me, as I fell by slipping through treading upon them. All were headed up stream except such as made frightened rushes past me; but many, although so headed up, were slowly drifting down, tail first, to swell the sick and helpless floaters in the bay, or to die upon some bar, and furnish feed to gulls and bears.

In some places, in fact in all where deep and still enough, the bottom of gravel was hollowed out into great wallows, from which, as I approached, crowds of salmon would dart, and I could see the bottom so covered with eggs that it seemed as though bushels of dried peas had been there scattered. Approaching one of these pools quietly, I succeeded in getting a good view of the operation of spawning, and I did not observe any use of the curved jaw in the connection. At first I thought that there were two varieties of salmon in the creek—one the garbosha and the other a black straight-backed fish. None of either kind were over thirty inches in length, most were less than twenty.

By examination of several of each style which I caught in my hands, I found, by stripping, that as far as could be judged, they being all spent fish, those with the hump back were males and the other females. By shooting several which were more lively and could not be caught, this view was confirmed, they being gravid fish.

In most of the pools immense trout (*Salmo spectabilis*) were either feeding upon the eggs, or lying quietly gorged. I shot one weighing four or five pounds, but although beautiful to look at the surroundings in which I got him were such as to deprive him of a place on our breakfast-table.

I saw one female salmon just as she finished spawning. She lay quiet for a couple of minutes and then began to topple over on her side, recovered herself and, as though startled from a sleep, darted forward and went half her length upon a gravel bar and continued forcing herself further up, until she was entirely out of the water, and there I left her to die. Most of these fish were more or less discolored and many bruised, and upon all there extended over the bellies a substance which looked like rough yellow blotting-paper, probably some fungoid growth.

After seeing, as I have to-day, such myriads of dead salmon, I do not wonder that with those who do not stop to think of the result, the impression should prevail that "all Pacific coast salmon die immediately after spawning."

The stream is of ice-water and comes from a glacier, whose foot is several miles back in the canyon. We did not visit it, for bear tracks were too large and numerous to make it advisable to so do, armed with one shot-gun alone.

While I thus amused myself with salmon, the Doctor wandered off with his shot-gun and was, as usual, rewarded for his toil by having no load to carry back. Neither he nor I saw a bird bigger than sandpipers, of which we both obtained specimens of spotted and semi-palmated, and one or two tattlers. When we left the Favorite the Major declined to accompany us and, from his mysterious manner, it was evident that he had some plan on foot which he did not disclose to us. When we returned he exhibited with illy-concealed pride and triumph the fruit of his afternoon, in the shape of crabs, of which he had with a spear, extemporized from two straightened-out halibut hooks, and a boat flagstaff, speared about fifty of the kind called spider crabs—creatures with legs about three times the length of the body and which we found to be most delicious. The largest one was nearly seventy inches from tip to tip of claws, of which but seven were due to width of body.

SITKA, Sept. 5, 1880.

The continuation of the Favorite's log, but for this break in it, would but have completed a circle, for the more important of the events which occurred on the 24th and 25th of August were given to you in my letter of those dates from Portage Bay and Pyramid Harbor, in which I told you of our interview with Klotch-Kutch and the settlement of the war between the Chilcats and Chilcoots.

Our trip to Portage Bay from William Henry Bay, which occupied the 23d of August, was but a repetition of the day before. Fair winds, clear sky, pleasant weather and magnificent scenery, which at last palled upon us, and we thought nothing of a glacier that did not present some new and striking aspect.

The character of the scenery changed somewhat as we went north—it lost in beauty, but gained in grandeur, the timber became of smaller growth and instead of reaching to the summits of the hills stopped short at perhaps a thousand feet, and was surmounted by barren, rocky ridges and peaks. And in many places we saw what we had seen south of Peril Straits, but nowhere between them and William Henry Bay—patches of dead trees standing out in relief through their white trunks. In this vicinity the death of so much forest might be considered as due to icy blasts coming over the glaciers, but that would not account for the same further south.

We left Pyramid Harbor early on the 26th and, favored in every way by wind, tide and weather, reached Sitka on the 28th without an adventure *en route*. Our trip has been in every way a success and will be the forerunner of others, for though much has been done there remains much more to do.

In closing this series I must admit that my powers of description have not been equal to the task I undertook. My written words but tamely describe the memories of

PISKCO.

PIPES AND SMOKING.

A DISCOURSE on cloud-blowing may not strictly fall within the province of FOREST AND STREAM, but I am persuaded that nothing which pertains to human comfort is alien to it.

Whatever is worth doing is worth doing well; and this is the more true and emphatic in respect to that which is done so much. For I take it, that next to eating and drinking and sleeping and fire-making, there is no one operation more extensively performed every day by civilized humanity than that of smoking. From sunrise to the waning midnight-lamp the pipe or cigar is the companion and comforter alike of peasant and philosopher.

But I have nothing to say of cigars. I confess that there is nothing like the genuine Cabagua or Partagas, or Panatella or Silva. They are perfection, like Burgundy among wines, and exhilerate the whole being, mental and physical, and make every fibre tingle with pleasure. Springing from the Indian soapstone pipe—the protoplasm or monad, so to speak—they present a brilliant illustration of the doctrine of evolution. But when the Confederacy disappeared from the horizon they departed with it, and are now as mythical as the lost Pleiad. My theme is pipes and their concomitants—stems and tobacco. The essentials of a good smoke are: 1. A good pipe; 2. a good stem; and 3. good tobacco.

The indispensable to a good pipe is that it shall absorb the nicotine and other noxious properties of tobacco; in a word, consume the tobacco without sweating it, for thereby its flavor is impaired or destroyed and its venom aggravated. This indispensable depends partly on the construction of the pipe, but mainly on the material of which it is constructed. The foam of the sea—*Fecurne de mer* (meerschaum)—in its pure state is, beyond doubt, the best material for a perfect pipe. It is light and porous, absorbs the nicotine and consumes the tobacco dry. But what is noteworthy and marks the effect of depraved fashion, one of these perfect pipes is not appreciated, or at least its commercial value does not reach its acme until it is "colored," that is, saturated with nicotine, and of course no longer performs the highest and most beneficent function of a good pipe—that of absorption. There are a great many frauds on the genuine article, only to be detected, without trial, by an expert or by costly trial by a tyro.

Of the woods used for pipes, all the fine-grained and compact, such as ivy and laurel, hard enough to be carved, are unfit for smoking. They may be pretty toys, but they sweat the tobacco and are worse than worthless—they are nuisances.

The root of the bamboo briar is the nearest and best approximation of the genuine sea-foam. It is as light and as porous, smokes the tobacco dry and clean, and the only drawback is its liability to burn. But by slow smoking, such as becomes the philosopher, that evil may, in most cases, be avoided. The decaying roots make the best pipes, if not too much decayed. An inexperienced person, in seeking roots, would reject these as worthless—as sodden wood—for they are black as your boot and heavy as lead; but in a few days' exposure they become as light as cork, and if they do not retain their shining black assume a mahogany color. Pipes made of the green roots will stand harder smoking, but they are not altogether as good absorbers.

The corn-cob makes a perfect pipe, but must be used with great care to prevent itself being smothered.

As to the construction of a pipe, it should be an inch deep and half an inch to three-quarters in diameter; and as a general rule as large at bottom as top. I do not say universal, for in "projeckin" with briar-roots I have made some pipes as crooked as a ram's horn, three or four inches long, and with a succession of chambers of various diameters, and one of these monstrosities still lingers in memory as the sweetest pipe I ever smoked. So there are exceptions to general rules, even in pipe-fature.

N. B.—Before leaving pipes, let it be impressed upon you that in smoking a briar-root hurry slowly—*festina lente*—and never forget that it is neither iron nor fire-proof brick.

ITEMS.—A stem should be so open and free that you will be unconscious of the suction. You imperceptibly create a vacuum in the mouth, which is spontaneously and insensibly filled with smoke. That, in its material features, is the perfection of a stem. Of the aromatic German cherry I know little and have nothing to say, except that all I have seen are too heavy for my taste. Of native stems, the Indian reed of Florida, called by the Indians "Ti-ti," makes an admirable stem. It has no joints, the pith is large and may be easily removed. Smoked when green it becomes of a lustrous ebony. If seasoned it darkens more slowly, and rarely acquires the ebony lustre; but that does not affect its smoking qualities. It is without odor, but its easy draft, lightness and long-continued freedom from rankness constitute its merits. We heard it said that after long use, if one end is closed and the stem filled with brandy and permitted to stand a day, it will be as fresh as a new stem. This may be true of other stems also, for there may be some hidden virtue in brandy. The fig makes a stem in great repute with many. If cut just before the leaves fall, when filled with matured sap and the bark kept on, it has a pleasant aroma, which it retains as long as a gentleman would care to use it. But the bark must be carefully taken from the end that goes into the mouth, or it will cause sore lips—very annoying, and much like fever blisters. To prevent this effect I am not certain but that the stem should be thoroughly dried before use. The fig has many hard joints, and the perforation is difficult, and should be made by a cold wire, and not a hot one, as the latter damages the odor. A drill and lathe is the best apparatus for boring. We have in Virginia a scrubby growth, called "seven barks," which makes a beautiful stem—golden yellow. Like the "Ti-ti" it has no joints, but the pith is small. The first year's growth has but three barks, and the coating which encases the inner bark is exquisite for its softness and delicacy.

As to length of stem tastes differ. I prefer one 3½ to 4 feet long; for you may smoke a great deal more with impunity with a long stem. And then, in reading or writing, the fire is beyond your clothes. True, you may now and then burn a hole in the carpet, but better that than your pants or vest, or shirt-bosom. Of course for campaigning by field or flood convenience dictates and exacts a short stem and good tobacco. There is a cry in the land for this desideratum. Every manufacturer has it, but no smoker can get it. With us the heavy excise tax has greatly contributed to its disappearance. Our planters aim more at quantity than quality and it is difficult now to find the genuine Oronoko, which was wont to gladden the palates of our fathers.

All good and sweet tobacco, fit for the pipe, must be ripe, and ripe tobacco always has a tinge of brown about. The fashionable, high-priced hickory-leaf tobacco is a fraud. It is the product of intense heat and has nothing of tobacco about it, except the bitter. The tobacco called the Little Oronoko, raised on newly-cleared land and cured in the sun, has long been regarded in Virginia as the best thing for the pipe. The lugs or bottom leaves—always the ripest on the plant—are esteemed the best. But this tobacco is not appreciated by the fashionable manufacturers and its production is annually decreasing. In the present state of things I do my own mixing as much as I can. I find that the mildest and ripest Virginian, mixed with best Cuban, in the proportion of half and half, yields a delicious cloud. Two parts of best Cuban to one of Perique give the best substitute I have found for a full-flavored Havana. A small pipe now and then of genuine, unmixed Perique is not without its charm. But Perique is said to be a dangerous article and the appetite for it grows by use. It is a product of the Tache Parish, in Louisiana, and no one but those who prepare it knows its composition. It has a slight odor of an anatomical dissecting-room—and having this smack of mortality about it, and being dangerous, is tantalizing.

Tobacco wetted and left to heat and mould—called, I believe, "funked"—loses its saltpetre and does not sting the tongue, but also loses much of its sprightliness and flavor.

Cuban tobacco is not adapted to the pipe. It has too much saltpetre. The best Cuban cigar cut up and put into a pipe bites the tongue, whereas the same, smoked as a cigar, has no bite and yields only unmixed pleasure. There is the same saltpetre in the one as the other and both are burnt by the same fire, and yet the result is radically different. Why is this thus? I consulted Mr. J. F. A., one of the most scientific of our manufacturers, and who adheres as closely as he can to the old landmarks for a solution of the problem. I subjoin his explanation:

That a genuine Havana cigar cut up and smoked in a pipe is not as agreeable as good old Virginia, I think arises from the following causes: First of all, all Havanas or other tobaccos suitable for cigar purposes have, before they are ready for use, to be thoroughly fermented (as the grape juice is into wine), which entirely changes the nature and quality of the leaf, extracting from it most of its vegetable gum, which must be got rid of, or the cigar would grow soft and mushy as you smoked it—hence Virginia tobacco will never make good cigars, as it will not yield to the proper fermentation. In this fermentation the ammonia is increased and that, with the nitre and potash retained in the tobacco after the fermentation is through, will always make that tobacco bite the tongue when put in a pipe. Yours, J. F. A.

Perfectly satisfactory as to the difference between Virginian and Cuban, but leaves the problem as to Cuban in a cigar and in a pipe unsolved.

Smoking is an American invention. It had its origin with the aborigines of this continent, and the calumet played an important part in the councils of peace and war. It was unknown in the civilized nations of Eastern and Central Asia It was unknown to Greece and Rome. And neither Homer nor Horace, Pluto nor Cicero had any conception of it. Sir Walter Raleigh is recorded as the first European who introduced the practice on the other side of the Atlantic. It is now everywhere, among all civilized people, and if the band of cloud-blowers could be incorporated, it would constitute the most numerous brotherhood in the universe.

But with a good pipe, good stem and good tobacco, there is still one thing needful to crown the whole—a good smoker calm, meditative, philosophic and who, with a thorough conviction of God's sympathy with man, can put the dispensations of Providence in his pipe and smoke them with content. Like every acquired taste, smoking is liable to abuse—to run into excess and become a vice. But used in moderation, the humble believer in the benignity of the Deity may be excused for regarding it as one of those blessings vouchsafed by the Giver of all good to ease the burdens and mitigate the troubles, trials and tribulations incident to this unsatisfactory state of being. It stands in the same category with the parterre of flowers which regale the nostril and delight the eye.

It is noteworthy that the sense of sight is quite as much interested in the operation of smoking as the sense of taste. No blind man ever smokes unless he acquired the habit before the loss of sight; and the most luscious cigar ever fabricated in the Havanas would waste its sweetness on the midnight darkness. It is the eye which imparts those exquisite charms to the circling wreaths as they float away into space—wreaths which, by their etherial delicacy, might justly excite the admiration and envy of the great cloud-compeller, old Zeus himself. VIRGINIANUS.

Natural History

DOMESTICATION OF THE OSTRICH.

BY E. B. BIGGAR.

IN a preceding article I gave a short account of a farm in the ostrich-rearing district, and some account of the ostrich camps and the young birds. I now resume at that peculiar diversion of the young ostrich—the morning dance.

As Shakespeare warns us to look out for the man who has no music in his soul and cannot be pleased with the sweetness of simple melody, so the ostrich farmer must beware of something wrong when his chickens cannot disport themselves in the windings of the mazy. This is no joke, but an actual fact, for when the young birds lose the enjoyment of the dance it is because some disease from the effects of the weather or from over-feeding is preying upon them. We are obliged to be up at daylight in order to see this spectacle, for ostriches and farmers are both early risers here; the former because it is nature, and the latter because this is the pleasantest part of the twenty-four hours for work.

At evening the young birds had all been put into a shed to protect them from the cold and prevent them from taking rheumatism Now the gate is opened and the whole troop pour forth, and each one as he finds himself in the liberty of open space makes a dart down the yard; then suddenly, as if he had forgotten something, he makes an abrupt stop, ducks his head slightly and then, to your surprise, whirls about and bolts on again. In this revolution he gives his wings a flourish, and perhaps two or three yards further on performs the whirl again. Then he will probably perform two or three gyrations in succession, and it is this which calls to mind the waltz. The grotesque way in which he sways his body and wings, and the awkward handling of his legs is to any one having a sense of the ludicrous in motion most amusing. The sight is particularly laughable where a large troop are engaged in the waltz at the same time. One seeing another take a whirl sets in himself, and in less than a minute the whole troop are gyrating about the yard, cheek-by-jowl, neck to neck, in couples or sets, now exhausting their space at one end of the yard, then taking a course to the other; and the only thing lacking to make their movements irresistable as a spectacle is their want of time and order. But in spite of this the beholder cannot help hazarding the conjecture as to whether they, instead of the Germans, were not the originators of the waltz of the ball-room. And against all their lack of discipline it really seems to become them better than the performance by their human—shall we say it?—imitators. And so they go dodging here, swinging there, while the ducking of their heads corresponds very well to a curtsey, until their blood is in fine circulation and their appetites keen. Oh, what a grand improvement it would be if humanity, like the ostrich, would do their waltzing in the morning before breakfast, instead of at night after supper!

The waltz may be kept up for ten minutes, or for more than half an hour, and then they turn to picking about, or where they are very tame, come to the spot where their regular feed of mealies (Indian corn) may be expected. Here the herd-boy, as he is called, for want of a better title, throws out handfuls of the grain, and they gobble it up with the avidity and quickness of hungry hens. Now that their morning feed is done, they begin to walk around us and evince a desire to introduce themselves. The farmer tells us that they are quite harmless.

The first familiarity one of them ventures to take is to make a snap at our neck. We give him a slap and stand back. "Oh! he's only after your breast-pin," says the farmer; "I forgot to tell you to keep your jewelry out of sight." This is easily removed, but the inquisitive bird makes a peck at the top button of our coat, and when I find at last that he does not seem to be very strong in the beak, and that this is not his weapon of offense, I let him continue the operation. If we ask why these birds have a passion for buttons and studs, and bright things generally, including jack knives, the farmer replies that they are in the habit of eating pebbles and stones to help digestion by the trituration of their food. The harder the stone the better, and it is proble they associate brightness with hardness.

After their feed the birds are let out in the "veldt" (the open field), and the Hottentot boy watches them through the day as they march ever busy, ever picking, ever on the move. This last remark needs, perhaps, to be qualified by the fact that in the heat of the day they may often be found kicking and rolling about in the sand and dusting it over their feathers. This, farmers, say, is to rid them of lice and vermin.

Our host now shows us his stock of feathers. On the floor of the loft are spread some magnificent bunches of plumes. Some are of the purest snowy white, as if they had just come out of the hands of the dresser, and seem to be nearly two feet in length. Others tinged with grey are yet feathers of splendid plumage and remarkably broad and rich looking. Then there are grey feathers and black feathers, small and large, dirty and clean, all ranged according to their class and each known by a particular name. These are sorted ready for the market, but many of his neighbors give them, mixed as they come off the bird, into the hands of agents, who sort them out and put them on the market at a certain commission.

The farmer next takes us into his hatch-house, where his incubator is at work bringing forth young artificially. The ostrich incubator here in use is a large bureau-like box, cubic in form and mounted on legs. In a zinc-lined casing covering it top and sides water is placed at a temperature of about 105 degrees, and the eggs are placed under this casing, but in contact with a flannel lining against the under surface of the zinc. Thus the warmth from the water comes down through the flannel and imitates the warmth of the bird. The eggs are placed in wooden drawers and brought into contact with the flannel. At the end of forty-two days, the period of incubation, they are brought out by tapping the shell with a hammer when breathing has been heard, and placed in a

compartment called an artificial mother. This is a box warmed by hydraulic heat and curtained with flannel, so that the chick sits under the folds as under the wings of a mother. When the egg is put in the date is marked on, and they are then merely turned over once a day till hatched. But let us leave art and see something of nature, which is more interesting.

Returning to the breeding camps we follow the farmer in his feeding operations. A donkey cart is waiting beside a shed where a fire is burning. The cart is loaded with large green vegetables, in shape like flattened pouches. These are the fleshy leaves of the prickly pear, which have been gathered wild about the homestead. They are unloaded with a fork, and each one singed on the fire till the prickles snap and burn off. Then they are chopped up into fragments an inch or two square, and loaded back, to be taken to each camp. As the cart goes along a couple of shovelfuls is allotted to each camp. Here in one camp the old cock is still on the nest. The hen comes bounding over to the gate and helps herself, but her lord, though no doubt feeling the pangs of hunger, denies himself, lying with neck at first outstretched on the ground, but head now lifted to see what is going on. Piece after piece she takes in until a foot of her long neck is swelled out like a snake. Then she lifts it and the food slides down, apparently by the force of gravitation; not straight down, but by a spiral course down the passage. As the farmer informs us that this couple will shortly change places in sitting, we will wait to see the operation.

Here and there in this camp there are small clumpy bushes not of sufficient size to hide the whereabouts of the sitter, yet we are told that although the cock might have sense enough to know that he is already seen, he will take as much precaution as if his whereabouts were totally unknown. After a watch of half an hour we are rewarded. The cock raises his head from the ground, and after a moment's reflection begins to rise. Slowly his spindly legs are lifted from out the cluster of tremendously large eggs which fall together as he rises; then while his body is yet scarcely erect he steps out, darts a yard or two in one direction, then sidles with a swerving movement of his wings in another, and finally at another angle again bolts off into the camp, fancying no doubt by these erratic manœuvres that no one would be able to know the exact locality of his nest. While he comes up to get the remainder of the food, to which the donkey-cart boy has now added to mealies, the female walks about in the deliberate style which they adopt when gazing about, with her head still for a moment and then moved forward with the motion of the body, as a stalk might be swayed by the wind. After a quarter of an hour at this she finds herself near the nest with no apparent intention of going to it, when suddenly she shoots down and is settled over it. Here she insinuates her legs among the eggs and makes a great deal of fussing and primping before she gets settled. During this time she has something to do with each egg, turning them over and shifting them about with her beak, which by means of her long snake-like neck she can put under her on all sides and behind. Settled at last, she lays her head out on the ground and reflects. Some birds take even greater pains to conceal their nests, yet others go on and off as if their nest were no mystery at all.

During the day, when the sun is strongest, the hen will be found sitting as it were upon her elbows, with her body lifted three or four inches above the eggs, and some leave the nest altogether for an hour or more during the hottest part of the day. Various in these respects are their habits and, so great is the divergence of disposition in individual birds, that one would almost fancy them to be of a different species. "Some," says the farmer on this subject, "are savage whether they are breeding or not, and will attack you as furiously as a tiger; others will never give trouble, and even in the breeding season can be approached in the camps. Now there is a bird that seems to hate me as an enemy at almost all times, and yet one of my neighbors could go into his camp without any danger." On our approaching the inclosure the bird in question was not long in making an exhibition of his feelings, for he approached with hisses like an engine letting off surplus steam, his wings spread out and feathers ruffled, until he appeared a monster in size. Then he knelt down and swinging his head from side to side, rattled it against his sides alternately by way of challenge. "That is the way they dare you," observed the farmer, "but they seldom or never get over a fence at you. They appear to be afraid to jump. They are savage to intruders and very consistently keep out of the camps of others."

"Are the wild ones savage?" we ask. I have never seen any wild ostriches so far down as this, but I am told that they are not. There are wild birds still, but further inland, in the Victoria West district and toward the Kalihari plains. I had an old Hottentot man lately who used to tell about catching wild ostriches and their chickens in this very district. Hunters tell how the old birds can trace the slightest touch of the human hand upon the eggs, and how that the bushmen, when they rob a nest, have to lift the eggs out with sticks, but Jantje, the Hottentot I speak of, says this is a mistake. He says he has removed and handled eggs without the old birds ever observing it and that the wild birds' eggs can be freely handled, and as long as too many are not taken out the old bird is none the wiser.

The way Jantje robbed nests was this: In some bush-covered plain where he had reason to think ostriches might be found, he went about midnight, walking cautiously, and when reasonably near, sitting under some bush. Here he remained till about three o'clock in the morning. About this time he expects to hear them "bromming." "And what is 'bromming?'" we interrupt. "It is a kind of roar, or short bellow, which travellers, as you have read, have often mistaken for the roaring of the lion. This noise they repeat several times and that gives Jantje a chance to tell at least the direction in which the birds are, for the female will not be far off. Then he steals as near as he can with safety and sits again, till early daylight. About this time the ostrich broms again and then, if possible, Jantje steals along still closer and waits till a third bromming, about eight o'clock, shortly after which the cock leaves the nest. While he is away and before the hen has been warned to assume her duties, Jantji has taken an egg or two out of the nest and now knows pretty nearly where to come when he wants another." "And what does he do with the egg?" "I am told they cook them in the shell itself and also by putting hot stones into them. I suppose they cook them with hot stones when they wish to preserve the shell, which makes a very convenient bowl, and a pretty strong one, too. Those eggs," he continues, "contain as much meat as two dozen hen's eggs and it is of as fine a flavor nearly. My wife frequently uses them in baking cakes and it is a common practice among other farmers. Whenever we find an egg with the shell perfectly smooth, or nearly so, we set that down as a wind-egg and cook it. Where there are no pin-poles in the shell it never hatches a chicken."

"And will a wild ostrich fight for its nest?"

"They will fight anything but a human being, I am told."

"And how do they make their attack?"

"By kicking. They throw their leg forward and if that big hooked toe-nail comes down your back there is fearful havoc. It is not always that he succeeds in making a scratch, but the force of his foot is as terrible. They often kill each other in a fight and have been known to kill men. No matter how tame they become, they are always liable to attack you in the breeding season. It is this uncertainty about them that makes me like the business."

So we bid adieu to the ostriches and the hospitable Englishman who has "cast himself away in Africa."

Cape Town, South Africa.

A HORNED DOE—*Akron, O., Jan.* 21.—Among the most successful of our local sportsmen who spent their autumn vacation in pursuit of the pleasures of field and flood was Mr. J. R. Criss who was with a small party in northern Michigan. His most valuable trophy was a fine doe with one horn. It was on the left side of the head about four inches long, palmate, its width at the tip being about two inches. Although late in the season it was in the velvet with a heavy coat of hair the whole length. It was mounted by Reichstag, the veteran taxidermist of Saginaw, who has probably set up more deer heads than any other man in the country, and who says that in an experience of twenty-five years he never saw anything like it. He has furnished many rare specimens to Michigan University, Smithsonian and other museums in this country and Europe, but says he never handled so valuable a head as this before. Mr. Criss has received the head, and is being congratulated on his good fortune by our local naturalists. CORK.

HORNS OF THE MOOSE AND DEER—*Bangor, Me., January.*—I have hitherto supposed and believed that both of the above-named animals and all others of their species annually shed their horns. This winter for the first time I have heard it denied, and positively asserted by those whose judgments and opinions are entitled to consideration that such is not the fact. Do moose and deer shed their horns annually and what is the opinion of FOREST AND STREAM? From recent inquiries among the hunters and lumbermen of this vicinity I am much inclined to change my views and adopt the belief that they do not shed their horns annually. I shall, however, before doing so make further investigation and will give you the result of my researches. J. C.

It is a well-established fact that all the *Cervidæ* shed their horns annually.

SWIFTNESS OF BIRDS ON THE WING.—Professor Newton considered that were sea-fowls satellites revolving around the earth their arrival could hardly be more surely calculated by an astronomer. Foul weather or fair, hot or cold, the puffins repair to some of their stations punctually on a given day, as if their movements were regulated by clock-work. The swiftness of flight which characterizes most birds enables them to cover a vast space in a brief space of time. The common black swift can fly 276 miles an hour, a speed which, if it could be maintained for less than half a day, would carry the bird from its winter to its summer quarters. The large purple swift of America is capable of even greater feats on the wing. The chimney swallow is slower—ninety miles per hour being about the limit of its power; but the passenger pigeon of the United States can accomplish a journey of 1,000 miles between sunrise and sunset. It is also true, as the ingenious Herr Palmen has attempted to show, that migrants during long flights may be directed by an experience partly inherited and partly acquired by the individual bird. They often follow the coast lines of the continent, and invariably take, on their passage over the Mediterranean, one of the three routes. But this theory will not explain how they pilot themselves across broad oceans and is invalidated by the fact, familiar to every ornithologist, that the old and young birds do not journey in company. Invariably, the young broods travel together, then come, after another interval, the parents; and finally the rear is brought up by the weakly, infirm, molting and broken-winged. This is the rule in autumn. The return journey is accomplished in the reversed order. The distance traveled seems, moreover, to have no relation to the traveler. The Swedish blue throat performs its maternal functions among the Laps, and enjoys its winter holidays among the negroes of the Soudan, while the tiny, ruby-throated humming-bird proceeds annually from Mexico to New Foundland and back again, though one would imagine that so delicate a little fairy would be more at home among the cacti and agaves of the Tierre Caliente than among the firs and fogs of the north—*London Standard*

CURIOUS SQUIRRELS—*Charleston, Ill., Jan.* 16.—*Editor Forest and Stream:* I have hunted squirrels occasionally for the last twenty years, and I never have seen one like that which Daniel Mitchell killed the 14th of May, 1875, four miles southeast of here by the Embarrass River. It was the same size as the large-tailed fox squirrel, but the top of the head, the back of the neck, the back, the upper part of the tail, the front and back part of the fore and hind legs were the same color as the fox squirrel, while the throat, the belly, the under part of the tail, the inside of the fore and hind legs were jet black. There are not any black squirrels in this part of the country. Dennis F. Hanks killed an albino fox squirrel a few years ago. He says he has hunted squirrels fifty years, and that is the only white one he has ever seen. Are not such squirrels very uncommon?

FOX SQUIRREL.

A CURIOUS BELIEF—*Dedham, Mass., Jan.* 19.—Last summer the daughter of an old farmer residing here told me that for the last three years, when their cows have been turned into a certain pasture where the feed is of the best, one of them has suddenly fallen off to about half the quantity of milk, and when removed to a distant pasture the milk returned again. One day last summer her father (whose sight is very poor) saw an animal close by the cow, which upon his approach made off to a swamp near by. I told her that I had the impression that I had read of cows being sucked by an otter. She wished me to investigate it, but as I was about leaving for the West I had no time. While I was away a young man shot an otter within half a mile of their place, which is the first one that I ever heard of being seen or killed in this vicinity, only ten miles out of Boston. Have you ever heard of a case of this kind? T.

Compare this with the belief still existing in some parts of Europe, that the hedge-hog sucks the cows, and that birds of the family *Caprimulgidæ* perform the same office for goats—whence the common name "goat-sucker"—for the nighthawk and other birds of the group.

WINTER BIRDS—*Hornellsville, N. Y., Jan.* 23.—The king fisher I reported the 10th is still here; was observed the 20th in a snow-storm. I also saw several crows flying same day, and have seen them here all the winter. A boy brought me on the 19th a bird nine inches long, black feet and legs, slate color, golden brown on head and rump, was eating sumach bobs, and made a noise like a rat, only very loud. What kind of bird is it? Saw a meadow lark the 12th, golden wing woodpecker 19th inst. Red headed woodpeckers and blue jays here all winter; a great many ruffed grouse frozen.

J. OTIS FELLOWS.

The bird was probably a pine grosbeak (*Pinicola enucleator*).

Ellenville, Ulster Co., N. Y.—Yesterday Mr. Newton Rockwell, a genuine sportsmen and well-known resident of the village, saw in the vicinity a meadow lark. Mr. Rockwell was driving in a sleigh at the time. The bird flew up from a tree near the road, apparently vigorous, and alighted within a short distance; he had no companions. Is not this very remarkable considering the lateness of the season and the recent cold weather? I remmember no similar incident in all my experience as a sportsman and close observer. Heaven help the poor quail this winter. I have induced several of my former friends to coax them about their barns where they can get food and seelter. W. H. HASBROUCK.

It is not unusual to find the meadow lark in New York throughout the winter.

Game Bag and Gun.

THE FLIGHT OF A RIFLE BALL.

A CORRESPONDENT in FOREST AND STREAM, apparently a young practitioner, asks: "What is meant by point blank and point blank range in rifle shooting?" These are very apt and important questions, I must confess; none are more so. I propose to answer them, using the plainest terms at my command. But to do so directly and without explanation would, I fear, leave the reader quite in the dark. Besides, the very interest of this subject lies in the lurking facts connected with it. Hence I will first define certain terms relating thereto, then make the necessary explanations, and lastly answer his two questions.

To experiment with, I select the common and best practical sporting rifle with crotch and bead sights, and sighted for 150 yards.

First.—What is meant by the "line of sight" of a rifle? It is the straight line from the eye, passing through the bottom of the crotch sight, taking in the tip of the bead sight, and thence straight on, piercing the target at its very centre. Mark, it is a straight line, and pierces the centre of the target.

Second.—The line of sight being understood, I ask what is meant by the axis of the piece, or barrel? It is the straight line running from the muzzle to the breach, along the centre of the bore throughout. It corresponds to the centre of the ball when the piece is loaded, and its prolongation is the "line of fire." Mark, the axis of the rifle and the line of sight are both straight lines, and if parallel, it follows they would never cut each other, if produced.

The above being well understood, we next proceed to make three experiments with our rifle, and under three different circumstances.

CASE 1, NO POINT BLANK.—Let us first suppose that the rear and front sights are of the same height—that is, that both are equally distant from the axis of the barrel—then will the line of sight and the axis of the barrel be parallel lines; so also will their prolongations. Now place the rifle thus sighted, horizontally, aim it at the exact centre of the target, at say one hundred yards distance, and fire. There will be no point blank or point blank range in this case. Why? Because the ball starting in its course on a line parallel with the line of sight will not rise above its level to cut it, which, as will hereafter appear, is a necessary condition in the premises. On the contrary, the ball will describe a downward curve of about twenty inches in 150 yards. The same is true if the piece be fired under an ordinary elevation. Rifles thus sighted always shoot a little too low, and the remedy, in part to this, will appear in the next case. This illustration has been introduced mainly to correct erroneous impression, and to show the effect of changing the sights so as to get a point blank range.

CASE 2, ONE POINT BLANK ONLY.—Let us now suppose the rear sight to be a little the highest, but only enough so as to cause the ball in its flight to rise barely to the line of sight and to cut it, and after this to describe a curve to the ground. It will be seen that in this case the trajectory of the ball cuts the line of sight in but one point. At this point, then, we have a point blank, and also a point blank range. But in practice this point blank will be found near the piece, say about twenty yards distant; hence this is not the recognized point blank, nor does it give the necessary range involved in this question. They are longer. Rifles thus sighted are good for squirrels and other small game; they are close shooters within about thirty-five yards, but at about 100 yards they shoot too low by about six inches. The next case will give a longer and better range, and furnish a solution to the questions.

CASE 3, TWO POINTS BLANK.—We will now elevate the rear sight a little more, say just enough so that when the piece is aimed true at the centre of the object the ball will strike it there, at 150 yards. This particular distance is selected, because I wish hereafter to trace the curve of the ball in this case of elevation. Being well aimed, now fire. What is the result? We see this elevation of the rear sight causes the ball to go entirely above the line of sight, in its ascending curve (very little, it is true), and after reaching its highest point, that it gradually falls to the line of sight, where it cuts it again at the very centre of the target. In other words, the curve of the ball cuts the line of sight in two points, the one at about six yards from the piece, and the other at the target, 150 yards off. This case presents two point blanks and two point blank ranges. But (as in Case 2) the first one is near the piece and is not recognized in long range practice, but the second one is recognized. It is the true point blank known

in science, and the corresponding range is the true point blank range. This being well understood, I will now answer the inquiry by giving two definitions.

First.—By POINT BLANK is meant the second point where the trajectory or curve of the ball in its flight intersects, or cuts the line of sight.

Second.—By POINT BLANK RANGE is meant the straight line blank range or shortest distance from the piece to the second point blank (or in practice to the target whose centre is struck at this point). The French and Americans use the same point blank, but in the British service it is different; their point blank distance is the distance at which the projectile (ball) strikes the level ground on which the carriage stands, the axis of the piece being horizontal." (Col. Scott's Mil. Dic.)

General Remarks.—Long ranges are generally made on the horizontal basis, and are so recorded for use in works on practical gunnery. But the above two definitions hold good in elevated or depressed firing also. It is theory I have presented.

Practice.—While in both theory and fact point blank is limited to a single point, yet in practice it is allowed a wider scope. It is here by common consent applied to the whole bullseye. If this be struck it is called a point blank shot, and the straight line from the piece to the target is called the point blank range. Neither is strictly correct, as I hope the reader will now be able to see, unless the bullet strikes the centre or its level for a range. In practice point blank in English, and "point blanc" (white point) in French correspond, they refer to the same thing—white spot, bullseye, target. Some understand rifle shooting in practice; but to the great majority who use it the science of rifle shooting is all in the dark. They cannot explain it correctly, nor is this a wonder.

The moment the beginner with the rifle will discard the false idea, which nearly all most naturally have, that "the rifle carries straight," at that moment is he in a condition to begin to understand a little of rifle shooting. Many persons and some of life-long experience still cling to this erroneous notion, especially for short ranges. It is as mathematically certain that the rifle does not carry straight for ten yards, as that it does not for 1,000 yards. The path of the bullet must be, and always is, a curved line known as the trajectory. Gravity is always pulling the bullet down; its effect commences at the muzzle of the gun, and no velocity of the ball can cancel it. This curve, however, is very flat within short distances, at long ranges it becomes high or much curved. Thus at 100 yards point blank the ball rises nearly three inches; falls about two inches to the line of sight with a gravity drop from the line of fire of about seven to ten inches, while at 1,000 yards, as at Creedmoor, the ball rises about thirty-four and a half feet, then falls the same to the line of sight with a gravity drop from the line of fire of about 121 feet.

The highest point of the trajectory varies a little with the range, but for ranges less than 1,200 yards they do not vary much from fifty-five one-hundredths of the range measuring from the piece. Firing at 100 yards the ball passes above the line of sight generally within ten yards from the muzzle. Remember this is the "first cut." Firing at 1,000 yards the "first cut" will be within two yards of the muzzle. Remember that point blank or centre shooting is never made along the line of fire or the direction the barrel points, but that it is always made along the line of sight. The mark is aimed at, and the ball by the use of the sight is made to hit it on the line of sight while the barrel is pointing above the mark, we do not know where at the time. Thus at 1,000 yards the bullseye is aimed at and struck while the barrel points about 121 feet above it. The same principles obtain in firing say at 10 and 20 yards, etc.

I will now, as a further illustration, practically trace the curve made by the ball along the line of sight in the 150 yards range, and notice its variations from it at a few points in the range. The ball, starting from about three-fourths of an inch below the line of sight at the muzzle, will hit a little below the centre, within about seven yards; at this distance, having arrived at its "first cut," it will centre (an intercepted target); at about 82 yards, the highest point of the trajectory, it will strike nearly five inches above the centre. Here it commences to fall, and at about 130 yards it will strike nearly three inches above the centre, and still falling it will again centre the target at the "second cut," or true point blank. Strictly speaking, the rifle when sighted in point blank can make but two centres; but when shot at near objects the cut or sweep of the ball will cut out the centre of the target, and thus appear to shoot straight. Rifles having fixed sights may be said to have but one point blank and one point blank range. Yet if differently loaded others will be produced. It will be seen from what has been written that point-blank ranges differ with every change of distance and charge. This fact, combined with others, makes all long range shooting at game a very uncertain thing. I discountenance it always, if there is any reasonable chance of crawling upon the game so as to get a dead shot. For deer and the like, I prefer for my rifle a point blank of not over 140 yards, and if in the timber 100 yards; but for small game generally I prefer 80 yards, and for squirrels 40 yards; then I am not habitually shooting over my game. In going on a tramp, camping out and roughing it, as all real sportsmen who get the game generally have to do, I rely solely upon the common open sights. From long experience upon the prairies of Texas and the West, as well as elsewhere, I find they are the only reliable standbys, and give me more game than any other sights. As fixtures, however, to have along, I have always carried the peep and globe sights. They sometimes come in good play in open grounds. I always train my sights to suit myself when getting the rifle from the maker. As purchased, I have never found them sighted for close shooting. I prefer a silver sight in front to all others. They are durable, and neither dead nor brilliant, and contrast the best in all seasons with the most objects.

But I am reminded that I must close this communication, already to long I fear. My purpose was to answer the two questions put by the inquirer. I hope my answer will be satisfactory, and that a rather perplexing subject will become he better understood. Herein will be my greatest reward.

MAJ. H. W. MERRILL.

DEER AND CARIBOU—*Sherbrooke, P. Q., Jan.* 26.—I have just returned from the Megantic and Spider lakes district. Game (deer and caribou) plenty, but it is impossible to hunt on account of light snow. The snowshoes go in eight to ten inches every step. As the close season commences February 1 there will be little if any legitimate sport, and measures have been taken to prevent killing out of season. Still a few will succeed in "running the blockade." D. T.

REPEATERS VERSUS SINGLE-SHOOTERS.

WHY is it that all the regiments of cavalry in this country and, in fact, over the entire civilized globe, are armed with revolvers, instead of the old-fashioned single-barrel pistol in vogue some years ago? Why are policemen and, in fact, all bodies of armed men who carry pistols, provided with revolvers instead of double or single-barrel pistols? Simply because six shots are better than two or one; because one revolver is more convenient to handle and carry than six single-barrels or three double-barrels. Any unprejudiced person can see that the only mystery is that any one should argue to the contrary, when the veriest savage has discernment enough to recognize the relative merits of the two styles.

Here is the *bete noir* and stumbling-block: Revolvers and repeaters are so constructed that the mechanism has to be more complicated than that of single shooters, be they pistols or rifles, because they perform most of the work automatically, consequently they have more pieces, some of which are of delicate mould, and if not made of good material will soon wear out, break or blow to pieces. Here, then, is the bugbear, and the one that causes the line and cry against repeaters in some cases and in some arms—justly, I must admit, but not in the repeater of which I am about to write.

Why, then, are not revolvers condemned and cast aside on the same grounds? Surely they are far more complicated than single-shooters. They have many more parts; they are much more easily rendered unserviceable; in fact, they possess all the faults of which repeaters are accused, and still every one uses them—and, mark you, not for sporting purposes, but in actual hand-to-hand conflicts, when human life often depends upon the speedy and correct action of this most valuable weapon—not for killing the timid deer, that is afraid of his own shadow, but with them men stand anywhere and against, at times, dreadful odds, being well aware and thoroughly convinced that their good qualities more than compensate for what are termed by some their "drawbacks."

Several of the most competent military authorities in the United States strongly advocate repeaters, and go so far as to say that cavalry should be armed with them and that it is only a matter of time when they will be issued to the whole army. It seems to me that if in the minds of these gentlemen the repeaters can stand cavalry use and the wear and tear of Indian campaigning they are strong enough for any purpose whatever, as a man who pays for a rifle of his own takes far more care of it than a soldier to whom it is supplied gratis.

The hope that repeaters would be used by the line has brought out valuable improvements in these guns, as such a revolution, when it does come, will put money into some of our rifle manufacturers' pockets—hence experiments are constantly being made in the direction of turning out a rifle that will stand rough usage and exposure, such as soldiers and plainsmen's guns are compelled to be subjected to at times.

I have spoken with several army officers (I mean officers who have been stationed on the frontier and fighting Indians for the last ten years) and other gentlemen conversant on this subject regarding the Winchester repeater, and nearly all bring up the following objections:

1. Too complicated and easily rendered unserviceable.
2. Men in action would waste too much ammunition and could not be kept supplied.
3. Are more expensive than the guns now used by the troops.
4. Have not sufficient range.
5. The magazine, when full, renders the gun extremely heavy and alters the balance when empty.
6. Are dangerous in the hands of raw recruits, especially cavalry, as they are self-cockers.

So far as I can remember, that is all that can be said against the Winchester, and I will endeavor to show that these so-called "defects" do not affect a sportsman, leaving the armament of troops to wiser heads and men of more experience than I can lay any claim to, as I deal only with what is best for game-killing purposes, regardless of all else, although, as I have hunted when hostile Indians were prowling around and no gun can compare with a Winchester for self-defense, I may perhaps be allowed here an opinion on that subject also, even if I never used one in this manner. Still I have known and seen those who have, and have heard nothing but in their praise.

Objection No. 1. I have seen in the hands of Indians and plainsmen hundreds of Winchester rifles and carbines that, judging from the battered condition of the stock, lock and barrel, must have seen the hardest kind of service, as the wood and metal used in these guns is no more apt to show ill usage than that of any other rifle, being as a general thing of the same kinds, and still these rifles were just as good as any other that had weathered as many storms, shot as accurately as any rusty land and groove could be expected to, worked as well as any jammed and bruised bearings could reasonably do, and, all in all, was just what it represented—a good gun originally, but rather the worse for wear; as any gun would be after passing through the same ordeal. Young Wat Eagle, an Indian scout belonging to the Seventh United States Cavalry, used a Winchester for I don't know how long that had only one link. I sent on and got him another, but I don't know if he ever used it. This Indian was a fine shot, and killed many deer and antelope, and one day in presence of part of the command, cleaned out a team of five in about as many seconds with this gun, which never refused to work, and was as accurate (although terribly scratched and dented) as need be, yet to a casual observer, and one who did not know its merits, and judging merely from appearances this rifle wasn't worth over $5. Still, it was his mainstay and on Sept. 13, 1877, he rode up to the Nez Perces' line, and fought single-handed against several Indians behind rocks and in ravines, and made them dodge too. He was shot through the hand, and was proud of his wound. That Indian was brave as a lion, and would no more think of giving up his Winchester than his life.

I came pretty near breaking my Winchester to pieces, and it is a wonder I didn't. My horse fell with me while crossing some bad lands, and came down squarely across the gun, nearly wrenching the stock from the frame and badly bending the upper and lower tangs and screws that held them together. Captain French, Seventh United States Cavalry, with the aid of a hammer, straightened out the injured pieces and screws, and my gun was good as ever, when many another would have been smashed to smithereens. Of course, I have seen badly-broken-up Winchesters, but no blame could be attached to rifle or maker. When a wagon rolls over a gun, be it Winchester or any other, it is likely to bend or dent it. When a horse comes down when on the full run and hurls a rifle to the ground the chances are that it will be found a wreck. It is unreasonable to suppose otherwise, and all the rider has to do is to pick himself up, and thank his stars that his neck isn't broken

Objection No. 2 does not concern a sportsman at all, and if he is foolish enough to shoot away his cartridges just because they are easily fired off, he deserves to run short, and is not entitled to sympathy any more than an engineer would be who killed himself while running his engine one hundred miles an hour—just because it could outrun a horse.

Objection No. 3—A Winchester model '76 costs from $27 up—which is less than any first-class length shooter can be bought for. I am not talking of humped up, remodeled, or condemned rifles worked over; but any well-known and reliable gun, say Sharps, Remington or Ballard.

Objection No. 4.—Game is generally killed between seventy five and three hundred yards, and any Winchester of the '76 model, be it Express, Centennial, or the one that shoots the sixty-grain straight shell, will certainly carry this far with great accuracy and force—and much further if needed. I have shot the Express bullet through eight one-inch pine boards, placed one inch apart, and the holes through the last ones went on increasing until they became larger than a silver dollar.

Objection No. 5 is not worth talking about, being imaginary.

Objection No. 6.—A man should learn to use his piece so that he will not endanger his life nor that of others.

The tendency nowadays is toward hammerless, self-cocking guns, provided with a safety catch. The Winchester is also made in this way, and is far safer than many single shooters. So this cannot, in justice, be brought against it.

I don't advocate a Winchester because Dr. Carver does such wonderful shooting with one, as a man who is such an expert would show off any gun to advantage. Still it shows what he gun can do. But I do brag on a rifle that gives a man confidence in himself; a gun that is always ready to deal death at a moment's notice, in the dark or in a hurry; no fumbling about for the breech, no dropping cartridges, no cold fingers to bungle with, no slipping, no sticking of shells (the extractor prevents that)—nothing in fact but to pump and pull, and when empty can be used as a single loader, with as good effect as any, and when full is a regular arsenal.

It has been my good fortune to carry the first Winchester to four villages in Minnesota and two settlements in Dakota, and when requested to show off my "new fangled" rifle, this is the way I did it, and I am proud to say I never failed to enthuse my audience.

I placed a board, say twelve inches, square at 100 yards, and fired at it say ten shots in rapid succession, taking care to hit it every time. I then invited competition, I to use my Winchester and two other men to use single shooters of any model (no self-cockers in those days, '7 and '73) and to shoot five shots each against my ten, and the quickest time and greatest number of hits to count.

This generally proved the superiority of my arm, as most of the men shot against were distanced. It also convinced me, and that's why I say buy and use a Winchester; if for heavy game use the Express; if for short range work, say deer, turkeys and an occasional bear, use the cal. 45, 60 grain straight shell gun. Formerly double barrels were almost exclusively used by English sportsmen ranging from cal. 10 to 16, shot-gun gauges, now the Express has superseded them entirely, having been found more accurate and destructive. When you have gun bearers with spare guns it is all very well to use single or double barrels; but as these fellows are expensive luxuries, probably stampede at the slightest approach of danger and frequently without provocation, I prefer carrying my own armory myself, and then if I do have to "walk fast" (it is not nice to contemplate bolting), why, I still have my gun, and am always ready to shoot buck, which is a pleasant reflection when connected with a grizzly, heap big Injun, or even sometimes in the case of a wounded elk or black tail buck.

The well founded objections that existed in the old models, especially as to the light load of both powder and lead, have all passed away, and now a Winchester stands out as a first-class gun, and this is why some rifles are made to resemble it so close by that the cut on paper is almost identical, which is, as a gentleman wisely remarked some time ago in this paper, "a distinction without a difference" "Otto" is not doing the Winchester justice when he hints at its imperfections and does not enumerate them. Fortunately the reputation of the arm is so well established that whatever he may say will be of no avail, as the American sports man can soon convince himself of the merits of any gun being intuitively endowed with a knack for recognizing a fine piece of mechanism, and preferring his own judgment to that of others.

It would never strike me to buy a Winchester for long range target shooting, as I consider the Sharps far superior for many reasons. It has more weight of barrel for same weight of gun; can be more easily cleaned and examined after each shot; has a stronger breech action to withstand heavy charges, and as a single loader is, in my opinion, what the Winchester is among repeaters, the very best of all.

There is still at least one improvement that I can see should be made in the Winchester, which is worthy of consideration. I now refer to the hind sight. A rifle which has to be carried for months hung on to a saddle bow must be well put together to stand the racket, and no sliding sights, especially rear ones, are of any use The forearm does not often come in contact with anything, so it is not of so much importance that it should be firmly and immovably fixed, but the hind sight is just where the pommel sling bears on the gun, and no matter how securely dove-tailed it will slip out of place after awhile, and that is extremely annoying. There are two ways of remedying this: make the stand on which the sight is fastened fit over the barrel as in the Springfield rifle and screw down to barrel; or have the leaf sights fastened to a steel bed, this bed to be sunken or dove-tailed into the barrel and well screwed in at each end. The slight projection of the leaves across the barrel, for the purpose of raising them, can be obviated by cutting into the barrel instead, the barrels being quite thick enough to stand this without sustaining any injury. The Sharps have a rear leaf sight with platinum lines, which is a beauty. I hope the Winchester people will soon have a similar one, as there can be no doubt that the English style is far the best for sporting purposes, say one stationary sight for 100 yards with fine bead, and 150 with coarse; one leaf for 200, and another for 300 yards, and that is all that is needed. It is much easier to raise a leaf than to adjust a scale, although beyond 150 yards one is generally not in much of a hurry. My favorite front sight is of steel, jet black, for prairie shooting; for hunter, ivory, both low on to the barrel. I dislike a rifle sighted over a high front sight, as these guns are generally meant to be shot with a fine sight, and on running shots I find I overshoot with them by taking too much of it in, besides a high front sight is apt to get broken and catches in everything.

A good feature and one greatly in favor of the Winchester is that quantities are shipped to England. As it is well known that no one is more fastidious or better posted than an English sportsman, accustomed to the very finest rifle, regardless of cost, this speaks volumes in praise of this excellent gun. TRADOR.

P. S.—"Owachita's" letter has just come in. I admire his style, and concur in his news: the most exacting mortal could hardly expect "Maud S." to make a good plough horse or circus performer. It is the same with guns and rifles. If you have one have a Winchester, if two, a Sharps and Winchester; the former for prairies and the latter for all kinds of shooting in timber, and wherever several shots can do more good than one, for hunting in cold weather, killing dangerous game, shooting on the run and self-defence.

THE PROPOSED AMENDMENTS.

NEW YORK, Jan. 29.

Editor Forest and Stream:

That the Long Island Sportsmen's Association and its action on the game laws have been "misrepresented in the FOREST AND STREAM" is beyond question; and I sincerely believe this was not your intention. It is unfortunate, because a spirit of opposition to the association has been aroused, which in turn has excited many of our members, and without firm and conciliatory advice I believe great injury will result to the friendly relations recently increasing between this and other sections of the State

I claim to know as well as any other human being what is being done in that association, because every document, including the minutes, is in my possession. We challenge courteous criticism and have repeatedly invited by letter and through your columns, suggestions. We have been attended by men of all classes, the market hunter, the dealer and the sportsman who hunts for pastime. Our committee has met frequently and expended much time and labor to ascertain the facts and the wishes of these several classes. Their meetings have been public and thoroughly advertised. We have avoided all "star chamber" work.

An argument was made that game of certain kinds could be advantageously preserved by placing it in refrigerators, and that if it were judiciously distributed it would last most of the year It was urged that no more game would be killed, but that it would be used here in lieu of abroad, as now is the fact, and would afford a delicacy to the citizens of our own State. The time asked by the dealer (particularly for venison) was until March 1; and this was based upon the facts that the main supply of venison comes from Minnesota and lawfully may be killed until December 15, and may not reach New York until after January 1. This argument has been represented as the decision of the association to allow the sale of game the year round, provided it has been refrigerated. No such action has been taken or contemplated.

During the past year I have technically examined our game laws and am convinced that they are and will be violated with impunity. I know the result of an ill-advised attempt to enforce the old excise law, when the dealers combined and so clogged the machinery of the law as to make it inoperative. I believe that the true theory of protection is by the mutual conservation of the several interests. We have tried to find that plane upon which all can stand. Some appreciate our efforts. In New York City one association, neglecting to avail itself of the tendered opportunity to confer with us, has deemed it wise and proper to condemn. We gain no assistance or encouragement from obstructionists.

When I consented to become the Secretary of the Long Island Sportsmen's Association and the President of the State Association, it was with an expressed determination to attempt a reconciliation of the diverse interests apparently affected by our inconsistent and ineffectual game laws. You have had opportunities afforded to become familiar with the steps taken to carry that determination to a final result.

I have neither time nor inclination to pursue a fruitless task. Whether such shall be its termination will depend largely upon our sportsmen throughout the State and the tone of the press.

The full text of a proposed bill will be presented by the committee to the Long Island Sportsmen's Association at its annual meeting of February 4, 1881. The action of that association cannot be foreshadowed, but from its composition of representative members of each class, a fair, honest, conservative measure may be expected. I submit, as a reasonable proposition, that any advice based upon the wide experience of such men is far more valuable than a theory or scare presented by any one class, no matter how eminently respectable. Please advise all interested to patiently wait until some tangible spectre appears to create a panic.

ABEL CROOK.

If any misrepresentation has occurred, it has been in ascribing to the association itself the adoption of the amendment proposed by its committee. We shall take pleasure in correcting the mistake by publishing next week the repudiation of the clause by the society to-morrow night.

THE GUN TAX ON LONG ISLAND.

Editor Forest and Stream:

I notice in your issue of the 25th ultimo that the Long Island Sportsmen's Association contemplate applying to the Legislature for the passage of an act confined to Long Island for a tax for a license to shoot.

The Legislature will never pass any such obnoxious and absurd law.

When it is necessary for the State to increase its taxation, and a tax of this nature is approved by the Legislature and passed, to be levied upon all persons and parts of the State alike, that will be an equitable law, but to levy a tax upon Long Islanders, with the view of excluding a great number of persons enjoying the sport of shooting, would be, such an outrageous partiality that no Legislature, however strong, would dare to pass such a law:

As Judge Lott remarked, "what was wanted was less law and more enforcement." This to a very great extent is true. Nevertheless, the law ought to be so clear that there ought not to be any trouble to enforce it, which, as it now stands, there is the hitch. It cannot be enforced against trespassers with any certainty or without enormous expenditure. However, we will let this pass and go to what is called the close season, wherein the law should be altered. I would suggest that woodcock shooting should commence within the first week of July and end the 1st of August, recommencing again at the same time the law shall be off for shooting generally. I would also suggest that the shooting for quail, partridge, rabbits and English snipe should commence on or before the 10th of October and end the 20th of December. As the law now stands parties are supposed to go shooting for woodcock and partridge, but for the ostensible purpose of killing quail or anything else. By fixing the time for shooting to come in for all kinds of game at the same time will prevent "Pot-hunter" killing game out of season By closing the season on the 20th of December it would be the means of protecting the game from wholesale slaughter in the snow. More quail have been killed since the snow than through the whole season. The weather generally is very unpropitious for the sportsmen after the 20th Dec. If at once this respectable, rich and influential body of gentlemen would buy say from 250 to 500 bushels of buckwheat, and so organize that the birds would in some localities be sure to be fed, a great many birds would be saved which, if this weather continues much longer, there will be no birds left alive to breed, and no law required to protect them for the next two years. In 1853 you could walk for days and not find a bird. Nearly all the birds were destroyed by the hard weather. Gentlemen, feed the birds and keep them alive, and then go to the Legislature for such laws as may be required to protect them.

To-day my man and team have been gone all day to feed the birds. He saw ten different lots of birds and fed them with enough wheat to last for a week, but it is snowing again and they will require to be fed again at once. I name this to you so you may judge what is required in certain seasons to be done. PRACTICAL.

SHOOTING IN OREGON.

EUGENE CITY, Oregon, Dec. 15.

I HAVE just returned from a pleasure trip through the eastern part of the State, which as yet is only sparsely settled and affords good sport for devotees of the gun and rod, also to those admiring fine scenery. The region is especially enchanting. Among the most fertile valleys of the State are the Grande Ronde and Powder Valleys, surrounded by the lofty Blue Mountains, covered with a dense growth of pine and fir timber Numerous mountain streams wind their way through the valleys, bordered by luxuriant bunch grass and willow thickets, where graze bands of sleek horses and cattle.

This is the only part of Oregon where may be found prairie chickens, and this fall I saw my first specimen of this beautiful bird, and as I have always wished, this, the first chicken I ever beheld, in its peculiar flight fell clean to my gun, and as I picked up the noble grouse it seemed almost a shame to kill so handsome a bird. Initiated into chicken shooting, I had fine sport, all, too, without a dog, as they were so plenty as to be easily found. Feeding on the black hawberries they become very fat, and I must say are as fine a bird for table use as a ruffed grouse or woodcock. There are some extensive haw thickets in the Grande Ronde Valley, and at this season of the year the bushes are destitute of leaves, yet covered with the rich berries. Mornings and evenings the birds frequent these groves in great numbers. Buzzing through the bushes they present difficult enough shots to suit the most adept shot and make a great slaughter out of the question. At one of these places I, in two afternoon shoots, brought to bag forty birds fat and plump, and would vary the sport by a shot at mallards in the river close by. Here was truly the hunter's paradise. Easy hunting, game continually in sight and in fields most pleasing to the eye. Great numbers of birds could be killed here daily, but with me sport loses its charm when it approaches slaughter, so what might have been scores I was content to make dozens.

On the hills among the sage brush were found jack rabbits, cotton tails and sage hens, which, when young, I thought were very good eating. They are very plentiful, and sometimes the stage between Boise City and Union passes through literally miles of them as they line the road. A good dog is very necessary, as they lie close and often will be nearly stepped on before taking wing. With shot smaller than No. 4 you will only frighten these hardy birds, and with a swoop they will sail majestically off for probably a mile. After that they usually flush wild.

Knocking over jack rabbits is lively work, as they start away very much like a jack snipe, making forty angles in forty yards. I well remember the last one I shot, fully sixty yards, breaking its thigh. It set up a most pathetic noise, somewhere between a cry and squeal, which I ended as soon as possible, and rabbit shooting will never be so enjoyable to me again. Ducks and geese lie and hatch around an extensive tule lake in the valley, and afford good shooting in August, but, reinforced by the northern flocks, frequent the stubble fields in October, and then are stronger on wing and in fuller plumage; but, in my opinion, wild fowl shooting is not as fine as in the Willamette Valley.

Since returning home in this place have got quite a number of geese, and one afternoon, while standing by a fence, got five Canada geese and eight mallards. When the North Pacific line is completed, let Jerome Marble come in the "Worchester" and see our immense numbers of geese and ducks. J. S.

THE MICHIGAN ASSOCIATION.

DETROIT, Jan. 28.

I HAVE already acquainted you by telegraph with the first day's doings of the Michigan State Sportmen's Association and forwarded by a previous mail certain significant letters bearing on the game laws, written by the President of the Lake St. Clair Fishing and Shooting Club.

The second day's proceedings were directly to the point, the first thing at the morning session being the report of the Committee on Laws for the Protection of Game. It was discussed *seriatim*. That portion of Section 1 of the proposed law relating to the division of the State known as the Upper Peninsula was stricken out, thus placing both peninsulas on the same footing with respect to the open season and, in fact, in all other respects. A spirited effort was made, led by Secretary Roney, of the association, to incorporate a provision prohibiting the killing of deer while in the water. This was defeated, but the advocates of the scheme to fix the open season for woodcock from August 1 to January 1 were more successful, they having carried their point triumphantly. An entirely new section was agreed to, as follows:

No person shall kill or destroy any pinnated grouse, commonly called prairie chicken, until after the 31st of August, 1883, and thereafter only in the months of September, October and November of each year.

A resolution making November and December the open season for Virginia partridge was also carried through and a strong one was put on record declaring against shooting game of any description on Sunday. These recommendations were all referred to the Committee on Legislation, composed of E. C. Nichols, S. S. Cobb, President Holmes, T. N. Cook and A. J. Keeney; and Messrs. G. W. Walcott, G. W. Higby and John E. Long were appointed a Committee on Enforcement. These gentlemen are true sportsmen and will do all in their power to enforce the provisions of the law relative to the preservation of game. The Legislative Committee were also directed to prepare bills prohibiting the digging of pits for deer, for the better protection of pigeons and for the appointment of a State Game and Fish Warden to enforce the laws in that particular province.

Papers were read as follows: "Fishing Rods—How to Make, Keep and Use Them," by S. W. Goodrich; "Game Legislation and the Open Season," by E. H. Gilman; "Amendments to the Fish Law," by Martin Metcalf; "Brook Trout in Oceana County," by L. G. Rutherford, and "Notes on the Destruction of Deer," by Secretary Roney.

East Saginaw was fixed as the place of holding the next annual meeting and the association elected officers for 1881 as follows: President, E. S. Holmes; Secretary, Wm. B. Mershon; Treasurer, N. A. Osgood.

I ought, in justice to the former Secretary, to record the fact that he peremptorily declined a re-election.

The association is composed of representative men, who conspicuously emphasize the difference between sportsmen and so-called "sporting men." GAMIN.

THOUGHTLESSNESS IN HANDLING GUNS.

DETROIT, Minn., Jan 3.

I HAVE noticed several little hits in your recent issues on careless handling of guns by inexperienced hands or experienced hands through thoughtlessness. Now, of course, care can be taken and a great many accidents avoided; but it takes, as the old saying says, experience to learn wisdom. I have always considered myself pretty careful at handling fire-arms, but I think that the incident that happened to me some time ago had the desired effect upon me and I now consider myself "fire-proof."

A person may be careful in a great many points, but he generally has a weak point somewhere, and I did not prove myself to be an exception to what I believe to be a rule. One day in the spring I had been out hunting and had wandered about for half a day without success and was wending my way homeward when I met a team that was going across the lake with a party to fish. I made up my mind to accompany them and see if I couldn't run on to a few ducks, and accordingly laid my gun in behind the seats and piled in on top of it. Now, it never occurred to me that that gun was in danger of going off during that entire ride, but if it had the only damage would have been no end-board in the buggy, so we will leave that "weak point" and pass on. When we arrived at our destination I jumped out and reached for my gun.

I have heard of hundreds of accidents happening just as mine did, and it has always been a mystery to me how it did happen. I raised the gun up with the muzzle pointed sideways and thought it was coming all right, but one of the triggers struck the end-board and threw the gun around, pointing it at my head, or nearly so. The gun was discharged and the charge of shot passed under the rim of my hat, one shot grazing my cheek, taking off a little skin. The barrel was within a few inches of my ear at the time of the discharge, and you may imagine how much I could hear with that ear for the remainder of that day. If anybody had told me before that event took place that such a thing could happen to me I would have thought them a little "off." And so it is with a great many others; they think themselves above having advice given to them, and only realize the fact too late that they are only human and are apt to forget themselves. No doubt numerous other readers of the FOREST AND STREAM can give some of their experiences in "taking lessons," and thus give timely warning to some unwary sportsman. Let us hear from you. H.

WILD FOWL AT CURRITUCK.—Never in my remembrance has the shooting been as good at Currituck as it has been this season. We do not know how to account for it, unless it is that the extreme cold weather has driven the birds South. I am a resident of Currituck. Have been living here for about eighteen years, and during the past two years have kept an account of all the birds I shot; and I find that up to this time, January 15, I have shot more birds than I ever shot in a whole season before. From October 1 to January 14 I have shot 1500 ducks, fourteen geese, seven swan and two snow geese. These were all shot from paints and ponds in the meadows. My largest bag was one hundred ducks I write this to show the people in the North and in other parts of the United States what they miss by not coming to Currituck duck shooting. The gunners who shoot from batteries have also shot a great number of red heads and canvas backs. P. Hampton and H. Taylor, two of our celebrated battery shooters, shot 325 red heads in one day. We have also a great many English snipe in February and March; and in July, August and September we have bay snipe, such as yellow legs, plover, curlew and all other kinds of snipe that follow the sea coast. During the past two years we have seen more green backs (or golden plover) than we have ever seen at Cobb's Island or any other place on the coast of the Atlantic. GUNNER.

ILLINOIS—*Charleston, Ill., Jan.* 17.—Quails, squirrels and pinnated grouse scarce; turkeys and ruffed grouse very scarce, and no deer to be found in this part of the country, the last one was run off with hounds on December 4, 1878. The only good bag that I know of being made in one day this winter was on November 26 by a company of twenty men out for a day's shooting. When they reached the field they divided into companies of ten men each, with J. E. Curd captain of company A and Wm. E. Jeffries captain of company B.; the company killing the least game to pay for a game supper. When they returned at night they counted the game. Curd's company killed 241 rabbits and 60 quails; Jeffries' company killed 211 rabbits and 40 quails; Curd's company winning by forty counts. Total, 452 rabbits and 100 quails—a very good day's bag. It is said that 1,000 rabbits were killed to-day by men who went from town. The supper was served up at the Maples House, the best hotel in the city for sportsmen to stop at. FOX SQUIRREL.

THE OHIO GAME LAW.—A bill introduced into the Ohio General Assembly to prohibit quail and prairie chicken shoot-

ing until Nov. 15, 1883, is provoking much opposition. A correspondent says: "In addition to this law, there are some five or six others also, offered by other members, making various changes. It seems that our average legislator tanks it his duty to offer some amendments either for the benefit of their temperance friends, or to change the game law, or something else to return him for another term. Possibly some of the quail have perished in the northern part of the State. They are frozen out in that section about one year in five anyway. There is no scarcity of them in the southern portion of the State. We have succeeded in interesting the Cuvier Club and other associations in this matter and now believe that it is questionable whether there will be any change in the present law, which allows shooting from Nov. 1 until Jan. 1."

NOVA SCOTIA "MOOSE SNARES"—*Portland, Me.—Editor Forest and Stream:* I hope that your correspondent "Globe Sight" will fulfill his intention of giving the readers of FOREST AND STREAM some sketches of moose hunting that will prove interesting, even though all non-residents of Nova Scotia are practically forbidden hunting there, by the $50-a-license law. This will deter sportsmen, but not the professional poacher, who neither honors nor fears the law that he can evade, or, if by chance detected, can pay his fines from the profits of his illegal business. But I beg that the description of "snares" may be omitted. I have often found them, but there are many localities where their use is unknown. Don't introduce them by interesting young poachers and giving new hints to old ones. EVERETT SMITH.

THE MONROE COUNTY LAW—*Rochester, N. Y., Jan.* 22.—I notice in your last edition you say: "The Monroe County game law is now the same as the State law, the Supervisors having repealed the county special law." This is a mistake in part. The Board of Supervisors only repealed the special law in regard to shooting. We have in this county a practical and efficient fish law, which the Board of Supervisors passed in 1878 and which has done more for the protection of the fish in this county than all the laws of the State ever did. If all other counties in this State would pass a similar law fish would soon become plenty. P.

TEXAS NOTES.—A herd of antelope recently charged into a herd of sheep in Brownwood County, Texas. Finding they were in the wrong herd, they dashed off, sheep and all together. The sheep kept on for about five miles, but were followed and driven back by the owner. I have known them to charge right up to a column of dragoons. Curiosity seems to lead them. A wild turkey was recently shot in Texas in the Red River bottom, Grayson County, which weighed twenty-seven pounds. But they sometimes weigh more than this. H. W. M.

TREEING BIRDS—*Philadelphia, Dec.* 28.—I have read with interest in your paper the articles about ruffed grouse treeing. In the Adirondacks they are always shot in this manner. The birds when flushed by the dog (almost any dog can be taught to do this) take to the trees, and the dog holds them there by barking until the gunner comes up. On the whole I think it is very poor sport, but the woods are so thick that it would be almost impossible to shoot them on the wing. G. H. T.

GLASSES FOR SHOOTING—*Jan.* 19.—Can you give me any practical hints as to style, shape, etc., of glasses particularly adapted to near-sighted persons for field sports? I have a pair with extra large lenses and frameless, but find for snap shots on the extreme left that the inner angle of the eye is not sufficiently covered nor is the lens sufficiently deep at this point when the cheek is placed snugly to the gun stock, the line of sight being often quite over lens. ANON.

Perhaps some of the readers of FOREST AND STREAM can supply this information.

THE NEW JERSEY LAW—*Hightstown, N. J., Jan.* 28.—The amendments to the New Jersey game law have passed to a second reading, and will undoubtedly go through the House "with bells on." These make the open season for woodcock from July 1 to August 1, and from Oct. 16 to Jan. 1; for quail; pheasant and rabbit, from Oct. 15 to Dec. 15, and prohibit the shooting of squirrel, woodcock, rabbit, pheasant and quail for two years in Monmouth County.

NIAGARA FALLS, N. Y.—*Jan.* 25.—It is to be hoped that the "Refrigerator Bill" will be killed. One afternoon last week my "pard" and I killed twenty-one cowcens, or old squaws.

THE LONG ISLAND SPORTSMEN'S ASSOCIATION will meet Friday evening, in the Royal Arcanum Rooms, Brooklyn, at 8 o'clock.

LIVE QUAIL.—Live quail may be procured of H. C. Ryall, Shelbyville, Tenn. The cost is from $1 to $2 per dozen.

MEETINGS OF GAME SOCIETIES.

THE LYNCHBURG ASSOCIATION.

The Lynchburg, Va., Fish and Game Association met at the Norvell House, in that city, January 13.

The meeting was called to order by the President, Dr. W. A. Strother. The constitution and by-laws were read, there being present many new members.

The president then read his annual report. The chairman of the executive committee made a verbal report, showing that that committee have been active in the discharge of the duties incumbent on them, and are making all necessary arrangements to bring violators of the law to punishment. The report of the treasurer was then read, showing a balance in the treasury of $49. There were some alterations in the by-laws. The names of sixteen new members were then proposed and they were elected.

Mr. B. Stockton Terry moved that a reward of fifty cents be offered by this association for every hawk other than a sparrow-hawk, and for every owl other than a screech-owl, killed in the counties of Amherst, Bedford, Campbell, Nelson, Appomattox and Pittsylvania, upon the delivery of the head to the secretary of this association, and that no member of the association be entitled to any reward. Adopted.

By Mr. Robert M. Brown, Jr., of Amherst: Whereas the law against trapping and netting birds has expired—*Resolved*, That the Executive Committee be directed to memorialize the new Legislature for the passage of a law prohibiting trapping and netting birds in this State. Adopted.

Mr. B. Stockton Terry, of Lynchburgh, moved that the Executive Committee be required to ask the Legislature to extend to hares similar protection in respect to destroying them in breeding time as to other game. Adopted.

At this time the association was invited to partake of an elegant supper which had been prepared for them by Mr. Terry, and accepting the invitation took a recess of an hour.

After recess the thanks of the association were tendered to Mr. Terry for the elegant entertainment.

By L. M. Kean, of Lynchburgh: *Resolved*, That the Executive Committee of this association communicate with all other associations in the State and individuals interested on the subject, in order to the procuring of the passage of full and symmetrical laws for the protection of fish and game.

Resolved, That in order to the foregoing the said committee make arrangements, in their discretion, for having a convention of delegates from all such associations for the discussion and preparing such laws as such convention may deem meet and procure their passage.

Mr. R. P. W. Morris, of Lynchburg, moved that an address be prepared and circulated by the Executive Committee, soliciting members in the surrounding counties, and that as soon as each county shall have representation in the association, the members for that county be instructed to elect a vice-president *pro tem.*, and that they present at the next annual meeting a name for vice-president for the ensuing year. Adopted.

The President announced that the election of officers for the year 1881 was in order, and the following were then elected: President, W. A. Strother, of Lynchburgh; Vice-Presidents, J. Holmes Smith, for Lynchburgh; Robert M. Brown, Jr., for Amherst; Col. Robert W. Withers, for Campbell; John J. Woodruff, for Bedford; Wm. F. Page, for Wythe. Secretary and Treasurer, L. M. Kean, of Lynchburgh. The Editors-and-Chief of the City Papers, Messrs. Charles W. Button, Alex. McDonald and Thos. Whitehead were elected honorary members of the association.

THE QUEBEC ASSOCIATION.

The annual dinner of the Fish and Game Protective Club of the Province of Quebec, was held at Montreal last week. The *Gazette* of that city gives the following report of it.

The annual dinner of the Fish and Game Protection Club came off last evening at the St. Lawrence Hall, and the members of the club may feel proud of the success they achieved. The *menu* was got up in the best style, and for which the St. Lawrence Hall has attained such a widespread reputation. At half-past seven the President of the Club, Alderman J. C. Wilson, took the chair, and among those present were Dr. C. C. Monk (Vice-President, in the vice chair), his Honor Judge Dugas, Euclide Roy, A. N. Shewan (ex-secretary), G. Ahern, J. Bourroughs, T. D. King, J. Nelson, A. Pinsonnault, Dr. Alloway, De B. Monk, F. Brady, M. Boyer, H. B. Trestler, M. Badgley, H. C. Carter, Chas. Torrance, Chas. Holland, Louis Sutherland, G. H. Matthews (secretary), M. Smith, *Witness*, G. S. Wilson and Chas. Marcil, *Gazette*.

BILL OF FARE.

Soup.

Hare aux Quenelles. Venison a l'Anglaise.

Fish.

Maskinonge, oyster sauce. Brook trout, tartar sauce.

Entrees.

Croquettes of venison, with mushrooms.
Salmi of black duck, with Spanish olives.

Joints.

Haunch of venison. Sauce—Gooseberry jelly. Wild turkey with cranberry sauce. Buffalo tongues with spinach.

Vegetables.

Asparagus. Potatoes. Green peas. Cauliflower.

Game.

Woodcock, glace on toast. Quail, with dry crumbs.
Partridge pique, English sauce. Redhead duck, lemon sauce.

Entremets.

English plum pudding, brandy sauce. Champagne jelly.
Charlotte Russe.

Dessert.

Strawberry ice. Lady's fingers. Oranges. Apples. Malaga grapes.
Walnuts. Raisins. Almonds. Pecan nuts.

Tea and Coffee.

Sauterne. Champagne. Port and Sherry Wines.

The chairman read letters of regret for non-attendance from Mr. Geo. B. Reeve, of the Eastern Township Fish and Game Protection Club, and Mr. W. F. Whitcher, Commissioner of Fisheries, Ottawa. After indulging in the good things with which the table was overloaded, the chairman rose and proposed the toast of "The Queen," which was received with cheers and the singing of "God Save the Queen." The next toast was that of the "Governor," which was also drank with much enthusiasm, and the singing of "For He's a Jolly Good Fellow."

Mr. De B. Monk, of the Fish and Game Protection Club rose and proposed the toast "The Dominion Parliament," which was duly honored. Mr. Monk, in proposing this toast said that Canada's good name, prosperity and happiness depended upon the Dominion Parliament, and to it the country was indebted in a very great measure for the stride that Canada had made and the enviable position it had gained for itself among the nations of the world. The all important question of the Canadian Pacific Railway, that was now before the House, would, he was sure, receive that consideration which it deserved, and would be solved to the greatest advantage of the whole country.

"The Quebec Parliament" was the following toast and it received an ovation. The chairman, in proposing the toast, referred in praiseworthy terms to the great good that the local Legislature had done for the citizens of all classes in the Province and referred in particular to the measures passed by that body, which had given life to the club and supported it in the execution of the duties which it had undertaken—the protection of fish and game. The club valued very highly the assistance of the Government in this undertaking and returned it thanks in the name of all lovers of fishing and hunting. One thing which they desire to put an end to is the shooting of spring ducks, which is carried on on a large scale. Last session a petition had been sent to the Legislature praying that an act should be passed to this effect. Unfortunately, through the efforts of *Le Club des Chasseurs*, of Sorel, and the influence exercised by some of the members, the bill did not pass, but at the coming session he was confident that the necessary legislative powers would be obtained and vigorous measures would be adopted against the parties guilty of this offence.

"The Army, Navy and Volunteers" was proposed by Mr. De B. Monk in glowing terms and responded to by Mr. G. H. Matthews, late of the 2d Royal West India Regiment and the singing of "Britannia, the Pride of the Ocean," by Major Ahearn, of the Victoria Rifles.

"The Fish and Game Protection Club" was given by Mr. A. N. Shewn, ex-secretary and member for over twenty years. He alluded in strong terms to the abundance of fish and game in this "Dominion of ours," to the vast range for fishing and hunting, extending from British Columbia to Halifax. In that respect it was the Scotland of this side of the water, and he appealed to the members of the various fish and game protection clubs of the country to stand "shoulder to shoulder," as the Scotchman says, to further the interests of the noble work undertaken.

"Our Sister Societies in Canada," proposed by the vice-president, was received with great enthusiasm and was given a "bumper."

In giving the toast of "Our Guests," the chairman alluded in fitting terms to the services rendered gratuitously to the club by Mr. Euclide Roy in his capacity of legal adviser.

Mr. Roy rendered thanks for the honor done him and he expressed the hope that the club would prosper by the admission into its ranks of gentlemen who hitherto were not members. "The country people," he said, "ought to form themselves into kindred societies and help the work upon which the future of Canada as a sporting country depended."

Mr. E. C. Monk gave the toast of "The Press," which was rightly honored, was responded to by Mr. Smith, of the *Witness*, and Mr. Marcil, of the *Gazette*.

The last, and perhaps best-received toast, was that of "The Ladies," which was responded to in an enlogistic manner by Messrs. Harper and Sutherland.

SAGADAHOC ASSOCIATION.

The Sagadahoc Association for the Protection of Fish and Game held their third annual meeting at Brunswick, Me., Jan. 13, and elected the following officers for the ensuing year: Dr. C. A. Packard, President; A. Q. Goud and J. H. Millay, Vice-Presidents; C. H. Greenleaf, Secretary; I. P. Booker, Treasurer; S. W. Carr, A. Q. Goud, G. H. Nichols, E. W. Johnson, C. L. York, Executive Committee.

The Executive Committee reported the association as in a flourishing condition, with a good membership and money in the treasury. The work done for fish and game has been to sow seed of wild rice, stock ponds with black bass, protect trout streams and plant about three hundred and fifty Messoni quail. A beginning has been made towards stocking the streams and more will be done in the future. A few extracts from the report regarding the quail may be of interest.

"The quail hatched out their young in several instances known to the committee, and in the fall showed a marked increase. Great interest was manifested in their welfare by the farmers, scarcely a day passing in summer but some one reported about the birds. One in Phipsburg allowed two acres of grass to remain unmowed for fear of disturbing the quails that were nesting there. He stated that they became so tame that they visited his yard with his chickens and his cats, supposing they were chickens, did not molest them. The nests found had from twelve to eighteen eggs, in layers of six eggs. If they return in the spring you will be notified at once."

A good work is being done in cultivating and giving expression to public opinion and, as far as possible, in enforcing the laws.

The members meet for three glass-ball matches each summer, thereby getting acquainted, the better to work together.

SECRETARY.

THE UTICA ASSOCIATION.

The Utica Fish and Game Protection Association met at the Butterfield House last week, President Storrs in the chair. We take the following report from a Utica exchange:

Counsellor Dunmore, from the Committee on Game Laws, presented a report, of which the following is an abstract:

Section 1 of the present law prohibits chasing deer with dogs except between August 15 and December 1. It is proposed in Mr. Dunmore's draft to change the time so as to include only the months of October and November. To section 4, which prohibits hunting wild duck, geese or trout in any of the waters of the State during a certain season of the year, coot, rail, snipe, plover and water chicken are added. In section 8, Oneida and Herkimer Counties are included in the law prohibiting the killing of quail for two years. Section 13, which now prohibits killing and exposing trout for sale, is made to prohibit catching trout alive with nets. A new section is added, prohibiting the catching of any spotted salmon or California trout less than six inches in length, and the taking of these fish for stocking private ponds. In section 23 the Mohawk River and its tributaries in Oneida and Herkimer Counties are included in the list of waters in which it is unlawful to fish with any device save hook and line, and the words "except minnows" are stricken out. A section is added in relation to enforcing judgment on conviction of the violation of the game laws. It provides that no person shall be bailed or admitted to the jail liberties. The law now provides that violators of the game laws must be taken before and tried by the nearest Justice of the Peace. An amendment is proposed transferring these cases to the Court of Oyer and Termiuer, giving to justices and similar magistrates power only to issue warrants and hold the alleged offenders for the action of the higher courts. It was stated that under the present law cases are tried before juries who are in sympathy with the offenders and often their accomplices.

Considerable discussion followed, in which Major Everts, Hon. H. J. Cookinham, F. I Meyers, Thomas Burt and Counsellor Dunmore participated.

Mr. Everts moved that a Committee of Five consider the proposed changes, said committee to put the amendments in form and present them to the Legislature. Carried. The Chair appointed as such committee: W. T. Dunmore, State Agent W. P. Dodge, John D. Kernan, I. C. McIntosh, H. J. Cookinham.

Mr. I. C. McIntosh said the season for shooting partridges and such birds should be limited to December 5.

State Agent Dodge said that many persons who fished through the ice for trout claimed they were fishing for suckers. He thought the law should prohibit fishing with hook and line while the season is closed.

Mr. Cookinham said some sportsmen claimed that floating for deer should be made unlawful at all times.

Mr. Dodge agreed with this view. In floating many are wounded and get away. With a dog the game is almost certain to be found.

FIELD AND RIVER SPORTSMEN'S ASSOCIATION.

At a regular meeting of the "Field and River Sportsmen's Association," of New Brighton, Pa., held on January 15, the following officers were elected for the ensuing year: President, Dr. D. McKinney, Jr.; 1st Vice-President, J. M. Farley; 2d Vice-President, W. H. Elverson; Executive Committee—Fred. Hollinsworth, Frank Merrick, John F. Sherwood. Delegates to State Association—A. M. Whisler, W. H. Elverson, J. J. Snellenburg. Our association is in first-class condition, financially and otherwise, and we have authorized the Secretary to purchase twenty-five dozen quail to be distributed through our county. The pointers and setters of our community are not quite so extensive as in other places, but the quality is first-class, and have done some good service the past season. E.

MISSOURI STATE ASSOCIATION.

The Secretary writes: "The Missouri State Sportsmen's Association since its reorganization is now about two years and a half old. There are about twenty subordinate associations or clubs that now belong to the State Association, and many other clubs throughout the State that work in harmony with the organization. Last June the meeting was held at Macon and was largely attended. Many reports from all parts of the State were brought in, which seems to foretell a very bright future for us. The tournament held during the meeting in June was one of the most successful and pleasant ever held in any State, and we look ahead to our next meeting, which is to be held at St. Louis some time in June, for a repetition on a much larger scale. Large preparations are being made for one of the grandest times on record. The affairs of the Association and the local managers at St. Louis are calculated to fulfill every promise. I will report progress."

IOWA STATE ASSOCIATION.

Mr. J. N. Whittam, Secretary of the Iowa State Association for the Protection of Game and Fish writes that the next annual convention will be held in Cedar Rapids, June 14.

Sea and River Fishing.

THE ST. CLAIR CLUB.

DETROIT, Jan. 15.

ONE of the most prominent, wealthy and rational amateur sporting clubs in the West, is by common consent the Lake St. Clair Fishing and Shooting Club. It was incorporated in June, 1872, its legal life being thirty years. The original incorporators were William C. Colburn, President of the Detroit Bridge and Iron Works; Lowell W. Tucker, retired merchant; Colin Fox, then Mich. Supt. of the Western Union Telegraph Co.; Charles Cadman, cashier of the Merchants' and Manufacturers' Bank (now of San Francisco); Geo. L. Field, dentist; James Nall, Jr., merchant; John E. Long, merchant; Morgan S. Fellers, merchant; Eugene Robinson, civil Engineer; Geo. W. Colburn, Secretary of the Detroit Bridge and Iron Works; Ashley M. Van Duzer, literatteur and Browse T. Prentis, lawyer.

The sole stated objected for which this club was organized is "the improvement and perfection of marksmen." Its affairs are managed by a board of seven directors, who are

elected on the first Tuesday of April in each year. Every member, (and there are two hundred of them) must be the owner of at least one share of stock, the entire amount being $25,000 in 1,000 shares of $25 each. The club has its maximum membership now and no new member can be admitted until a vacancy shall occur. A few honorary memberships have been conferred, but the club are rather chary of that kind of hospitality for the reason, I suppose, that it is regarded as no mean honor, and when it is bestowed upon a gentleman there must be some conspicuous warrant for it. To belong to the Lake St. Clair Fishing Club is to be within a charmed and exclusive circle and to have at command the facilities for the best sport under the most enjoyable auspices which the region affords. The Treasurer is obliged to give bonds for the faithful discharge of his trust, and all the Executive officers are held up to the strictest obedience to the regulations by which the organization is governed. The initiation fee is $25 and the annual dues are $10 for each member.

The club houses are situated a short distance above the head of the Lake St. Clair ship canal at the most favorable point for fish and duck in that now historic region known as the Flats. These houses are two in number, the second and larger one having been erected in the summer and autumn of 1880. It is a large two-story and attic structive, with a wide veranda on each of the two lower levels extending entirely around the building. The sleeping quarters are the perfection of airiness and comfort, and the machinery of the cuisine is regarded by experts as the model for sportsmen's clubs the world over. I do not know a more luxurious loafing place on this continent, and I doubt if club life of this particular kind is found more enchanting and appetizing anywhere. Why, it is almost impossible to induce any of the members to take a commonplace vacation in summer. If they can get a day's, a week's or a month's re-pite from business or professional cares, as the case may be, you do not catch them hieing away to Saratoga, the Branch, the mountains or any other "resort," but instead, up they go to the club house, and enjoyment such as I suppose every habitual reader of FOREST AND STREAM appreciates. Beautiful black bass are here taken in enormous catches, and during the season, ducks of all kinds fairly darken the air. I remember that one day, last autumn, three young men killed 193 in a little over three hours' shooting from the banks of the canal, within easy sight of the club house. Fishing, however, is the sport to which the members of this club address themselves with the greatest relish, and the big stories they tell of their achievements with hook and line would seem almost incredible were it not a familiar fact that at no other point in Western waters is there such bass fishing as on these very Flats.

The domestic rules of the club, so to say are exceedingly vigorous. Thus, it is expressly enacted that the buildings shall be kept for the use of members and their families *exclusively*, except that members have the privilege of inviting thither their friends who are not residents of Detroit, the contiguous townships, or Essex county, Ontario. This means, simply, that home guests are to be excluded, all the hospitalities (so far as gentlemen are concerned,) being kept for visitors from abroad. There is a gallant sub-proviso according to the items of which the members may invite to the club houses their lady friends within the tabooed territory for a single day—from morning until evening. You remember the gentleman, who, on starting for Europe, was asked if he were not going to take his wife along. "Great Guns! no," was the amazed reply. "I'm going abroad to enjoy myself." Then again, the clause "families of members" has an iron-bound definition to the effect that said families shall be held to consist of the wife of a member, his daughters, any female who is actually a member of his family, his sons under the age of twenty-one years, and his parents who are sixty years of age or upwards. There is also a stern regulation warning too good-natured members that in extending hospitalities to persons not members it must be understood that it is for sport and recreation only, and that the club buildings are not to be used as a "summer resort," nor as a base of operations for shooting or fishing for market.

The membership of the Lake St. Clair Fishing and Shooting Club represents an aggregation of the best social elements of Detroit. Its affairs are conducted on the high-toned or chivalrous plan—not snobbish, but in just that spirit which is the real essence of the gentleman sportsman's relations to sport of this character. A CLUB GUEST.

AN HOUR ON LAKE DELAWARE.

BY NED BUNTLINE.

THROUGH the kindness of the genial gentleman and distinguished philanthropist, Hon. E. T. Gerry, of New York, and Mr. Robert J. Livingston, of one of your oldest, wealthiest and best families, I received an invitation in the latter part of August last to test the size and gameness of the *Salmo fontinalis* in Lake Delaware, a lovely sheet of pure spring water, a mile long, by one-half in width, with an average depth of twenty feet or more. This inland gem, the brightest and fairest of its size in our State, lies in Delaware County, town of Bevine; is a preserve well protected and stocked with millions of speckled trout, few of which are caught under a pound weight and more, and twice and thrice the size. And as it is shut out from public rods, they have every chance to multiply in numbers and increase in size, few having taken more than is considered necessary for table use, and the country seat of the owners. But their hospitality being numerous guests within the palatial old mansion, and their table never lacks a fair supply of delicious trout among the other viands.

I arrived early in the forenoon at the lake, but the kindness of my reception kept me off the water till after lunch and then I learned a new lesson in trout catching. I had my Orvis rod, as choice a book of flies as ever angler used, but for nearly two hours I could not draw a trout to the top of the transparent water. They were all down about the cold spring holes, the boatman said, and would not rise till near sunset, or when the sun was sinking from sight. I would not believe him, and change after change was made on my leader, and I cast till I was weary, and nothing yet. Finally, near where a bubbling spring ran down the shore, I had a leap for a bright McLeod. A lazy one-pounder took the hooks, and in less than a minute, with only a swivel or two, was drawn within reach of the landing net, my light rod scarcely bending, so little did he try to get away. Another, no larger, came up soon after and I got him.

From thence I had no rise to the fly. But my boatman said "Put a single hook, a good and stout one on a strong leader; let your hook sink of its own weight fourteen or fifteen feet, and see what comes." I rigged my line; he put the red fin of a small sun fish on it, and I let my hook sink. The sun was now almost out of sight.

"Jerusalem, what's that?" I cried a minute later.

My line went out as if a locomotive was off with it. Full forty yards were off the reel before I got it checked, and then my six ounce bamboo was doubled down till the tip was almost within reach of the hand that held the butt.

"You'll have all you you want now!" said the boatman. "Reel in, please, if your rod will stand it. There's more where he came from!"

I tested rod and tackle as I never did before, and soon, shooting here and there, but nearer to the boat every second, a speckled giant flew through the crystal water! Soon he was within reach of the net, and Ferguson, the gallant boatman, had him raised and in the boat.

"A three-pounder, sir! Hurry up now, you'll have fun for the next hour!"

And I did; no rise to a fly, but a strike for a sunfish fin when the hook was anywhere from five to fifteen feet down, and all as large as the last. An hour went by, and it was getting so dark I could see line or rod, scarcely. Then I counted my fish. Afterward I weighed them. Thirteen in all; the weight twenty-eight pounds; and if that was not worth "an hour on Lake Delaware," what could be?

Earlier in the season the catch would have been larger, the boatman said, and the fly would have done the work. But in August no large trout would come to the top, but sought for at twilight in the morning or at sunset in the evening, they could be had as I caught them.

My valued friend, G. W. Van Siclen, will say it was hardly like me to pull fish from the bottom, but I could get them no other way, and as I said above, I learned a lesson, old as I am. I know another lake, near Westfield Flats, that is full of fish, and yet last summer was whipped with the fly by scores of good New York fishermen, who could not catch enough to eat. Had they tried my plan their fortune would have been better.

In the colder lakes, like Blue Mountain, Eagle and Utowana, the August fishing is only good with the fly. But in waters fed by bottom springs mostly and more open to a summer sun the sport is changed.

THE AUTOMATIC REEL.

THIS reel, which is advertised in our columns involves a new principle and seemed so different from anything before made that we were tempted to write for a description of it and have received the following.

In size, weight and general appearance it does not differ from the reels in ordinary use; the line is withdrawn from it, as from the common reel, to any desired length.

In case the leader and flies get entangled, or the hooks are caught in water grasses they can be brought to hand, instantaniously, by a simple movement of one of the fingers of the hand holding the rod.

It will reel in a hundred feet of line sooner than any reel in use will reel five feet; or it will reel it in as slowly as the fisherman may desire.

But it is when a game fish is struck that the advantages of the "Automatic Reel" become most apparent. By a movement of the finger, as before described, an instantaneous tension of the line is produced; so delicate that, if the angler chooses to allow it and the fish be obstinate, he can run out the whole length of line against a continually increasing resistance, more or less augmented as may be desired. If the fish makes a charge in the direction of his captor, no matter what his rate of speed may be, the reel takes up the line so rapidly, that no slack can possibly be obtained. All this is accomplished without the use of a crank, which, though a useless appendage to this reel, will be furnished to those who wish it so constructed as to be attached at pleasure.

The multiplying gearing is planetary in construction, is light, compact and durable, requiring to be wound up when the line is first put on, and never afterward; being once set will run for years.

HOW TO BAIT FOR BASS.

IT may seem like assurance on my part to criticise Mr. Seth Green's method of "How to Catch Bass," as described in the New York *Sun*, but I am bold enough to differ with him as to the proper manner of baiting the hook, either with a live minnow or crawfish, and am willing to refer the matter to any jury of Kentucky or Indiana bass fishermen

Mr. Green says in using minnows for bait, "insert the hook through the middle of the back, just above the backbone," etc Now, I say that the point to be gained is to keep the minnow alive as long as possible, and I cannot imagine a speedier way of killing a young and tend r fish than by hooking it through the back, throwing it into the water and jerking it out again. I agree with Mr. Green in saying that the first striking of the bass is simply to catch his prey, and that he then runs off and proceeds to turn the minnow preparatory to swallowing it head first. Now, according to Mr. Green's manner of hooking a minnow (four inches long) through the back the bass must of necessity swallow at least two inches of the minnow before the hook reaches his mouth, and should the minnow be a chub, sucker or shiner of four inches in length it is a rather good-sized or thick fish, and I hold that so small a hook as he describes would, at least half the time, pull out of the fish's mouth without touching it; for it must be remembered that while he is engaged in swallowing the two and a half inches of the bait he has to contend with the same amount of line or shell, while the hook is hidden in the minnow and, from its size, so out of proportion to the size of the bait, is more than likely not to touch the mouth of the fish, so as to follow Mr. Green's method of baiting it kills the minnow, hides the hook and forces upon the bass the necessity of doubling up a line and swallowing two and a half inches of a large minnow before you can strike with any certainty of hooking him—this in case he survived his labors in getting down to where the hook was placed. Now, the blue cat of the Wabash River is the only fish in America that can swallow a minnow tail first, so the Kentucky and Indiana way of hooking a minnow is through both lips, not touching even the mouth, but just through the rim or cartilage of the lips, and in this way he cannot drown as his mouth is shut, and when you pull him out to make another cast you do not injure him nor break his backbone for he is moved naturally through the water, and as he is in no pain he will live longer than if hooked in any other way, and as we agree that the bass takes the minnow head first when he takes his second start he has the head of the minnow in his lip, and as this contains the hook now is the time to pull.

I agree perfectly with Mr. G. as to the manner of hooking the crawfish for bait, and there is no bait so good as a soft crawfish in the last of June, and from that until the last of August, and as the bass is an epicure he knows exactly when such things are in season and to be had, so when crawfish are shedding a bass will seldom be tempted by the choicest minnow.

I, however, disagree with him as to the manner of the bass in swallowing this bait, and contend that the fish takes a common sense view of the case, and also swallows the crawfish head first, for swallowing it tail first would be very much like attempting to swallow a half open umbrella handle first in preference to taking it other end first, for the tail of the crawfish is so arranged that it will contract or expand in a manner very similar to the umbrella. However, I do not contend that the fish cannot and will not swallow a crawfish tail first, but in the case of the minnow I decidedly do.

U. S. S. New Hampshire.

FISH PESTILENCE IN FLORIDA.

WASHINGTON, D. C., Jan. 27.

IN referring to the fish pestilence in the Gulf of Mexico, in connection with the article of Mr. S. T. Walker, the error was inadvertently made of stating that the proposed investigation of Dr. Guiteras was under the direction of the National Board of Health. The inquiry was instituted, and Dr. Guiteras was detailed to prosecute it, by Dr. J. B. Hamilton, Surgeon-General U. S. Marine Hospital Service, in Washington. Respectfully yours, SPENCER BAIRD.

PROPOSED CHANGES IN THE FISH LAWS.

THE special committee of the Long Island Association for the Protection of Fish and Game at their recent meeting at the Fulton Market Fish Monger's Association had discussions which show that they are not unanimous on all questions, especially on the refrigerator amendment Several prominent dealers who had been invited to submit suggestions attended and materially aided the committee. Mr. Robert Furey presided, and Mr. Abel Crook, President of the New York State Association for the Protection of Fish and Game, acted as Secretary.

The following fish were named, and the least weight at which they should by law be offered for sale in the markets was discussed. One by one the fishes were debated over. Blue fish, not under three-fourths of a pound; weak fish, not less than half a pound; sea bass, half a pound; porgies, half a pound; black bass, half a pound; yellow perch, one third pound; white perch, one-fourth pound; mullet, one-fourth pound; butter fish, one-fourth pound; flounders, half a pound; sun fish, one-fourth pound; Spanish mackerel, one pound. It was decided that dressed eels should not be less than twelve inches long, while eels not dressed might be sold fifteen inches long. Also to prohibit the catching of shad from sundown Friday night until sundown Saturday, of each week, and none to be sold less than one and a half pounds.

Several communications were read, including one from Francis O. de Luze, of No. 18 South William street, asking the Legislature to prohibit the use of "fykes" in the East River. The fishing in the river is being totally destroyed by this species of net, and that they should not be used below Fort Schuyler. He also complains of the menhaden boats, which fished last summer about the mouths of Little Neck, Cow Bay and off Whitestone, Long Island, taking all sorts of fish in their large nets.

Mr. Chappell proposed that whitebait shall not be caught in New York waters, because there is a dispute as to what whitebait really is. The demand is so much larger than the supply that the young of many kinds of valuable fish are caught.

State Fish Commissioner E. G. Blackford had paid great attention to this matter. He had induced fishermen to try if our waters did not contain the whitebait, so famous in England. He obtained from Prof. T. J. Moore, of the Derby Museum, Liverpool, specimens of whitebait in order that they might be compared with the young of fish caught in New York Bay to determine the question whether we have whitebait or not, and Mr. J. Carson Brevoort thought them present in our waters.

Some were obtained and Prof. Spencer F. Baird pronounced them the young of two distinct species, the common alewife and the other the sea, or Taylor shad—both resembling the herring. After a long and keen discussion among naturalists in England about the origin and real nature of the whitebait it has been demonstrated that whitebait are simply the young of herring. After these young herring had been tested and found to be equal to English whitebait the demand far exceeded the possible supply, as not over fifty pounds could be caught and brought to the city in one day. Having determined that they were not the fry of any of the valuable food fish Mr. Blackford took measures to procure a supply, and a demand for them as white-bait was soon created. He was very careful to examine them with a view of detecting other fish, but did not find any young shad or other valuable fish. A few specimens of bluefish and an occasional mackerel fry were detected. He had not received any complaint that in selling whitebait he was selling the young of valuable fish. Certainly seven-eights of the fish sold as whitebait are anchovies. If the real whitebait should be allowed to grow to maturity they would be herring, and would bring two cents a pound, or half a cent apiece.

The brook trout law was then discussed. Mr. Blackford said that the present law was unjust to marketmen. No man was more anxious to obey the spirit and letter of the law than he, but if a box of trout were shipped to him in the close season without his knowledge, and he did not know its contents, a citizen who saw him open it could have him fined. In such a case, or if he had 1,000 pounds of trout on hand when the season closed, he was willing to destroy them or give them to a charitable institution. He thought that refrigerating trout would be an evasion of the law.

On Mr. Chappell's motion it was decided that the President of the New York Association for the Protection of Fish and Game should have the power to appoint officers to be deputized by the Sheriff of the county to take or receive by voluntary surrender any fish or game found illegally in possession of any person in the State, and to give the fish or game seized to the county's poor.

The proposed amendments were concurred in, and will be included in the report of the committee to the Legislature, together with others offered by Mr. Farly, to the effect that no persons shall use a drag-net in the waters of Coney Island Creek or Gravesend Bay from May 1 to Oct. 1.

LAKE JACQUES CARTIER.—A trustworthy correspondent writes: "In the last number of FOREST AND STREAM you have a letter on "Trout-Fishing in Canadian Wilds," written from Quebec by a person under the name or *nom de plume* of F. Roberge, detailing a trip to Lake Jacques Cartier. Now, my dear FOREST AND STREAM, I hate to see you sold. Lake Jacques Cartier is a totally played-out lake. It has been fished so long with nets and hand-lines by professional marketmen, that twenty trout, averaging a quarter of a pound, would be a big day's fishing there. These men go there in the winter and camp and never go out or stop fishing until the ice breaks up in spring—at least they did this until two winters ago; but now it does not pay, so they have stopped. "Roberge" says they caught 1,500 trout from noon of Monday until Wednesday night, just two and half days and just 600 trout to two rods a day. This is pretty fair trout-fishing, I should judge. I have traveled the length and breadth of Lower Canada and fished in as many different lakes as any man in the country, but this is a little ahead of any trout-fishing it has been my luck to find. Taking away lost time in rowing the boat, meal times, etc, it is a most extraordinary catch for any lake. What a supernatural thing it is, then, for Jacques Cartier. Again, the country about this lake is an impassable morass in summer, that cannot be crossed until the frost of winter has hardened it enough to permit of doing so. Yet this man took a boat within two miles of the lakes, and this on a buckboard, a vehicle that will only carry two ordinary men in safety and are only intended for one during wet or muddy times. He is not astray more than several miles in the size of the lake; but then I suppose a mile or two makes no difference to him. Again, what would trout be like caught in a warm month like September or August, kept two days without ice, then put into a box and jumped about for two days longer over a rough road? Nice fish they would be.

IN MEMORIAM.—Mr. Thomas Tod Stoddart, a well-known veteran English angler and author, died recently. The following lines, entitled "The Angler's Dirge," are from his own pen:

Sorrow, sorrow, speed away
To our angler's quiet mound,
With the old pilgrim, twilight gray,
Enter thou the holy ground;
There he sleeps, whose heart was twined
With wild stream and wandering bourn,
Wooer of the western wind,
Watcher of the April morn!

"A WATER GLASS".—In your issue of Dec. 30, 1880, I observe a letter signed "M" with the above heading. I have known an instrument used for finding lost anchors in deep water something similar to that mentioned by Mr. Benjamin. Its construction is simple, a long wooden box or "shute" say 3 ft. 6 in. by 12 in. by 10 in., with a pane of glass inserted in one end the other open, the seams of the box caulked to make them water tight and two handles fixed on the sides. When used the end of the box containing the glass is sunk a short distance under water, and on looking down through it the operator finds that the effect is to completely nullify the "ripple" or roughness of the water at the surface rendering the bottom visible at a considerable depth. A. T. KETTLE.

STRIPED BASS IN THE HUDSON.—Large numbers of black bass, or rockfish, are reported caught in the Hudson River. Between Peekskill and Kingston Point many are taken from five to thirty pounds in weight, under the ice. At Poughkeepsie they sell for ten cents a pound and in New York for twice that sum.

Fish Culture.

THE CENTRAL FISHCULTURAL SOCIETY.

[CONTINUED.]

MR. BARTLETT: I can add something to the evidence of the wonderful growth of carp in America as shown in the paper read by Mr. Mather, a noticeable feature of which is that all the accounts seem to agree in their figures of size, gradually increasing as the reports come from the warmer waters of the South. In June last I received a lot of carp from Prof. Baird which were from 2½ to 3½ inches in length. Some of them escaped from their confinement in a period of high water, and a few were recovered in September, one of which measured 12½ inches and it is probable that some are larger.

The following paper was then read:

PROTECTION OF FISHES IN LAKE MICHIGAN.

BY WM. H. BALLOU.

Since 1876 the whitefish industry of Lake Michigan has been on the wane. Indeed, the catches have been so light of late that many pound nets have been left to their fate and the owners have sought more profitable employment. Not many years ago the angler who cast his fly off the lake shore from some craft or pier was often rewarded by a fine trout. Of late no such welcome bite greets the efforts of the idler in the lower part of the lake, nor in fact do we now see the fisherman wending his way home with the old-time long string of perch. These remarks apply to Southern Lake Michigan. What troubles the waters of the lake, and why have our game fishes become so scarce in their accustomed haunts? These are grave problems for consideration; so grave that it devolves on this association to take such action at this meeting as will influence legislation toward a better protection of common interests.

Why protection is needed. Nearly every article of commercial value is afforded some protection, either by nature or the laws of man. The laws regulating the destruction of game birds and mammals are very rigid. Those relating to the fishes of rivers and inland lakes are likewise strict. Strange as it may seem, when one considers the staunch laws of New York relating to Ontario's waters, Lake Michigan, entirely an American lake, is left alone, and its inhabitants given over as prey during all seasons.

Disappearance of Whitefish. The remarkable fact of the disappearance of whitefish of late has been noted above. In the latter part of July, the *Inter-Ocean* intrusted to me the solution of this intricate question. In an article published on the 29th of that month I gave the results of my investigations, which I incorporate in part here. These fish seek the deep portions of the lake in cold and hot weather, where they find an equal temperature, sufficiently warm for winter and cold for summer. They leave their winter quarters about the 20th of May, and scatter along the coasts to their accustomed feeding grounds. In latter October and November they leave the feeding for the spawning grounds. It is during these fall migrations that some stringent law should prevail for their protection. By means of that terrible machine of destruction, the gill-net, literally vast numbers of whitefish are secured by fishermen who follow them in their migration. If there is any law which ought to deal with rigidity, it is that one which will effect the right use of the gill-net. It is a fact of my own observation, substantiated by Milner and others, that during October and November, when spawn is ripe in the whitefish, these obnoxious nets and the boats of fishermen fairly reek in the milt and spawn of captured victims. Is it any wonder that these fish are growing scarce; that not only consumer, but fisherman should cry to legislative halls for protection?

By careful study of tables of the industry, I have determined that the decrease of whitefish in Lake Michigan is 25 per cent. per year for the last twenty years. I shall not discuss the minor causes of destruction in this paper, but shall deal with the one great source of evil. Prof. Milner has ably examined these minor causes, but left totally untouched, the fact that in violation of an unwritten law, tens of thousands of female whitefish were being taken when ripe with spawn. This is the great consideration with which we need only to deal, to have the lake once more prolific with an abundance of choice fishes. I shall therefore offer a recommendation to this association relative to this point at the conclusion of this paper.

Catalogue of Fishes of Lake Michigan.—There are at least ninety-eight species of fish inhabiting Lake Michigan, all of which should come under the law of protection Milner gave a list of about sixty species, in the report of the United States Fish Commission for 1872-73. The nomenclature of nearly all of this has been totally revised since. I have made use in this list of my own material and all publications from which anything could be gleaned. I found the proof sheets of the forthcoming *Bulletin* of the State Laboratory containing Professor Forbes' paper relative to the dietary habits of fishes very accurate and useful. Prof. Jordan's "Manual of Vertebrates," which I followed largely for nomenclature, I found entirely void of the first iota of information relative to breeding habits. This otherwise exceedingly valuable and indispensable work seems sadly deficient in this particular. One line to a species would at least state the time of spawning. The following is the list?

1. Black-sided darter; blenny darter, *Alvordius maculatus*. A curious and elegant fish.
2. Fan-tailed darter. *Etheostoma flabellaris*. An abundant species.
3. Striped darter *E. f. lineolata*. A supposed varietal form of the preceding.
5. Common yellow perch, *Perca americana*. Spawns in winter.
6. Pike perch; wall-eyed pike; salmon; dory; glass-eye; yellow pike, etc., *Stizostetheium vitreum*. An edible but voracious fish, which most fishermen ignorantly discard from their nets. Spawns in winter.
7. Gray pike perch; sauger. *S. canadense*. A highly destructive, edible species, which breeds in winter.
8. White bass, *Roccus chrysops*. Common to Lake Michigan. Spawns in the fall.
9. Black bass; Oswego bass; large-mouthed black bass, *Micropterus salldus*. An elegant, voracious, carnivorous species which spawns in summer.
10. Small-mouthed black bass; moss bass; *M. salmoides*. A fine, edible fish. Breeds in summer.
11. Rock bass, *Ambloplites rupestris*, a ubiquitary species, breeding in summer.
12. Blue spotted sun-fish; roach, *Apomotis cyanellus*. An edible but bony fish of more general distribution than that accorded it by Jordan. Breeds in summer.
13. Black sun-fish, *Chenobryttus gulosus* A large fish, breeding in summer.
14. Blue spotted sunfish, *Apomotis cyanellus*. An abundant species in Western waters.
15. Blue orange sunfish; sun perch, *Xenotis megalotis*. A brilliant species, largely found in the more northern waters.
99. Common sunfish; pumpkin seed; bream, *Empomotis aureus*. One of the most widely distributed species. The best possible bait for the large pickerel. By means of it the writer has been able to secure the most gigantic specimens of the pickerel and pike tribes by simply dragging a live sunfish through the water on a hook.
16. Grass bass; calico bass, *Pomoxys nigromaculatus*, a handsome, summer-breeding fish.
17. Sheepshead; white perch; grunter; drum, *Haplodonotus grunniens*. The appearance of this fish from deep waters is always a signal for the disappearance of the whitefish during extreme hot weather.
18. Kumleins cottis, *Uranidea kumlieni*. A deep-water animal.
19. Franklin's cottus, *U. franklini*. An inhabitant of the south and east shores of Lake Superior, which may doubtless be found in extreme northern Lake Michigan. Milner calls it a Lake Michigan fish.
20. Hoy's bull-head, *U. hoyi*. A deep-water fish named after Dr. Hoy, of Racine.
21. Lake Superior Miller's thumb, *Potamocottus meridianalis*. A large species ascribed to Lake Michigan by Milner (Rept. U. S. F. C., 1872-73, p. 35, as *Uranidea richardsonii*).
22. Rice's sculpin, *Tauridea spilota*. A species named after Frank L. Rice, of Evanston, of deep-water habitation.
23. Deep-water lake sculpin. *Triglopsis thompsoni*.
24. Stimpson's sculpin, *T. stimpsoni*. A sculpin of deep-water procivities named after Dr. Stimpson.
25. Ling; Burbot; lake lawyer; eel pout; lake cusk, *Lota lacustris*. A fish whose real edible value is confined to its liver.
26. Brook stickleback; Ohio stickleback, *Eucalia inconstans*. A nest-building species.
27. Lake Superior stickleback, *Eucalia inconstans pygmæa*.
28. Many-spined lake stickleback, *Pygosteus occidentalis nebulosus*.
29. Silver skip-jack; river silver side, *Labidesthes sicculus*. An inhabitant of Lake Michigan, according to Milner.
30. Barred killfish; spring mummichog, *Fundulus diaphanus*. I am inclined to give this fish a place as an occasional inhabitant of the lake, and perhaps other killfishes.
31. Mud minnow, mud dace, dog-fish, *Melanura limi*. Milner mentions this species.
32. Muskallunge; great pike, *Esox nobilior*. A common species.
33. Great lake pike; northern pickerel. *E. lucius*. A short-stubbed species.
34. Trout perch, *Percopsis guttatus*.
35. Mackinaw trout; great lake trout, *Salmo namaycush*. The pride of the lake. Milner claims that this fish does not eat whitefish, and demonstrates his point quite satisfactorily.
36. Siscowet; Lake Superior trout, *Salmo siscowet*. This fish is undoubtedly found in northern Lake Michigan.
37. Brook trout; speckled trout, *Salmo fontinalis*. A familiar species.
38. Lake herring; Michigan herring, *Coregonus artedi*. An abundant shallow-water species.
39. Black fin, *C nigripinnis*. A deep-water species.
40. Lake Michigan cisco, *C. hoyi*. The smallest of ciscoes and the prettiest.
41. Lake whitefish, *C. albus*. The most important fish of the lake. Spawns in fall.
42. Menomonee whitefish, *C. quadrilateralis*. A more northern species than the last.
43. Moon eye, silver bass, tooth heron, *Hyodon tergisus*. A beautiful fish.
44. Ohio gizzard shad; thread shad, *Dorysoma cepedianæ heturura*. An "escaped" species belonging to the Ohio and Mississippi rivers.
45. Storr's minnow, *Hybopsis storerianus*.
46. Spawn eater, *H. amarus*.
47. Long-finned minnow, *H. columellus*. I give this fish the benefit of a doubt and include it here.
48 Red-tailed minnow, *H. hematurus*.
49. Cope's minnow, *H. lacertosus*. I take pleasure in dedicating this fish to my friend Prof. Cope. He gave it a scientific, but not a common name. Such modesty should have a reward, even at a late day.
50. Common shiner; red-finned; rough head; red fin, *Lucilus cornutus*. A widely dispersed species.
51. Silver shiner, *L. selene*. An extreme northern species.
52. Rosy minnow, *Notropis rubellus*.
53. Emerald minnow, *N. dinemus*.
54. Red-sided minnow, *Gila elongata*.
55. Shiner; stilbe; bream, *Notemigonus chrysoleucus*.
56. New world minnow, *Phoxinus neweus*. Found on both sides of the lake, and consequently given place as a doubtful species.
57. Northern hemitremia, *Hemitremia heterodon*. Included on the grounds of the last species.
58. Common chub; horned dace, *Semotilus corporalis*. One of the most widely diffused of the *cyprinidæ*.
59. Horned chub; jerker, *Ceratichthys biguttatus*. The most widely diffused of fresh water fish.
60. Lake chub, *C. prosthemius*.
61. Milner's chub, *C. milneri*.
62. Spotted shiner, *C. dissimilis*.
63. Long-nosed dace, *Rhinichthys cataractæ*.
64. Marbled dace, *R. marmoratus*
65. White mullet of the lakes, *Myxostoma carpio*.
66. Red horse, common mullet, *M. macrolepidota*.
67. Lake mullet; eastern red horse, *M. m. macrolepidota*. A variety of the last.
68. Golden red horse; lake mullet, *M. aureola*.
69. Small-mouthed red horse; white nose, *M. velata*.
70. Long-tailed sucker, *M. anisura*.
71. Small red-mouthed horse; white nose, *M. velata*.
72 Spotted mullet; striped sucker, *Minytrema melanops*. One of the elegant species.
73. Creek fish; chub sucker, *Erimyzon sucetta*.
74. Stone roller; hog sucker; mud sucker, *Hypentelium nigricans*. A "singular" fish.
75. Common sucker; white sucker, *Catostomus commersoni*.
76. Red-sided sucker; long-nosed sucker, *C. longirostrum*.
77. Moon-carp sucker, *Carpiodes selene*.
78. Lake-carp sucker, *C. thompsoni*.
79. Common channel cat; blue cat; white catfish, *Ictalurus punctatus*.
80. Great fork-tailed cat; catfish of the lakes; Mississippi cat; Florida cat; great blue cat, *Amiurus nigricans*. The largest of the *siluridæ*; said to attain 200 pounds' weight.
81. Yellow cat; chubby cat, *A. natalis*.
82. *A. n. cupreus*.
83. *A n. eanosus*.
84. Long-jawed cat, *A. vulgaris*.
85. Bullhead; horn pout; small catfish, *A. catus*.
86. Mud cat, *Pelodichthys olivaris*. A river species.
87. Yellow stone cat, *Noturus flavus*. The largest of this genus.
88. Cubby stone cat, *N. sialis*.
89. Common American eel, *Anguilla acutirostis*. Introduced into Lake Michigan.
90. Bowfin; dogfish; mudfish, *Amia calva*.
91. Gar pike; bony gar; billfish, *Lepidosteus osseus*.
92. Short-nosed gar-pike, *L platystomus*.
93. Duck-billed cat; spoon-billed sturgeon; paddlefish, *Polyodon folium*. Runs up the canal from the Mississippi. Has been even taken in Lake Erie, in one instance, to my knowledge.
94. Red sturgeon; lake sturgeon, *Acipenser rubicundus*.
95. Small black lamprey, *Amocetes niger*.
96. Silvery lamprey, *A. argenteus*.
97. Leech lamprey, *A. hirudo*.

Can Protection be Afforded Inland Waters?—I have carefully examined all game laws in vogue by those States bordering Lake Michigan, and find no mention of it whatever. It has been left wholly to itself as if its fishes were of an inexhaustive abundance. The question, therefore, most prominent is: Have bordering States jurisdiction over portions of the lake next to them? They have. Let me give a legal demonstration of this point. The action of the general government relative to inland waters demonstrates that States have, and not it, jurisdiction over navigable waters within or bordering them. For instance, it is found practicable to erect a lighthouse on some rocky ledge, six miles out in or on the shore of our lake. The contractor makes application to the State claiming the point in question, for permission to so build. It owns no lands nor asserts jurisdiction over none not specially set apart by Congress. Having obtained permission to erect a lighthouse or signal service station it provides all the funds necessary for the maintenance of the structure. This fact, together with those well-known that the government is also required to ask permission of States to remove obstructions, fortify military positions, make coast surveys, contract harbors, breakwaters, etc., on their territory, shows conclusively that the general government recognizes the jurisdiction of States over their coast waters which it only professes to protect.

The duty, then, of States in this direction is clearly defined. The responsibility cannot yet be laid at the door of the United States Government.

Let me distinctly state that a general law should extend to all fishes of whatever proclivities, for their protection and preservation. Do we not protect every individual bird? Is

a bird more useful, more palatable, more beautiful, more of a scavenger than the fish? There are some harmless fishes which should no more be molested than some harmless birds. The eel is just as much of a scavenger as the turkey buzzard, which is so carefully guarded; and furthermore, it is a valuable food fish furnishing a flourishing industry to thousands of men, and the necessaries of life for their families. It should be just as unlawful for the fisherman to toss his hundreds of socalled unimportant fishes on the bank to die as for one to needlessly slaughter birds. These wasted fishes all come within the economy of nature. The time has never existed when one more perch or sunfish, so despised, was created than was needed to meet some natural law. They are the food of larger and hungrier fishes, the mink and other animals. They are a water scavenger and purifier, feeding on animal life below their order. The darter is as innocent, as beautiful, and as useful as the hummer. Finally, fishes have delicate structures, and senses of pain, hunger, besides intelligence. It is as vicious to leave one to die out of its natural element as to drown a warm blooded vertebrate.

I have argued these claims at length to impress this association with the necessity of extending protection rigorously to all fishes, and to demand of States at this meeting that humane and righteous laws be passed for the protection of the innocent, and the propagation of the food-fishes. I would suggest that a scientific committee be appointed to determine the proper protection and time of the same for each lake fish; that this committee draw up a series of resolutions, and that another committee, consisting of members from each bordering State, be authorized to present the resolutions to their respective State Legislatures. I would further suggest that the scientific committee be authorized to confer with the United States Fish Commission, relative to urging upon Congress the necessity of passing a general law for the protection and propagation of food-fishes of the Great Lakes. The general government has its agents scattered all along the coasts, and its gunboats with equipments for the detection of smuggling. By these means it could terrorize those fishermen who have no respect for the rights of the inhabitants of a defenseless community, or their own interests.

[The other papers and discussions will follow as fast as we can publish them.]

SALMON EGGS IN MILT.

GRAND LAKE STREAM, Maine, Jan. 24.

IN your issue of Jan. 20 I have just read a note of Mr. Von dem Borne's on the transportation of newly impregnated eggs in milt without water. I have had some experience in this matter, and the results are such that I feel bound to warn fishculturists against trying such an experiment on a large scale.

Several years ago while seeking earnestly to overcome the defective degree of impregnation which has always troubled us here at Grand Lake Stream I ventured to keep a great many salmon eggs in contact with the milt for a long time—one, two, three hours and even longer. The result was disastrous, while the ratio of impregnation was not improved by the operation, the development of the eggs so treated was very irregular, and great numbers of them perished. Afterward by critical experiments I satisfied myself that the protracted contact of the milt was the cause of these failures.

I will quote from my note-book a single experiment. In 1870 the eggs were for the most part washed off immediately after applying the milt. I believe this to have been done in every case except one, and our average losses amounted to 11 per cent. on the crop. A single lot of eggs numbering 5,156 was, for experiment's sake, allowed to stand for four hours and forty minutes in the milt. Not one of these eggs ever hatched. Every one of them died, turned white and was picked out. I might cite many similar examples.

My advice is to allow no salmon eggs to stand in the milt more than fifteen minutes. We always practice severe agitation of the spawn pan to secure contact of milt with every egg, and then immediately wash them clean so that it often happens that barely a minutes' contact is permitted. But a minute is ample so is a second.

I think that eggs and milt might be transported separately without water, in bladders, jars or other tight vessels, but there is a limit to the time they can be kept after leaving the fish. I once corked up some eggs just taken from the parent fish, kept them under water for forty-eight hours and impregnated 41 per cent. In another experiment I kept eggs in an open dish in the air, and found that their capacity to receive impregnation declined rapidly after six hours, and at the end of twenty-four hours was wholly lost. This result is also corroborated in a general way by other experiments. C. G. ATKINS.

DO QUINNAT SALMON DIE AFTER SPAWNING?

SAN FRANCISCO, December 27, 1880.

Professor Spencer F. Baird:

My attention has been called to my letter of Sept. 26, 1876, and Mr. Livingston Stone's comments thereon, as found in pp. 815-818 of your report for 1878. In stating Mr. Stone's remarks about all salmon dying after spawning, I was in error mentionm the Sacramento instead of the McCloud River. But I intended my remarks to apply to the river he mentioned, and I have seen no reason to change my opinion since writing.

That many and probably a very large proportion of the female salmon die in the McCloud River after spawning is no doubt true, but the same proportion of female fish die in other rivers which they ascend under the same conditions of life, age and difficulties of navigation. A close examination of fish as displayed upon the stalls of our markets in summer, will convince any unbiased close observer that many salmon are deficient in vitality to successfully ascend long and rapid rivers, cast their spawn and return the same distance to tide-water. In the case of river-spawning-salmon the results cannot be definitely known, owing to the habits of those which survive and the concealment that waters permits against the closest scrutiny. It is admitted by Mr. Stone that some spent salmon do find their way back into tide-water through the Sacramento, but he claims that these come from some other stream than the McCloud River. This is simply a guess to sustain his theory, as there can be no positive proof to the contrary. He will admit, however, that salmon of various sizes and ages visit the McCloud River together to spawn during the season. That some of these salmon are more battered and worn out than others, and that the spawning season is a prolonged one extending over several months time. A portion of this time of visit is before the annual building of the dam at the hatchery and a portion after the taking of spawn by his employees is past. That, as soon as the heavy rains come in December and sometimes even in November, the dam is swept away and the river is open to the fish to go up or down, as they choose, until the next year's dam is built. That the dead salmon are to be found in great numbers in the McCloud River for a limited season only, and that with the exception of only one month, spawning or nearly spawning fish are to be had at all times of the year. Prior to the late rain (18th inst.) there was a large run of salmon going up the Sacramento River, the catches of the boat averaging from forty to fifty fish each, daily, from the first inst. The canners claim that these late salmon are those which have been spawned at the hatchery, as no similar run has ever been known on the river and there are no branches of the main Sacramento that could afford proper spawning ground for such a vast body of fish outside of the upper Sacramento, Pitt or McCloud rivers.

In regard to the taking of spent fish in the lower Sacramento River, the testimony of fishermen is that some are caught in the nets, while, owing to the salmon drifting down river, tail foremost, many fish escape. In this connection I have a theory of my own, which, I think, is at least plausible and accounts for the great bulk of spent salmon not being seen or taken while returning to sea. It is that instinct causes the salmon to float down with the current with its head up stream, because in its weak state there is less labor in so doing than in any other way. That it breathes with less difficulty and in case of stranding, the tail being down stream, its motive power admits of its rescue.

All persons who have investigated the habits of salmon in fresh water state that it seeks no food either in going to or returning from spawning, also that its vitality in such cases is largely exhausted. I therefore think it very probable that the spent fish, to avoid its numerous enemies, drift down stream near the bottom out of reach of the nets which are floating above. It is proper to say that both Mr. B. B. Redding, State Fish Commissioner, and Mr. Richardson, connected with the hatchery, oppose this theory, claiming that spent salmon drift on the surface where they have been readily seen. My answer to this is that the surface fish were the weakest of the return run and naturally floated, as they were about to die and be stranded on the shores a short distance below.

My experience with salmon and salmon-trout in the coast-streams makes me think that the spent fish of the Sacramento River must remain some time, probably two or three weeks, in the brackish water of Suisun Bay before recuperating sufficiently to go to sea. This, if so, would confirm my theory that the spent fish progress along the bottom instead of the surface of streams, as few, if any, are taken by netting in brackish waters.

As to salmon overcoming difficulties in ascending streams, an instance that I witnessed may interest you. Some years since, in June, the lagoon of San Gregorio, about forty miles south of this city, being closed by a sand-bar, I opened it to the sea one afternoon. The next day I went up the creek to fish, and, when about four miles from the sea, heard a great splashing in the creek below me, which was caused by a salmon passing over a shallow place. When I saw the fish it was in shallow water with its fin and a portion of its back out of water. It swam up stream into a hole, above which was a long gravel bed, over which the water trickled until just before falling into the hole, it drained into three small channels. The salmon made an examination of these channels several times apparently undecided which to take, but finally made a rush up one, working a track about ten feet long up the gravel bed, when he rested. I tried to catch him when he struggled again, completing his track (about twenty feet long) into the upper hole and escaped me. Had the bottom been of rock, he would have worn his tail fins, as it was he made a track in the pebbles, into which the water ran, half floating him. As the lagoon had been closed for weeks previous, this salmon, with a companion, (which was taken a few hours previously) must have passed from salt to fresh water within twenty-four hours and, being nearly three months after the usual spawning-time, was in an abnormal condition. "That the spawning-season is a mere accident of place," as stated by Mr. Stone, I do not believe, as the young of Lake Tahoe trout hatched out at Lake Merced, about eight miles from this city, spawn in June, the same time as the parent fish. Lake Tahoe is over 6,000 feet above the sea, while Lake Merced is not fifty feet above and about a mile from the ocean.

During last July immense schools of large salmon were feeding in the sea off Monterey, about ninety miles south of this city. Many were taken by trolling, the sport lasting nearly the whole month. There were reports about the same time also of similar schools of salmon off Point Conception, about 200 miles south of Monterey. The salmon taken at Monterey were nearly ripe fish, and as they visited no coast-streams, were undoubtedly on their way to the upper Sacramento River to spawn in August and September following. These facts, I think, show that our summer run of salmon come from Southern waters, while the winter run always makes its appearance first near the Oregon line and thence successively at more southern rivers. The winter-run salmon are also of a smaller size; are stouter and different color from the summer-run. Canners claim they are not so desirable for canning—wanting the fat and high color of the Sacramento salmon.

I trust the length of this letter has not wearied you, and that, although in a disjointed state, you may find in it some facts that may be valuable in the history of our salmon now or hereafter.

HORACE D. DUNN.

INTRODUCTION OF THE GILL NET IN THE AMERICAN CODFISHERIES.

GLOUCESTER, MASS., Jan. 10.

THE use of gill nets for the capture of cod, *Gadus morhua*, in the winter shore fisheries from this place is a matter which is now absorbing considerable attention here, and the possibility of using them with success in the distant Bank fisheries is also being discussed. As recent experiments have proved entirely successful in the shore fisheries, and the practicability of using gill nets to advantage there, at least, is no longer an unsolved problem, a short account of their introduction and subsequent results, so far, may perhaps prove interesting to the readers of your valuable and widely-circulated journal. Gill nets have long been used in the codfisheries of Norway, more than half of the fish caught at the Lofoden Islands being taken in this manner; but of this, or of the manner of using gill nets for cod our fishermen were ignorant until the knowledge was supplied to them by the United States Fish Commission.

In the summer of 1878 Professor Spencer F. Baird, the Commissioner, established his headquarters at this place, and when he returned to Washington in the autumn several gentlemen of the commission were detailed to remain here, observe the habits of the winter fish, make experiments in hatching cod and other sea fishes and also to gather any other information that might be of future use or benefit to the American fisheries. The commission had several Norwegian cod gill nets and these were set off the Cape; but it was found that the mesh, which was but eight inches, was too small for the cod in this vicinity. Professor Baird then had other nets made with a larger mesh and these, though set under different circumstances, proved quite successful and gave a clue as to the size of mesh best adapted for fishing in this locality.

After demonstrating that the gill nets might be used with good success the fact was made known to the Gloucester fishermen and the loan of the nets was offered to any responsible fisherman who would give them a fair trial; and notwithstanding this generous offer nothing was done toward accepting it until the fall of 1880, the fishermen fearing to make such a decided change from their old methods of capturing the cod, although they must have felt sensible of some of the inconveniences attending the use of the most serious of these, under the old system, was lack of bait, and the fleet was often delayed for several days at a time waiting for it, and serious loss to the fisheries was thereby frequently incurred. This was more than usually the case during the past fall, when the spurling, (small herring) the bait most generally used and desired, appeared in very small numbers about Cape Ann. The lack of bait, together with the knowledge of fishing with gill nets that had been disseminated among the fishermen by the Fish Commission, led the first attempt being made by the Gloucester fishermen in the early part of the present winter.

Capt. Stephen J. Martin, of this place, who has been connected with the Fish Commission for some time, and who at present is in charge of the station here, called the attention of his son, Capt. George H. Martin, to the subject of taking cod with gill nets early in the fall and urged him to make the trial. The young Captain Martin, who is well known as one of the most enterprising and intelligent of the Gloucester fishermen, obtained a Fish Commission Report in which the Norwegian gill nets were described, etc., and began reading up. Later, before starting out on his trip, he had an interview with a member of the Commission, then in Gloucester, who had, by the direction of Professor Baird, made a study of this kind of fishery at the International Fishery Exhibition at Berlin, Germany. In addition to the nets that were furnished free by the commission Capt. Martin got eight more for the first trial. Instead, however, of using these nets in the exact way in which the Norwegian fishermen do he hit upon a plan by which one man can handle a gang of nets for which six or seven men would usually be required in Norway. This new method is called "under-running," and is another example of the ingenuity characteristic of the Yankee. By this means the vessel carries eight dories, each with a single man, and eight gangs of nets, each gang, at present, being composed of three nets, a total of 150 fathoms in length to a gang, or 1,200 fathoms for the whole crew.

The nets were set for the first time on the "pasture" (the local name for a small fishing ground) November 26 and hauled the following morning with fair results, but when set again on better grounds in Ipswich Bay they did exceedingly well, taking 4,000 pounds of splendid cod in two nights' fishing. This proved that cod could be taken in large quantities, by the use of gill nets, on our coast; but it was found that the larger size of the fish here necessitated the use of stouter twine than is used in the Norwegian nets. The nets first used were soon torn to shreds by the struggless of the great cod, but other and stronger ones have been obtained. The average weight of the fish taken in them is twenty-three pounds, and some individuals reach seventy-five and eighty pounds. Although the weather has been exceedingly stormy and unfavorable during the past month the Northern Eagle (the vessel having the nets) has succeeded in making good trips averaging from 5,000 to 10,000 pounds, the total being in round numbers about 57,000 pounds. Vessels using trawls and fishing on the same ground have, in some instances, got less that one-half the amount of fish taken by the Eagle

The great importance of this method of fishing, aside from the increase in the catch and the fact that no "trash"—small fish, etc.—is taken to be thrown away again, is that no bait is required. Perhaps this will be better appreciated when it is known that for the month of December, just past, the average bait bill of the Gloucester shore-fishing vessels was $150 each, and to this may be added the loss of time in procuring bait. Again, if the nets can be used on the Grand Banks with equal success, and there seems no reason to doubt it, we shall be relieved from all dependence on the British Provinces for bait supplies and be able "in the future to obviate the necessity of asking a participation in their inshore fisheries."

To conclude, I quote the following from the Sixth Annual Report of the Boston Fish Bureau in relation to this matter: "The last improvement that has come under our notice is one that, if it continues to do all that it gives promises of doing, will be of great value to the fisherman and revolutionize the present manner of catching ground fish. We allude to the use of gill nets in cod fishing. * * * Nets of ten-inch mesh are set the same as herring nets, being set in the morning, or during the day, and are hauled the next morning. As yet no fish caught, except at night, and only the largest cod; the catch for the three first trials with unfavorable weather was, respectively, 4,000, 6,000 and 7,000 pounds. Capt. Martin is much pleased and has ordered new nets. These nets can be used on the Grand Banks, or in fifty fathoms of water, as well as in Ipswich Bay, where at present used only in eight to fifteen fathoms. We may not be much surprised in the near future to see the old and much-condemned as well as expensive method of trawling superseded by the gill nets introduced by the U. S. Fish Commission." J. W. C.

THE AMERICAN FISHCULTURAL ASSOCIATION.—A meeting of the officers of this association was held at the office of FOREST AND STREAM at noon January 28. Present: G. S. Page, Vice-President; E. G. Blackford, Treasurer; Barnet Phillips, Cor. Sec.; Fred. Mather and H. D. McGovern. It was decided to hold the next meeting at the rooms of the Fulton Market Fishmongers' Association Wednesday and Thursday, March 30 and 31. This will give members a chance to remain over and see the trout opening at Fulton Market, April 1 to 3, and at the same time the latter will not draw members from the hall during the session. A committee of three, consisting of Messrs. Mather, Phillips and Blackford, was appointed to correspond with members relative to the preparation of papers and the preparing of a programme for the meeting, and also to correspond with members of the Central Fishcultural Society and invite communications and an interchange of friendly feeling.

THE McDONALD FISHWAY.—The Richmond and Allegheny Railroad are about to build a McDonald fishway over Beshor's Dam, the lower dam on the James River, which is eleven feet high. This way will be constructed under the supervision of Mr. McDonald himself and will be a good, practical test of the practical value of his plan. It will be finished in time for the spring run of shad, which, above this dam, will have a run of forty miles before meeting with another obstruction. The McDonald way is certainly cheap and the working models which we have seen have certainly checked the water in its downward flow completely and we await the construction of this one on a large scale, in hope that it may work as well in practice as it does in miniature.

IOWA NOTES.—An Assistant Fish Commissioner has been appointed in this State. Mr. A. A. Mosher, of Spirit Lake, Dickinson Co. was so appointed on Nov. 10, 1880. His district is Northwestern Iowa and his work is to assist the Commissioner and work. Commissioner Shaw has just taken nine 500,000 whitefish eggs from the Northville, Mich., hatching station of the U. S. F. C.

SALMON FOR LONG ISLAND.—Mr. E. G. Blackford, of the New York Fish Commission, recently received from Prof. Baird, through Mr. Chas. G. Atkins, 25,000 eggs of the Atlantic salmon (*Salmo salar*) for Long Island waters. They have been placed in charge of Mr. Thomas Tapham, of Roslyn, L. I., a gentleman of large experience in trout culture. Their exact destination is not yet decided upon, but there are several streams which are available for salmon on the island.

The Kennel.

THE ENGLISH POINTER.

[Reprinted from advance sheets of Vero Shaw's "Book of the Dog," furnished to the FOREST AND STREAM by the author, through Cassell, Petter, Galpin & Co., publishers, No. 596 Broadway, New York.]

IT is, we believe, a pretty generally admitted fact among sportsmen that modern pointers are deficient in nose when compared with what they used to be; in other words, nose has been sacrificed by the almost insane importance which has been attached to pace. Breeders appear to have, in many instances, only had in view the production of an animal that can gallop, and thereby cover more ground than other dogs which might be brought against them; and nose has thereby suffered to a great extent.

Our Continental cousins, especially the Germans, have, however, viewed things in a very different light, for the Continental pointers partake more fully of the nature of their Spanish ancestors than do the English. A leading German sportsman only recently remarked to us, that though he admired the English dogs (pointers) they were too fast for the sport he wished to put them to, and that his experience taught him that the slow and staunch German pointer was, in his part of the world, the most valuable dog. However, he added, that he hoped that the crosses he had in view between the two varieties, German and English, would improve both breeds and render each more valuable for his purpose.

The German pointer does not differ very materially from the English, save in his clumsiness. He is more throaty, certainly; but this is scarcely to be wondered at when his closer

connection to the Spanish pointer comes to be considered. The best specimens of this variety which we have seen at German dog shows, have been liver-and-white in color, and the lower dog in the accompanying illustration may be taken as a very faithful representation of this class.

On comparing the three types of pointer (Spanish, German and English) which have been treated of in this work, our readers might almost be brought to style the three varieties as superlative, comparative and positive, for they really represent these degrees to a remarkable extent. The superlative bulk of the original Spanish pointer becomes greatly modified when the German branch of the family appears upon the scene, while the latter in his turn has to be at once refined if he is desired to be made anything like the English dog in shape.

In the accompanying engraving the resemblance of the German pointer to the Spanish is very apparent, especially in the forequarters, and it may be added that little pace could be expected to be found in either of these animals. Contrasted with the English pointer, however, neither the German or Spanish members of the family are likely to suffer if strength is to be taken as any criterion of merit; but it is nevertheless notorious that their great bone has not had the effect of adding stamina to either breed.

Whether or no the German pointer would be a desirable cross for our English dogs is a mooted question at the present time. Personally we should be very much disposed to try it, if we had a strain of light-weight pointers to work upon; and our desire to do so would be increased if we had the breeding of a field trial winner before our eyes. At present, as we have said above, we consider that too much attention has been paid to increasing the pace of a pointer, and we believe that the time is not far off when this merit will play a secondary position to that of nose, as this has inevitably been the consequence of breeders sacrificing one property in an animal in their efforts to produce another feature of excellence. We do not wish it to be imagined for a moment that we by any means decry the acquisition of pace in a pointer. A slow, pottering dog is enough to break an active man's heart we admit; but at the same time we reserve to ourselves the privilege of adding that a pointer without a nose is as bad as one who is deficient in pace. In field trials a fast dog looks flash, and by his superior pace can cover more ground, and therefore increase his chance of finding birds. The natural result of this is that such a dog defeats his slower but surer companion, who keeps steadily plodding on throughout the trial, and would do so throughout the day without a fault, and probably would wear his gay companion down in half a day. That such a thing is done at every trial a reference to the reports thereof will amply testify, and this, we trust, will have the effect in time of causing steps to be taken to remedy the evil. Field trials are such excellent institutions in themselves, if properly carried out, that every step should be promptly taken to prevent fashionable prejudices from doing any injury to the class of dog which is meant to be benefited thereby.

Allusion has been already made to the colors of the ancient pointer, and the ideas of Mr. B. Thomas have been fully stated. In the present day, however, the markings of the pointer have increased in variety, and now we may reckon upon finding good specimens in color, black, white, lemon and white, orange and white, liver and white, and even an occasional all lemon dog. The entire number of whole-colored dogs is, however, a very limited one, and by far the most fashionable colors in the present day are the liver and white, lemon and white and orange and white, which may be taken as favorites in the order named. Caprice is, nevertheless, chiefly responsible for the placing of one of these colors over another, and it is only of recent years that the liver and white dogs have reoccupied the position we have given them on the list. Personally we see little advantage in placing one color over another, but we certainly prefer parti to whole-colored pointers, and most strongly object to a lemon and white pointer who carries a black nose upon his face. In our opinion this defect is simply a disqualification, though authorities of position, we know, differ from us on the point; but still we remain unconvinced, believing that the majority of pointer breeders agree with us in this respect at least, and hold that a black nose is a decided blemish on this class of dog.

Whilst on the subject of color it may be noted that many admirers of the liver or liver and white pointer are accustomed to argue that he is in this point entitled to respect as more closely resembling the old Spanish pointer than the lemon and white or orange and white Still, when we take into consideration the crosses that have been admittedly introduced into the breed we cannot see that much is to be gained by this argument, even if it is strictly correct, which we have no means of proving.

The liver and white pointer, however, had previously been the popular dog, and this certainly seems to support those who argue in favor of this color. To Mr. Whitehouse, of Ipsley Court, the greatest credit is due in connection with lemon and whites, which is a breed he has succeeded in bringing to the highest pitch of perfection. His most famous dogs have been Hamlet and Rap, but an enumeration of all this gentleman's many first-class pointers would be a task to any writer of a work on dogs which he could ill afford the space it would consume. Mr. Whitehouse is recognized as one of the leading judges of the breed with which his name has been so honorably identified, and the correctness of his decisions at the shows where he officiates is recognized by all.

In spite, nevertheless, of the popularity which the lemon and whites have attained and the regard with which orange and whites are looked upon by many breeders, as well as the existence of blacks, livers and other colors, the liver and whites appear to hold their own. Mr. W. Arkwright's Prude II. and Don Jose, Mr. R. J. Lloyd Price's Wagg, Belle and Bow Bells and the former's great rival, Mr. James Fletcher's Ponto, are all liver and white. Nor are these by any means the only first-rate specimens of this color. Mr. Bartram, of Essex, has a grand specimen of the liver and white in Special, a very heavily-marked dog, and shot with liver ticks on the portions of his body which should be white. Many breeders admire this heavy marking and certainly we can see no reason for decrying it, though it is uncommon on the show bench. In addition to Mr. Whitehouse, the following gentlemen have shown good lemon and whites: Mr. W. Arkwright (Prim and Primula), Mr. R. B. Lee (Miss Prim) and Mr. C. W. Brierley (General Prim).

As a companion the pointer is confessedly inferior to his great rival the setter, for, though there are exceptions to this as to every other rule, it is not for either his affection or intelligence in private life that the pointer especially shines. As an indoor pet this dog is not the success he might be supposed to be, and his more homely jacket places him at a disadvantage with the setter when the palm of beauty comes to be awarded. Having no luxuriantly silky coat, the pointer looks to be what he in reality is—a workman—and as such he has succeeded in winning friends in every part of the country.

GERMAN POINTERS.

From page 405 of Vero Shaw's "Book of the Dog;" the plate having been forwarded to the FOREST AND STREAM by the Publishers.

JOCKEYING AT FIELD TRIALS.

THERE has recently been published a lengthy letter written by a man named C. B. Whitford, in which an ingenious attempt is made to whitewash Gladstone's performances at Robin's Island, to advertise the man Whitford himself as a dog-handling jockey, and to throw discredit upon our report of the Eastern field trials. Unfortunately for the author of this agonizing wail, it is but a crude patchwork which reflects no credit upon him as possessing either brains or morals. We are roundly abused simply because we reported the Gladstone heat as it occurred, and because we expressed our opinion that Gladstone was the loser.

We have all along since the trials expected to see an attack of this kind made, a dying squirm as it were, wherein everything would be done in the way of abuse to serve us out, because we did not proclaim Gladstone and his professional handler the winners, and the two most perfect animals in the world. We have had good reason to believe that this malicious attack would be made, for on the night of the ending of the trials, while on our way to New York, this man Whitford came and sat beside us in the cars and tried, as far as he dared go, to persuade us to publish Gladstone's record as a perfect one; for, as Whitford said, "I do not wish to see in print that Gladstone committed errors."

We were somewhat amused at the boldness of Whitford's "little game," and still more indignant. We knew that such practices had been successfully tried on others, and this knowledge had already explained to us many things that would otherwise have been mysterious.

The cause of the present outburst of spleen seems to be that we said that "in our opinion Nat won the heat, as it was a race between dogs and not handlers." It was on the following lines in the Eastern Field Trials Rules in the Instructions to Judges that we based our opinion. They read as follows:

"The dogs are to be hunted in all respects as an ordinary day's shooting, in a sportsmanlike manner."

Now, everything depends upon the interpretation of this paragraph and what the words "in a sportsmanlike manner" mean. We presume that from our standpoint it will be impossible to beat into the brains of Whitford, and men of his class, that there is a vast difference in the way in which a gentleman and a tricky dog-sharp will look at a matter of this kind. But, nevertheless, there is a difference which hinges on a man's moral training and depends upon the people with whom he has been accustomed to associate. We know that Whitford prides himself upon being a dog jockey, as we have heard him openly boast of different unfair exploits where he had choused an opponent out of a heat. Similarly there is a class of men who delight in swindling their fellow men with marked cards and loaded dice, and who pursue the even tenor of their way, congratulating themselves for their own cleverness and believing that they have done no wrong. It is this man Whitford who is elbowed to the front to lay down the law and teach the gentleman sportsmen of America what is sportsmanlike and what is not.

If the field trials in this country are to be governed by such fellows, it is high time that honest men have nothing to do with them. It is Whitford's opinion that it is a sportsmanlike proceeding to circle his dog ahead of his opponent's dog who is roading to the birds and who has first discovered their presence, thereby completely barring the roading dog from every chance to secure a point and trickily gaining the credit that the other dog deserved. What sportsman would continue to shoot with a companion who was guilty of such practices? Not many, we imagine, and yet the organ that plays for this monkey calls it "nice generalship." A fine code of honor to attempt to inculcate a sporting public with!

In our opinion the judges were bound in accordance with the rules to immediately disqualify Whitford at the first attempt to deprive by this means the opposing dog of his opportunity to point. It is a well-known fact that three times during the heat Nat discovered the presence of birds first and was jockeyed out of each of three chances to point, which, from his record, it is fair to presume, he would have done. At all events, according to the principle on which the trials were conducted, Nat should have been given the same chance that was given to Smut when in the heat with La Guy. It will be remembered that when Smut had discovered the scent, La Guy was ordered by the judges to be kept at charge until Smut had a chance to make out the bird and point. We believe the principle of ordering any dog to be kept at charge a bad one, but as it was done in one instance it certainly should have been done in all cases of the kind throughout the trials, or not done at all.

Following a long attempt to bolster up the unfair practices put in use, the writer says that we were not present at the running of one part of the heat. This statement coming from the source it does is not surprising, and is on a par with statements of an untrue a character. We saw the heat from beginning to end, but at one period of the heat an unsuccessful attempt was made by interested parties present to make black appear white, and we laughed in our sleeve, as an entirely different story from the truth was told to those who had not been present.

The writer then goes on to say that "some of our mistakes are pardonable on the ground of ignorance, as it was our first full field trial experience." Ignorance we presume of how to pervert truth, and ignorance of how to write a report of an American field trial from the standpoint of a professional dog jockey. Had our experience of how dogs should work been gained by being present at some "eight field trials," which the writer claims to have attended, perhaps we would have known no better than to give the wrong dog the most credit, but fortunately for us fifteen years of constant work in the field in many of the best sections in the Union, and the knowledge attained from shooting with gentlemen of experience and standing, has enabled us to rise a step higher on the ladder than can ever be reached by such a trickster as Whitford.

To sum the matter up, Whitford's performances at Robin's Island were not in accordance with the rules, as his dog Gladstone was not "hunted in all respects as in an ordinary day's shooting, nor in a sportsmanlike manner." Stealing an opponent's dog's points he did do, and recently, in the presence of two well-known gentlemen, Whitford not only openly stated that he employed this means to beat his opponents, but shamelessly stated his motives for the trick. Referring to the Hamilton-Gladstone heat, he stated that having bet over again, on Gladstone, all the money intrusted to his care in the pool box, he was very much frightened when he saw Sensation wind the bird which decided the heat, and that Sensation would have pointed it had he not circled Gladstone in ahead, and thus deprived the pointer of the heat and first place. Had Sensation won this heat the handler of Gladstone would have lost not only all his own money, but that of other people which had been intrusted to him, and his reputation for honesty, not to say honor, would have been worse than it is at present.

We have not time nor inclination to stop our train for every barking cur, but on this occasion we have been pleased to have an opportunity to show up some of the possibilities of field trials as at present conducted, and in whose hands a certain amount of power is vested. It has been our aim to treat both rich and poor man alike, but we have catered to no man. When the FOREST AND STREAM has to be run in the interest of dog society it will then be time to close its pages and melt into its type. We have conscientiously striven to pick our way on open ground which, by the way, in the doggy world is no easy task, and to try and raise to their highest standard the sports of field and flood. This can only be done by steering clear of everything that smells of chicanery and by doing to our fellows as we would be done by.

The simple facts are these: Whitford did repeatedly circle his dog in front of other dogs that were working out a trail, and did thus deprive them of the opportunity to win. His motive in doing this was in part to save his own pocket as he had by his own confession bet other people's on the events.

We know of no reason why we should change our former opinion that in the Nat-Gladstone running "Nat won the heat, as it was a race between dogs and not handlers."

A CLEVER FIELD DOG.

MARY was a liver and white ticked pointer of great versatility as a trick dog and was a prodigy as a retriever, whelped at or near Paris, Tennessee, in 1865 or '6. She was house and yard broken by "Gus" Harris, and when a pup sent to George Bolton, of Harrodsburg, Ky., "in memory" of our associations. I am sure that all of Gus' chums will indorse the declaration that he can beat the world training a dog.

Mary's education was the most finished that I ever saw till I met Cousin Charlie, a regular graduate from a college whose dogological curriculum is the most comprehensive in America if show dogs are the standard by which to judge. It is a common charge, if not belief, that trick dogs in general are indifferent, if not comparatively worthless, field dogs. Mary was an exception. Her intelligent eye and dignified carriage were conspicuous to even casual acquaintances and the gravity with which she recited her diversified lessons was the admiration of all witnesses. She d serves as her biographer a Wirt or a Boswell and I presume to give but a few of her earliest field performances which came under my eye or are derived from irrefutable authority.

Gus wrote that before sending her he took her into the field once, without gun, and she staunchly stood every bird found. I took her out after noon, for her first round with the gun, and couldn't coerce her into fetching a rabbit, the only game found. On making my report to her owner he ordered that she should not be taken out again till opportunity would permit him to go. That wasn't long. After the first discharge of his gun he missed his flask, which contained a pound of powder, and without thinking to avail himself of Mary's aid, started in hunt of it, when his companion rather insinuatingly asked: "Why don't you make Mary find it?" Thanking him for the reminder, she was called and sent in quest. Her movements were visible nearly half a mile before she disappeared on the back track. She found and brought it, to the joy of her owner and astonishment of his companion.

The whip was necessary to induce her to fetch the first quail killed, which she handled with evident fear, but after it had been tossed out a few times she brought it with alacrity. Recognizing the significance of "I'll flog you" as thoroughly as a human being, a threat was enough in the instance of a hare soon afterwards killed. She was made to carry it at heel some distance, and over after a burrow or impenetrable brush-pile was necessary to escape of wounded hare or bird.

I accompanied her owner the second time that he took her into the field and as we drove along the pike she arose in the buggy and pointed a bevy of quail, which was in a cluster of briars on the roadside. On reaching the first field a party that preceded us had scattered the birds. Mary soon made a point near a hedge, which was impassable to us. On walking in we put up a brace of quail, which we dropped on the opposite side of that hedge. A third quail flushed and fell to the gun of another sportsman on the same side, fully fifty yards to our left. Without removing from where he re-loaded, her master sent her through the hedge and she successively brought all three birds to him. She was invisible to us when on the side the birds had fallen. Had I not seen the feat I should have demanded the "papers" before receiving the report as fact. I had seen enough of her performances to experience neither doubt nor surprise when told that she twice found and brought her master a hammer which he lost from his gun-lock in a stubble field and missed only on failure of the barrel to fire. The unimpeachable veracity of the gentleman who enthusiastically corroborates the story leaves no room to stamp it a Munchausenism, incredible as it may seem to many. It is the most remarkable, well-authenticated instance that ever reached my credulous ears.

The undersigned and two others saw her owner wound a quail from horseback, which was marked down in an adjoining field, nearly three hundred yards from where it rose. The bird was flushed by the horses and Mary didn't see it at all. She was called to the fence, put over and directed fully one hundred yards to the spot, where, in obedience to orders, she sought, found, brought and delivered the bird to her master, who hadn't even alighted from his horse to reload his old muzzle-loader. On another occasion one of the last-named party had her in the field, when he met a couple of neighbors, whose dogs were the acknowledged cracks, one being an imported pointer, over which the writer has shot and can attest his merits. As Mary was a stranger to that locality they were soon favored with an account of some of her achievements when it was rather derisively requested that she should be put in to find three birds which on the rise of a flock they had knocked down in thick stubble, and vainly spent many minutes in hunting with aid of the dogs. Declaring that Mary would find them if there she was conducted to the spot and put to work. In rapid succession she delivered her handler the three dead birds which had been abandoned in disgust. Both gentlemen cheerfully acknowledged that they had before thought that Mary knew a good nose and retriever, but that the little bitch surpassed their most extravagant conceptions. Should any martyr wade through this scribble to this point let him remember that the foregoing are given as something extraordinary because performed by a pup in her first season. On bench or in field Mary would have been pronounced a "daisy," a "stunner," in her younger days. In drawing-room or an accomplished belle.

Cats and fowls fed with her without molestation. One summer a young chicken was her inseparable yard companion utterly ignoring its species. It was no uncommon scene to see a Thomas or Tabby enjoying a sun-bath on or between her paws supporting Mary's chin.

No long bow was ever drawn in Mary's cause as long as I know her, and too much cannot be said to her praise.

Just here let me give an instance suggestive to the inconsiderate of the danger of having a puppy retrieve a wounded bird of pugnacious nature. My old friend and sporting mentor, "Mac Higgins," of Mercer County, is the most unpretentious but accomplished devotee to rod and gun in Kentucky, and the most successful, barring that infernal gout which often tumbles him like a stroke of lightning in the heat of sport. He can come nearer teaching a pointer the syntactical intracies of the English language than any man in the South except Gus Harris.

A few years ago he had the most beautiful pointer bitch pup in the scope of our sporting acquaintance which he trained for our fall work. She was about perfection. Before open season she was ordered to retrieve a wounded sap-sucker which "got in its work" on Zoo's nose with its claws, sending her yelling to the major for succor—that sap-sucker hanging on like a possum reduced to "tail hold." Never after could she be induced to touch a bird.

Briefly one instance of Zoo's logical puppy performances and I'll stop. One morning early in her first season, the first time that the writer shot over her, nine birds had been bagged from the first flock without an error for which Zoo would have been demerited in a field trial, when a wind arose threatening a gale which would spoil our sport. Reaching a woodland Zoo gave signs of birds near by, and she working faithfully as a cat. Losing scent she made a wide and cautious detour against the wind to where she first caught it, and resumed work with greater deliberation again getting lost. Four times she made the detour before striking a trail she could follow, and that flock was found and pointed forty rods distant.

His held me motionless from the moment that she proclaimed game, and without word or motion from either we enjoyed nearly half an hour's work which would have made the most phlegmatic lover of a pointer into ecstasies. Following that bevy Zoo soon made a point, and when ordered to flush moved but a pace, indicating that the bird was very near. I discovered it within a foot of her nose without any cover, and Hig was near enough to it to pin it to the ground with the muzzle of his gun and pick it up, which he did.

That sap-sucker episode made her afraid to pounce on the bird when ordered to flush. I insisted that it was a wounded bird, but Hig's old gun was coaxed off but once that morning without bringing anything to bag, and he doubted that bird's head and bagged with others without a search for shot wounds.

With a grateful acknowledgement of your unselfish beneficence in showing up the Dittmar-detonating-destruction believe me

Yours fraternaly, KENTUCKIAN.

ST. JOHN (N. B.) DOG SHOW.

THE first annual bench show of dogs, held under the auspices of the New Brunswick Poultry and Pet Stock Association, took place at St. John, N. B., on January 18, 19, 20 and 21. One hundred and four dogs marked the entry-list and forty-five classes were established for their reception. No money premiums were distributed, but the winner of each class was awarded a neatly gotten up diploma. Mr. G. Walton, of Boston, Mass., acted as judge and the show was governed by the following gentlemen, who constitute the officers of the association: President, Col. A. Blaine, St. John, N. B.; Vice-Presidents—Messrs. A. Thorne, St. John, N. B.; Capt Thos. McKenzie, Fredricton, N. B.; L. J. Almon, Rothesay, Kings Co., N. B.; Rev. D. W. Bliss, Westmorland Co., N. B.; W. B. Morris, St. Andrews, Charlotte Co., N. B.; C. E. Grosvenor, Canterbury, York Co., N. B., and Alex Stewart, Dalhousie, Restigouche, N. B. Secretary, Mr. H. W. Wilson, St. John, N. B.; Treasurer, Mr. Wm. Snider, St. John, N. B. Committee of Management—Col. Blaine, chairman; Dr. D. E. Berryman, Messrs. Chamberlain, W. Snider, Magee, Jack, G. H. Snider, Kaye, Wetmore and Wilson.

The following is from a correspondent: "Over one hundred dogs were shown and there were some very creditable specimens, while there were many others that it would be difficult to classify. A bull-terrier dog shown by Peter Church, St. John, Judge Walton said he had not seen surpassed in Boston, and there were but three dogs in New York that he knew of that were better. Two fine collie dog puppies, shown by John McMillan and J. B. & A. M. Magee also received very favorable mention. The bitch and dog from which they were bred are the property of the Marquis of Lorne. There were some good Irish setters and a fine mastiff in the show. The other prize winners are unworthy of mention, perhaps. In all probability a kennel club will be formed shortly and next year a finer show may be expected in St. John."

Subjoined is the list of owners to whom awards were given, the names of the dogs having been omitted in the records:

LIST OF AWARDS.

Class 1.—Mastiffs (Dogs)—First, A. R. Sheraton's, St. John, N. B.
Class 2.—St. Bernard's (Dogs)—First, L. R. Vaughan's, St. John, N. B.; roughcoated. Puppies—Second, L. R. Purchase's, St. John, N. B.; Bitches—First, Jos. Prichard's, St. John, N. B.
Class 3.—Newfoundlands (Dogs)—First, F. B. Hazen's; second, L. R. Vaughan's; v.h.c., M. Ryan's; c., Geo. Troop's. Puppies—First, Geo. H. Westbrook's; second, Henry McMillan's. Bitch Puppies—First, John Lenihan's. Bitch—First, Jos. Prichard's.
Classes 4 and 5.—Siberian or Ulm and Bloodhounds. No entries.
Class 6.—Greyhounds (Bitch Puppies)—First, J. B. and A. M. Magee's.
Class 7.—Deerhounds (Bitches)—Second, Lemuel Wyllis.
Classes 8 and 9.—Champion Pointers. No entries.
Classes 10 and 11.—Pointers (Dogs)—First, Blair Estabrook's, Sackville, N. B.; second, A. W. Howe's. Bitches—First, A. W. Howe's. Dog Puppies Second, Blair Estabrook's. Bitch Puppies—v.h.c., James Duffy's.
Classes 12 to 17.—English Setters, Black and Tan Setters, and Red and Red and White Setters. English—First, T. S. Peters'; second, Jas. H. Pullen's. Gordon—First, J. S. Climo's; second, E. J. Harrison's. Puppies—First, Frank McGuire's. Irish—First, Wm. Clark's dog; first, R. Harper's bitch, second, FRANK ELLIS'S.
Classes 18 to 21.—Chesapeake Bay Dogs, Irish Water Spaniels, Retrievers and Clumbers. No entries.
Class 22.—Cocker Spaniels (Dogs)—First, C. T. Stone's; second, W. Graham's. Bitches—First, Joseph Dalzell's; second, A. W. Howe's. Puppies—v.h.c., Frank McGuire's.
Class 23.—Field Spaniels—First, John R. Armstrong's; second, Bob Blackhall's; v.h.c., C. T. Stone's.
Classes 24 to 27.—Foxhounds, Harriers, Beagles and Dachshunds. No entries.
Class 28.—Fox Terriers (Dogs)—First, John Smith McLaren's; second, Frank McGuire's. Bitches—First, John S. McLaren's; Puppies—First, John S. McLaren.
Class 29.—Collies (Dogs)—First, G. S. and J. D. Purdy's. Bitch Puppies—First, John McLaren; second, F. M. Kaye's. Dog Puppies, First, J. B. and A. M. Magee's; v.h.c., G. S. and J. D. Purdy's.
Class 30.—Dalmatian. No entries.
Class 31.—Bull Dogs (Dogs)—First, R. Magee's; second, S. J. Crowleys, Milford, N. B. Bitches—Second, J. Magee's. Bitch Puppies—First, James Magee's.
Class 32.—Bull Terriers (Dogs)—First, Snider Bros'.; second, Peter Clinch's; v.h.c., Frank McGuire's; h.c., R. Magee's; c., R. B. Humphrey's. Bitches—First, Snider Bros. Dog Puppies—First, E. LeRoy Willis's; second, Snider Bros.; v.h.c., Thos. Quinn's. Bitch Puppies—First, H. B. Master's; second, Charles Logan's.
Class 33.—Skye Terriers (Dogs)—First, C. Skinner; second; Alex. Blaine.
Class 34.—Pugs (Dogs)—First, G. S. and J. D. Purdy's. Bitches—Second, G. S. and J. D. Purdy's. Dog Puppies—First, G. S. and J. D. Purdy's; second, G. S. and J. D. Purdy's; v.h.c., G. S. and J. D. Purdy's. Bitch Puppies—First, G. S. and J. D. Purdy's; second, Frank McGuire's.
Class 35.—Scotch Terriers—First, R. Budge's; second, F. McGuire's.
Class 36.—Black and Tan Terriers (Dogs)—First, A. Blaine's; second, A. Blaine's.
Class 37.—Japanese Dimnonts. No entries.
Class 38. Yorkshire Terriers (over 5 lbs.)—First, Charles Austin's second, Dr. D. E. Berryman's; v.h.c., Frank McGuire's.
Class 39 to 42.—Yorkshire Terriers (under 5 lbs.). Toy Terriers, Blenheim Spaniels and King Charles Spaniels. No entries.
Class 43.—Japanese Hound. First, Wilson Brothers.
Class 44.—Italian Greyhounds. No entries.
Class 45.—All Other Varieties. Irish Terriers—First, Thomas Carvalle's; second, Thomas Carville's. Spitz Dogs—First, James McWilliam's bitch; second, S. A. Wetmore's dog. Sussex Spaniels—First, F. Dowling's. Rough Coated Retrievers (Dogs)—Second, A. Jordan's. Curly Coated Retriever (Bitch)—First, Dr. Holden's.

RETRIEVING SPANIELS.

IF the proposed cocker club is, as I trust it will be, successfully got up, I hope some of its members will devote their attention to the breeding and training of retrieving spaniels. I will explain what a good retrieving spaniel ought to do and the advantages the sportsman would derive by keeping one.

Owing to his beauty and intelligence he is a most companionable dog and, as his work is not so hard as that of a setter or pointer, who has to range fast and far to find his game, he is fit to work every day. When worked with setters he should keep a little in rear and a little to one side of the gun, so as to be able to see what is going on and mark where the dead birds fall and the wounded ones go down, in order that he may retrieve them without delay when told to do so. This is the hardest part of his work to learn and nothing but plenty of experience will make him perfect at it. It is necessary that he should have a first-class nose and know how to use it in following up wounded game, otherwise he is not worth his keep. When ordered to hunt out any rough ground or cover he should keep within gun-shot, and if put into a branch, or other strip of cover, keep opposite the gun. For ruffed grouse, cock, snipe and rabbit-shooting he should be as good or better than a setter, and for duck-shooting (being small enough to take in a canoe) he is better than any other dog.

Indirectly, his great value to a sportsman who keeps a number of setters and pointers, is that, as he does all the retrieving, they can be trained to drop to shot and thus kept out of the great temptation to be unsteady that they would otherwise be subject to. Allowing setters and pointers to retrieve is, as every experienced sportsman knows, the chief source of unsteadiness.

I have consulted several sportsmen on this point and they nearly all tell me that they find it unsatisfactory, but do not see how it can be helped.

As a matter of fact, there are very few setters or pointers that retrieve tenderly and well in every respect and are at the same time quite steady at their other work. Many a time, when hunting with a friend and his "dog of all work," have I been annoyed by his rushing in to pick up my dead birds and thereby flush one or more single birds that had been marked down out of a nicely-scattered bevy.

While on the subject of retrieving I want to point out that if a setting dog is intended to retrieve he ought not to be taught to drop to shot, for if he does so how can he mark the dead and wounded birds?

At one time I owned a very clever and experienced retriever (I mean a dog bred and trained specially for the purpose). He never spoiled my sport by running in, but I have sometimes seen him run to the top of a knoll, or other high ground, to watch where a wounded bird was going to. With him I never troubled myself to mark any of the dead or wounded birds—he always brought them promptly, and I really do not think that in a whole season he lost three birds that it was possible for him to get. Had he been taught to "drop to shot" how could he have done such good work? Except for certain places, I do not advise the use of the real retriever in this country, as I believe a good spaniel would answer the purpose better on the whole, being smaller, and the retrieving in general not nearly so difficult as it is in Great Britain.

For a man that does not want to keep more than one dog, let him by all means teach him to retrieve, but not allow him to run in as soon as the gun is fired, nor drop to shot and hide his head in a tuft of grass, but stand steady till told to "go," and mark when the birds fall, so that his master will not have the trouble of showing him, but can give his whole attention to marking where the rest of the covey may light. IBEX.

THE COCKER CLUB—*Editor Forest and Stream:* As there was no doubt about the ultimate establishment of the club which I proposed in my letter to you of Nov. 12 last, I did not waste my time or your space by replying to any one of those who pitched into me. Now, thanks to your kindness, we have started with a list of names sufficient to carry weight. You ask us to vote for ten and to elect a committee of seven. Now I think, sir, that it would be very advisable to have a larger committee, say of nine, so that all sections of the country may be represented, thereby effectually squelching the cry of it being a New York club or local to any part of the country. I shall, when I send in my voting paper, record this additional vote that the committee should be one of nine, and I hope all that agree with me will adopt the same course. I intend voting the following ticket, because on it all the men are good, and without speaking disparagingly of their fellow club I may say they contain the brains of the embryo cocker club: Messrs. Tinsley, Whitman, C. B. Cummings, Wygant, McKoon, Macdougall, A. H. Moore, Kirk and Fellows. I do not object to a working club committee of seven, only I think the standard committee, which will be our first committee, should be in every way representative, both in point of comparative numbers, breeding and show experience, and representing the real spaniel men. LEAM.

NOTES FROM ABROAD.—On New Year's Eve a dog showing the intensely religious turn of mind claimed for the whole population—biped and quadruped—of "Scotland, renowned for sanctity of old," *bawv'ered* into a Mr. Lloyd's church, at Perth, but his reverence declared "the house of God was not the place for dogs to worship in," and forthwith ejected the poor collie and then proceeded with his discourse. No, for the canines but the *canaille*, was the Gospel preached; but the forcible ejectment of "the beastie" by Mr. Lloyd was a dangerous experiment. Suppose, instead of a well-conducted Scotch dog, with the national respect for the cloth, it had been the bull-terrier Tarquin, there would have been no "proceeding with the discourse," and instead of sounds of worship there would have been lond lamentations over spoiled pants and waistcoat and wailing and gnashing of teeth. By the way, I hear that poor Tarquin will bite no more. I cannot bring myself to say he is dead—the expression is too stale. Let one be fashionable just once and say he "has gone over to the great majority." The person who killed a favorite dog of Mr. Lort's has, on being sued, cried *peccavi* to the tune of £60 and costs, a sum far below the dog's value; but the "popular judge" is as forgiving as he is generous.—SIRIUS, in *The Stock-keeper*.

There has been 152 entries secured for the Field Trial Derby, including 81 pointers and 71 setters. Lord Downe, Mr. Barclay Field and Mr. Lloyd Price are responsible for most entries in the former division, and the names of Messrs. Bishop, Bowers, Llewellin and Macdona appear prominently in the setter entries.

There are nearly 1,250 entrees in the Alexandria Palace Show. The following are the numbers of entrees in some of the principal classes: 27 bloodhounds, 84 mastiffs, 91 St. Bernards, 22 Newfoundlands, 22 deerhounds, 42 pointers, 92 setters, 53 retrievers, 180 fox-terriers (including 50 wire-haired), 52 Dachshunds, 11 Bassets, 86 sheep dogs, 46 bull dogs, 32 bull terriers, 12 Bedlingtons, 32 Irish terriers, 36 black and tan terriers, 17 Skyes, 12 Scotch terriers, 23 Dandies, 50 pugs, 20 toy spaniels, 14 toy terriers.

PICTURES OF THE MOOREFIELD KENNEL STOCK.—Through the courtesy of Mr. A. H. Moore, of Philadelphia, the genial proprietor of the Moorefield Kennel, we have come in possession of twenty-two excellent photographs of his magnificent dogs. The pictures are taken by Messrs. Schreiber & Sons, of Philadelphia, and reflect great credit on their merit as first-class artists. We are having these pictures framed in groups, and in a short time they will decorate the walls of our *sanctum sanctorum*. We will then be pleased to have our friends call and admire this beautiful collection. The pictures are of the pointers Donald, Banjo, Belle II., Countess Bang, Stella, Bang and Rose, and of the setters Leicester, Temple Bar, Luna May, Duke of Beanfort, Raleigh, Count Dan, Lass o' Gowrie, Ruth, Count Fred, Berkley, Dart, Rory Morn, Norna and Roderick, and of the little spaniel Charlie.

LOST AND STOLEN DOGS.—Since January 1st, we have been notified of the loss of more dogs than during the last six months of the past year. We are always glad to make notice of such losses in our columns free of charge, and do all in our power to assist the owner to recover his own, but we would remind our friends that a little care will save a deal of trouble. Cooks will be cooks, and leave the gates open, and little boys are known to have a particular aversion to shutting doors behind them. Dogs of a roaming disposition will go a'gadding, and there are hundreds of persons always on the look out for well cared for looking dogs. These animals are picked up, sold to the fanciers, and a market for them is found in a distant city.

PHOTOGRAPHS OF SETTERS.—We have received from Messrs. Schreiber & Son, of Philadelphia, half a dozen photographs of as many setters. The portraits are all from nature and are excellent examples of the photographers' art.

The dogs represented are Ollie, Belle, Warwick, Royal Duke, Champion Firefly and Mr. Schreiber's Grouse. The latter has a grand head and was, in his time, a very remarkable dog. When seventeen years old, being then deaf and blind, he got two puppies. One of these, now fourteen months old, is said to have been hunted last November for five days without making a mistake.

THE STUD BOOK REGISTRY.—As we are in constant receipt of inquiries regarding volume second of the National American Kennel Club, and how to make registry in same, we state for the information of our friend that the entries closed on May 1 of last year, but as yet the book has not been published. By addressing Charles De Ronge, 51 Broad street, New York city, all particulars can be secured, as that gentleman has the matter in charge.

IRISH SETTER NORA.—In report of the Pittsburgh Dog Show in referring to the beautiful Irish setter bitch Nora, who received second (*not Norah*, as published in the catalogue), we stated that at the St. Louis Dog Show of last year, she did not receive mention. We wish to correct this, as she received second in a class of eleven entries. We were led into making this assertion from the omission of all mention of the award in the official list sent to us from St. Louis.

HE IS TWENTY-EIGHT YEARS OLD.—A gentleman in central Ohio has a collie dog, perhaps not as sagacious as some of the dogs I read of in the FOREST AND STREAM, but if not, certainly it is not from lack of age, for he is said to be twenty-eight years old and very hearty. This can be corroborated by several respectable witnesses, or I should have been dubious; like all of Washington's body servants, you know, they are very old, but this is a fact. Have you ever heard of such an age?

J. C.

Never knew of one a day as the one mentioned. Next!

ALL THE DOGS from Mr. A. H. Moore's kennel at the Pittsburgh Bench Show were equipped with the patent dog-chains furnished by Mr. Henry C. Squires, of No. 2 Cortlandt street, New York For a bench show, and indeed for all the purposes of a dog-chain, they are just the thing.

HEAVY LOSS OF STOCK BY FIRE.—A very severe loss was caused by an incendiary fire on the night of January 14, on the Elizabeth Stock Farms, near Lancaster, Pa., in the burning of a large number of cattle. There were five dogs also burned, beagles, of a very fine strain, which Mr. Colin Cameron, the manager, will have difficulty in replacing.

150 LBS.—Mr. C. H. Evans, of Hudson, N. Y., rejoices in the possession of a St. Bernard dog named Alp purchased from Mr. C. Z. Collins which weighs just 150 lbs.

PANSY.—We had a pleasant call the other day from Mr. Fellow's charming cocker bitch Pansy, and we take this means to thank Mr. Fellows for his courtesy in permitting her to be brought to this office.

$100 REWARD.—We call attention to notice of Messrs. E. and C. Von Culin in another column.

STERLING DOG SHOW.—Mr. C. B. Whitford, of St. Louis, Mo., has been selected to be the judge for this show.

R. B. CUMMERFORD, Secretary.

A 165-POUNDER.—Col. Charles C. Goddard, of Zanesville, Ohio, owns a St. Bernard from a brace of dogs imported by Hon. H. J. Jewett, of Erie Railway fame. The dog is a remarkably fine one and weighs 165 pounds.

FIXTURES.

Rock River Valley Poultry and Kennel Club show—Sterling, Illinois, Feb. 10, 11 and 12. R. B. Commerford, Sec.

April 1, at Columbus, Tenn.—Close of entries, National American Kennel Club's second American Field Trial Derby. Joseph H. Dew, Sec.

KENNEL NOTES.

*** Breeders and owners of sporting dogs are invited to send memoranda of names claimed, bred, whelps, sales, etc., for insertion in this column. We make no charge for the publication of such notes; but request that in each case the notice be made up in accordance with our form, that the name of both owner and dog be written legibly, or printed, and that the strain to which the animal belongs be distinctly stated.*

NAMES CLAIMED.

Pomp—Mr. W. S. Carleton, of St. John, N. B., claims the name of Pomp for his English setter puppy, ten months old, out of Lil by Blackey.

Tip—Mr. W. D. Beatey, of Greencastle, Indiana, claims the name of Tip for black, white and tan evenly marked setter dog, whelped August 18, 1880, out of Jessie by Imported Penn.

Sailor—Mr. Luther W. Chadwick, of Dover, N.H., claims the name of Sailor for red Irish setter bitch puppy, whelped August 30, 1880, out of May by Echo.

Donald—Mr. H. F. Smith, of Trenton, N. J., claims the name of Donald for black and white dog puppy, whelped December 5, 1880, out of Fido by Bennett's Don.

Dutchess—Mr. H. F. Smith, of Trenton, N. J., claims the name of Dutchess for black and white bitch puppy, whelped December 5, 1880, out of Fido by Bennett's Don.

Buff and Bess—Mr. Atwood Collins, of Hartford, Conn., claims the names of Buff for red Irish setter dog and Bess for red Irish setter bitch, brother and sister, whelped December 12, 1880, out of Fannie (York-Gipsey) by King Ike (York-Banshee).

Gipsy and Carlo—Mr. Clarence P. Hunt, of Memphis, Tenn., claims the names of Gipsy, bitch puppy, and Carlo, dog puppy, out of Lady Donald for black and white dog puppy, whelped December 5, 1880, out of Fido by Bennett's Don.

Buff and Bess—Mr. Atwood Collins, of Hartford, Conn., claims the names of Buff for red Irish setter dog and Bess for red Irish setter bitch, brother and sister, whelped December 12, 1880, out of Fannie (York-Gipsey) by King Ike (York-Banshee).

Gipsy and Carlo—Mr. Clarence P. Hunt, of Memphis, Tenn., claims the names of Gipsy, bitch puppy, and Carlo, dog puppy, out of Lady Clare by Joe Jr., purchased from Mr. Jerry Cockrell, Memphis, Tenn.

Effa B.—Mr. H. J. Bennett, of Trenton, N. J., claims the name of Effa B. for his black and white setter bitch, whelped December 5, 1880, out of Lambert's Fido by owner's Don.

Don—Mr. G. B. Nichols, of New Haven, Conn., claims the name of Don for Gordon setter puppy, whelped January 2, 1881, out of Mr. W. H. Pierce's Jennie (Shot-Mab) by Dr. S. Fleet Speir's Gypsum (Don-St. Kilda).

Daisy—Mr. G. B. Nichols, of New Haven, Conn., claims the name of Daisy for black and tan setter puppy, whelped July 30, 1880, out of Mr. W. H. Pierce's Fannie (Jerome Marble's Grouse-John Boyden's Hope) by Dr. Aten's Glen.

Adabelle—Mr. J. H. Phelan, of Jersey City, claims the name of Adabelle for red Irish setter bitch puppy, whelped November 12, 1880, out of Dr. M. S. Moore's Floss by T. O'Moore. The puppy was purchased from Mr. T. M. Smith, Jersey City, N. J.

Heather—Mr. F. Campbell Moller, New York city, claims the name of Heather for a black, white and tan bitch puppy, whelped November 25, out of owner's Belle by Cozzen's Bumps.

Bruce, Nolly and Fly—Mr. H. J. Bennett, of Trenton, N. J., claims the names of Bruce, Nolly and Fly for orange and white setters, whelped December 25, 1879, out of owner's Fido by W. Brumaker's Duke.

Mack—Mr. H. W. Nichols, of New Haven, Conn., claims the name of Mack for his black and tan Gordon setter dog puppy out of Mr. W. H. Pierce's Jennie by Dr. S. Fleet Speir's Gypsum.

Peggy—Mr. E. Whitney, Jr., claims the name of Fleet for his black and tan Gordon setter puppy, whelped January 2, 1881, out of Mr. W. H. Pierce's Jennie by Dr. S. Fleet Speir's Gypsum.

Major—Mr. A. J. Light, of Sherburne, N. Y., claims the name of Major for his liver and white cocker spaniel dog, whelped August 22, 1879, out of Ruth by Charlie.

Sport—Mr. A. J. Light, of Sherburne, N. Y., claims the name of Sport for liver and white cocker spaniel dog, whelped May, 1880, out of Ruth by Mr. A. J. Light's Cub.

New York Sooty—Mr. A. W. Lucy, No. 6 Second st., this city, claims the name of New York Sooty for his pug dog, a half brother of Mr. Lucy's original Young Sooty.

Tootes and Toodles—Mr. P. V. Hay, of Baltimore, Md., claims the names of Tootes and Toodles for brace of beagle puppies out of Landen's Fan by his Hunter.

Hartford Queen—Mr. J. P. V. Hay, of Baltimore, Md., claims the name of Hartford Queen for beagle bitch purchased from Mr. H. O. Neal, of Harve de Grace, Md.

Daisy Starlight—Mr. H. W. Durgin, of Bangor, Me., claims the name of Daisy Starlight for Llewellin setter bitch, whelped January 24, 1880, out of Starlight by Likes. In color and markings she resembles her sire.

Dot—Mr. H. B. Dickson, of Baltimore, Md., claims the name of Dot for liver and white cocker spaniel bitch, two months old, by black Burdett cocker spaniel Wildair out of Mr. McKoon's Dolly.

Cuba, Trocha and Dart—Mr. H. B. Duckerspiele, N. Y., claims the name of Cuba for bitch puppy, Trocha and Dart for dog puppies, whelped November 27, 1880, out of Lulu by Sensation II.

Romp—Mr. James L. Stevenson, of Bridgeport, Conn., claims the name of Romp for orange and white setter dog puppy, thirteen months old, whelped December 29, 1879, by Mr. H. W. Stevenson's Grouse out of Mr. Wm. Gebler's Pride.

Spot—Mr. James L. Stevenson, of Bridgeport, Conn., claims the name of Spot for orange and white setter bitch puppy, whelped December 29, 1879, out of Mr. Gebler's Pride by Mr. H. W. Stevenson's Grouse.

Rosy—Mr. John E. Sherman, of Foxboro, Mass., claims the name of Rosy for white, black and tan beagle bitch puppy, six months old, purchased from Mr. N. Elmore.

Mike—Mr. W. H. Coursen, of Newton, N. J., claims the name of Mike for black, white and tan beagle dog puppy, seven months old, out Lilly by Cluster, purchased from Mr. W. D. Hays, Hastings, Mich.

Midget—Mr. W. H. Coursen, of Newton, N. J., claims the name of Midget for black, white and tan beagle bitch puppy, five months old, out Lilly by Lee, purchased from Mr. W. D. Hays, Hastings, Mich.

Young Monarch—Mr. H. W. Durgin, of Bangor, Me., claims the name of Young Monarch for orange and white setter puppy, whelped July 14, 1880, by Dashing Monarch out of Petrel, bred by Mr. John C. Higgins, of Delaware City, Del.

Grouse—Mr. Brailsford Capron, Paris, Ont., claims the name of Grim for setter dog puppy out of Wirlwind by Druid, purchased from Mr. A. A. Francis.

Consternation—Mr. Benfield Capron, Paris, Ont., claims the name of Consternation (con for short) for setter dog puppy out of Wirlwind by Druid, purchased from Mr. A. A. Francis.

Jubal Early—Mr. Brook Powell, Baltimore, Md., claims the name of Jubal Early for his liver and white pointer puppy, whelped September 19, 1880, by Mr. G. B. Nichols' dog Don out of Mr. Powell's Gwyon.

Gwyon—Mr. John O'Donoghue, Washington, D. C., claims the name of Guyon for his thoroughbred smooth-coated St. Bernard puppy, whelped June 7, 1880, out of Mr. J. R. Schuyler's Josephine (Rob-Roy by Nellie Gray).

Gup—Mr. G. A. Burleigh, Taylorville, Ill., claims the name of Gup for his red Irish setter puppy out of Nell by Prince. Presented to him by Mr. O. F. Cromwell, Taylorville, Ill.

Flora—Mr. G. B. Cochrane, of Carleton, Mass., claims the name of Flora for Gordon setter bitch puppy, 8½ years old, out of Doane's Chloe by same owner's Tom.

Sport in Forest. Dash of Connecticut, Fred, Frankie, Lilly White and Little Pan—Mr. Herman Kellner, of Danbury, Conn., claims the name of Sport in Forest for orange and white setter dog puppy, Dash of Connecticut, for orange and white setter dog puppy; Fred, for orange and white setter dog puppy, Frankie, for orange and white setter dog puppy; Lilly White, for white and black marked setter bitch puppy, and Little Pan for orange and white setter bitch puppy, all of one litter, whelped November 12, 1880, out of owner's Jessie by Fred.

Count Laverack—Mr. Fred. T. Hall, Jr., of Bangor, Me., claims the name of Count Laverack for lemon Belton setter purchased of Mr. John C. Higgins, Delaware City, Del., whelped July 14, 1880, out of Petrel II, by Young Laverack. A pure Laverack, with dark eyes and nose.

Claremont, N. H., Jan. 28.—I notice in your issue of the 27th inst. that Mr. Austin Mann, of Brownsville, Texas, claims the name of Elcho for his black and white setter out of Nellie by Flash. I would suggest that Mr. Mann select some other name for his dog, for I think the name of Elcho rightfully belongs to my Irish setter. I forward Mr. Mann, by this mail, my dog's history, which will, I trust, show good reasons for the name not going outside the setter strain, which for several years has been distinguished by it. OWNER OF ELCHO.

[We consider the above protest eminently proper. The duplication of names is becoming more and more confusing. We therefore call the attention of our friends to the fact that there are hundreds of new names that can be used, which may be selected to specify the individuality of their stock.]

NAMES CHANGED.

Dan to Goldstone—Mr. George F. Pinkham, of Central Falls, R. I., changes the name of his red setter puppy Dan, which was claimed in last issue, to Goldstone. He is out of Flora by Arlington, and was whelped July 2, 1880.

BRED.

Jess-Shot—Mr. Jos. Dalzell's (St. John, N. B.,) champion cocker bitch Jess (Max-Flirt) to Mr. O. S. Stone's Shot (Don-Women).

Penny-Benedict—Mr. J. G. Dellwo's liver and white cocker bitch Penny, January 26, to the Lachine Kennel Club's imported Benedict (Champion Bachelor-Negress).

Lady Romp II. Donald—Mr. A. H. Moore's champion pointer bitch Lady Romp II. (Francis Prince-Belle) to his champion Donald (Bob-Sappho).

Cloudy-Young Sooty—Messrs. Miller & Co.'s pug bitch Cloudy to Mr. A. W. Lucy's Young Sooty, November 21, 1880. Both of New York city.

Minnie May Punch—Messrs. Miller & Co.'s pug bitch Minnie May to Mr. Halstead's Punch (formerly Thomas Kellagher's Punch), December 10. Both of New York city.

Girl-Glenmark—Mr. R. T. Greene's (Jersey City, N. J.,) pointer bitch Girl (Maryland-Tell) to Mr. Wm. F. Steel's Glenmark (Orgill's Rush-Round).

Ruth-Racer—Mr. Robert Walker's cocker spaniel Ruth (Snipe-Fairy) to his imported Racer.

Daisey II.-Racer—Mr. Robert Walker's cocker spaniel Daisey II. (Gerry-Daisey) to his imported Racer.

Topsey-Rex—Mr. George Burrell's (Jersey City, N. J.,) Scotch collie bitch Topsey to Mr. Lindsay's (Jersey City, N. J.,) Rex, first New York, 1881; on January 26, 1881.

Fanny Fern-Elcho—Mr. R. C. Waller's (Chicago, Ill.,) Fanny Fern, dam of champions Ben and Race, by Elcho, to Dr. Jarvis's champion Elcho, January 26, 1881.

Cute-Snipe—Messrs. C. B. Cummings & Son's (South Acworth, N. H.,) cocker bitch Cute to Snipe.

WHELPS.

Type—Mr. John Davidson's (Monroe, Mich.,) English setter bitch Type, whelped on January 6, six puppies, by Douglas. None for sale.

Cloudy—Messrs. Miller & Co.'s premium English pug bitch Cloudy, whelped January 21, 1881, eight puppies, four dogs and four bitches, to Mr. A. W. Lucy's Young Sooty, both of New York City.

Flirt—Mr. E. Francis' (Newark, N. J.,) black and tan setter bitch Flirt (Dinks-Alice) whelped January 17, 1881, eight puppies, three dogs and five bitches, by Dr. H. F. Aten's Glen (Dash-Belle).

Countess—Mr. Isaac Yeansley, Jr.'s (Coatesville, Pa.,) Countess whelped January 21, 1881, three whelps, two dogs and one gyp, by Sanboin's Count Noble.

SALES.

Wee Willie—Mr. P. Mulligan, of New York city, has sold his Yorkshire blue and tan terrier pup Wee Willie, probably the smallest specimen ever bred in New York. Wee Willie was out of Mr. Gothier's Flo by Thomas Kellagher's champion Willie, winner of first prize at Westminster K. C. Bench Show, 1880. Sold to Messrs. Miller & Co., New York city.

Pug Dogs—Rodger Jones, of New York city, has sold his pug dog to Mr. Cone, of Lenox, Mass.

Wildair-Sara Bernhardt Whelp—Mr. J. Otis Fellows has sold a liver and white cocker bitch puppy, whelped October 27, 1880, to Dr. David H. Sager.

Beagle Bitch Puppy—Mr. N. Elmore has sold the white, black and tan, six months' old beagle bitch puppy, recently purchased of Mr. J. E. Dodge, to Mr. John E. Sherman, of Foxboro, Mass.

Betsy—Robert Walker, of Franklin, Delaware County, N. Y., has purchased the imported liver and white cocker bitch Betsy from Mr. Charles E. Lewis, Suspension Bridge, N. Y.

Belton-Brambler Whelp—Dr. T. Clay Maddux, of Baltimore, Md., has purchased a black, white and tan ticked setter bitch puppy of four months, out of Brambler by Belton, from Mr. John Bolus, Worcester, Ohio.

Jeff—Mr. George Wicks, of Grand Rapids, Mich., has bought the celebrated black Newfoundland dog Jeff, one year old, from Mr. E. H. Gillman, of Detroit, Mich.

Speck—Mr. George Wicks, of Grand Rapids, Mich., has sold the black and tan dog Speck, of imported stock, whose weight is 33½ lbs., age three years, to Mr. A. Van Dusen, of Jackson, N. J.

Sensation II.-Lulu Whelps—Mr. M. J. Newhouse, of Oneida, N. Y., has sold two liver and white dog puppies, also one liver and white bitch puppy, to Dr. J. Morill, Poughkeepsie, N. Y.

Pet—Mr. J. Coleman Drayton, of this city, has purchased of Mr. S. T. Hammond, of Springfield, Mass., his celebrated Ethan Allen setter dog Pet. We congratulate Mr. Drayton upon the acquisition of so valuable an animal.

Sara Bernhardt—Dr. Luke Corcoran, of Springfield, Mass., has purchased the foxhound bitch Sarah Bernhardt.

Nettie—Mr. George M. Whitin, of North Uxbridge, Mass., has purchased from Mr. M. P. McKoon the cocker bitch Nettie, whelped September 27, 1877, out of Princess by Dutch.

Racer—Mr. Robert Walker, Franklin, Delaware Co., N. Y., has purchased imported cocker spaniel Racer, from Mr. S. Fleicher, Hollidaysburg, Pa.

PRESENTATION.

Champion Willie-Pie Pup—Mr. Gottier, of New York city, has presented a dog pup, brother to Wee Willie, to Mr. Thomas Leonard, of New York city.

DEATHS.

Ruby—Dr. C. P. Lyman, of Springfield, Mass., has had the misfortune to lose his imported pointer bitch Ruby.

Bronze—Mr. P. W. Aldrich, of Readville, Mass., has lost his Gordon setter puppy Bronze (Doane's Tom-Nellie Horton, supposed to have been killed by tramps.

Prudence—Mr. George E. Browne, of Dedham, Mass., has lost by death the pointer bitch Prudence. Cause, old age. She was by Warburton's Dandy out of Crowell's Nell, and dam of Strong's Pete, grand dam of Aldin's Pete Jr., and Peg and other noted dogs.

Light—Mr. Frank Johnston's (Jackson, Miss.,) orange and white setter puppy Light out of Daisy Dean by Lincoln from distemper.

Lemon—Mr. Frank Johnston's (Jackson, Miss.,) lemon and white setter puppy Duke of Montview from distemper.

Lady Eva—Mr. Herman Kellner, of Danbury, Conn., has lost his orange and white bitch puppy Lady Eva, out of his Jessie by Fred.

KENNEL MANAGEMENT.

57 C. F. C., Pawtucket, R. I.—I find on the inside of my puppy's lips several warts, both large and small. How shall I remove them? Ans. Put a rubber bit in the dog's mouth, and after drying the warts with a piece of cotton, remove them with scissors and touch the bases with nitrate of silver. Continue to do so until they disappear. A small red hot iron is recommended instead of the caustic, as giving less pain if properly applied.

58 C. A. S., Sloansville, N. Y.—Your hound probably has a tape worm. Give the following emulsion: Oil of male fern, half ounce; powdered gum acacia, one ounce; pure glycerine, one ounce; water to make ten ounces. It should be mixed by a chemist and kept in a glass-stoppered bottle, and well shaken before used. The dose for a full-grown foxhound is one and a half tablespoonsful. Give no food eighteen to twenty-four hours before giving emulsion. To prevent the dog from vomiting tie his head up for an hour. A large dose of castor or olive oil should follow after two or three hours.

59 BROKER, New York.—You will run fearless risk from losing your dog by boarding him in the country. The city is no place to kennel a dog. We know of no reliable place that would suit you. Consult our kennel columns, and after you have selected a place write us and we will be pleased to give you all information regarding it.

60 J. P. W., South Orange, N. J.—For removal of warts in your dog's mouth see answer in this column to C. F. C., Pawtucket, R. I.

Far, far better for you than Beer, Ale or Porter, and free from the intoxicating effects, is Hop Bitters.

Rifle and Trap Shooting.

RANGE AND GALLERY.

CONLIN'S SHOOTING GALLERY.

The third week of the pistol shooting tournament ended Jan. 29. The contest during the week was for the championship of ward shooting, at paces. The following are the names and scores of the first ten competitors:

Dr E T T Marsh	5½	Hon Sherman Smith	8¾
Wm M Chase	5¼	W C Southwick	9
Col J J Dunn	5¾	David A. Davis	10½
T B Childs	6 3-16	J W Leggett	10½
Pierre Lorillard, Jr	7	W B Smith	10¾

The scores show the total measurement of ten shots from centre of shot to centre of bullseye. As will be seen by the scores of the winners and Mr. Chase, there is only one quarter of an inch difference in the total measurement of the string of shots. The first three scores show an average of about one-half an inch measurement per shot from centre of bullseye. This is extraordinary shooting, and the closeness of the scores illustrates how evenly the competitors are matched in skill.

The fourth week of the tournament is now in progress, and the contest for the championship at swinging object at ten paces; it is open to all comers, and all are cordially invited to call at the gallery and witness the shooting. JAMES S. CONLIN.

MAMMOTH RIFLE GALLERY—*Boston, Mass., Jan.* 29.—The only change to be noted in the positions of contestants in the New Year's Rifle Match the past week is the advancement of Mr. N. W. Arnold to 3d place, Mr. Merrill still holding the lead, with Mr. Williams 2d, Mr. Richardson 4th, Mr. Ames 5th, Mr. Wilder 6th. Below is the summary:

J Merrill	38 38 39 39 40—194	L T Folsom	35 35 36 36 36—178
J H Williams	37 37 38 39 40—191	J J Ross	35 35 35 35 37—177
N W Arnold	38 38 38 38 39—191	A C Goodspeed	35 35 35 35 36—176
E F Richardson	38 38 38 38 39—191	F J Snow	35 35 35 35 36—176
J Ames	37 37 37 38 38—184	Wm Pollard	34 35 35 35 38—175
Elihu Wilder	36 37 37 37 37—184	G Warren	34 35 35 35 36—175
C R Bartlett	36 36 36 36 36—180	O T Hart	34 35 35 35 35—174
A C Gould	35 36 36 37 37—181	B H Daley	34 35 35 35 35—174
Geo D Edson	36 36 36 36 36—180	H K Knowles	34 34 35 35 35—173
S Fogg	35 35 35 36 37—178		

West will commence the Everybody's Rifle Match with 6 cash prizes, also the extra prize of $15 for a clean score. Match No. 2, called the silverware Match, open to all who have never won a prize in the gallery; 1st prize, pitcher and salver; 2d prize, $3 in cash; 3d $1; also $15 for clean score.

The leading scores in FOREST AND STREAM Match, for the elegant meerschaum pipe, which continues until May 1st, are:

D N Sherburne	38	Geo D Edson	36
S Fogg	37	A C Goodspeed	36
J J Ross	37	O T Hart	36
C R Bartlett	36	H H Daley	36

Pistol Practice—Mr. Wilder still leads with 115, Mr. Souther and J. J. Dunn have 114, and Mr. F. J. Rabbeth, 112. Summary:

Elliot Wilder.....	38	38	29—115
S Souther.....	38	38	38—114

C C Foster.....	32	32	33—97
L F Folsom.....	32	32	33—97

BOSTON, *Mass., Jan.* 22.—The attendance to-day at Walnut Hill was good, considering that the weather conditions were the very worst. The cold was intense. The signal flags snapped and were torn; the shutters were blown down by the northwest wind, which indicated 8 o'clock, and all calculations were upset. The pavilion was as cold as a barn, and the scorer and Statistical Officer Brownell were nearly frigid. The white snow was piled up in front of the shed and before the butts to a height of five feet, and only half of the targets could be seen from the firing points. The new match was the only one shot, and it will continue each Saturday until closed by the committee. The conditions are as follows:

No. 1—Record Match (Creedmoor target).—Open to all comers. Rounds—ten. Re-entries permitted. The three scores to win. Entry fee for members, twenty-five cents; non-members, fifty cents; subsequent entries, twenty-five cents. Prizes will be awarded to the competitors making the best improvement on or approximation to the average of their record. This average will be obtained by aggregating the nine best recorded scores of competitors. Ties will be decided by the merit of winning scores, treated as one continuous score. Competitors, including non-members, not having a sufficient record to make a proper average, will be handicapped by the judgment of the officer in charge, but in no such case on a less average than 4.4. Military rifles will be allowed 2 per cent. additional on scores made with such rifles.

The prizes are the gold medal of the association and fifteen cash prizes, aggregating $100.

No. 2 record match, also opened, will be shot on the Massachusetts target. First prize, bronze medal of National Rifle Association and nine other prizes, valued at $75. Conditions, five scores to win, seven rounds, under the same general conditions as match No. 1.

The results yesterday in the No. 1 record match, in which there were forty-three entries, were capital, Mr. Charles coming to the front with 46, and A. C. Gould with 45. Considering the day the work was first-class, as the score indicates:

The Record Match (Creedmoor).

W Charles.....	5	5	5	4	5	5	5	4	—46

M L Riggs.....	175	J L S Kelliher.....	158
N. D. Ward.....	175	A Seltenreichen.....	153
C L Turner.....	175		

NEW YORK RIFLE GALLERY.—Match commencing February 1 and ending February 28. Conditions: Open to all comers; weapon, any rifle, 22 cal.; 3 lb. pull; rounds, 10; entrance fee, 25 cents. 1st prize, $20, to be awarded to the marksman making the four highest scores during the month (not necessarily consecutive); 2d prize, $15; 3d, $13, 4th, $10, 5th, $8, 6th, $6, 7th, $4, 8th, $3. No marksman can win more than one prize. Marksmen may use their own rifles and ammunition if desirous. $25 will be paid for a full score or 10 shots.

BROOKLYN—*Brooklyn Long Range Gallery, 381 Fulton st.*—The rifle match, prize, a Ballard, 22 cal., 300 yards (reduced), ten shots, three scores to win, two winnings before final ownership, was well attended to-day, and resulted so far in Mr. A. H. Anderson's taking the lead in the first week by making the highest score, 48, by a total of 96 (possible 150), Mr. F. Ronaldson following closely with 48, 48, 48. Last week Mr. Ronaldson was the winner with 47, 48, 49, beating Mr. A. H. Anderson by two points. Ties made is therefore not decided yet. In the every Saturday night matches (ring target) Mr. A. H. Anderson won twice in succession, by making each time 118 out of 125.

PHILADELPHIA.—Some very remarkable shooting has lately been made at warne's gallery, Eleventh and Chestnut streets, the score of which should be given to your readers, and which I add, as a premium of $50 is offered to any amateur who will equal the pistol practice. Dr. M. S. Price, at 24 yards distance, off hand, with hunting or open sights, made thirty-two consecutive shots, which measured 25½ inches, all shots being measured from centre of bullseye to centre of ball mark in target. Dr. A. B——, at 35 feet, at or before the word "go," at swinging target, 2 inch bullseye, moving four feet from side to side, hit the target 100 consecutive times. I think this latter shooting was wonderful. Mr. Warne has never seen its equal, and will give $50 for a similar performance by an amateur. HOMO.

SCHUTZEN NOTES—*Jersey City, Jan.* 22.—The ball of the Jersey Schutzen Corps, Captain A. B. Hardekopf, was held at Cooper Hall, Jersey City, on the 20th, and was one of the brilliant affairs of which the Jersey Schutzen Corps have been the originators. The hall was splendidly decorated and made a good impression. When the march commenced 1 counted eighty couples and still parties were coming. Visitors of other corps turned out in strong bodies, of which I noticed the Hoboken Schutzen Corps, Captain Hoffman; Jersey City Schutzen Company, G. S. B. Captain Aegelbach; Jersey City Schutzen Corps, Captain Lippmann; Schutzen Lyra (singing society), Prest. Gartegast. Of the New York Schutzen Corps, it was a tied that not a single soul was present, although I understood that Captain Hardekopf received a letter before the ball, in which the captain of the New York corps gave notice that the invitation was accepted, and that they would visit the ball in a strong body. At 12 o'clock the members of the corps and the visitors formed in the ballroom, and opened ranks, when Captain Hardekopf and ex-Captain August Ernisch were brought in by a committee and placed before the company. Ex-Captain H. Raschen then presented the captain, with well-chosen remarks, a splendid sword and belt, as a token of the esteem and friendship of the members. Mr. Hardekopf, on behalf of the corps, then addressed Ex-Captain August Ernisch, and presented him with an elegant diamond pin, as a token of thanks for the three years' service to the corps as captain. At the opening and closing of this ceremony the Schutzen Lyra rendered fine music. The whole affair from beginning to end was a great success, and the different committees deserve great credit for their management. A.

SHOOTING MATCHES.

LOUISVILLE, *Ky., Jan.* 2.—*Editor Forest and Stream:* Referring to the proposed circuit of shooting tournaments for this year, we desire to claim six days for the Louisville Sportsmen's Association, to commence Monday, May 30th. The week immediately following the dates claimed by the Missouri State Sportsmen's Association.

JNO. H. HARMOUR,
JOE GRIFFITH,
Managers, for Louisville Sportsmen's Asso.

LEXINGTON GUN CLUB—*Brooklyn, Jan.* 22.—It gives me great pleasure to announce to you that the Lexington Gun Club of Brooklyn have reorganized. Their inauguration shoot and banquet took place at their new grounds on the Jamaica road. The birds were a fine lot; 5 ground traps, 25 yards rise. Among the contestants you will recognize a few familiar names. Those gentlemen having been on a tour through Spain for a few years. The following is the score:

G Delgado.....	1	1	1 1 1 1 1 1 1 1 —10
J Gutierrez.....	1	1	1 1 1 1 1 1 1 0 —9
J Fernandez.....	1	1	0 1 1 1 1 0 1 1 —8
S Oholoran.....	0	1	1 1 1 0 0 1 1 1 —7
M Garigorda.....	1	0	1 1 1 1 0 1 1 1 —7
B Hanlon.....	0	1	1 1 0 1 0 1 1 1 —6
G L Birch.....	1	0	0 0 1 1 0 0 1 1 —5

The club intends to spend their in fishing in the Colorado Parks this summer.

CONEY ISLAND CLUB—*Club Grounds, Coney Island, Jan.* 27.—Match for gold badge; handicap rise, 7 birds each, H & T traps; Captain Bill, 7; Madison, 6; Williams, 4; Eddy, 4; Graves, 4; Fagan, 4; Sherlin* 4; Spergel, 4; Harrand, 3; Miller, 3; Jones, 3; Frank, 2; Foote, 2; Geo Post, 2; Roberts, 2; Laughlin, 2; Clarke, 1.

ESSEX GUN CLUB—*Newark, N. J., Jan.* 24.—Monthly shoot. The average shooting was not up to what it has been in the past, and can be accounted for by the snow storm the night previous, which is very detrimental to a bird flies low, especially if it is a white one. Shooting at 25 yds.:

Belcher.....	1	1	1	1	1	1	1	1	1	0—9
Pentz.....	1	1	1	0	1	1	1	1	1	1—9
Hunt.....	1	1	1	1	1	1	1	1	1	1—10

Johnson.....	27	"	0	1	1	1	0	0			—3
Simpson.....	27	"	0	0	1	0	W				—1

Match, five birds, five each:

Colonel Armstrong.....	28	yds.	0	1	1	1—4
Johnson.....	21	"	0	0	1	0—2

Bad Dreams, Disturbed Sleep, Indigestion, Stomach Gas, all vanish before Hop Bitters.

Yachting and Canoeing.

YACHTING NEWS.

WINNING YACHTS.—A correspondent writes that the Chas. Benson, a "cock up" of the Southwark Y. C., should be credited with two firsts, having beaten the former champion (Ledyard) in two matches during the season.

OBITUARY.—The composer who, in our absence, made the Viking 16 ft. long instead of 16½ ft., and gave to the Fleta yawl 16 ft. draft in place of 7 ft., died suddenly the next day from being helped out of a third story window.

LYNN YACHT CLUB.—The following are the officers for the year: Commodore, E. C. Neal; Vice Commodore, E. G. Souther; Fleet Captain, J. F. Lee; Secretary, E. M. Frazier; Treasurer, C. H. Clifford; Measurer, C. Taylor.

HULL (MASS.) YACHT CLUB.—All the yachts are being changed into keels, in spite of the fact that the club does most of its sailing in the river. A season or two more and there will not be a centreboard yacht left in the East.

NEW YACHTS.—Mr. Clapham is building a Nonpareil, 24 ft. long and 10 ft. wide, for Georgia parties. Inquiries from parties residing in the inland water at Bensenville, and the Nonpareil promises to become the recognized light-draft type, as shifting ballast is a nuisance not necessary in her.

QUAKER CITY YACHT CLUB.—The annual reception of the club took place yesterday at headquarters, corner New Market and Brown street, Philadelphia, a very pleasant evening being enjoyed by the members and invited guests. The club is prospering, and its annual fixtures, including numerous squadron cruises and matches, are an example for many older organizations.

WANDERER put to sea from this port, Jan. 26, bound for Charleston, where her owner, Mr. E. Morgan, Jr., will join. She is now rigged as a topsail schooner. We take the dimensions of her spars from the N. Y. *Herald:* Foremast, above deck, 56 ft.; masthead, 11 ft.; foretopmast, 28 ft.; topgallantmast, 13 ft.; mainmast, above deck, 65 ft.; masthead, 10 ft.; maintopmast, 41ft.

FOR HOLLAND.—Wm. Forsyth, of Keyport, has been indulging his fancy in building a light draft model for a gentleman in Holland to sail about the shoals of the Zuyder Zee. She is of course of the slab type with inordinate sheer and a huge fixed "horn." All very well for the Zuyder, but if her owner ever gets blown off shore he can thank his stars if in the steep seas of the German ocean he can make a harbor to leeward.

THE MADGE.—A report comes to us that Mr. Jas. Coats may possibly bring his fine little ten-ton slup over with him from England. We hope there may be some truth in this. The Madge is one of the fastest and handiest craft in England and is expected to look after some of the coasts of Great Britain, and making forced passages in all kinds of weather which would put our largest sloops to shame. She is 35.7 ft. stem to post on deck, or about 36½ ft. on water line, 7 ft. 7 in. beam, and 7 ft. depth and draft.

NEW YORK YACHT CLUB.—At the meeting of the N. Y. C. C., Jan. 26, held in the rooms of the N. Y. Bi. Club, the following officers were chosen for the ensuing year: Com., E. B. Bronson, canoe Queen Mab; Vice Com., Wm. Whitlock, canoe Clochette; Sec. and Treas., C. B. Vaux, canoe Dot. Executive Committee—Messrs. Bronson, Whitlock, Vaux, Aiken, Norton. Regatta Committee—Messrs. Vaux, Gschnitzer, Stephens, D'Oremieulx and Monroe. The next meeting will be at the club dinner the second Wednesday in April.

YACHTS' PHOTOS.—Black & Co., of Boston, have not been idle last summer. They have added many fine photos to their list, while we in New York have been content with viewing the finished. We have poked away at New York artists without result, but Brontano has promised us to try and wind up some one to the necessary pitch of making money hand over fist, so that New York yachts may figure on his portfolio in the near future. If there is a live artist at Port Jefferson he has the chance of his life in the big fleet laid up and hauled out there. Will he wake up?

NAVAL ENCYCLOPEDIA.—L. R. Hamersly & Co. have just published their Naval Encyclopædia, a work of exceeding usefulness and a valuable book for the libraries of yacht clubs and nautical men. It is a complete book of reference on all matters relating to naval and shipping affairs, and contains much information. As a volume of reference it is a specialty and has no equal. A fifteen-page article on yachts and yachting by C. P. Kunhardt will be of particular interest to our readers. It supplies numerous tables of data and the most approved sailing rules.

CUTTERS IN BOSTON.—A bid of $100 in excess of cost has been made for a cutter built this winter and accepted. Mr. Ed. Burgess is having another built by Lawley & Son, 32 feet on deck, 27 ft. water line and 8 ft. beam, with a draft of 5 ft. She will have a plain sloop rig and regular ship's companionway, which will be very stylish in appearance. Mr. Malcom Forbes has become the owner of the former on the same lines, and a series of interesting matches will be the result as soon as the imported craft finds her firm in American waters. Eastern men take kindly to the cutter. There will be a dozen in commission this summer.

THE REPUBLIC.—This schooner is now in the hands of Smith & Terry, Greenport, for alterations and repairs. It will take $5,000 to put the yacht in condition after only one short season's service in sheltered waters. All the joiner work was of green wood, and has shrunk away beyond remedy, and the arrangement of the cabins was found so inconvenient that the owner has determined upon entire renovation. She was ostensibly planned and modelled by self-styled "practical" men, and built in "the provinces," so that her failure under sail and a heavy bill for repairs are not to be wondered at. She was the production of "patriots on the make." A little more "theory" and a little less "star spangled banner" could have turned out a much superior ship and a better job all round.

THE BERRESHOFF COIL IN ENGLAND.—I see "Southwest Coast" asks for some information in regard to coil boilers, which I believe I can partly supply, and am glad to assist him and any to whom it may be of use with what experience I have in the matter. Judging by knowledge gained in driving several launches fitted with these boilers, I have no hesitation in stating that they are the best for small work, as is the boiler of the future, while it is simply not yet tried for larger sizes, but with modifications will equally, in my mind, come out first rate. There are so many elements in its favor over ordinary types, as to anybody acquainted with its merits, can hardly fail of producing this impression. Only consider, first, impossibility of priming (in itself a hitherto unhoped-for advantage in small boilers), and no theory but a real fact, myself having driven a little Herreshoff, only 16 diam. and 2ft. high, at full speed through all sorts of water and over 100 miles in two days without a stop either at midnight, with never a trace of priming, whether in salt or fresh water, and, what is still more excellent, with no salter water in boiler at the end than the beginning of any length of run; secondly, rapid steaming—as soon as a good fire is obtainable there is but no second lost. Another enormous advantage, especially for little boilers and auxiliaries: It pays to get up steam for half hour or even quarter-hour run. Thirdly, impossibility of a burst, or any danger from over pressure. This is conclusion to all the nervous. The danger of bursting a Herreshoff is simply to dig deep and throw the steam pipe as far as it might and very little risk, with little possible consequence, as there is such a little of either steam or water to escape compared with ordinary boilers. It will be sure all to go safely up the chimney. In fact, the boiler becomes far the strongest part of the combination, and may smash up the engines, as I have several times done with it, but never comes to grief itself. Fourthly, freedom from destruction by strains either from unequal expansion by heat or other causes. The boiler being a mere spring made of pipe, there is no strain put up on any part of it, even if it were possible to have one half red hot and the other cold. This advantage will be more appreciated by those used to large marine boilers. Fifthly, great convenience in being able to leave alone with fire in; all that is necessary is to damp the fire with ashes, and it the second day is ready to continue anybody who thinks he is up in such things that I am a red-hot partisan of the Herreshoff boiler, and have an interest in its sale. Both ideas would be right and both wrong. When a boiler shows more advantages I shall be as red hot for it, while as yet I see no reason why such one needs in any good addition to the powers at man's disposal. I may say, in conclusion, that I am an amateur; have owned several yachts, launches and engines; and that all I have now said on the Herreshoff is based on my own actual experience by driving four or five Herreshoff launches. If I could afford it, I should at once fit my steam yacht (40 tons) with one of these boilers.—HENRY T. DAWSON (The Cedars, Chiswick, Dec. 28).—*London Field.*

REGISTRATION OF SMALL CANADIAN YACHTS.

CANADIAN YACHTS under fifteen tons have not hitherto been permitted to take out papers, and in consequence have often got into difficulties with the customs authorities when visiting ports on the United States coast. The Secretary of the Royal Canadian Yacht Club having made representations to that effect to the London authorities, the following reply and instructions have been published:

ROYAL YACHT OF MINUTE PATRON, Jan. 28, 1880 (192—1880).

"The attention of the Board having been directed to the diversity of practice which exists in regard to the registry of yachts not exceeding fifteen tons burden, and it appearing that at some ports the General Order 89, 1854, is still acted upon, notwithstanding that the conditions of such order have ceased to be operative since the passing of the Merchant Shipping Act, 1854, the Board rescind the General Order No. 68, 1852, and direct that the exemption of registry set forth in Section 19, Clause 3 of the Act quoted above be maintained as regards such vessels, not exceeding fifteen tons burden, employed solely on the rivers or coasts of the United Kingdom, and that pleasure yachts be admitted to registry on application of the owners without requiring from them any statement that the vessels are to be employed in foreign waters.

"Copies of this minute are to be delivered to the proper officers in London, and transmitted to the collectors at the Outario ports for their information and government.

"CUSTOM HOUSE, LONDON, NOV. 26, 1880.

"The aforegoing copy of the Board's minute, dated 22d inst., is transmitted to the Collector at Toronto accordingly.

"By order of the Commissioners,

F. G. WALPOLE."

MY FIRST CANOEING CRUISE.

Editor Forest and Stream:

Having a fifteen foot, forty-five pound canvas canoe (which had up to this time only been used for hunting near home, the first thing to be decided upon was where to go. On examining the map I found that by taking canoe by cars to Mount Vernon and, starting on the Kokosing, follow its course to the Wahondding, thence to the Walhonding, Woman and Muskingum to Zanesville, would give me a trip of about 125 miles of water, not dangerous, but through the rocks at Milwood, and the rapids between Coshocton and Dresden, would be exciting enough for a beginner.

My canoe is fifteen feet long, oiled poplar frame and bottom, with canvas sides and decks. At night I throw a waterproof canvas over a heavy cord stretched from end to end of the canoe, and raised in centre by a stick, and then make my bed on the bottom, on the inside bottom board, and using my rubber boots for a pillow, I can sleep dry, let the weather be what it will.

I started on a Monday morning and had a good send-off at Mount Vernon by the canoe men introduced in the river by which I was hauled through the centre of the town. A dreuching shower about an hour after might have dampened the ardor of a less enthusiastic canoeist, but the blankets, provender, ammunition, gun, etc., being well stowed under the decks, and the hood snugly buttoned around the manhole, with rubber coat on, I paddled ahead in the bright sun was shining. The second day I tried the Esquimaux trick of turning a somersault with poor success. I was running down a swift current and came unexpectedly upon a wire stretched across the river about three inches above the water. In spite of my most frantic efforts to keep the canoe end on, she whirled around, and the next moment the canoeist was in the water and the canoe right side up on the other side of the wire. Not a thing had spilled out but the contents of my pockets were decidedly damp, which I remedied on a raid on a farmhouse near by, where the good lady of the establishment soon had the blankets and pack steaming before a large fire. I reached the rocks of Milwood that evening and started the next morning under the care of half a dozen natives through the bridge which crosses the river at this point right above the first rapid. I got through all right, with one or two scrapes. The scenery along the route was beautiful, the river running for miles at the foot of a range of pine-covered hills. The rapids between Coshocton and Dresden were successfully passed with one or two narrow escapes. Among the comical incidents of the trip I remember one. I was sitting in the canoe with the paddle across my knees as a native came along, and I asked him how far to Coshocton (the next place ahead)? I was replied to about as near as I could get there sooner if I would turn around and go the other way. He had never seen a canoe propelled by paddle, and supposed I was going up stream because I faced the bow. I reached Zanesville Saturday evening, and was home again on Monday morning. I voted the trip a success, and, health, etc., permitting, shall keep it up in the future.

AMATEUR NO. 1.

THE FLAGSHIP OF THE S. F. Y. C.

OUR description of the flagship of the San Francisco Yacht Club will be read with interest as an example of a sailor's yacht. "Hedges," "hawsers," "warps on reels," and similar appliances may strike the average Eastern yachtsman as old and strange, but they belong to any well fitted yacht nevertheless, even though of moderate dimensions, and many of our readers may profit by the good example set by Commodore Harrison, both in the matter of fitting out and cruising. The model was not built for a racing craft, but for a comfortable and safe cruising yawl, and every one who has seen her acknowledges she is all that. Her length is 49 ft.; beam, 16.5 ft.; depth of hold, 6.2 ft. She has a good deal of sheer forward, with a straight stem and fine entrance; 5 ft. overhang aft and none forward; a short

bowsprit only 16 ft. outboard; mast well forward, 10 ft. from stem; main boom, 35 ft. long; gaff, 18 ft.; hoist of mainsail, 38 ft. The jigger or driver has a 17-ft. boom, 8-ft. gaff and 34-ft. hoist. The rig is snug in comparison with Eastern yachts, due to the prevailing strong winds on the Pacific coast. The yacht has 26 inches freeboard to her deck, and the cabin house is 16 inches high, the cockpit or standing, room 10x10 ft., with good large scuppers; decks of white cedar; rail combings, bits and cockpit of Tamanu wood (as hard as iron), black walnut and prima vera. All iron work is galvanized. The best bower anchor weighs 220 lbs. and has 50 fathoms of half-inch chain. The working anchor is 160 lbs. and has 35 fathoms of three-eighths of an inch chain. The kedge weighs 56 lbs. All anchors are galvanized, and all running gear is New Bedford whale line. The yawl also has 60 fathoms four and a half inch manilla for a hawser. Sails of No. 5 bighted cotton duck. Below her ballast is blacksmith scrap iron carefully laid between her timbers and bolted in solid so you could turn the yacht bottom up and not a pound of ballast would shift, or you could strip her garboards off and she would not leak a drop. Fore and aft, and at both extremes, she is cemented even with her keison, except between two channels, her draft being over five feet. Her cabin is 6 ft. 2 in. high all over. She has four double berths in the cabin with spring mattrasses, which, when made up, are 4 ft. 6 in. and 5 ft. wide, and divided from each other by movable bulkheads, something like in the Pullman cars, and curtains inside. She also makes up two berths on the floor of the cabin. Forward of the main cabin is a large stateroom with double berth, and forward of that a washroom and w. c. On the port side is a large galley, 11 feet long, with one large stove, a six-hole Richmond range, and one double coal oil stove for warm weather, or to make tea or coffee, as well as a large sink. The forecastle has berths for two hands. Coal oil is kept in a tank right in the eyes, filling from the deck, the hawser on a reel forward of the bits, and the running lines on reels, one on each side of the bits, so they are all within reach. The cabin table seats nine on camp stools without crowding, and there have been twenty-three to dinner, cooking for all on board. As the centreboard only comes six inches through the table it is no detriment to proper service. Two sideboards by the companionway, and two white lockers opening into the cabin and running under the seats of the cockpit, afford stowage for provisions. In the lazaret there is an ice chest and room to stow 20 or 30 cases of stores, besides oil tanks, yacht stores, etc. The water tanks hold about 200 gallons. The Frolic steers with a Spuecaster fisherman's wheel. She was built for comfortable cruising on the Bay of San Francisco and not to go to sea. Although all summer it blows very hard on the Pacific slope, and makes a very nasty choppy sea in the bay, it is nothing like the open sea, and so great a beam does not interfere with good performance, while it gives much room below, the easy bilge and great dead rise making some amends for the other evil. A standing bowsprit and single jib are also easier to work with one man, and the sea is rarely heavy enough to put her bowsprit under. The crew consists of one man and a Chinaman for cook and steward, and the Frolic often cruises from ten days to two weeks, and generally with about five ladies besides gentlemen.

In case of heavy weather, and but a short distance to go, the mainsail is lowered and the yawl worked under jib and bigger, under which sail she is very easy, weatherly, and works beautifully. Of course, if in for a long beat, she is reefed all round, and reefing the mainsail is child's play—all done on deck. If the weather keeps getting worse the jib and jigger are stowed and a small storm jib is set flying just outside the knight-heads. She is then under very easy sail, and all where it should be, right in the body. Should it blow still harder a second reef is hauled down in the mainsail. If still too much take in the storm jib, and under that double reefed mainsail she will work like a cat-boat, but it must blow very hard to need all this reduction. With an able boat like the Frolic, and rigged as she is, heavy weather has no terrors for those on board, not even for the ladies who cruise in her, and it has often happened a short

The Kennel.

PURE FIELD TRIAL SETTERS FOR SALE.—Leah (Roybel-Livy Gil), a very handsome blue Belton and an excellent field and brood bitch, 2½ years old, $100. Cara R. (Roscoe-Armida), lemon Belton, 9 months old; a beauty, only $50. Kate R (Roscoe Armida), very handsome blue Belton, 9 months old, price $50. Four pups, 2 months old, by Roxey-boy out of Armida. Great beauties, very cheap. All the above are pure field trial setters; the most successful strain at field trials and bench shows in England and America, and are sold only on account of the crowded condition of my kennel.

For full pedigrees and particulars address F. A. DIFFENDERFER, 15 Shippen st., Lancaster, Pa.
Jan27,4t

$100 REWARD! The above amount will be paid to any one giving information leading to the detection and conviction of the party who forced the window of and introduced poison into the kennel of pointer bitch Nag on the premises of Mrs. M. E. Von Culin, Delaware City, Del.
E. & C. VON CULIN, Delaware City, Del. feb3,1t

FOR SALE, a brace of Gordon setters, dog and bitch, whelped Jan. 1, 1880, out of Browne's Nellie Horton (litter sister to Malcolm and Dream II.) by Orgill's Rip. Have been worked on quail all through the past season. Price for brace $125. Address FRED. N. HALL, P.O. Box 884, N.Y. feb3,2t

FOR SALE, handsome English setter, 2 years 2 months old, orange and white, by Morris's champion Lark, ex-Belle. Price $50. Address R. M. LIVINGSTON, Box 191, Newport, R. I. feb3,1t

ENGLISH pug dogs and puppies. We have obtained specimens of some of the best strains and intending purchasers call or address with stamp. Miller & Co., No. 6 Second st., N.Y. city. feb3,1t

WILL EXCHANGE a handsome red Irish setter dog, 18 months old, by Dash ex-Flora, C. N. Y., 1880, for a handsome bull terrier or fox terrier bitch. Address W. E. LIVINGSTON, Box 131 Newport, R. I. feb3,1t

FOR SALE, a liver and white pointer dog, aged 3 years; also a setter slut, lemon and white, age 4 years; has been shot over for 3 years; also a setter slut, 10 months. She has been run all this season. Write for pedigree and price. JOSEPH LEWIS, Apollo, Armstrong Co., Pa. feb3,1t

OULEOUT COCKER SPANIEL KENNEL.—For pure Cockers from the finest selected stock in the United States, imported and native in the stud, imported cocker Racer, liver and white. A very handsome, powerful dog, 3 years old, fine feather, weight, 28 lbs., litters warranted. Will serve good approved bitches only at $15. Address ROBERT WALKER, Keeper Ouleout Kennel, Franklin, Del. Co., N. Y. tf

RORY O'MORE KENNEL.—Champion Rory O'More in the stud. The handsomest as well as one of the best field and best bred red Irish dogs in the United States. Winner of first prize at New York, 1877; champion at New York, 1878; champion at Hudson, 1879, and winner of the gold necklace at New York, 1880. For sale, thoroughbred pups. Address W. N. CALLENDER, Albany, N. Y. June24,tf

PINE LODGE KENNELS.—I am prepared to take a limited number of dogs, either setters or pointers, and train them thoroughly. I give my puppies seven months' work out of the twelve, and guarantee satisfaction if the dog has all the natural instincts. References on application. Prices, $50 and $75, according to length of time I keep the dog, with discount to parties at long distances. A. WINTER, Cairo, Thomas County, Georgia. Oct 2,tf

GLEN-R. and T.: by Colburn's Dash ex Mullin's Belle. The above dog, winner of first in brace stakes of the Eastern Field Trials, will be allowed to serve a few bitches of approved form and blood. Stud fee $25, and $2 for groom. Address
H. F. ATEN, M.D.,
34 Hanson place,
Brooklyn, N. Y

ST. BERNARDS FOR SALE.—The undersigned, wishing to reduce his kennel, offers for sale several magnificent imported Mount St. Bernard dogs and bitches, carefully selected from the best European strains. To be sold for no fault. For prices, pedigrees, etc., address,
LE ROY Z. COLLINS,
Sept 18-tf Lancaster, Mass., U. S. A.

FOR SALE, a well broken Pointer dog; 2 years old; native; good retriever from land or water. Also good, sound, liver cocker, 2½ years old, broken. Price $20 each. Will give away small pointer bitch Clare, 3½ years old (Dutton-Topsy) to any one that will give a pair of pups from first litter by good, small pointer dog. Address ROBT. WALKER, Franklin, Del. Co., N. Y. Jan27,2t

FOR SALE, a well bred red (with a little white) setter puppy, 20 months old. Has been handled this fall, and breaker gives a good account of him. Apply to PIONEER, this office. Dec30,tf

"THE FISHING LINE."

TAKE THE

Grand Rapids & Indiana R.R.

Mackinaw, Grand Rapids and Cincinnati Short Line

FOR THE

Trout, Grayling, and Black Bass Fisheries,

AND THE

FAMOU SUMMER RESORTS AND LAKES OF

NORTHERN MICHIGAN.

The waters of the

Grand Traverse Region

and the Michigan North Woods are unsurpassed, if equaled, in the abundance and great variety of fish contained.

BROOK TROUT abound in the streams, and the famous AMERICAN GRAYLING is found only in those waters.

The TROUT season begins May 1 and ends Sept. 1.

The GRAYLING Season opens June 1 and ends Nov. 1.

BLACK BASS, PIKE, PICKEREL and MUSCALONGE, also abound in large numbers in the many lakes and lakelets of this territory.

The sportsman can readily send trophies of his skill to his friends or "club" at home, nice for packing fish can be had at many points.

TAKE YOUR FAMILY WITH YOU. The scenery of the North Woods and Lakes is very beautiful; the air is pure, dry and bracing. The climate is peculiarly beneficial to those suffering with

Hay Fever and Asthma Affections.

The hotel accommodations are good, far surpassing the average in countries new enough to afford fine finest of fishing.

During the season Round Trip Excursion Tickets will be sold at low rates, and attractive train facilities offered to Tourists and Sportsmen.

Docs, Guns and Fishing Tackle Carried Free at owner's risk.

It is our aim to make sportsmen feel "at home" on this route. For Tourist's Guide (an attractive illustrated book of 60 pages), containing full information and accurate maps of the Fishing Grounds and Time Cards, address A. B. LEET, Gen. Pass. Agent, Grand Rapids, Mich.

Chesapeake & Ohio R.

The Route of the Sportsman and Angler to the Best Hunting and Fishing Grounds of Virginia and West Virginia,

Comprising those of Central and Piedmont Virginia Blue Ridge Mountains, Valley of Virginia, Alleghany Mountains, Greenbrier and New Rivers, and Kanawha Valley, and including in their varieties of game and fish, deer, bear, wild turkeys, wild duck, grouse, quail, snipe, woodcock, mountain trout, bass, pike, pickerel, etc.

Guns, fishing tackle, and one dog for each sportsman carried free.

The Route of the Tourist,

through the most beautiful and picturesque scenery of the Virginia Mountains to their most famous watering places and summer resorts.

The Only Route via White Sulphur Springs.

Railroad connections at Cincinnati, with the West, Northwest and Southwest; at Gordonsville with the North and Northeast; and at Richmond and Charlottesville with the South. All modern improvements in equipment.

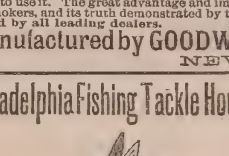
Old Judge Smoking Tobacco.

The Only Tobacco Ever Manufactured that does not Bite the Tongue.

Something Important for Cigarette Smokers to Know.



THE MAJORITY OF SMOKERS are perhaps not aware, that in smoking Cigarettes made of the ordinary pure rice paper, they have been inhaling THE MOST DEADLY OF POISONS, thrown off by all burning paper, namely: The Oil of Creosote. CHARLES G. EMERY, of the firm of GOODWIN & CO., manufacturers of "OLD JUDGE" Cigarettes and Smoking Tobacco invented and patented a process, March 5th, 1878, by which the Rice Paper used as wrappers for "OLD JUDGE" Cigarettes has been so prepared that the unpleasant ODOR and the injurious effects of the Oil of Creosote are completely neutralized or destroyed, and the paper made saliva proof to prevent its breaking or melting in the mouth. The unprecedented popularity of "OLD JUDGE" Cigarettes is owing to the fact that this process has been used exclusively in their manufacture, no one else having the right to use it. The great advantage and importance of this invention will at once be recognized by all smokers, and its truth demonstrated by the first "OLD JUDGE" Cigarette they smoke.

Sold by all leading dealers. Try them and you will use no others.

Manufactured by GOODWIN & CO., 207 and 209 Water st., NEW YORK

GUNPOWDER!
Dupont's Rifle, Sporting and Blasting Powder.

THE MOST POPULAR POWDER IN USE!

DUPONT'S GUNPOWDER MILLS, established in 1802, have maintained their great reputation for seventy-eight years. Manufacture the following celebrated brands of powder:

Dupont's Diamond Grain.—Nos. 1 (coarse) to 4 (fine) unequalled in strength, quickness and cleanliness; adapted for glass ball and pigeon shooting. Packed in 1lb canisters.

Dupont's Eagle Ducking.—Nos. 1 (coarse) to 8 (fine); burns slowly, strong and very clean; great penetration, with a close pattern; adapted for glass ball, pigeon, duck and other shooting, with either muzzle or breech-loaders. Packed in 1lb and 5lb canisters and 6¼ and 12½lb kegs.

Dupont's Choke Bore.—Specially adapted for "Choke Bore" Guns, and particularly for prairie and upland shooting. Burns slowly, strong and moist; does not cake or burn on the barrels, gives both a good penetration and a close pattern, will be found well adapted for glass ball and pigeon shooting. Made of two sizes, only No. 7 and No. 5, No. 7 being the coarsest. Packed in 6¼lb kegs and 1lb canisters.

Dupont's Eagle Rifle.—A quick, strong and clean powder, of very fine grain for pistol shooting. Packed in 1lb canisters and 6¼ lb kegs.

Dupont's Rifle Fg. "Sea Shooting."—FFg. and FFFg. The Fg. for long-range rifle shooting, the FFg. and FFFg. for general use, burning strong and moist. Packed in ¼lb, 1lb and 5lb canisters, 6¼, 12½ and 25lb kegs. Fg coarse, FFFg. fine.

Dupont's Sporting, Mining, SHIPPING and Blasting Powders of all sizes and descriptions. **Special Grades for Export.** Also Rifle, Cartridge, Musket, Cannon, Mortar, Mammoth, Hexagonal, Cubical and Pellet Powder, U. S. Government Standard.

Powder manufactured to order of any required grain or proof.

Agencies in all the cities and principal towns throughout the United States. Represented by

F. L. KNEELAND, 70 Wall Street, N. Y.

N. B.—Use none but DUPONT'S Fg. or FFg. for long-range rifle shooting.

The Hazard Powder Co.,
MANUFACTURERS OF
GUNPOWDER.

Hazard's "Electric Powder."

Nos. 1 (fine) to 6 (coarse). Unsurpassed in point of strength and cleanliness. Packed in square canisters of one pound *only*.

Hazard's "American Sporting."

Nos. 1 (fine) to 6 (coarse). In 1 lb. canisters and 6½ lb. kegs. A fine grain, quick and clean, for upland prairie shooting. Well adapted to shot guns.

Hazard's "Duck Shooting."

Nos. 1 (fine) to 5 (coarse). In 1 and 5 lb. canisters and 6½ and 12½ lb. kegs. Burns *slowly* and very clean, shooting remarkably close and with *great penetration*. For field, forest, or water shooting, it ranks any other brand, and it is equally serviceable for muzzle or breech-loaders.

Hazard's "Kentucky Rifle."

FFFG FFG, and "Sea Shooting" FG in kegs of 25, 12½, and 6¼ lbs. and cans of 5 lbs. FFFG is also packed in 1 and ¼ lb. canisters. Burns strong and *moist*. The FFFG and FFG are favorite brands for ordinary sporting, and the "Sea Shooting" FG is the standard *Rifle* Powder of the country.

Superior Mining And Blasting Powder.

GOVERNMENT CANNON and MUSKET POWDER; also, SPECIAL GRADES FOR EXPORT, OF ANY REQUIRED GRAIN OR PROOF, MANUFACTURED TO ORDER.

ANSWERS TO CORRESPONDENTS 38

TO CORRESPONDENTS.

The FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen.

Communications upon the subjects to which its pages are devoted are invited from every part of the country.

Anonymous communications will not be regarded. No correspondent's name will be published except with his consent.

The Editors cannot be held responsible for the views of correspondents.

For advertising rates see prospectus on last page.

All communications of whatever nature should be addressed to the Forest and Stream Publishing Company, Nos. 39 and 40 Park Row, New York.

FOREST AND STREAM.

Thursday, February 10.

THE PROPOSED NEW YORK LAW.

THE new law proposed by the committee of the Long Island Sportsmen's Association would be in several respects more desirable than the one now in force. It restricts the killing of certain game to more limited periods than at present permitted, and in these changes the sportsmen in the State will concur.

In respect to the provisions which regulate the traffic in game the proposed law has vital defects. The committee who drafted the bill explain that they "have heard the arguments of representative hunters for the market, dealers in fish and game, and those who hunt and fish for recreation and amusement." "The natural antagonism between those who hunt for a living and those who hunt for pleasure has been apparent. We have endeavored to reconcile these conflicting interests as far as possible."

From the wording of their bill it is perfectly clear that the "endeavor to reconcile" has been altogether in favor of the market hunters and dealers. The committee appear to have lost sight entirely of the real intent of a game law, which is the due protection of game, and to have had in mind only the protection of the unrestricted traffic in game. This was perhaps a natural result of the circumstance that the influential member of the committee drafting the bill is himself a large dealer in game and fish, and has for a long time openly and strenuously advocated the sale of refrigerated game all the year around.

The obnoxious refrigerator section, which has met such deserved opposition among sportsmen throughout the State, is still retained, although in a modified form. It reads as follows:

SEC. 34.—Any person may sell, or expose for sale, or have in possession any hare or rabbit, any woodcock, any ruffed grouse, commonly called partridge, any spruce grouse, commonly called Canada partridge, and any quail, from the first day of January to the first day of February, and any pinnated grouse, commonly called prairie chicken, and any venison, from the first day of December to the first day of March, without liability to punishment or penalty, provided it be proven that such birds or game were killed without this State, or within the period provided by this act.

The sale of all game should cease with the expiration of the lawful time for killing it. No concession whatever should be made for the extended sale of birds. If any concession is made for venison one month is amply sufficient. The dealers can regulate their trade and confine it to the legitimate period if they choose to do so. Their trade should be governed by the law; the law should not be governed by their trade.

It is claimed that the present law against trapping and snaring birds and the sale and possession of such birds is inoperative, because the word "wilful" occurs in the law. The simplest, easiest and only effective remedy then would be to omit altogether the word "wilful" in the section. The proposal of the committee that the Long Island Railroad baggage men who peddle trapped birds, and the dealers who expose trapped birds for sale must be in due form first notified that their birds are trapped, before they can incur any liability therefor, is simply ridiculous, and if put into effect would make the law more of a nullity than it is even now—if that be possible.

In case the plea of ignorance should some time not prove sufficient protection to the guileless offender, and a "State game protector," undaunted by the obstructions of this proposed law, should really prosecute for violation of law, the party proceeded against need only summon a "county game protector," who is empowered by proposed section 38 "to take or receive by voluntary surrender game or fish which, under violations of law, shall be killed, caught, had in possession, sold, exposed for sale, purchased, or transported into the county for which such officer shall be appointed." And "the receipt of such game or fish by such officer shall be a bar to any prosecution, civil or criminal, in case of voluntary surrender, or where the person from whom such game or fish shall be taken shall have given prompt notice of such possession, and shall, when required, make oath that at the time of receiving the same he was ignorant of such violation of law, and shall disclose the name and residence of the person from whom the same was received to the best of his knowledge." This section should be amended by throwing out in the last sentence quoted, after "criminal," the words "in case of voluntary surrender, or;" the clause would then cover all that it ought to cover, and it would not be, as now, the last of a number of resorts provided to allow any man of ordinary intelligence to sell all the year round game killed in any manner and at any time.

In fact the effect of these provisions must be to so hamper and render nugatory any prosecution for illegal traffic in game that it would be practically giving those disposed to engage in such a traffic the fullest license and encouragement. We can conceive of no possible circumstances under which, with this law in force, such offenders could be punished, save by the forfeiture of the game itself. The proposed act, as it is now worded, is not a game protective law; it is designed rather to protect the dealer and to render ineffectual any attempt to restrain the traffic in game as it ought to be restrained.

The members of the Long Island Sportsmen's Association owe it to themselves as sportsmen, to their reputation throughout the State and to the true interests of game protection in this State and elsewhere to withhold their indorsement from such a bill. Their prompt rejection of these provisions will do much to allay the suspicion, now somewhat prevalent, that this whole movement is simply the shrewd attempt of a prominent game dealer of this city, who is also the leading spirit of the association, to use the influence of the society to fix the game laws just as he wants them, that they may subserve his own personal interests.

BREEDING SALMON IN FRESH WATER

WE recommend a perusal of Mr. Fairbank's article, under this head in another column, to all fishculturists and fish commissioners. His method we believe to be the right one. He has pooled his salmon and not scattered them, and the result is they are there. If he had put in half the number he might never have seen a salmon; but he put in enough to make their presence felt and to allow some to escape their enemies, and they escaped.

Nature intends millions of eggs and millions of young fish to be food for birds, aquatic mammals, insects and fish, just as she provides a plant with a hundred seeds, ninety-nine of which feed the birds, mice and squirrels, and one brings forth its kind and keeps up the stock.

A half million of fish eggs seem to be a great number, and tempts commissioners to distribute a "good lot" to a dozen localities. But what is the entire number when compared with the vast quantity dropped in the McCloud River by millions of salmon?

The lesson taught by Mr. Fairbanks in his paper read before the Central Fishcultural Society at Chicago is a plain one. It means consolidate, and not distribute. In distribution there is weakness; in consolidation, strength! If today we had a million eggs of a new and valuable fish at our disposal they would all go into one stream, "make or break," as the saying goes, and we think an impression might be made on the stream that would remain.

NATIONAL GUARD RIFLE PRACTICE.

IT would seem that the magnificent record which the citizen soldiers of the State of New York have made for themselves is to be cut short by a sort of official strangulation. Gov. Cornell has decided that rifle practice is of no value because there is no prospect of any war breaking forth for 50 years to come, and therefore no merit in having troops prepared to use their weapons. This is the perfection of simplicity, and as a statement from one supposed to have mastered some of the simplest ideas of political economy, appears almost monumental in its stupidity.

With a regular army barely large enough to serve as a police force for the rapidly diminishing frontier it would be the most rational substitute to build up to its largest proportions a strong militia force; but to make a record for economy the National Guard is to be attacked and slashed out of all semblance of utility. The new crotchet is to have encampments, where the citizen who is willing to give a portion of his time to the service of his State suddenly finds himself the victim of capricious orders and compelled to sacrifice a good portion of his private time for a foolish notion. A regiment able to carry on a good street fight is worth far more as a menance against turbulence and disorders than a command able to go through all the routine of camp duty. And then, as the camp sites are to have butts off in some corner the troops under canvas are to pick up during their week's picnic a full knowledge of how to hold and how to hit. What is really needed is a careful showing up of the present system of rifle practice.

The whole system of rifle practice is on too wholesale a scale. Men cannot be set up in rows and taught to shoot in the aggregate. Each man is a unit, and because A shoots well is not the least reason why B, who stands next in the ranks, should be able to hit a barn-side. Each man must have a definite personal idea of how to shoot, and much of the instruction can be given in the armory, but it is not a sort of instruction which can be hurried. To hold a rifle with ease and steadiness, to pull off without giving the weapon a twist and to pull the trigger without the ordinary flinch are all points to be acquired by much personal practice. When all this has been gained then a charge may with some advantage be placed in the rifle. Where regiments have succeeded in showing a good rifle record it has been by following out this plan of careful attention to the personal instruction of the men. Where regiments have shown a wretchedly poor percentage the inference is that it has followed out the regulation orders in a perfunctory manner. Now the Adjutant General proposes to take away the last incentive by cutting away the extra prizes offered each year for the team and other contests. Much has been done during the decade of

rifle shooting we have enjoyed, but it is not as yet a plant of such sturdy growth that it will bear such neglect as the State of New York, through its official leaders, proposes to put upon it. To suspend shooting for a time until the *personnel* of the Guard has been altered means simply that the entire work will have to be gone over again and a start made from the point we stood at in 1872. The expenses already incurred are not fairly representative of the sums which will be required to maintain rifle practice. The ranges are now fixed upon, and while many of them no doubt are illy chosen and on too pretentious a scale, more modest arrangement, well patronized, would show better results; but to enforce this economy is quite another thing from jumping to a total abolition of all rifle practice and the placing of the National Guard in the position of a mere puppet show, trained to walk in step, to carry their rifles as so many drilling sticks and make a very pretty show at parade, while worthy only of ridicule for their inefficiency.

THE EEL-WEIR QUESTION.

THE local papers in the interior of the State of New York have been greatly exercised over some donkey's assertion that the eel-weir was a harmless institution, and gallons of ink have been shed by those who saw a fine chance to advertise themselves at the donkey's expense. Slip after slip has been sent to FOREST AND STREAM containing arguments pro and con which have gone into the waste-basket on the principle that it don't pay to load a siege-gun to kill a mosquito. If these weirs can discriminate taking only eels, and passing the bass, shad and young of other fish, they are the most intelligent eel-weirs in the business, and we would like one for dissection and examination of its brain. No doubt, now that in the process of evolution the eel-weir has advanced so far, these traps can be taught to bring their prey on shore and skin them for market, and when the angler of the future takes his walks along the banks of the stream he will behold this new breed of traps hauling their catch ashore, and swearing at the stray bass which have persisted in getting in to annoy them. Such traps will no doubt increase not only the bass and shad of our rivers, but will also add to the crops of the riparian owner by fertilizing his fields with the eel skins and other debris.

Seriously, the fact of the destructiveness of the eel-weir is so apparent that we have not thought fit to print the arguments. Our old friend, E. C. Z. Judson (Ned Buntline), who is something of a naturalist as well as a novelist, writes us from "Eagle's Nest" on this question and says:

"All observant trout men know, old and large trout after spawning in the fall almost always, if not always, turn their course down stream to seek still and deep water, or to go toward the sea. Such invariably fall victims to an eel-weir if it is in their way.

"I know from years of observation on the Juniata, Susquehanna and Delaware rivers, not to speak of other and smaller rivers, that eel-weirs scoop in every kind of fish which turns to go down stream faster than the current, and so goes head first into the pot, from which none but the smallest escape. These eel-weirs used to be set at low water, before the fall freshets came on, all along the rivers I have named until so far down that the water was too deep to build dams. Captain King, of Mast Hope, Pike County, Pa., used to supply his table with fish as well as eels from his weir when I stopped at his hotel one summer in 1853, I think; and trout not caught by hook and line—trout of large size, taken thus from the Delaware, were more than once on that table. I remember it distinctly, for I had quite a row with the captain about the innovation on our old Waltonian arts."

A ZOOLOGICAL GARDEN FOR NEW YORK.

THE project to establish a zoological garden in New York on a plan somewhat similar to the London Zoo and the Jardin des Plantes of Paris is again being agitated. It is high time that this matter should be taken in hand, for as we have before said, it is a shame and a disgrace that New York should have no "wild beast show" while other cities, such as Philadelphia and Cincinnati, have excellent ones. The collection at the Central Park, although good as far as it goes and admirably managed by Mr. Conklin, can never amount to anything so long as it is under the city government.

A number of applications have been made for some years back to obtain the consent of the Park Commissioners of this city to establish in Central Park an independent zoological garden, but the Board decided, and very properly, that the Park could not be used for any such purpose. In 1879 the Universal Conservatory and Zoological Garden Company was formed for the purpose indicated above, and it is stated that ground will be broken for the buildings as soon as the frost is out of the ground. The site said to have been selected for the garden is an admirable one. Thirty-three acres of land have been purchased, we are told, north of One Hundred and Fifty-fifth street, and between Eighth and St. Nicholas avenues. This is about one mile from the High Bridge, and at the present terminus of the West Side Metropolitan Elevated Railway, overlooking the Harlem River and including a considerable area of low flat ground, a steep hillside and a plateau on a level with the highest portion of the island at that point. A location more admirably fitted for the purpose to which it is to be devoted could scarcely have been found on Manhattan Island.

It is stated that the plans for the buildings have been drawn, and it is to be hoped that work on them will be begun as soon as the weather will permit. The following description of the proposed garden has been published:

The main entrance to the garden is to be on the corner of One Hundred and Fifty-seventh street and Eighth avenue. Here it is proposed to erect a building 100 by 90 feet, in Moorish style, for officers of the company, with a series of arcades fronting on Eighth avenue, for the tropical carnivora.

For the larger tropical animals there will be an extension of these arcades along One Hundred and Fifty-eighth street, 525 feet in length and 50 feet wide, while the arcades on Eighth avenue will be 1,090 feet long and 75 feet wide. Pavilions are to be erected on both corners. The garden will be divided by the main avenue, 70 feet wide. To the north, directly opposite a large fountain, will be a Chinese pagoda 65 by 125 feet. West of this temple, at the foot of a bluff, will be the antelope house, 40 by 80 feet, while to the right will be a stone quarry. This will be converted into bear pits, which will adjoin the owl and bat ruin, running along the wall of the aquaduct for a length of 250 feet. The top of these ruins will form a promenade 15 feet wide, leading to the dairy building.

At the fountain in the main avenue will be an ornamental monkey house in Moorish style, the building being 70 by 140 feet. West of the monkey house will be a grotto for the Polar bears and seals.

The most prominent buildings of the garden will be on the bluffs, which rise one hundred feet above the level of the ground. Here it is proposed to place a conservatory and palm garden, 225 by 125 feet, with arcades which will form a square and contain restaurants. The space inside the arcades will be arranged like a terrace garden and so constructed as to be covered during the winter by glass frame-work. There will also be another extension of the conservatory, 110 feet by 95 feet, on the east side, arranged especially for water plants.

Fifty feet from the northwest corner of the arcades will be the observatory, whose tower will rise 210 feet above the foundation and 325 feet above the level of Eighth avenue.

The capital stock of the company is fixed at $2,000,000 in stock and $1,000,000 in first mortgage bonds.

It is earnestly to be hoped that this project may be carried through. That such an institution would pay, if properly managed, scarcely admits of doubt, and its value as a public educator cannot be over-estimated.

FOR GENTLEMEN HANDLERS.—The FOREST AND STREAM desires to offer at the important Field Trials to be run the coming autumn certain prizes, to be competed for by dogs owned and worked by amateur handlers. It is too soon to announce the exact conditions which will govern the running for these prizes, or to say of just what the latter will consist. It is probable, however, that a number of cups and gold medals will be offered to be run for at the different events, to be won by the best dog owned and handled by a sportsman who has never received compensation for breaking a dog, and who is not a market shooter.

The object of announcing such a series of prizes is, of course, to encourage among non-professional sportsmen the training of their own dogs, or at least the proper working of these after they have been trained.

It will scarcely be denied, as a general proposition, that comparatively few of the men who shoot know how to properly handle dogs. Each one of course thinks that he is posted, but will readily enough agree that most of his fellows are not; and as no small portion of a dog's success in such a competition depends on his handler, we are inclined to think the prizes which we wish to offer may have the good effect of showing to each man the excellences of some methods and the faults of others. A competition of this kind, open to all non-professional sportsmen, should bring out a very large representation of the men who, owning only one or two dogs, and those good ones, shoot almost the whole season through and kill much game. We look forward with much pleasurable anticipation to seeing such a competition inaugurated, and if the field trials clubs will arrange for such a running we shall be pleased to contribute the prizes. We shall have more to say on this subject hereafter.

WE SEE BY THE DAILY PAPERS that one Al. Johnson, a grizzly bear hunter, of Calaveras County, Cal., after a scalp-rending tussle with Brum, is now lying in an extremely mangled and critical condition. There is nothing remarkably strange in this state of affairs, except that the bear hunter and the daily papers began to lie in this same way several winters ago. It is about time for the attaches of our enterprising contemporaries to either let him up or give him decent burial.

FOOLS AND SNAKES.—Eve was the first victim of the serpent's wiles and Adam the second. The list is a long one, and not yet finished. The latest on record is the man who recently bought a petrified snake out in Western New York, and who afterward discovered his treasure to be constructed of sand, hair and fraud.

The history of serpent worship is most curious, the history of fools most instructive, and the study of the two in connection is both curious and instructive. Cardiff giants, planted Muldoons, dug-up snakes, petrified monsters, rogues and dupes are multitudinous and coexistent upon the face of the earth. The geographical distribution is the same; where one is there will the other be also.

It was not so long ago that we looked on at the New York Aquarium while the scientific elders of the city solemnly studied the dimensions of the graven image of a tailed man, and listened to the glib lies of one Conant, the fellow who had the bogus petrifaction in charge. In due time the whole story of the fraud came out; but whether the schemers were punished we do not now recall. The fellows who sold this last snake swindle have been arrested, and it is to be hoped that they may have an opportunity of displaying their artistic taste in stone work for a term of years in the State Prison.

THE AMERICAN CRICKETER—a little newspaper devoted to the interests of the "noble game of cricket"—reaches us this mouth with a new design at its head, in which are used for ornamentation the implements generally to be found on the cricket field. The design is appropriate, and notable for its artistic effect. It is a decided improvement to the paper, and has none of the "amateurishness" that was somewhat characteristic of the old heading. We take this opportunity of saying a good word for the little cricket paper. It is published purely as a labor of love to the game, and its usefulness is unquestionable. Through its columns may be learned all about what is doing in the development of cricket in America, so that the ex-cricketer may not remain in darkness, although he be prevented from taking an active part in it. Those of our readers who have an interest in the matter may obtain a sample copy gratis by addressing the editor, at 413 Walnut street, Philadelphia.

SPURGEON HAS PREACHED A SERMON from the text "Beware the Dog," in which he talks of that animal in a manner little creditable to himself as an Englishman, a humane man, or a clergyman. We commend to Spurgeon a perusal of the instructive "Current Dog Stories," which appear from time to time in the FOREST AND STREAM.

THERE IS SOME DOUBT about the New Hampshire Fish and Game League having a meeting this year. The president of the League says that the Commissioners have left the society nothing to do.

The Sportsman Tourist.

A TRIP THROUGH THE PROVINCES.

OUR party, consisting of Walter Hubbard, F. G. Markham and the writer, left Boston, May 28, for St. John, N. B., thence to Halifax, and returned via Intercolonial Railroad to Moncton, Campbellton, River Du Loup, Quebec, White Mountains and back to Boston—covering a distance of 1,757 miles in three weeks' time, at an expense of only about $100, the details of which follow, with a summary of time, miles and expenses. Our prime object was to see new places, experience new sensations and take salmon and trout *en route*, if they deigned to rise to our flies. To taking salmon we plead not guilty; to the other charge, guilty. We experienced a delightful trip, caught quantities of large trout, but found ourselves too early for salmon, which this year, owing to a cold and backward season, had not yet commenced running up the rivers. We visited several famous salmon pools where last year salmon were taken in considerable quantities. Our objective point for the latter was Fraser's Pool on the Restigouche, and it was not until we reached Halifax that we learned the New York Club had purchased all rights there. This somewhat disconcerted our plans. We pursued the even tenor of our way, however, and rested content with what came in our path.

Taking the Eastern Railroad at Boston at 7 P. M. we reached Bangor at 5:30 A. M. next morning. A free carriage took us to the Penobscot Exchange Hotel, the best there, where we got a good breakfast for fifty cents. At 7:17 the train left on the European and N. A. R. R. for St. John (only one train a day).

From Bangor to St. John the ride is an exceedingly dull one, as the road passes through a very uninviting country, mostly woods, whose dreary aspects are not enlivened by any interesting features. At 12:50 P. M. you reach Vanceboro, where the train stops about twenty minutes for dinner, which is good at a charge of fifty cents.

At 5:30 you reach St. John. As you near St. John the woods disappear, the country becomes hilly, green grass and flowering meads appear, and waving fields of grain and rustic farmhouses greet the eye. At St. John terminus the train leaves you at the ferry landing, where the vociferating hackman will relieve you of all care of luggage, etc. Five minutes ride takes you across an arm of the Bay of Fundy, and you are in St. John City.

"Hotel Dufferin" is the house you will hie to if wise, and although it is not all that could be desired, still it is the best, since the "big fire" swept away the "Victoria," and with it half the city. It is kept by the former proprietor of the "Victoria," and is favorably located and comfortable.

Sunday, the 30th, we spent roaming about this ancient city, visited the falls of St. John, shipping, etc. The traces of the big fire of '77 are scarcely to be noted now, so that the city is still a beautiful one. Saturday eve, I omitted to note, we visited D. Scribner & Sons and Charles Baillie's tackle stores, and laid in a supply of fishing tackle and flies. The former makes the better rod, while the latter ties the better fly.

Monday, May 31, we embarked on the Empress at 8 A. M. to cross the Bay of Fundy. The steamer runs tri-weekly—Mondays, Wednesdays and Fridays. It was a stormy morning, and the "General Order No. 1" from the captain to the crew as we left the wharf to "prepare for rough weather" was suggestive of a stormy passage, which on this bay means business for all hands, passengers included

However it did not prove very rough, and we reached Annapolis about 2 P. M., and took the Halifax train, via Windsor and Annapolis Railroad. From Annapolis to Halifax (130 miles) is one of the most enjoyable rides in the Provinces. The conductor who runs this train, Mr. Edwards, deserves more than a passing remark. He has been upon the road longer than any other employee, and has risen from an humble position to conductor, and deserves even better. He is the most courteous, good natured and obliging I ever met, and carries souvenirs of his popularity in the shape of a gold watch, charms, etc., presented him by fellow travelers. The route traversed by this division of the road is through the

"Evangeline district," whose simple legend is forever rescued from oblivion by Longfellow's famous poem, and Mr. Edwards takes especial pleasure in answering all questions touching this interesting country, and pointing out the places of note. Most conductors would have tired of it years ago, and with a wrathful answer turned away a soft question.

He showed me a letter from Mr. Longfellow, in which the latter says that although he has written this poem, he has never and probably will never see the land of which he has sung.

Reaching Windsor at 6:25 (84 miles), we left the train and found our way to the "Victoria Hotel," kept by John Doran. The name is large, but the house very small and very ordinary in all respects, though moderately neat and comfortable. It is the "best," however. And right here I will take occasion to remark that nowhere in all Nova Scotia or New Brunswick is there a single first-class hotel.

If you find yourself in a comfortable house, with a fair table, thank yourself you are no worse off. The houses are invariably small and tables only supplied with a limited assortment, while meat is not as tender as ours and the bread usually coarse and dark. It is no place for epicures. The bright side, however, is, the linen is usually clean, rates very low—from $1 to $1.75 per day—and the people very courteous. You are always treated with the utmost consideration and respect, and when things are not quite to your liking you feel much like apologizing to the landlord and servants for having found them so illy prepared to receive you. I have twice traveled the length of the Provinces and never yet received a surly reply or discourteous answer from any one, anywhere, from the highest to the lowest. Under such circumstances a crust of bread even is sweet to the palate.

We stopped off at Windsor in order to take the "Royal Mail Stage" to Chester, a superb town on the Southern coast. We had been advised that it ran Tuesdays and Saturdays, but found it was Wednesdays and Saturdays. We also found that said "Royal Stage" was a one-horse buggy which might possibly carry two passengers with light baggage, so that it was little matter we missed it. After some tribulation we procured a two-horse wagon with comfortable seats to take us across to Chester, about forty miles, for $12.

The route across is right over the backbone of Nova Scotia and is mostly up hill all the way. Tuesday morning, June 1, was charmingly sweet, and about 7 A. M. we found our traps packed and ourselves spinning along over a pleasant road on our "march to the sea." For ten or twelve miles the road is not bad, and the bracing morning air, charming landscape and wooded hills lent exhilaration to our spirits, and we grew happier under their influences.

In a couple hours' time we had left behind nearly all traces of civilization and plunged into the howling wilderness. The road became narrow, rocky and hilly, and our progress slow, but we were happy still. About 2 P. M. we reached Mrs. Redmond's "Half-way House," and stopped for dinner. They had no oats for our horses, but fortunately we had anticipated that and lightened our wagon of a bag of the same. For dinner they gave us bread and milk with raspberry jam.

After an hour's delay we paid our bill, $1 for men and beast, and resumed our journey. Toward night we sighted "Mahone Bay," upon which Chester is situated, and a lovely view it was to our eager eyes. At 7 P. M. we drove up to "Charley Lovett's Hospitable Inn," as dubbed by Hallock, and were met at the door by "Charley" and his gude wife. Half an hour later we were discussing the day's ride over lobster salad, etc., etc. Chester is a quiet, old-fashioned village nestled at the border of a beautiful bay, which is dotted with innumerable islands, and has a population of about one thousand souls. It is forty-five miles west of Halifax, and affords a delightful resort for summer boarders, who come here in considerable numbers to enjoy the refreshing breezes from the sea, and lie off in peaceful bliss or employ themselves in boating, catching tom cods from the wharf or throwing the fly for salmon and trout. A daily line of coaches runs each way from Halifax to Lunenburg (west of Chester about twenty-five miles). It has two good inns—Lovett's and one opposite. Lovett's is the best. There is nothing here in the shape of public buildings; a small church, one or two small country stores, a lobster factory and post-office make up the assortment. The people are mostly given to fishing, and are genial and well-disposed. The village is composed of small unpretending houses in the main, although there are a few of some pretension. It is situated on rising ground, which slopes pleasantly down to the sea, and on a fair day the prospect out upon the bay and ocean is most charming. Green lawns and cultivated grounds give the whole place an aspect of neatness, and the sleepy quiet which always prevails makes one feel that he is indeed in a land of dreams.

Salmon and trout fishing has been much noted here in the past, but I regret to say that we were disappointed in not finding it what we hoped this spring. Yet it has by no means departed. Last spring and summer salmon were taken in goodly numbers with a fly, but the season this year has been so backward that when we visited here salmon had not commenced running up. It has three good salmon rivers—Gold River, the best, six miles west, has been the finest in the province. It is a beautiful river to gaze upon, and has innumerable pools; but the Indians and natives are so much given to "dipping," in spite of the laws, that salmon have a poor chance to propagate their species. Middle River, four miles west, is counted a good salmon river, and East River, seven miles east, also, and although salmon will continue to be taken on all these rivers in the future, still not in the abundance formerly, till the laws against "dipping" (with nets) are rigidly enforced. Trout fishing, however, continues to be good, and we enjoyed a day's fine sport on Middle River Branch, about six miles from Lovett's.

Having experienced, but not exhausted, the lovely charms about Chester, we bid adieu to its quiet and hallowing influences on Saturday, June 5, and turned our faces toward Halifax—by the "Royal Mail Coach."

It was a lovely day when we bid adieu to the green slopes of Chester and whirled away from "mine inn" at 11:15 A. M. The fragrant morning air charged with the incense of the neighboring fields lent a charm to our ride which only the country can give. The road to Halifax though somewhat hilly is in good condition, and we found our ride by no means tedious.

For the first few miles it lies through the wilderness with an occasional opening where farm houses and primitive log-huts greet the eye and protect the settlers from the inclemencies of the seasons. For a distance of several miles the road skirts along St. Margaret's Bay, when a fine view may be obtained of the ocean and headlands. Changing horses twice we reached Halifax at 6:30 P. M., and took our way to the "Halifax House," the best in the city.

Of Halifax I shall not write except to say it is a very ancient city and boasts one of the finest harbors in the world.

Having spent Sunday here, visited the arsenal and generally canvassed the city. On Monday, June 7, at 1 P. M., we took a train on the Intercolonial R. R. for Truro, sixty-one miles, where we proposed to spend the night and take a view of the village. We arrived there at 4:35, and found comfortable quarters at Prince of Wales Hotel kept by A. L. McKenzie. We found a court in session, and visited it, and gazed with "awe" upon the gentlemen in robes. The wig, alas! they had laid aside.

June 8 we resumed our journey at 10:55, and at 4:20 we arrived at Moncton, 126 miles, where we tarried to take in the "Bore." "One of the greatest living curiosities in the world," as Barnum would remark.

Most of your readers are doubtless aware that the Bay of Fundy furnishes one of the highest tides in the world. At times it rises and falls about seventy feet! The time to see it at perfection is in the spring, and the place Moncton. Owing to the peculiar formation of the river banks at a point half a mile east of the station, called the Elbow, on the Petitcodiac River, when the tide makes up it rushes with almost frightful velocity during high tides, bearing onward a huge wall of water about six feet in height at a rate of eight or ten miles an hour. It comes in just after low water, and may be heard at a distance of two or three miles. By daylight it may be seen a mile away, and as it approaches it seems an avalanche nearing you threatening destruction. The lazy current of the river is now seen creeping its sluggish way down to the sea. In a moment the huge volume of water comes foaming up, and meeting the current turns its course backward, and rushes past you a roaring cataract. It was this we tarried to see, and saw, as the tide comes in twice in twenty-four hours. We had two exhibitions, one at 9:30 P. M. and one at 10 A. M. The evening performance was the better, although it could not be seen at quite so good an advantage as there was no moon, but it impressed us as one of the wonders of the world, and richly repaid us for our delay.

June 9 we continued our journey leaving at 12:15 P. M., and reached Newcastle at 6:30—78 miles. This is the stopping off place for salmon fishing on the Miramichi. A good hotel, "The Waverley," half a mile from the station, is reached by a bus which runs to every train. Newcastle is situated on Miramichi Bay, which is an arm of the Gulf of St. Lawrence.

Into this bay empties the river of the same name, famous for its salmon. It is a thrifty seaport town of about 1,500 inhabitants. Salmon fishing with a fly is only to be enjoyed up river on "North West" and "South West." Brunce's "Big Hole" on the northwest is twenty-three miles from Newcastle, reached only by private team. Stop at John Hare's log-house; nice, homely people and coarse fare, but neat and comfortable.

The other ground is at "Indiantown," seventeen miles from Newcastle, reached by steamer two or three times a week or private conveyance. Stop at Frank Jardin's, the only place; comfortable quarters. Both of these places are favorable for fly fishing for salmon, and fishing free to all. Salmon range from eight to twenty pounds.

After tea we interviewed the landlord who put us in the way of finding a team to take us to "Big Hole" on the morrow, and having closed a bargain for a two horse team for $5 per day we spent the evening in sauntering about the village.

June 10 found us *en route* for the fishing grounds. Leaving the hotel about 7 we reached Hare's about 11 A. M. The drive lies along the Miramichi most of the way and is a very pleasant drive. It is settled most of the distance, till within five or six miles of Hare's, then houses disappear and woods skirt either side of the way. Taking a hasty lunch of bread and milk we went forth, arrayed in the panoply of fishermen's gear, and found "Big Hole," a distance of about half a mile. "John" and one of his boys accompanied us. At the "Hole" we found a skiff of sufficient size to carry us all and were paddled half a mile up the branch to the foot of some rapids, where we divided up—part in the boat and part on shore—and entered zealously into the sport. The trout rose rapidly to our flies and ere the sun had cast her departing rays upon us we had brought a hundred trout to our landing nets, ranging from a quarter of a pound to two and a half and three pounds. It was fine sport and keenly enjoyed by all of us. We saw one salmon break the water during the afternoon, but we could not succeed in raising him to a fly. We were still too early for salmon-fishing and we rested contented with trout.

About 6 we broke off for the day and found our way back to the house, where a comfortable supper awaited us.

During the afternoon two gentlemen joined us and, as Hare's is none of the largest, we had close quarters for the night, with Mr. Hare's family of ten. We, however, spread our beds upon the floor and retired at an early hour. It was a muggy night and the mosquitoes put in their bills, which somewhat interfered with sleeping, but we battled them till sleep overpowered our drooping lids, when we left them to present their bills as might please them best and sank to slumbers sweet.

Friday, the 11th, was ushered in with serene sky and balmy breath. Scarce had the early streaks of morn penetrated our humble log house ere we were up and doing. Not having fully undressed, our toilet was soon finished and, after a hearty breakfast of salt pork, coarse bread and tea, we again repaired to Big Hole and were rewarded with a fine catch of trout. So eager were they for the fly that in a couple hours' of fishing we had caught all our consciences would suffer us to take and, as the heavens now were becoming overcast, we concluded to reel up our lines and bid adieu to this charming spot. At 10 A. M. we had stowed our traps aboard, bidden a hearty adieu to Honest John and his ever-faithful wife, scattered a few shillings among his interesting children and taken a last farewell of our forest retreat. About 1 we reached Newcastle again and found a comfortable dinner awaiting us at the "Waverley." At 5:30 we took the accommodation tram at the station and soon Newcastle, with its pleasant associations, were lost to sight.

There were but few passengers aboard, as is usually the case on this train, which consis ed of some thirty freight cars, with one passenger car attached. There being no "smoker" attached, we found our way into the baggage car, where a few cigars, judiciously distributed, emptied the easy arm chairs of conductor and "all hands" and we were "at home" to all inquirers.

In passing, let me remark that though smoking may be a "vile habit," yet its indulgence often paves the way to great civilities—as we indeed found in this case. We soon knew every man on the train and a jolly time we had of it to the end. Moral: On mixed trains in the "suburbs" always carry a full case of cigars.

At 1 A. M. we arrived at Campbellton, 107 miles, where the conductor escorted us to the "best hotel"—the Royal. Here we knocked up the landlord, who, peering through the half-open door, saw the genial face of the conductor and we were at once admitted and the best rooms given to our party. That the reader may not place too much confidence in the quality of these Province hotels, let me remark that the best, though comfortable, are very ordinary, but you will always find the proprietors very courteous and obliging and willing to do anything reasonable for your comfort. They, however, lack tact for keeping a hotel and have no markets, such as the States afford, to furnish a table with. They are, however, reasonably neat and if one is not a *dilettante* he will get along very comfortably.

Campbellton is a thriving seaport village of some 600 inhabitants. It is situate on the southern shore of the Bay of Chaleur, formed of the waters of St. Lawrence Bay. It has three hotels and is one of the briskest villages of the Province and a sort of headquarters for lumbermen and fishermen. The railroad company have also a portion of their works here. Two steamers (*en route* from Quebec to Pictou) touch here weekly. A steamer leaves here twice a week, also, for Gaspe. In the immediate vicinity, however, there is no fresh-water fishing; yet a few hours' ride will take you to good fishing grounds. A lake about six miles away is full of the nicest trout in the Province, which is to a certain extent preserved. A charge of one dollar per day, however, entitles you to fish it to your heart's content. The trout average from one to one and a half pounds each, although those weighing two and three are not uncommon.

Across the bay—some twelve miles, reached by sail-boat—is the Scumina River, one of the most famous trout rivers in the whole Province. Here you can catch trout by the hundred of exceeding size, the average being three to four pounds each, while those weighing seven and eight pounds are by no means uncommon. The season for catching them, however, is later than in other parts, being the latter part of June, July and August and, let it not be forgotten, either, the flies do inhabit there. All along this coast (the northern) are many rivers, even down as far as Gaspe and up again on the northern shore, and many of them are among the finest salmon rivers anywhere to be found in this latitude. Most of them are, however, leased and permits can only be had by the good grace of the lessees. As I have not fished any of them I will endeavor not to mislead the reader, but I was informed by those "well informed" that it is no difficult matter for a small party to go there and get a permit for a few days' fishing.

For sea-trout fishing there is no better place anywhere than among the islands six miles above Campbellton, where the tide waters meet the Restigouche in its march to the sea. Take a team and drive up, or the cars, as suits your fancy, and get off at a flag station near Mrs. Gillis'. She keeps a hotel and will give you comfortable quarters. Here you will find genuine Indians—Micmacs, a tribe of which is located here, who, with their birches, will put you on the ground and you can catch more trout than you ever dreamed of in the States, ranging in weight from one-half to three or four pounds each and sometimes five or six, though not frequently. To this inviting spot we drove, on Saturday, the 12th, sent our team back and took the cars home at nightfall.

The day was exceedingly windy and the waters very rough, but we brought home a goodly mess of fish, the largest of which, taken by our genial fellow-sportsman, Walter Hubbard, kicked the beam at three and a half pounds, and, I beg the reader to note, was taken with a fly, as all of the mess were. But I cannot dwell; let it suffice that if one seeks trout only he can take them with satiety here any season, beginning usually from the 10th to 15th of June and throughout the summer. The country is beautiful and flies not very annoying till into July, and even then not so bad as in the denser woods, for here, be it remembered, the forest is pretty well thinned about Campbellton.

At 7:30 P. M. on this day in question we repaired to the depot and, flinging our pocket-handkerchief to the breeze from the top of a stick, the train stopped, and in thirty minutes more we were again safely housed at the Hotel Royal discussing the events of the day over a hearty supper, which awaited our coming.

Sunday, June 13, was a quiet day with us in this quiet little fishing hamlet. The clock struck 9 before we left our comfortable beds.

The sky was overcast and a fresh wind blew in upon us from the sea. It was rather too rough to trust ourselves to a frail birch, otherwise we would have visited the Indian church on the opposite shore and witnessed their form of worship. As it was, we hugged a comfortable fire and spent the day in reading and writing.

Monday, the 14th—alas! our last in the wilderness—we were up at 6 and, after a hasty breakfast, we bade adieu to our genial landlord, John Sproul, and walked to the station, some ten rods. At 6:30 the train left and at 7 we reached Metapedia, thirteen miles distant, where we had hoped to crown our desires of salmon fishing; but, alas! we were doomed to disappointment. Wealthy New Yorkers had found this blissful retreat and, with their long purses, had laid an embargo upon all transient fishing here. We knew it, indeed, before we reached here, having had it painfully broken to us *en route*, so the disappointment was not so keen to us, but it was nevertheless a great disappointment.

Here in this lovely valley, where the waters of the Restigouche and Metapedia unite and, mingling their musical voices in harmonious accord as they course onward toward the sea, three years ago, I spent one of the pleasantest days of my sportsman's life. Here I cast the gaudy fly and captured my first salmon, thrilling with that intense excitement known only to the true sportsman and angler. On the north shore, overlooking one of the loveliest salmon pools in the Province, stands Fraser's inviting hotel—now, alas! his no longer, but that of a wealthy knot of nabobs of our own land. I mean them no disrespect, but I do feel that it is all wrong that because one man's purse is a trifle heavier than another's that he should monopolize the wilderness as well as the city "sites." Every true sportsman is willing to pay a reasonable *per diem* for the privilege of trying for salmon, but the day seems not far distant when the tired and over-worked "citizen" will be denied this health-giving sport, for few can afford to pay $2 0 or $300 a year for a lease and, like the poor Indian, he is driven from his fishing grounds, for no sooner does a river develop a goodly pool than it is "leased," and if the man of moderate means would try his skill he must do it under the fatigue of long "carries" into the denser wilderness. I had a long talk with our old friend Daniel Fraser, the former

owner of this retreat, and it was almost with tears that he related how he was compelled to part with this property, but money was at the bottom of it. Debts he could not meet forced the separation of him from the home he had cherished and reclaimed from the wilderness nearly a quarter of a century ago. He said he regretted it as much on account of his patrons as himself. He had entertained many genial guests and should be sorry not to meet them here again, and he yet hopes in finding pastures new, where he can "tend his flocks." Fortune grant he may! He is one of the noblest of God's noblemen I ever met.

I have nearly finished my say, but ere I close I must give a parting shot to my esteemed critic "Manhattan," who so relentlessly pursues me with his quill reiterating his assertions that there is no salmon fishing worth the while in these parts. I have not been unmindful of his shafts in the FOREST AND STREAM. I have carefully noted with what grim satisfaction he alluded to the fact of the utter disappointment of all the salmon anglers in these parts this year, and wrote of our "lucky catch" of three years ago as being unusual. I therefore took much pains to inquire all along my route as to last year's catches, and especially did I interrogate Mr. Fraser, who informed me that in the last twenty years there had never been a single year that salmon had not been taken here in considerable quantities before June 20 with a fly. Last season he informed me that several hundred salmon were taken from his pool with a fly, and the non-advent of salmon this year in that locality surpassed his wisdom; he could not understand it. That salmon have been very scarce this year is wholly true, and it is true of all Canada, and not of the Restigouche alone. I have full and abiding faith in first class salmon fishing yet in the Provinces. Nowhere are streams better adapted, nowhere better spawning grounds. Then why not? The salmon are not yet fleeing the ocean. It is undoubtedly true that salmon are not so plenty as formerly, and there are many reasons why it is so. The demand is greater, prices are higher and inducements to their capture keep pace with that demand, and hence follows netting, dipping and increase of fly fishing, but the supply is not yet seriously impaired. Should, however, the Canadian government withdraw its protection from the streams and suffer an attempt at their destruction then no one can say how long we shall enjoy that rarest of all fishing. The success or non-success of this year, however, is no test, and the very fact that scientific men like Prof Baird and Hind have given it especial attention through your paper proves my argument that there must have been good fishing heretofore or this year especially would not be the subject of commentary.

But enough. Our party remained at Metapedia only two hours; visited the pool, and saw a half dozen canoes anchored in her waters with as many anxious anglers deftly turning their flies in vain for salmon. Not a rise got they, and we bade them adieu and once more we boarded the train and turned our faces homeward via Quebec (302 miles). About 2:30 we reached Trois Pistoles where we got a good dinner for fifty cents, and resuming our journey reached Quebec safely about 9 P. M. Stopping at the "St. Louis" Hotel over night we continued our route the next evening at 8:30. About midnight we reached Richmond where a short delay affords an opportunity for a lunch, and where we changed cars. About 4 A. M. we reached Sherbrooke where we again changed cars after an hour's delay, and continued then our journey. We purchased our tickets via White Mountains, and at 3:30 P. M., June 16 we tied up at the "Kearsarge House" North Conway, having experienced a delightful ride through the "notch." And here, patient, reader let us part, after commending to your kindly consideration the following table which I trust you will find of service should it fall to your lot to go to the Provinces:

	Conveyance.	Miles	Time. H. M.	Fares.
Boston to Bangor	E. & M. C. R. R.	244	10 45	$8 00
Bangor to St. John	E. & N. A. R. R.	206	11 42	
St. John to Digby	Steamer	43	5 00	2 00
Digby to Annapolis	"	18	1 15	
Annapolis to Kentville	W. & A. R. R.	59	2 45	2 00
Kentville to Windsor	"	25	1 15	75
Windsor to Halifax	"	56	2 60	
Windsor to Chester	Team	37	10 60	12 00
Chester to Gold River	"	5	1 00	
Chester to Middle River	"	4	20	
Chester to East River	"	7	1 00	
Chester to Halifax	Stage	45	7 15	2 50
Halifax to Moncton	Intercol. R. R.	187	8 00	
Moncton to Newcastle	"	78	4 30	
Newcastle to Indiantown (on Miramichi)	Team	17	2 30	
Newcastle to Big Hole (on Miramichi)	Team	21	3 00	
Newcastle to Bathurst	Intercol. R. R.	44	2 05	
Bathurst to Rough Waters (Nepisiquit)	Team	9	1 30	
Bathurst to Grand Falls (Nepisiquit)	Team	29	4 00	
Bathurst to Campbellton	I. R. R.	63	2 20	
Campbellton to Metapedia	"	13	30	
Metapedia to River du Loup	"	176	8 10	
River du Loup to Quebec	G. T. R.	125	5 45	
Halifax to Quebec (thro' ticket)	Railroad	686	30 00	14 20
Quebec to Boston		394	21 00	11 00
Boston and return to Boston (round trip)	Railroad & str.	1757		44 45

NOTE.—The above table shows the distance we made on the round trip to be 1,757 miles, and the entire fares from Boston and return to Boston, $44.45.

We were absent on our trip twenty days, and our entire expenses were under $100, which included railroad fares, hotel bills, teams, etc., etc.; in short, everything except tackle and expenditures foreign to our trip. Our hotel bills averaged about $1.50 per day.

At the "Dufferin," St. John, we paid $2.50 per day; at the "Halifax House," $2 per day; at Chester, $1.25; at Newcastle, $1.50; Campbellton, $1.25. Long trip tickets average about two cents per mile, while local rates are over three cents. A single word about hunting. In N. S. and N. B. game of all kinds is very abundant in their seasons. Moose and caribou are said to be very plenty; deer not quite so much; of smaller game, birds, partridges, ducks, quails, snipe, etc., are quite common. As to the place to go for game I was told "you can hardly go amiss." This is especially true I think between Annapolis and Yarmouth in N. S., and anywhere back from the settlements in New Brunswick If one goes for game, he will find September and October the best time to go, and one of the best implements to take along is a Parker shot-gun and a "Shelton Auxiliary Rifle." Then you are prepared for all kinds of game. I am using both, and I find my "Shelton" a great *desideratum* in the woods. It is a powerful and accurate shooter and worthy of the indorsement of every sportsman. I had a tight-fitting enameled leather case made for mine, and when not in use I keep it suspended from my left hip, and never have suffered any inconvenience from its presence.

In hunting one needs a dog, especially for birds; they are too tame to fly, and you will likely pass them if you do not have a dog's nose to point 'em out. If you have a good dog you ought to take him, as bird-shooting not being made so much of here, good dogs are not over plenty. For moose and caribou shooting you will find dogs in plenty if you strike the right locality, while our own dogs would be of little service.

(At the risk of laying my article open to the charge against a woman's letter—that the "nub" of it always lies in the postscript, I shall venture a few words more).

In regard to the mode of getting to Nova Scotia or New Brunswick, there are several pleasant routes and many pleasant places to be done *en route* without going much out of the way.

From New York one can take a steamer to Halifax, Boston or Portland.

From Boston one may go to Portland, Bangor, St. John, Yarmouth or Halifax by steamer if they prefer it to all rail, or you may divide between railroad and steamer.

From Portland you may take a steamer to Mount Desert, thence to Machiasport by steamer, thence to Eastport by stage about thirty miles, and there connect with International line of steamers for St. John. *En route* from Bangor to St. John are the Schoodic Lakes, of which Grand Lake is the centre, famous for land-locked salmon and trout. They may be reached by cars from McAdam Junction (on E. and N. A. R. R.), N. B. and C. R. R. to Princeton, or by steamers and stage from Eastport or St. John; distance, McAdam Junction to St. Stephen, thirty-five miles. Thence *via* Calais to Princeton, twenty miles. From St. John City one may take a steamer up the river St. John, and at points along the route make excursions through the wilderness to the head waters of the Miramichi or Nepisiquit.

From St. Johns City you may go by rail to Point du Chene (Gulf of St. Lawrence) one hundred and thirteen miles, and there connect with Gulf Port steamships and take a steamer direct to Quebec, stopping *en route* at Chatham (for Miramichi), Bathurst (for Nepisiquit) or Gaspe. You may also from Point du Chene reach Prince Edwards Island, Pictou and Cape Breton by steamers. From Halifax you may take a coasting steamer along the south shore of Nova Scotia to Yarmouth, making stoppages en route.

In brief, to the variety of routes in this interesting country there is no end. But I must conclude this weighty "note" with the observation that although both Nova Scotia and New Brunswick lack the enterprise and thrift of the States, still the country is interesting and the people social and hospitable. You will meet with features foreign to those in your own country, and especially is this true of the eastern portion of Nova Scotia, as you travel toward bleak, barren and sturdy Great Breton, where in midsummer your overcoat will not come amiss. Your expenses will be comparatively light, and its cool and invigorating atmosphere will give you a renewal of health and strength which will linger with you upon your return to sultry climes. Your contact with the honest and God-fearing "Blue-Noses" will make you a better man, and you will carry pleasant associations away with you which will outlast all privations and abide ever green in your memory, growing ever brighter with declining years.

GEORGE A. FAY.

West Meriden, Conn.

GROUSE SHOOTING ON THE REDWOOD.

"AN unpromising day for hunting, eh?" Any one but a sportsman would have thought so that morning, when my friend Mr. B. and I, having resigned our dogs to the tender mercies of the baggage-master, boarded the cars at St. Paul *en route* for Redwood Falls.

It was hot, speaking mildly. It was also August 17, and the law on *Cupidonia cupido* had already been off two long days, and a day more must elapse before we could back our dogs with "Steady" and "Hie on," and hear the whirr of wings and the report of our tried breech-loaders. Hardly had an hour passed, and our minds settled to the contents of our favorite novel, when word came that my Don was mad. Hastening to the baggage-car the spectacle was not encouraging. The dog was nearly choked to death with dragging at his chain, and trembled and jerked in every part as if the shaking palsy and tetanus had both their clutch upon him. A liberal hydropathic treatment, however, and "Richard is himself again."

Before noon we arrived at Kasota Junction, with the pleasant knowledge that five long weary hours must be worn away somehow, somewhere between the depot and two or three shantics which, if I remember rightly, comprised the entire "village."

We were fortunate enough to fall in with a well-known dog trainer who was out exercising two puppies, and as Mr. B. had lately purchased "Captain Jack" of this individual, we felt quite content to hear his stories. He was, however, cruel to our hopes, for having dogs perhaps to train in that part of the country, he advised us to abandon Redwood Falls as a failure, no chickens there, and "go West."

This we kindly but firmly refused to do, and four o'clock saw us off again. A mile or so out from the Junction stands St. Peter's Insane Asylum, a noble stone structure surrounded by extensive grounds, which so lately, with many of its unfortunate inmates, was destroyed by fire. Whirling on to Sleepy Eye we changed cars, and I believe, for the first time in the day, really began to enjoy ourselves. Broad prairies extended on either hand, bounded only it seemed by the horizon.

As it grew dusky, sitting by the open door of the baggage car, we could see the fire-flies flashing in the tall prairie grass. Now and then a solitary grouse would whirr away, or a covey would rise only to settle a little farther on. In the sloughs along track we could see teal and other ducks swimming and diving, busy with their evening meal, while cranes, herons and hawks squawked and lunged or sailed lazily away from the noisy train that had broken upon their meditations with its puff and clatter.

At eight o'clock, "pitch dark," our trip of one hundred and thirty miles was ended, and we were shaking hands with our old friend O'Hara, the druggist.

Very soon we were quartered at the "Exchange," unpacking our traps, and having left all arrangements for the next day with our friend, we speedily consigned ourselves to the watchful care of the drowsy god. Alas! what a night. A description of its terrors would be to write another "Inferno." And well might they have said of us next morning, as they said of Dante (I omit the quotation.)

Off bright and early next day, we soon discovered that we were in the right place, but, alas! was ever one so fortunate as not to be unfortunate? Birds were plenty, ammunition plenty, strong arms and good guns, but the weather was insufferably hot, Don too fat, Leo weak—just over the mange; and there we were. However, by hook and crook, getting up our own birds when our dogs were too petered to get them up for us, and by wide ranging ourselves we carried back a bag which, with the best of dogs and everything favorable, could not but be considered good.

The next forenoon was spent in visiting the dales of the Redwood, the falls from which this enterprising little town takes its name, and rowing up the river to the mineral spring whose ferruginous waters, cool and sparkling, may have "millions in it" for the right party.

In the afternoon another friend in the land office took charge of us, and assuring us that he could get a dog worth having we left our own behind. After driving some twelve miles we found the dog. It was on the afternoon that we took our first look at a jack rabbit. It was then that our ears were filled with wonderful stories of the monstrous leaps these rabbits were accustomed to make—sixty feet at a jump we were told was nothing.

Warner tried to stop the individual in question, but after emptying both barrels into the air the rabbit concluded that Fred was rather excited and it was best for him to be moving.

I am sorry to add—in order to be truthful—that his leaps although long would double up many times to reach sixty feet.

Jack, the new dog, proved a success, on about three coveys, then he began to range. Out of sight in a few minutes we would come upon him a mile or two further on just in the act of getting up a fine lot of birds. Sometimes by much running or urging our horses by "pounding them on the back," as O'Hara expressed it, we would manage to get in a shot or two before the game was off. With this sort of light infantry charging again and again we brought our bag up into the fifties for the afternoon. As evening came on the superheated air cooled almost suddenly, and as the clear, round moon came slowly up over the prairie we could almost imagine it November weather, and gratefully drawing our topcoats about us we hastened homeward.

There is one thing rather noticeable about the Redwood County prairie, it is as smooth as a floor, and the carriage wheels roll along as if on a trotting track. In the other counties of Minnesota in which it has been my good fortune to shoot one can find nothing of this kind.

The next day took us across the Minnesota River into Renville County. Here, with "Sancho," another dog hired for the occasion, with his master to take care of the team and mark down birds, we had our first really good shooting. The dog, although not over well trained, was staunch, and thanks to him we made the best bag of our trip.

Ducks were plenty in the sloughs; cranes, too wary to be approached, were visible now and then, while hawks and herons were without number.

The Redwood and Minnesota rivers, I am told, afford excellent bass and pickerel fishing. Although I was obliged to forego that sport the one large pickerel that I saw set my fingers itching for the rod.

Off at three next morning—cold, dark and disagreeable—a fortunate connection of trains brought us to St. Paul at eleven o'clock.

Two days and a half shooting; score one hundred and thirty pinnated grouse, besides hawks and herons.

I can say for the "Exchange," S. D. Sicklars, proprietor, that it is a good house, well kept, and that everything is done for the comfort and accommodation of sportsmen. Terms $2.00 a day.

W. P. M.

Boston.

DEER STALKING.

TO one who has enjoyed the pleasure of deer stalking there is ever, as the season approaches, a desire to renew the sport. For the past two winters we have denied ourselves the coveted pleasure, but a letter from a friend of bygone days warned us that the season was drawing to a close, and that to fulfill legally our promise we must come at once. It was enough. We would go.

A day's ride by rail of twenty or more miles by a semi-weekly mail and passenger stage, that reminded one more of a trip in the heart of the Rocky Mountains than in the interior of the State of Pennsylvania, brought us safely within one hour's walk of the house of our friend, a son of a once noted woodsman of this section. And while speaking of this we might as well put on record the fact that within a few miles of here lives the veteran hunter John McHenry, than whom no better shot nor one better posted as to the habits of every species of game that is found in this part of the State ever handled a rifle or trailed a deer. A true sportsman before ever the law prohibited or exonerated the man who did it, he shot every dog of friend or foe that he found following a deer on the mountains, and few cared to quarrel with John McHenry for so doing. A quiet, peaceful man ordinarily, he was a very torrent when aroused. Even yet you cannot find a native of these mountains who cannot tell you of his exploits, and his reputation of having killed many more deer than any man in this or adjoining counties is, I think, well supported by facts.

The walk from the stage to the house of our host was the pleasantest part of the trip. It gave us an opportunity to get the cramped feelings of travel worked off and to allow us to feel as free as the country we were in, and fit us to enjoy our supper. Every country, yes, every section, differs in its cuisine. We knew where we were going, but our anticipation was more than realized; and again, we will write that no place away from its native land can its fruits be fully enjoyed. Never nectar tasted like that old Metheglin, nor venison prepared by the best French artist like that done to a turn on the huge open fire. The repast over we discussed the plans of the morrow and listened to the stories of the successes, adventures and escapes of the half dozen hunters and rugged mountaineers who gathered round the cheery log fire to welcome our coming and make pleasant our stay. A good night's rest, a hearty breakfast, and then we felt that feeling again, unappreciated by all men that never saw a buck in full run, themselves within shooting distance, yet every drop of blood in their veins so hot that if they moved the very friction of circulation would set them on fire.

Deer had not been very plenty, though scarce a man who had not at one time during the season seen one or more. My coming had been put off so late that the prospect was far from encouraging. Daylight found us up one of the ravines about one hundred and fifty yards from a well known deer run, where we waited, waited, yes, five long hours and no deer. Then, as they would not come to us, we thought to go to them, and after stalking the balance of the day darkness found us a long way from home and not a tail

seen. Having expected just about such luck we were not so greatly disappointed; in fact, rather pleased, for we did not wish to miss one, and felt then in no condition to be sure of getting in a telling shot even with a good opportunity.

The next morning, leaving early and taking a different route, scarce an hour had gone before our companion brought down a fine doe. We only saw the one when he fired, but three others bounded away. This was a fine shot made at ninety paces with a muzzle-loading rifle. After hanging the doe up we commenced to get up on the does we had frightened away, and this is an art that the best of us are glad to learn more of and to profit by the secrets of each successful hunter. Having followed these deer for hours, and momentarily expecting to see them fly for their lives, they astonished us by the noise they made coming down the mountain as if chased by a dog. Now or never! They were running broadside to us and faster, it seems, than I ever saw deer run before, probably from the fact that I had seen none for two years. There was no time for delay, but singling out the largest, calculating on their speed, and firing, was the work of an instant; and such a sight, such a confused tumble never greeted my eyes, though I had seen deer fall from the first to the last day of the season for many successive years. To get a second cartridge into the gun was another moment's time, but the others were gone. The deer did not prove as large as I expected, but I think he made up in speed what I over-estimated him in size, therefore with the results of the shot I was more than satisfied.

To a novice the carrying of a deer is quite a task, but by putting it over the head, letting the hind legs come down in front of the right shoulder and the front legs where the left hand can grasp them, the largest deer can be easily carried. After the last shot, night not being far off, and the deer a good ways no doubt, we gathered up our last trophy and retraced our steps to get the one of the morning, and it was not long until we were once more waiting for supper and recounting the incidents of the day.

The next day brought us no return for a long tramp, save the sight of three deer at distances too long to kill, and with night we left the mountain for the day and the season, feeling, however, well compensated for the three days' tramp in carrying off under the circumstances the one.

It has never been our pleasure to gun on the plains, but I doubt if the shooting of an antelope in the open at five hundred yards is any more of a task than the killing of a common Pennsylvania red deer at one hundred and seventy-five yards in the woods, provided both are going at the same rate of speed.

We cannot close without adding, by way of postscript, our wonder if the world at large knows what a blessing mountains are. Here is the very spirit of freedom nurtured, the best and noblest-hearted of men are born, bred and reared; the difficulty of intercourse with the world preserves them from its bickerings, narrow-hearted selfishness and jealousies.

Unityville, Lycoming County, Pa. BRISK SHOT.

F. A. DURIVAGE.

F. A. DURIVAGE was an author, artist, sportsman and gentleman in the strongest sense of the words I use. Yet he has passed away as almost all my boon companions of forty years ago—gone so suddenly that I scarce can realize it now! Only ten days before his death I received a letter, blotted with his tears, condoling with me over the bitter loss of my little daughter. On my arrival in New York city on February 4 I learned that he had died on the first of this month.

Born in 1814, liberally educated, from his earliest youth gifted with both pen and pencil, Francis A. Durivage made his way upward and onward, winning friends, fame and a competency, as he went along. As the "Old Un" in the old *Spirit of the Times*, he wrote many of the finest sketches ever found in that spicy paper. I was associated with him on the Boston *Times* immediately after I returned from the Mexican war, and from that hour up to his death we were warm friends, constant correspondents when apart, and so associated that no one can better testify to his guileless, open heart, his great talent, his true manhood.

The little poem which I beg to lay before the readers of the FOREST AND STREAM speaks a volume of the love he bore for his son, who fell in the service of his country. I have sent the original in manuscript, and a sketch, a landscape made in Europe, to the FOREST AND STREAM office, where the friends of "dear old Dury" can always see them. This is a copy of the verses:

ALL.

There hangs a sabre and there a rein,
With a rusty buckle and green curb chain,
A pair of spurs on the old gray wall
And a mouldy saddle—well, that is all!

Come out to the stable! It is not far,
The moss-grown door is hanging ajar.
Look within! There's an empty stall
Where once stood a charger—well, that is all!

The good, black horse came riderless home,
Flecked with blood drops as well as foam:
See yonder hillock where dead leaves fall,
The good black horse pined to death—that's all!

All? Oh, God! It is all I can speak:
Question me not! I am old and weak!
His sabre and saddle hang on the wall
And his horse pined to death! I have told you all.

And now the father has gone to meet his son where parting comes no more. Art, literature, fond relatives, dear friends mourn their loss; but Durivage can suffer no more. He had been an invalid for years, the result of a fall on shipboard when returning from a trip in Europe in 1873. His last letter to me, bearing date January 18, contained these words:

"I am really afraid to open a paper, my friends are dying so fast. Jas. Oates, "Acorn," Cowdin, Hon. Chas. P. Clinde, Epes Sargent, and now your darling Irene!"

Alas, only a few days and his hand was cold in the grasp of death, the eyes that tear-blotted the letter to me in my sorrow are closed forever.

God rest thee, noble soul! God comfort those who miss you! I can write but this—no truer friend ever grasped my hand than he who rests from labor evermore.

Eagle's Nest, Feb. 6. NED BUNTLINE.

FLORIDA, *Fernandina.*—The weather has been so wet and inclement as to preclude all field sports. So we, our dogs and guns are all rusting together. However we live in hope of a few brighter days before long. Game is rather plenty, but the country rather full of water. Plenty of snipe on our marshes, and I hear of woodcock a few miles from here, a bird that is rather scarce with us. A. C. F.

Natural History.

THE CHESAPEAKE ZOOLOGICAL LABORATORY.

THE Johns Hopkins University of Baltimore has recently published the report of the third year's work of the Chesapeake Zoological Laboratory, covering the summer of 1880.

This Laboratory, of which W. K. Brooks, Ph. D., is Director, has afforded accommodation in the past to a number of earnest investigators, and much good work on the Southern marine fauna has been done by them. Dr. W. K. Brooks' studies on the development of the oyster have a practical bearing which would commend them even to those least interested in science. During the past summer six gentlemen were at work in the Laboratory; these were the Director, Mr. K. Mitsukuri, Ph. B.; Mr. E. B. Wilson, Ph. B.; Mr. F. W. King, A. M.; H. C. Everts, M. D., and H. F. Osborne, Ph. D. The Laboratory was opened April 23, 1880, and closed September 30, thus being in operation for twenty-three weeks. Beaufort, North Carolina, was chosen as the seat of operations for 1880, and in his report Dr. Brooks gives his reasons for this choice and some description of zoological interest of the locality. He says:

Beaufort was selected for our third season's work because it is the nearest accessible town south of Baltimore which is favorably situated for zoological study. The advantages of a location in a town are well shown by the fact that the expenses of a session of twenty-three weeks this year were considerably less than those of a ten weeks' session the year before.

The scientific advantages of Beaufort are very great; the most important is the great difference between its fauna and that of our Northern Atlantic coast.

The configuration of our coast line is such that Cape Hatteras, the most projecting point south of New York, deflects the warm water of the Gulf Stream away from the coast, and thus forms an abrupt barrier between a cold Northern coast and a warm Southern one. The fauna north of this barrier passes gradually into that of southern New England, while the fauna south of the barrier passes without any abrupt change into that of Florida, but the northern fauna is sharply separated by Cape Hatteras from the southern.

As the laboratory of the U. S. Fish Commission and Mr. Agassiz's laboratory at Newport afford opportunities for work upon the Northern fauna, it seemed best for us to select a point south of Cape Hatteras in order to study the Southern fauna with the same advantages, and as Beaufort is the only town near the Cape which can be reached without difficulty, it was chosen as the best place for the laboratory.

The situation of this town is exceptionally favorable for zoological work, for the surrounding waters present such a diversity of conditions that the fauna is unusually rich and varied.

Close to the town there are large sand bars, bare for miles at low tide, and abounding in animal life. From these we could collect an unfailing supply of Amphioxus, Renilla, Limulus, Balanoglossus, Sea Urchins, and a great variety of Molluscs and Crustacea.

The mud flats furnished us with another fauna, and yielded a great variety of Annelids, a new set of species of Crustacea and Molluscs, Gephyreans, Echinoderms and Polyps. The large salt marshes gave us a third fauna, and a short distance inland large swamps of brackish and fresh water furnished still other conditions of life.

As the town is situated at the point where Gore Sound connects Pamlico Sound with Bogue Sound we were within easy reach of a continuous sheet of landlocked salt water more than a hundred miles long, and these sounds furnished still another collecting and dredging ground, abounding in Corals, Gorgonias, Ascidians, Star Fish, Sea Urchins, and a new set of Molluscs and Crustacea.

As most of the shores are flat and sandy those animals which live upon a sandy bottom are much more abundant than those which attach themselves to solid bodies, but the stone breakwaters at Fort Macon, the wharves at Beaufort and Morehead City, and the large oyster beds which are found in the sounds furnish a proper habitat for many fixed animals, and yielded us a rich supply of Hydroids, Corals, Ascidians, Sea Anemones, Sponges, Cirrhipeds, etc. The ocean beach within a short distance of the town furnished still another fauna, and a sail of three miles from the laboratory carried us to a good locality for ocean dredging.

The greatest advantage of the locality is the richness of its pelagic fauna. There are very few points upon land which are so situated that the surface animals of mid-ocean can be procured in abundance for laboratory work, and as careful work is very difficult on shipboard, a laboratory which can be furnished with a good supply of living pelagic animals presents opportunities for work in an extremely interesting and almost new field.

The Gulf Stream is constantly sweeping these animals northward along the North Carolina coast, and as the tide sets in through Beaufort Inlet into the sounds the floating animals are carried with it. Such oceanic animals as Physalia and Porpita were frequently thrown, uninjured and in perfect health, upon the beach within twenty feet of the laboratory, and during the season we found nearly all the Siphonophoræ which are known to occur upon our Atlantic coast.

With all these advantages we enjoyed a mild and uniform climate which enabled us to work in perfect comfort during the hottest months of summer.

The zoological resources of Beaufort have not escaped the attention of American naturalists and there are few places upon our coast, outside of New England, where more zoological work has been done. In 1860 Drs. Stimpson and Gill spent a season in dredging and collecting in the vicinity of Beaufort, Cape Lookout and Cape Hatteras, and an account of their work was published in the "American Journal of Science." Dr. Coues, who was stationed at Fort Macon during the war, occupied himself for two years in collecting the animals which are found here, and he published a series of papers on the "Natural History of Fort Macon and Vicinity" in the "Proceedings of the Academy of Natural Sciences of Philadelphia."

These papers, which were continued by Dr. Yarrow, contain copious and valuable notes on the habits and distribution of the animals which were observed, and we found them a great help to us. These two naturalists found four hundred and eighty species of animals in the vicinity of Beaufort. Of these four hundred and eighty, two hundred and ninety-eight are vertebrates and one hundred and eighty-two are invertebrates. Of the vertebrates twenty-four are mammals, one hundred and thirty-three are birds, twenty-seven are reptiles, six batrachians, ninety-seven fishes and eleven selachians. Of the invertebrates one hundred and forty-seven are molluscs, twenty-one are crustaceans. The list of vertebrates is very nearly exhaustive and we made no additions to it, but the list of invertebrates is obviously very imperfect, and, although we made no attempt to tabulate the species which we observed, there would be no difficulty in enlarging the list twenty or thirty fold.

Among other naturalists who have spent more or less time at Beaufort I may mention Professor L. Agassiz, Professor E. S. Morse, Dr. A. S. Packard, Professor Webster and Professor D. S. Jordan. Professor Morse procured most of the material for his well-known paper on the "Systematic Position of the Brachiopoda" on the sand bars in Beaufort Inlet.

The results of the summer's work are briefly touched on in the report. Much valuable work, attended with interesting discoveries, was done on the Crustacea. The embryology of marine Annelids was also studied and considerable time devoted to the hydroids and jelly fish. Some of the most interesting results of the summer's work have been briefly announced in the scientific journals of this country and Europe, and we look forward with interest to the publication of the results in full.

The following abstracts of a number of the more important points covered by the work of 1880 were published during the past summer:

The Development of the Cephalopoda and the Homology of the Cephalopod Foot. By W. K. Brooks. "Amer. Journal of Science."

The Development of Annelids. By E. B. Wilson. "Amer. Journal of Science."

The Rhythmical Nature of Segmentation. By W. K. Brooks. "Amer. Journal of Science."

The Origin of the Metamorphosis of Actinotrocha. By E. B. Wilson. Amer. Assoc., Boston Meeting.

Notes on the Medusæ of Beaufort. By W. K. Brooks. Amer. Assoc., Boston Meeting.

Budding in Free Medusæ. By W. K. Brooks. "Amer. Naturalist."

Development of Marine Polychætous Annelids. By E. B. Wilson. "Zoologischer Anzeiger."

Embryology and Metamorphosis of Lucifer. By W. K. Brooks. "Zoologischer Anzeiger."

The Early Stages of Renilla. By E. B. Wilson. "Amer. Journal of Science."

THE FLORIDA RATTLESNAKE.

Crotalus Adamanteus.

A YOUNG naturalist from Cincinnati, Mr. D., was wounded March, 1875, near Port Orange, Volusia Co., Florida, as follows:

He had killed a very large snake, over six feet long, and cut off its head intending to take it home in alcohol. In order to make it safe to carry he proceeded to stuff its mouth with cotton so as to bury the fangs; this he did with a stick six or eight inches long while the head lay upon the ground. As he pushed in the cotton the head gave a spasmodic spring, and one of the fangs scratched the end of the right thumb. Mr. D. directly tied a cord tightly about the thumb, and called to his companion to open the flesh with his knife, this was done, and the thumb was sucked to extract as much of the poison as possible. He then sent to the nearest house for whisky, and walked to the hotel perhaps half a mile.

No whisky, however, could be obtained for more than an hour. When it came Mr. D. drank a pint or more, but it was very bad liquor, and Mr. D. never having used spirits found much difficulty in swallowing it. A doctor had been sent for in the meantime. From the tightness of the ligature the venom seemed to be confined to the end of the thumb which had become black. After Mr. D. had drank all the whisky he could swallow he removed the ligature fearing the death of the part from arrested circulation. As soon as this was done constitutional symptoms appeared, nervous depression and difficulty of breathing, while the hand and arm began to swell. In about six hours the surgeon arrived, who found the patient evidently sinking. He gave more whisky, and also the French antidote prepared by Powers & Wightman, of Philadelphia, also using volatile liniment on the limb. He was of the opinion that the patient would not have survived another hour but for the antidote and the additional doses of whisky.

After this Mr. D. began to rally, and when I saw him a week later he thought he would escape with the loss of the thumb. In about two weeks after the accident Mr. D. arrived at New Smyrna on his way home. The arm was in a sling, and was still swollen and somewhat discolored. The end of the thumb was sloughing off. Mr. D. told me that all the whisky he drank, probably near a quart, produced not the slightest intoxication, although he had scarcely ever tasted liquor before.

The snake was in the moulting state, when it is blind and particularly venomous. Mr. D. thought that if the bite had been inflicted by the living animal anywhere except on one of the extremities that death would have ensued in fifteen minutes. He has killed and prepared many rattlesnakes, and was aware of the danger of handling them, but supposed that this one was dead and harmless.

Another instance of the same kind was told me by the sufferer, a powerful and athletic man, who being on a hunt in Turnbill's Swamp, near New Smyrna, shot a large rattlesnake which was lying across the path. Taking the snake up by the neck to remove it, its weight was so great that the hand of Mr. L. slipped and a finger was scratched by one of the fangs. Mr. L. tied a cord about the wrist and started for the hotel to procure whisky. He was about two miles distant, and before he had gone half a mile he was so sick that he had to hang up the deer which he was carrying. Presently he was obliged to leave his gun and lie down, and it was with the greatest difficulty that he reached the hotel, where he drank a bottle of whisky before any symptoms of intoxication appeared. In this case, as in the other, the patient was wholly unused to spirituous liquors.

Ammonia was also administered, but his arm was swollen and useless for a week, and it was many weeks before he fully recovered. With youth, health and a vigorous constitution to assist him, he barely escaped with his life from this scratch. The species of rattlesnake found in Florida is larger and more venomous than those of the North. They

are said to grow to the length of seven, eight and nine feet, with a girth in proportion. And yet, with all this deadly power which the rattlesnake possesses, comparatively few persons are killed by them. In the first place, it is not an aggressive animal; it is usually content to act on the defensive. Secondly, it never strikes without throwing itself into a coil; this, though quickly done, yet gives the incautious intruder some chance of escape. Thirdly, this snake almost always gives warning with its rattle before it strikes. I think that more persons die in the Southern States from the bite of the moccasin snake than from that of the rattlesnake, though the latter is probably the more venomous. The moccasin is aggressive and strikes without giving warning. The rattlesnake seems to be a chilly creature, and usually keeps in its den in winter. During ten winters spent in Florida I have never met with a living rattlesnake in my walks, though my residence has been in an unsettled part of the State, where the animal is common in warm weather. Probably a dozen are killed every summer by the family with whom I make my winter home, and even the children seem to have very little fear of this deadly reptile.

There is a very large serpent of the constrictor genus in Florida which makes war on the rattlesnake and kills and devours it. It is here called the "gopher snake," is black in color, active, and grows to the length of eight feet. Perhaps the "king snake" (*Ophibolus getulus*) of North Carolina, described by Drs. Coues and Yarrow as a destroyer of rattlesnakes and moccasins. Several persons in Florida have described to me how this gopher snake will pursue and attack the rattlesnake, the bite of which seems to be rendered harmless to the other by its thick, scaly covering. It seizes the rattlesnake by the neck, strangles it, and then having bitten off the head, swallows the body—nearly as long as its own—the whole operation consuming two hours or more. This gopher snake is harmless to man, and is encouraged to live about the house, being a great rat catcher. It will also swallow eggs and chickens. It becomes so familiar that the children make a pet of it sometimes. G. C. C.

CAN THE PINNATED GROUSE BE SUCCESSFULLY PROPAGATED?

SEVERAL of your Eastern correspondents have expressed a desire to propagate the pinnated grouse, commonly called prairie chickens, for game, and have requested the opinion of others as to the probability of success in such an undertaking. This problem seems best solved by considering the nature and habits of this bird, and what it needs for successful increase. This necessitates a partial description.

I have hunted the pinnated grouse more or less for thirty-eight years, and from sunny Texas northerly through the Indian Territory and Kansas to Iowa, Illinois and Wisconsin. In Texas, where the seasons are the most mild and the advantages of winter and summer food are the greatest, we do not find the game in abundance, but only here and there sparsely. But in the Indian Territory they increase northerly in numbers, and still more so in Kansas, Iowa and Southern Minnesota. Here they are very numerous, and as much so as they were in Illinois and Missouri forty years ago. From these facts it will be seen that the grouse is prominently a Northern bird both by nature as well as by choice, for all this vast extent of continuous prairie country has been open to its choice for ages. And yet we find it by nature propagating best in a region of country where the winters are intensely cold and the grounds covered with deep snows several months in the year. This proves that the grouse can endure the severity of any winter that we may ever expect to have in any of the Eastern, Middle or Southern States. None of these, be it remembered, are ever exposed to those death-dealing winds of the Northern prairie country where the thermometer sometimes falls in a few hours to minus thirty degrees, and even to forty, as sometimes reported. And yet the grouse, the most hardy of birds, comes out strong in the spring.

As is well known, they live on or relish about the same kind of food as the common hen—green plants, wild and cultivated, wild seeds, cultivated grain, insects, grasshoppers, etc. But in the winter the grouse will live and flourish where the hen would starve to death.

They are strong and wide-awake foragers, both in summer and winter, and never fail to get a good living. This is true whether they are on their native prairies or in the cultivated fields of the farmer. They rejoice in the latter, for it is here they fill their crops the quickest. If left undisturbed in the neighborhood they soon become constant "tramps," and from day to day carry away bushels and bushels of the farmer's grain. Swift of wing, they can strike as straight a line for the farmer's fields or cribs of grain, and keep, by duly posted sentinels, as sharp a lookout for the farmer while there as any bird I know of. If left unmolested generally the grouse becomes quite tame and familiar with things around the house and barn, as the garden fences to light on, etc.

Suitable cover for them is the main requisite. It is their ark of protection. For that kind which they like best I would refer you to the open prairies. Here, amid the thick, tall grass and tufts of weeds, we find them. Here they nest, feed and rear their young. Here, both old and young scamper away as quick as thought, and bury themselves in the thick grass to avoid the swoop of the hawk which already hovers over them. Here they roost, and here they strive to elude the pursuit of man. But alas! he comes to the field with his dogs and guns, and there is but little chance for escape. We next hear of this "happy family" through FOREST AND STREAM, about as follows: "Two great Nimrods, A. and B., with their celebrated dogs Snip and Rip, recently found ten covies of grouse in one day, and bagged ninety-nine before noon. Only one got away, and it wounded."

In propagating grouse, an essential to success is cover. They must have this, or they will, like the quail, pass on to other places where they can find it. This cover must also be exclusive, or not disturbed during the nesting season. Much of our country affords ample cover for grouse, and it is only where the lands are very rich and all cultivated, or grazed closely annually, that the requisite cover may not be found. Nearly our whole seacoast, with its numerous indentations, bays, rivers and creeks, where much tall grass and food abound, must be well adapted for propagating purposes, as well as much of our open waste lands generally.

The country must be open, for the grouse requires a considerable space around it in which to fly for a retreat, especially when molested and frightened. The quail is generally content with a ten-acre field, but the grouse wishes to command much more. His flight is much longer and his cover often more remote. Neither of these birds will stay in any section of our country where it cannot readily fly to cover. This is always held in view alike by both.

The following extract from a letter just received from N. D. Merrill, of Creston, Union County, Iowa, will be read with interest. To him I had written for some information, since he was born and brought up as a farmer in Illinois, where the grouse were very abundant. To my several inquiries he replies as follows:

"I will answer your questions as well as I can in regard to prairie chickens.

"1. They do not migrate South in the winter; no matter how cold or snowy the weather may be, they stay around.

"2. I consider them to be as hardy as the partridge (the woods ruffed grouse), or the blue jay or crow.

"3. I never knew one of them to freeze, and never heard it asserted that they do. I consider them as hardy as any bird I know of.

"4. I have my doubts as to raising them by hand. I have tried to raise young ones that I have caught on the prairies yet I could never get them to eat, and they would starve to death.

"There are quantities of them around here now and in all our corn fields by the hundreds. I have recently heard some farmers complain of them eating a great deal of their corn; they invade the unharvested fields of which there are yet many, and so commit the damage, but I have not hunted them any as the weather has been very cold, and there is about five inches of snow now."

The grouse have a strong attachment for the place where they are reared. From year to year they will cling to it, though most of them be killed off annually by hunters. I now have in view one little (marsh-grass) valley, about half a mile wide and a mile and a half in length, for which they have contended, and thus far successfully for the last forty years though annually hunted. It is but four miles from Waukesha, a large village in Wisconsin, and now celebrated as a fashionable summer resort on account of its "Bethesda spring" water. This little valley is entirely surrounded, and has been for twenty-five years with highly cultivated farms. A noisy railroad also intersects it, and yet these birds cling to it, and will continue until the last one is killed. This natural attachment of theirs to their home is a feature most favorable to their successful propagation. In my opinion they can be successfully propagated, and all we require to do is to properly place then in regard to cover, food and range, and then let them live quietly until they become plenty, and then to be hunted in September and October only. They are prolific breeders, and if properly placed and well protected they could not fail to soon give us much healthful amusement and well filled bags of game. H. W. MERRILL.

New Rochelle, N. Y.

MINUTE FORMS OF LIFE IN THE WATERS OF THE LAKES.

IT is a common saying that each glass of water we drink may contain thousands of living organisms, but the truth of such a statement, though generally accepted, is not fully appreciated by most people. No one who has not investigated for himself different samples of water, who has not studied with the microscope the minute organisms which abound in so much of our water, can realize how vast is this invisible world, made up of forms belonging to both the vegetable and the animal kingdoms. An extremely interesting paper on this subject was read before the Kirtland Society of Natural Sciences by C. M. Voice, Esq., which we think well deserving of the attention of our readers and which we reprint below. All those who are especially attracted by this subject will no doubt have seen Prof. J. E. Leidy's superb work on North American Rhizopods. Mr. Voice says:

The waters of the great lakes are well known to abound in varied forms of life, the most generally known of which are the products of the fishing industry, the encouragement by governmental aid to fish propagation serving to render this industry and its results familiar to all. The annual catch of fish and the vast beds of mollusca found in some localities constitute about all that a great mass of people know of the life inhabiting these waters. And with the exception of a few reflective minds, the present condition of life in the waters of the lakes is popularly supposed to have always existed in about the same condition. As numerous and prolific as are the popularly known forms of life inhabiting the waters of the lakes, careful search with adequate means reveals a vastly more abundant and prolific world of minute forms, both animal and vegetable, many of which are only visible with microscopical aid.

The naturalist knows more or less thoroughly of the varied forms of visible life abounding in the waters and of their significance, and, if a microscopist as well, is likely to be familiar with the hosts of minute beings that people the same watery world.

A study of the microscopical forms of life in the lake waters reveals in their forms and habits of life a vast significance, corroborative of other evidences of the former condition of the lakes as a sea. In pursuing the study of the minute forms of life in the lake waters, the most convenient plan, and that generally adopted, is to take samples from the water supply by means of straining or filtering. How closely and accurately the material thus obtained represents the conditions existing in the great body of water is not easily ascertainable, and it is not unlikely that some forms, and perhaps many of them, exist in the waters of the lake that are not obtainable in the manner referred to. But, proceeding with the process of examination by filtering, we find throughout the year vast quantities of the forms of life common to fresh water, such as various species of diatoms, desmids protococcus, oscillatoria, and other families of confervoidea, and numerous entomostraca, infusoria, rotatoria, rhizopoda and other classes of protozoa.

Among all these varied forms of teeming life with which the lake water abounds there are none, so far as I know, which might not be expected to be found in fresh water, except among the diatoms. But of the sixty odd species of diatoms which are found in the filterings of our water supply, there are at least three, and perhaps more, which are representatives of marine forms; these are the *Rhizosolenia eriensis*, *Actinocyclus niagaræ* and *Amphiprora ornata*, and to these should be added, in my judgment, the *Stephanodiscus niagaræ*.

Of these forms the *Rhizosolenia eriensis* was first collected by Mr. H. C. Gaylord from the water supply of this city and was described and named by Professor H. L. Smith, of Geneva, N. Y. This is the only species of Rhizosolenia yet found in fresh water, all other species of the genus yet described being marine or fossil, and the recent forms mostly found in the stomachs of salpæ and ascidians. This diatom has so far only been found, to my knowledge, in the waters of the lakes at Cleveland, Buffalo and Chicago. The *Amphiprora ornata*, found in considerable numbers in the lake water at certain seasons, has also been reported from two other localities in Ohio, from New York and from Florida, but sparingly. The *Actinocyclus niagaræ*, named by Professor H. L. Smith, and described in the "American Quarterly Microscopical Journal," October, 1878, was also sent to him by Mr. Gaylord and has not yet, so far as I can learn, been reported from any other locality than Cleveland. The other species of Amphiprora are marine and those of *Actinocyclus* marine or fossil.

Some other species of diatoms found in the lakes are so modified in form as to be perceptibly different from the same typical species found elsewhere. From these facts Prof. Smith, above named, suggested the query whether salt or brackish water might not be found at the bottom of the lakes; but from the shallowness of Lake Erie that is improbable in this case, and my own conclusion is that these forms of diatoms are survivors of the ancient sea, which have, during the subsidence of the former sea, survived the change from brackish to fresh water, perhaps not modified in form during the change. As bearing upon this view many facts which have come under my observation may be cited. Some three or four years ago, after repeated desultory examinations of the lake water, I began a systematic course of taking filterings, and at first supposed that filterings of each of the four seasons of the year would display the species of the year; but during the second year of such observations I became convinced that more frequent tests were needed, and took filterings from twice to three times per months, and during the year 1879 I saved a filtering of each week of the year, excepting during two short absences. Examination of the filterings when taken confirmed what had been deduced from former observations, that the forms of life in the lake water exhibit a well marked periodicity, the limits of which I have not continued the observation far enough to exactly define at present, but which as far as the diatomaceæ are concerned, can be in general terms stated thus: During that part of the year from about the first or middle of February to about the first of May, the variety of form is greater; from thence to about November 1 the prevalent forms is greatest, and from November 1 to about February 1 the disappearance of warm weather forms and appearance of the cold weather forms goes on; thus producing a periodicity of three seasons in the year. During the winter and the early spring the *Stephanodiscus niagaræ* is the prevalent form, giving place to Melosira crotonensis as the warm weather approaches, which soon yields prominence to *Tabellaria fenestrata*, which continues the predominant form until fall, when the *Melosira* again appears, and soon becomes equally numerous, both forms, as cold weather approaches, becoming scarcer, while the *Steph-niagaræ* reappears and rapidly increases in numbers, until at times it forms almost the whole of some winter gatherings. The *Actinocyclus niagaræ*, so far as can yet be judged, appears most frequently in the late winter and early spring gatherings; seldom or never in summer. The *Amphiprora ornata* and *Rhizosolenia eriensis* are found occasionally at all seasons, but in greatest abundance in the winter and early spring gatherings. During some weeks in July and August, 1879, neither of these diatoms were found, the gatherings consisting almost exclusively of *Tabellaria fenestrata*. The forms of *Surirella* and *Cymatopleura* are also most abundant in the early spring gatherings.

The influence of storms on so shallow a lake might well be supposed to have considerable influence upon the contents of the water supply, but so far as I have been able to observe, no difference in the forms of diatoms found in the filterings is caused by storms, but considerable mud is brought with them.

This periodical abundance of the forms before mentioned, the *Actinocyclus*, *Rhizosolenia* and *Amphiprora*, in the colder season, and their partial disappearance in the hottest season of the year, and the uniform greater abundance of the *Stephanodiscus* during the winter, also becoming scarce in the summer, is strong evidence in my mind that all these forms are survivors of the cold seas, and were, perhaps, the chief forms then prevalent in those waters; for which reasons the colder temperature of the present lakes is most congenial to them and best suited to their development.

As the changes that left our present lakes progressed, these forms kept pace in their modification with that of their habitat, new forms appearing and being introduced by various causes, until the present condition has been reached, and I entertain no doubt that if future changes should replace our lakes with arctic seas those peculiar diatoms would then be found the chief and perhaps the only survivors of our numerous present forms.

It may be of some interest to state that in the year 1878, at the suggestion of a gentleman in Philadelphia, I sent to him repeated gatherings of diatoms from Lake Erie with a view of introducing the *Stephanodiscus niagaræ* into the fresh water and clear spring ponds of that locality; but we did not succeed in getting them to live, although they will live for weeks here in a comparately small amount of water.

Another matter should be mentioned, and that is that the character of the filterings taken on the same day varies in different parts of the city. I have seen forms of the diatoms and infusoria quite abundant in a filtering made at the store of Mr. Gaylord, which forms could not be found at all in a filtering which was progressing at my own house during the same time, and other striking instances have been noticed; but as the periodicity of forms is a characteristic always observable wherever the filterings are taken, it may be assumed that a continuous series of observations made upon filterings from the same faucet represents fairly well the characteristic of the general source of supply.

It will be of much interest to supplement the examination of the contents of the water supply with that of dredgings or soundings from the sediments of the lake bottom, and I hope eventually to be able to do this.

PINE GROSBEAKS IN MASSACHUSETTS.—*Editor Forest and Stream:* Flocks of Canada Grosbeaks have visited us this winter, probably on account of the severity of the snow storms. They feed principally on the mountain ash berries, the trees of which grow in orchards. While in search of shrikes for mounting, Dec. 8, I shot what I supposed was one, but on examining it I found it to be a mocking bird, as was attested by several parties, the distance was one half mile from home, and the bird was feeding on barbery seeds. I have observed several flocks of snow buntings also one flock of thirteen male bluejays, January 8, also observed two robins. A few flocks of quail were shot late in fall; partridges nearly extinct; nearly every one that was shot was found to contain the *tic* imbedded in the skull. Please give your opinion in regard to the mocking bird. JOHN O'LEARY.

Amesbury, Mass., Jan. 21.

The occurrence of the mocking bird, if such it was, in Massachusetts at the time mentioned was certainly remarkable though not without parallel. There are records for example of the capture of the cardinal grosbeak in New York city in the dead of winter.

Game Bag and Gun.

DESTROY THE HAWKS.

WE have frequently called attention to the good results which are sure to follow the destruction of hawks and the vermin which prey upon game. There is a special demand this year that persistent efforts should be directed to this end. The game has been so largely depleted by the severe weather that its preservation from the hawks and vermin, which have also suffered and are therefore the more ravenous, is all the more imperatively called for.

We have received several communications upon this subject, all of them being of about the same tenor. A Farquer County, Virginia, letter says: "I have often expressed the opinion that the hawks killed more partridges than sportsmen. I have never seen in any publication like yours an article elucidating this proposition. Allow me to suggest to you to gather all the information you can about it. It will astonish those who have never given it attention to learn what vast numbers of partridges fall victims to their cormorant appetites, and will stimulate efforts to destroy the pirates."

Of the good results which followed an effort to decrease the number of hawks in a given locality a Bloomsburg, N. J.,

correspondent writes: "It is not the gun that destroys and exterminates our game, but, among many other things, are the hawks, minks and foxes.

"A few years ago two or three of our young men took to buying all kinds of furs—mink, fox, skunk, etc., and many a farmer's boy made enough money for his winter use. The next season the result was plainly visible. In places where these animals had been abundant and quail scarce we (the two fur buyers and myself) shot thirty-four quail in one afternoon. This was a good bag for us, and we wondered how it was that we found so many birds on that forsaken spot. By questioning and conjecturing we came to the conclusion that the nest-destroying animals were nearly all caught, and so it proved to be, for right around where these boys captured their furs do we go to hunt quail, and there is the only place that we find them."

Some months ago we spoke of the commendable example of the Luzerne County, Pa., Sportsmen's Club, which offers bounties on hawks, etc., and we are glad to note that other societies are adopting the same plan. The Forest and Stream Association, of Wilmington, O., have raised a fund to be used in giving premiums for the destruction of hawks and has published its appeal to that effect in the local papers. Of the destruction of the quail by hawks in Ohio during the close season there, a Wilmington correspondent says: "Inclosed find a remonstrance against any change in our present game law, which is being signed by all of our farmers and citizens, with scarcely an exception. Our present law is a good one and we do not want it changed. They will legislate the quail out of existence if they keep on. They had much better offer a reward for the destruction of hawks if they want quail to increase. During the past two "close seasons" in this State the hawks were driven in from our sister States, where shooting was permitted, in great numbers, and proved very destructive to our quail. I think both close seasons were actually disadvantageous and quail did not perceptibly increase during those seasons."

The premiums are $10 to the person killing the greatest number of hawks, $5 to the next, $2 to the third. In addition to the above premiums, the Association will pay $1 per dozen for all hawks killed in Clinton County during this time; the said hawks to be of the larger varieties commonly known as the squirrel, bullet and red-tailed hawks. These premiums do not cover the small sparrow hawk, which should not be destroyed, being of great benefit to the farmer. The head and two talons of each hawk will be taken as evidence of destruction.

Other associations are adopting the same timely and sensible measure. The Lynchburg, Va., Society for the Protection of Game has offered fifty cents apiece for the scalps of hawks, with a view of checking the destruction of quail and other birds.

The sportsmen of Washington, Pa., have organized a side hunt for hawks, etc., to extend through February and March, the losing party to pay for a supper.

We should be p'eased to hear from our correspondents in various sections of the country further reports of efforts in this direction and of the good results which may have followed.

THE WEATHER AND THE BIRDS.

WE have advices from many sections, all showing the effects of the recnet cold weather and heavy snows upon the supply of game. A Coshocton, O., correspondent, under date of January 17, says: "The very severe weather we are having is killing off all the quail and ruffed grouse in this part of the State. I frequently hear of whole bevies of quail being found frozen to death. Last Saturday a boy near here took a grouse off a tree. It was too numb to fly."

A Wilmington, Ohio, letter, written January 17, says: "The quail are all right in this locality; many more left over than ever before. They are also very plenty in the adjoining counties of Green, Fayette, Highland, Brown and Warren, and in fact in all the corn producing districts of Southern Ohio. You cannot freeze out fat quail, and they have been unusually fat this winter. No quail have perished in this county either from hunger or cold. There is now one-third of our corn standing out on the stalks, some say over one-half. This gives abundance of food and shelter. This corn will not be gathered until March, so come what may our quail are all safe."

A Cleveland, Ohio, correspondent tells us: "Our quail season has been very short, 15th November to December 31, in Ohio, and really weeks less on account of hard weather. More rest for the quail. The quail in Ohio have been very scattering; in some localities plenty, others very scarce. I bagged in eight days twenty-one dozen over an eleven-month old "Arlington" Flora, Irish puppy. That of course is not all I have killed, but that is plenty thick enough for me. I see in a paper that quail are frozen out in Southern Ohio. It is not the case here, nor in Central Ohio. I found quail as good and strong as I ever shot them. There is more corn not husked in Ohio than I ever saw in thirty years' shooting, so I think quail will not suffer much here this season. Am informed such is the case in Michigan. Had a very nice shoot in Michigan with John Davidson in October. Shot a good variety of game—grouse, quail, cock, snipe and rabbits. He has some splendid youngsters in his kennel this time, flyers indeed. I shot a good many cock last season, nearly 300. Largest bag, fifteen brace."

From Jordan Station, Ky., a correspondent writes: "The extreme cold weather and an army of trappers have almost exterminated the quail. Reelfoot Lake, three hours' drive from this point, is almost deserted by both game and hunters."

S. C. C. writes from Marietta, Ga., under date Jan. 15: "The quail (partridges in Southern speech) have suffered much from the cold. It was five degrees below one night, with the ground covered with snow to the depth of six to ten inches for a week. Many flocks have been found frozen, as well as other birds, and quail will probably be scarce next fall."

Attention has already been called in these columns to the possible danger of eating quail at this time. Concerning this subject the Washington *Republican* says: "It will be recollected that at the time Buchanan was inaugurated a large number of persons were poisoned at a certain prominent Washington hotel. The winter immediately preceding the inauguration was an unusually hard one. The proprietor of the hotel, to please his guests, had procured, as is stated, all the quail in the surrounding country. These birds had been starved to such an extent that they were compelled to feed upon poisonous berries and leaves until their flesh became thoroughly permeated with the poison. The birds have been starved for weeks, and are now feeding upon such berries and buds as to make their flesh poisonous. The deep snows in the country prevent the birds from receiving their usual sustenance from seed and the sands or small gravel which assist in digesting and assimilating the same, and consequently they are driven to those modes of sustaining life which, while they may be useful to themselves for the time being, render their flesh highly injurious to human beings as an article of food. The birds are being killed at the present time by shooting and trapping, and the country people who offer the same in market are entirely ignorant of the terrible and insidious poison which they are daily distributing. All through the adjacent country of Maryland and Virginia we have what is known as the poison oak. This is a vine which bears berries very similar to those of the wild grape vines. The touch of the "poison oak" is dreaded by all who travel the woods. Its contact so swells the hands and face as to render the individual unrecognizable by his friends in a few moments. The quail at this season of the year seeks the poisonous berries which grow upon the vine."

The extraordinary depletion of the game calls for active efforts on the part of individual sportsmen and sportsmen's clubs to replenish the supply. Many instances have come to our knowledge where this has been undertaken. Live quail are advertised in our columns, and, as we announced last week, may also be bought of H. C. Ryall, Shelbyville, Tennessee.

"Homo" writes from Philadelphia: "In Philadelphia many of our game-dealers are purchasing live quail, wherever they can get them for sale, for those wishing to restock regions where the birds have been destroyed by snow. There is a great demand for them here and prices are high. I have never known but one such winter in my recollection, and continual information from the South, as far as lower Alabama and Georgia, states that the quail there have suffered severely. Quail from the far South for restocking purposes are by no means the bird to procure, on account of their natural susceptibility to cold, and an ordinary winter North would certainly destroy many of the first year's hatching. What we want, if possible, are quail from Maryland, Delaware and Virginia, and certainly not further South than North Carolina."

The Maryland Association of Talbot County, at Easton, Md., correspondent writes, propose to restock their section with birds imported from the South. They have issued the following circular: "The Maryland Association of Talbot County for the Protection of Game and Fish desire to enlist the active co-operation of all the residents of the county in their efforts to avert the total destruction of birds and rabbits by the severe weather now upon us. There are few berries, the most having fallen, and the earth is covered deeply with snow, under which a solid crust of ice prevents the possibility of the birds obtaining food. Without help all must perish. We urgently press upon all farmers, and most especially those who are members of the association, the necessity of preventing this disaster by feeding the birds. Keep a space cleared at the stack yard, near the hog and cattle pens, or under shelter of the woods, and supply it regularly with damaged grain, screenings or corn. The birds will soon find it, and enough breeders be saved to stock the county. The hawks will soon find where the birds are, and a few steel traps set on the stack poles or other suitable places will accomplish a double object—the hawks will be caught and destroyed, and the bounty of fifty cents in cash for every scalp will pay for all trouble and expense."

A New York city correspondent suggests that a few quail turned loose in the spring and a few quarts of grain or seed well distributed now will do more than any game laws. In the colder climates in Europe it is customary to provide a rude shelter here and there, with a close picket fence, yet so birds can pass in and out, and here grain is kept all through their hard season, and they have no trouble about scarcity of game.

Frank Schley writes from Frederick, Maryland, Jan. 31: Supposing the intense cold weather and the long continued snow might have had a disastrous effect upon the partridges (Bob Whites), I directed Henry Perkins who is a reliable huntsman to take my two partridge dogs, Dick and Duke and ascertain if there were any partridges to be found. The ground to be beaten, both the dogs and the huntsman were perfectly familiar with, being the laurel hill sides, foot lands, briar patches, sage fields, swamps and thicks of the Linganore hills where I had left in different locations six to eight partly broken up coveys of partridges late in the season. He and the dogs returned home late in the evening very much fatigued from tramping over the snow, and he reported that he had gone over every foot of the ground as I had directed him, and found the birds all safe in coveys where I had left them. There were five to twelve birds in the coveys, and they were wild, strong and hearty.

A Sutton, Mass., correspondent, who says that the quail are suffering very much there, adds, "I am feeding three broods thirty-one in all—and hope to get them safely through the winter."

The deer and other large game have suffered at the hands of the "yarders," "crusters" and butchers. It has been an excellent season for filling up refrigerators. We take from the Reno, Nevada, *Gazette* a paragraph showing how they do it out there: "The heavy fall of snow which came on Dec. 1 caught a great many deer in the hills. Two brothers named Jones, who live on Feather River, four miles from Beckwith, found a fresh trail down the mountain one morning which had evidently been made by deer striking out for Red Rock and other warm valleys over the Nevada line. The Joneses stuck a flag right in the track, and during that night nearly a hundred deer turned back from it. Next day the Jones boys started out on the trail and soon came up to straggling deer floundering through the snow. A wounded deer led one of the boys off the main trail, but the other followed up until he came to a fence, where he found a number of the herd tired out and unable to go further. He shot nine without moving from his position, and had to stop for want of bullets, having used up all he had."

A Washington, D. C., correspondent says: "Crows have been found in numbers dead around the river shores and country roads, having either died from cold or starvation, or both. Several fine deer were killed near Chancellorsville last week."

Advices from High Point, North Carolina, say: "The severe weather here has hurt the quail shooting, though there are some birds left."

From Farquier County, Va., we hear: "The almost unexampled depth of snow with us has of course destroyed many partridges, but not all, for some were seen near my home yesterday. Our sportsmen have bought a good many, and keep them in coops to turn out in the fields in the spring."

One of the "old-fashioned winters," of which we hear so much, was that of 1779-80. A newspaper writer says of it: "The winter of 1779-80 was very severe in this country. The bitter cold began in the middle of November and continued until the close of February. The sun's rays were not warm enough to melt the snow, which lay on the ground almost five months, so thick that it was very hard to get from place to place. All ordinary bodies of water were ice-bound. Domestic fowls and wild turkeys perished by thousands, so did deer and buffalo, and wolves and panthers, mainly from lack of their natural food, buried under the snow. The Northern and Western rivers were fettered by the frost, and the Cumberland was so firmly frozen as far South as Nashville that emigrant trains passed securely over the river. The Delaware opposite Philadelphia contained ice of three or four feet, and Long Island Sound and the Chesapeake were frozen over. Scientific persons have declared that hot and cold waves often recur every eleven years, as in 1846, 1857 and 1868, and the weather wise predict that this will prove to be one of the coldest winters known for twenty years."

From Cedar Rapids, Iowa, the Secretary of the Iowa State Association writes, under date of January 25: "Snow has not been very deep in this section, and I think the quail will pull through. They were in abundance and very few shot or killed this season. If they get through winter, will be plenty next season."

It is needless to say that a heavy fall of snow and a freezing "spell of weather" are hailed with joy by the fellows who snare and trap and huddle-shoot the coveys. An Oskaloosa, Iowa, letter says: "The quail and chicken shooting season just past with us has been one of the best on record. We have had but very little snow until within the last two weeks, but there are about eight inches of snow on the ground at the present time, with a good prospect for more, and I am almost ashamed to tell you, but it is the truth, our quail are being killed by the hundred almost every day and brought into town under the noses of our officials, who do not try to molest the offender. Everybody says that there never were so many quail, and that there will be plenty left to breed from another year, but for my part I do not believe it. If the deep snow lasts and the potting is kept up I think that there will be very few quail left by spring. We have a sportsman's club in our city, that is, by name only, for some of the members are the very ones that are now killing quail almost every day in the week. We are to have a grand circular wolf hunt in our township on the twenty-fifth of the present month."

A Highland Park, Ill., letter says: "I am much afraid the snow and excessively cold weather will use up what quail we have left. Foxes are very plenty this year; partridges scarce."

CRUSTING DEER.

Editor Forest and Stream:

The interesting manner in which you present matters pertaining to the welfare of all branches of sport, the just views expressed relative to protection of game of all kinds, upholding the righteous and condemning the unjust, are very gratifying. For several years the improvements made in FOREST AND STREAM, its appearance and internal workings have been noted with especial pleasure.

It has been remarked that "it is almost useless to attempt to get right game legislation as things are now." My ideas are that, through your watchfulness and exposure from time to time of the attempts to force jobs through, a great deal of harmful matter can be prevented from accumulating. Unless you had adopted that course certainly there would not have grown the existing wide-spread confidence in your willingness to expose such matters.

The sportsmen now feel confident that any injustice toward the preservation of game will be attacked by you and every endeavor put forth to defeat the attempts. Surely the scheme for selling game the year through could not have met a worse blow than you gave it.

The very interesting letter from Wm. P. Dodge, published in this week's FOREST AND STREAM, can but have been written purely in the spirit of wishing to point out a serious defect in the law relating to the preservation of trout. He apparently is a gentleman very much interested on that subject and to a lesser degree, though perhaps not much, the protection of deer in our Adirondack region. Toward the close of the communication he remarks: "Men calling themselves sportsmen, and who belong to sportsmen's clubs and are members in good standing," being in the woods in June and July on a fishing excursion, and want "a little venison to eat while in camp," have a "mistaken notion" that they have a right to kill it for that purpose, which he follows by claiming "that it works harm to the general enforcement of the law to allow it, as guides and parties living back in these localities claim, with good grounds, that it is no worse for them to "crust" deer for meat for winter use than for these sportsmen (?) to kill them out of season for their use." Please allow me to call attention to a difference between "crusting" for meat to use and "crusting" in the general acceptance of the term.

In the first place, the guides and residents of the Adirondack region might "crust" every winter for the purpose of using the meat for food for themselves, and stand on an equal footing with sportsmen who kill for "a little venison to eat while in camp." My view of that part of "crusting" is that the deer would hold their own in point of numbers.

In looking at the broader acceptance of the term "crusting," quite a different feeling exists, for the idea is that the person or parties seeking to kill deer by "crusting" do so with the full knowledge that the deer are perfectly helpless, and it is possible to kill nearly every one found in the "yard." C. Fenton asks the question in his excellent letter, published in your issue of the 13th instant, "Wherein lies the difference between killing deer after being driven to water by hounds and that of killing them by crusting or killing them in the deep snows of winter on snow shoes?" Of course he means the moral difference, and asks a question of that kind with the inference that some absurdity exists in trying to make a distinction. The case stands like this: In getting the deer either in the water away from shore or finding them "yarded" while deep or crusted snow exists, the party seeking to kill the deer knows that he has the advantage and is sure of his victim, there is not much uncertainty. Consequently it is like picking apples off from a tree—get them all. Unhappily, it is similar after they are gotten, only those can be used that do not spoil. Still there is a dissimilarity, for the apples are gathered entirely with the idea of use, while the deer are killed principally because it is possible.

To show how helpless the deer become during deep and crusted snow time, I will call attention to the fact that moose are captured sometimes alive and bound with ropes under

similar conditions, and taken out of the woods alive too. Take it for granted that if moose can be so treated, the poor deer are easily made victims. It is possible to so hamper deer with ropes either in the water or in the deep snow. I believe it very excusable for the guides or residents of the wilderness proper to procure venison for subsistence in any manner possible, but the wanton destruction of deer is quite another matter. The sportsman might justify himself for shooting quail or woodcock while on the ground during nesting season, or while caring for their young quite as well. It is only excusable where necessity demands it.

Mr. Dodge also remarks that owing to the condition of the snow the dogs are not able to run, and in that way points directly in this unconscious manner to one of the greatest and most pernicious evils we have, and one that cannot be eradicated without State power and money. The fact is that inhabitants of regions bordering on the Adirondack wilderness can go in with hounds with perfect feelings of security against arrest during all times. Mr. Dodge gives evidence of the practice during close season even of hounding the deer.

In connection with this subject I should like to call attention to a portion of a letter published in your issue of the 27th inst. "The proper law would be to forbid the sale of game after the first day of the close season. This is the rule abroad. Why should it not be so here? The only exception to this might be made in the case of venison, which only exists in our State in a few localities, and could there be protected by local laws, with the consent and co-operation of the residents." Close the gates on the goats, but let the sheep go through! Prevent the reception of quail, grouse and other game from the West and South, but admit venison because it cannot be marketed very well—conveniently—only in cold weather. Yes, deer "only exist in our State in a few localities." If ear if it becomes possible to market venison in New York and other cities all during January that the market men will not be obliged to go to the far West entirely with orders for venison; mysterious boxes and barrels of "potatoes" or possibly "mutton" will be shipped from the "few localities of our State" as long as they exist. However great the supply may be at present I think means should be taken to prevent a diminution of it rather than to offer loop-holes for a contrary result. If the marketmen cannot conveniently freeze their venison so as to bring it to market during the open season, and sell it during that season, why I say let them suffer, not the deer. If it is prohibited to sell quail on or after the first day of the close season it reverts to the benefit of game, for there would not be so much killed during the last few days of the open season virtually cutting short the open season for pot-hunters, and is a suggestion worthy of consideration, very broadly too. For in protecting the game are we not protecting the interests of all lovers of sport at the same time the genuine interests of marketmen? If they do not know their own greatest interests the societies who study such matters and the sportsmen's papers should point out to them the straight and narrow path.

To permit one violation and discountenance another, it must be admitted, "works harm to the general enforcement of the law." WOLLAT.

QUAIL AND DUCKS IN FLORIDA.

WILLIAMSPORT, Md., Jan. 31.

A WORD of warning and of advice to brothers of the rod and gun may not come amiss, and I shall be fully repaid if I can save only one of your many readers, who are thinking of such a trip, from the impositions practiced by the railroad between Richmond, Va., and Jacksonville. Appended they will find a list of dog rates with the routes traveled.

The first question asked, "Is there plenty of game?" and I can truthfully say yes. Ducks, quail, deer, turkeys and fish are to be found in abundance, such an abundance as no Eastern gunners can ever hope to see here, and withal so easy of access from all points North that the wonder is that more sportsmen do not go there. The whole line of railroad from Fernandina to Cedar Keys literally swarms with ducks and quail, and at almost every station on the road board can be had at from $1 to $1.50 per day.

Our party, consisting of H. J. and the writer, with our guns and three dogs, left Washington on the fast mail south at 11:50 A. M., January 6, and right there our troubles began.

While purchasing our tickets we inquired about charges on our dogs, and were informed by the gentlemanly agent that there was no charge on dogs except the baggage master's fee, and such we found reasonably correct until we reached Richmond. There, as paymaster for our trio, my troubles began in dead earnest, and the further we went the worse it became, until in sheer desperation we threw away our tickets from Charleston, S. C., to Jacksonville via railroad, and took passage to the latter point on the steamboat St. Johns, making thereby a clear saving of twelve dollars on account of dogs, and in addition reaching Jacksonville fully six hours ahead of our train. For Jacksonville we started for Otter Creek and Col. Wingate's in the "Gulf Hammock," but finding when we reached Archer that the whole country south of Bronson was flooded we concluded to stop at the latter point. There our good angel in the person of Capt. J. D. McDonnell (our conductor on train) came to the front, and advised us to go to Shell Lake, assuring us that it was the "gunner's paradise," which assertion we can heartily bear testimony to the truth of.

Reaching Shell Lake about noon we were most hospitably received by our generous host, Judge McD. Although he was totally unprepared for our arrival we were at once made to feel that Southern hospitality is still no myth, for "right royally" were we entertained, although unknown to us a dark shadow even then overhung the household.

The time flew by all too fast for us, and our departure, hastened as it was by the demise of Judge McD's wife, made our leave-taking doubly sad. We will long remember our week of sport among the ducks and quail, with which Shell Lake and the adjoining broad acres abound, and the happy evening hours spent in the society of their owner and his noble sons and lovely niece. Any sportsmen tourists who are in the future so fortunate as to drop into our quarters there will acknowledge that half has not been told.

Our gunning score was for two days as follows: Friday, the 14th, 87 ducks to three guns; Saturday, the 15th, 70 quail to three guns. This could have been duplicated every day of our stay had we been inclined to shoot for the score, but it looked too much like wanton slaughter, and we only hunted hours enough each day to kill what game could be consumed.

But all things must have an end, and as our holiday drew to a close we regretfully turned our faces homeward, landing safely in Washington on the night of the 23d, tired and "travel stained," but of the unanimous opinion that Florida in general and Alachua and Levy counties in particular can afford such shooting as is nowhere else to be found that it has been our good fortune to visit.

In conclusion let me say to all who are going South and intend taking their dogs along, do not go via "Atlantic Coast Line" of railroads unless your pocket is deep enough to stand a constant drain on it in shape of mileage on dogs. Charges on dogs from Petersburg to Weldon are 1c. per mile; from Weldon to Wilmington, N. C., 1½c. per mile; from Wilmington to Florence, 1½c. per mile; Florence to Charleston, 1¾c. per mile; Charleston to Savannah, 1c. per mile and so on all through, charges ranging from one to one and three-quarter cents per mile. On the F. G. and W. J. Transit Road charges are one dollar per head if you take dogs only five miles, or one dollar for the whole length of road from Fernandina to Cedar Keys. The best route for sportsmen is by water from either New York or Philadelphia, as it is not near so hard on the dogs and $25 easier on the pocket.

KENORC.

KILLING GROUSE FROM TREES.

UPON reading the pleasant articles of "Jack," of Staunton, Virginia, and "Black Ned," headed "Dogs That Tree Grouse," in your issue of the 20th inst., I was somewhat surprised to find that "Black Ned" does not consider it sportsmanlike to kill grouse from trees. If there are any other birds so wild, so horribly, terribly hard to bring to bag as the ruffed grouse (the pheasant of Virginia and partridge of the Northern and Western States) I am not aware of it. I will not agree with "Black Ned." How is one to kill them in an ivy thicket too thick for a bench-legged fice to get through? And just such places suit grouse best.

I am very much like the old country fellow who went to the menagerie. I believe I will tell the story—with your permission: An old countryman, upon one occasion, went to an animal show and was very much pleased with all that he saw. As he stood leaning upon his long staff, intently gazing upon the various animals, he asked very many questions of one of the showmen, whose business it was to answer all questions about them. "What is this?" queried old homespun. "That, sir, is the elephant." "And what is this?" asked the old fellow. "That animal, sir, is the monkey." "Monstrous like folks, too," put in the old one. "Here is another great critter," said the countryman; "what do ye call him?" "The camel, sir. He can go without food as long as Dr. Tanner—and without water, too—and bear at the same time the hottest sun," said the showman. "The camel!" said the countryman. "Well, I have long wanted to see one. In searching the Scripter I have read a heap about 'em."

Just at this time the showman was called off and the old man had then to navigate alone. He wandered around for some time in the most serious manner until, by and by, he came upon a cage of snakes. Here he stopped and a grand smile lit up his face, which soon turned to a broad grin and finally the grin ran into an old-fashioned laugh. Here was something the old fellow knew all about. While looking at and enjoying the snakes, his horny hand still firmly clutching his good two-year-old hickory stick, one of the snakes thrust its head between the wires, right in front of him, and in an instant the old one popped off its head, killing it as dead as the mischief. Quick as lightning another and another head came out, and by quick blows of the old man's staff were sent the way of number one. By this time the work became fast and furious, snakes poking their heads out of nearly every crack, from one end of the cage to the other, and were decapitated in a trice by blows from the stick. In fact, he got so warmed up to his work that he seized his hickory with both hands and thrust it into the cage and came down with all power, overhanded, upon its occupants.

At this juncture the attention of the keeper was called to the scene and, rushing up, he said: "In the name of all that is good, what are you doing, sir? Those snakes cost me $5,000."

The old man merely turned his head for an instant (the remarks of the showman having no other effect than to cause the countryman to withdraw his stick and resume the popping-off process in his former scientific manner), remarking: "Stranger, I don't care a darn; I kills 'em just wherever I sees 'em."

Now, "Black Ned," I am, with regard to the ruffed grouse, like my old friend—"I don't care a cent; I kills 'em just wherever I sees 'em." RICHARD M. CONWAY.

Conway Farm, Va.

MONTREAL, Jan. 26, 1881.

I am happy to see that matters pertaining to ruffed grouse, mode of treeing them, etc., are claiming attention in your columns. Some years ago I lost a fine Norfolk spaniel. Friend Hallock in making mention of his death in FOREST AND STREAM claimed him to have been "the best ruffed grouse dog known." His superiority was in his nose which enabled him to find every bird in the woods, and in the perfect control I had over him.

The red colleys when trained for that purpose make very fine dogs for ruffed grouse shooting; they, perhaps, have not so strong a nose as the field spaniel, but their color, greater intelligence and sly, careful, foxy-like movements, make them seemingly especially adapted for treeing grouse.

A brother of the writer has one of these dogs (not for sale) which in some ways displays more intelligence in treeing his bird than any other dog I ever saw. I have repeatedly seen him when following a bird at full speed that he had flushed and lost sight of in the brush stop suddenly and listen to hear his game when it would alight then locate and find it. Those who have hunted this kind of game know that when they alight on a tree after flying some distance they make a noise with their wings that can be heard quite a distance. To train a colly for this work, begin when he is not over six or eight months old, and let him mouth the first bird shot to his satisfaction, use him kindly, encourage, but never abuse him, his intelligence and love for the sport will teach him to do right when he learns what you require of him.

I can also bear testimony with "Jack" that fox hounds are sometimes good grouse dogs. The "old gent," Mr. E. W. Geer, of Fairfield, or rather Sheldon, Vt. P. O., who is an old veteran fox hunter, had in my boyhood's days a fox-hound that we used to hunt foxes, rabbits and grouse. He would give tongue on the trail of the latter game, and treed them and keep his bugle agoing until the whole woods fairly echoed with "delightful music" and we bagged the bird. The "old gent" deserves more than a passing notice. Quite a humorist and naturalist in his way, full of dry wit, and thoroughly understanding the habits of the local grouse found in his vicinity make him a pleasant companion to those whom he will accept as such. In his younger days he used a short twenty-inch under-lock Windsor rifle, and many a fox has he knocked over when running at full speed from twenty to thirty-five rods away, and would also kill rabbits while running before the hounds, in thick swamps where he could not see the rabbit but for a single jump at a time. I have also known him to shoot muskrats swimming in the creek in the evening when it was too dark to see the sights on his gun. The last wolf killed in his county he killed by still-hunting, and shot his game as it lay asleep digesting the mutton it had eaten in a farm yard the evening before. The "old gent" is now sixty-three years of age, and owing to failing eyesight has laid aside his rifle and uses a light muzzle-loading English shot-gun, and has within the past month taken some long tramps through the snow at his favorite sport, fox hunting.

At some future date I will send you some facts regarding the habits of ruffed grouse, where they are likely to tree when flushed, etc. STANSTEAD.

WELLSVILLE, Jan. 26.

Having watched with much interest the discussions in your valuable paper, particularly the conflicting opinions of my friends F. and Bell Muzzle relative to grouse treeing after being flushed by dog or man, I offer some suggestions, the results of observations made in the twenty years that I have been a lover of both rod and gun. In my humble opinion they are both correct, and only have to be located differently to make them so. My experience has been that grouse will tree after making their flight in localities where is no undergrowth or fallen timber, making it a subject of wonder to owners of fine pointers or setters and oftimes of censure to the dogs that they were unable to find after the first flight and marking down of birds, which birds were undoubtedly at the time standing very still and straight close to the trunk of some bushy hemlock forty feet above them. For it does not prove absolutely that there is no grouse in almost any tree because you cannot detect his presence, which the most practiced eye fails to do. But the same dogs often redeem themselves when hunting in low cover, making good the reputation lost by not being able to climb trees in search of game.

It does not tax my memory severely to remember when it was considered an achievement to bag a limited number of grouse by the easiest method afforded, either by stealing a march on an old drummer, guided by the thud of his wings, and bowling him over with a villainous old musket loaded with No. 1 shot and tamped with a whole edition of the village paper, or searching him out from the dense foliage of a tall hemlock. We never intentionally flushed our birds in those days, and usually forgot to fire if they were so unkind as to anticipate our designs. Men were rare in this country twenty years ago who would believe it possible, much less attempt so difficult and uncertain things as bagging a grouse on its flashing flight through thickets which at best only afford a glimpse to direct the aim. But breech-loaders were equally rare; also pointers and setters; and, worse than all, we had no FOREST AND STREAM to guide us. That was the time when the Dittmar might have flourished, and possibly there would have been no gunners left to tell their experience if they had moral courage sufficient to use the deadly mixture.

H. C. W.

ANDOVER, O.

I notice in the current number of your paper a communication in regard to pheasant-treeing dogs. I have owned a couple of such dogs and agree with your correspondent as to the breed being unnecessary to make a good treeing dog. In the communication referred to the query was put, "How does the dog select the right tree?" In my mind this is simple to explain in two ways: one by the fact that some dogs follow the flight of a bird with their eye. When a pheasant is flushed by a dog well in advance of the hunter it nearly always rises into a tree and there remains until something again flushes it therefrom. This in itself causes more false points by both setters and pointers than any other one fact, as the bird rises quite noiselessly, and not with the frightened bur-r-r-r that is heard when the hunter approaches. The pheasant-treeing dog notes this, and when the bird alights in some friendly bushy-topped tree he goes tearing after it, and by his barking so bewilders the bird that he is easily stalked and shot. The other way in which some treeing dogs distinguish the tree (and probably the most general manner) is by searching for the droppings of the bird, which are made immediately on their alighting in a tree. As soon as the whiffet winds these droppings he works up to the tree and, finding them, elevates his nose and gives loud mouth until the bird again takes wing or is shot by the sportsman. The trees generally selected by pheasants treeing are evergreens or beech with the dry leaves still on. I have a dog at present that will tree birds by the latter method and stay with them hours, but I don't allow him with me except when rabbit hunting, as I prefer a setter and the sport of shooting on the wing. Very few pheasants were killed in this section this season, although they were quite plenty. I know of a number of brood of quail, but did not disturb them, preferring to let them breed another season. The rabbits are very numerous, and within a few miles of here some hare can be found. The wild turkeys are getting scarce, though there were a couple of flocks reared in the Dorset woods last summer.

A. W G.

MORRISANIA STATION, N. Y., Jan. 10.

While the subject is under discussion in your columns, I would say that I think the different views of the subject of ruffed grouse resting on trees may be easily accounted for. In the Canada woods, where and because they are seldom disturbed, I have often shot them from trees with my rifle. A setter or pointer there would be superfluous. But in the woods nearer home, where they are so often shot at or hunted, I have very seldom seen them take refuge on trees, and I doubt whether the "little barking dog," so often mentioned, would have much occupation in treeing them in any of the well-scoured woods near New York.

As to squirrels not laying up stores for winter use, I shot a red squirrel last November in Dutchess County which was watching my movements from a hole in a dead tree. Cutting the stump down I found the little fellow, and from under him, in the hollow of the tree, I gathered more than three quarts of chestnuts. And the experienced farmer-sportsman with me asserted that they always lay up stores for winter. On the same trip I had a black snake, and a very large fellow of some unknown kind, hiss very decidedly at me. MANHATTAN.

THE STATEN ISLAND Association have received 600 quail from Tennessee.

THE UNUSUAL NUMBERS OF WILD FOWL SOUTH.

FROM Currituck Sound, North Carolina, to Wilmington, of the same State, the bays and inlets are teeming with wild fowl of every variety. At the mouth of the Chowan River, Albemarle Sound, swan and geese were never known to have been so plentiful, and multitudes of brant are wintering in the Palmico. At Middletown, situated on this latter sound, the natives are reaping a harvest, and many fowl are being shipped to cities both north and south of them. It would seem that the unusual winter we are having has driven the major portion of the flight of water birds to the coast of North Carolina. We hear from the baymen at Atlantic City, Tuckerton and Barnegat, N. J., that shortly after the brant reached their waters they were forced southward by the freezing and closing of the bays, which have continued shut in, excepting the channels where the current runs at a depth, since the latter part of November or first of December. In these channels neither the Canada goose nor the brant can feed, unless it may be in open weather, when floating vegetable matter, carried off the flats by the tide, provides them with provender. Now that the shoal places have been completely frozen over the birds are compelled to seek other grounds.

Sportsmen who wish to enjoy goose, brant and duck shooting of every variety should visit Middletown, Hyde Co., N. C., providing they can accommodate themselves with the rude fare of the country. The town can be reached from Washington, Beaufort Co., at the head of Palmico River, but the wagon road leading thereto is a terrible one, and as there is a dearth of the luxuries to which the city man is accustomed in this region, coffee, tea, etc., should by all means be taken.

Bogue and Stump sounds, south of Beaufort, N. C., are now perfect beds of fowl. In fact all along the series of sounds from Beaufort north to Wilmington south the sportsman cannot go astray in seeking for good grounds; and parties wishing to prolong their stay late into February may be certain of having excellent snipe shooting, for these sections yearly form resting and feeding places for the long bill in his northern migration.

Our river men in Philadelphia are looking for a sudden breakup of winter when Jack Frost grows tired of sojourning with us, and argue with an instinctiveness I have never been able to explain that we are to have excellent ice-shooting for ducks when they "get ready to come north," and your correspondent has arranged with one of the old paddlers, who has promised to "put him on the ducks" when they appear. At present a skiff could not live in our river in such ice as can now be seen in the Delaware. HOMO.

TRAPPING ON BAILEY LAKE.

THIS small sheet of water can be found just at the conjunction of the first range of uplands and the overflow lands of White River, in the southeastern part of White County, Arkansas, and has for its outlet and inlet Raft Creek, which from here is nothing more than a series of small lakes and ponds until it mingles its waters with White River, some twenty miles distant. At the lower end of the lake a huge cypress brake, well filled with water and fallen trees and deeply tangled with tie-vines, intersects that furnishes our fur animals with good quarters

The coon and mink pay special attention to the lake as the plain paths along the water's edge will show. The fish herein afford them splendid repasts, when they are fortunate enough to secure such, or to discover the refusal of an otter's breakfast, which is not infrequently the case—hence the attraction.

In trapping for coon and mink we use for bait fish when easily at hand, as they have a particular partiality for this; otherwise birds, rabbits or anything they have a fondness for. The trap we place under water when convenient, as then it would not be so liable to be observed and stepped over in taking the bait. Coon, being speedy travelers, occasionally sally forth, all following the same trail, on a gormandizing tour to the neighboring corn fields that are only a mile or two back in the settlements. The trails are made plain by frequent passing, and along this roadway many a coon feels the close embrace of a Newhouse trap. Not having been molested in a steel trap-way by a Kit Carson since Davy Crockett made his lonely tramp through here, the coon do not en ertain any suspicions as to the trapper's devices.

The banks of the lakes are very flat—only a few feet above the level of the water—and in consequence the other cannot enjoy the fun of sliding. About the only device the trapper can successfully employ is to prepare to take them at their accustomed place of going ashore During the first snow, November 17, they engaged in unusual fishing and frolicking, and several were the fish we found they had apparently caught through sport, being but slightly mutilated. These we promptly secured and devoted to the coon and mink cause. The succeeding snows were accompanied with such freezing that the lake was sealed with a coating of ice three inches thick, and the otter were forced further down the creek to open water. To capture these animals, excepting the otter, is only a matter of slight skill and ordinary exercise; therefore the liberal compensation and sport we derive from the time and labor spent is quite satisfactory and we do not regret the venture.

The weather so far this winter is of uncommon severity, and still continues, having had only a few pleasant days, and is in fact a grand exception to the generality of Southern winters, and is better suited to more northern latitudes. This inclemency will accordingly enhance the value of our furs, which will substantiate the saying, "What is one's loss is another's gain. WALTER D. CHILDRESS.

West Point, Arkansas, Jan. 19.

TRANSPORTING OUT OF SEASON.—*Rockland, Me., Jan.* 21.—I wrote you that the Game Warden here had seized three carcases of deer while being shipped to Boston. After paying for trucking, telegraph and legal advice, the warden has restored them to the express company who were carrying them, learning that some of our judges had decided that if it could be proved that the deer were killed before the first of January they were not liable to seizure, although the law reads like this: "Section C, Chapter 50, 1878: No person shall carry or transport from place to place in this State the carcass or hide, or any part thereof, of any such animal during the period of time in which the killing of such animal is prohibited, under a penalty of $40." So a man can go to a yard of deer, kill them all, and send them to Boston. The warden will not trouble them; it cost him too much to seize these, and if a man brings twenty deer to the boat and says he shot them in December and has had them frozen in the woods, the warden will not try to prove that they were shot in January. So much for the game law of Maine. CITIZEN.

The law of 1878, quoted by our correspondent, has not been changed. It still holds good. The warden should have held on to the deer. This is the law as it appears in the compend furnished by Commissioners Smith and Stilwell.

HUNTING WITH DANIEL WEBSTER.

PUTNAM, CONN., Jan. 17.

IN the winter of 1843-'44 deer were quite plenty in Plymouth woods. The Hon. Daniel Webster was then at Marshfield. Word was sent to him that the Kingston gang was going on a deer hunt the day before Thanksgiving, with invitation for him to join us, and all were to meet at the old blazing place at Smelt Pond, at sunrise, sharp. By 8 o'clock His Honor appeared with a gentleman friend; and Samuel and Waldo F., Uncle Thomas B. and my father and myself. We all had old-fashioned King's arms, percussioned, except Mr. Webster and friend, who had double guns. It was a fine frosty morning and our party lively. We had two good hounds. Samuel and Waldo were to take the hounds and drive Watson's Valley. Uncle Tom was to drive over and take Nick's Rock stand. The rest of us were to hurry over to the Carver road and string out at the guide board crossing. We had scarcely reached our places before we heard the welcome voices of the hounds in full cry, and soon the thundering echoes of two King's arms at the head of Watson's Valley, and then echoing down the valley came Whoop-oh! Whoop-oh! Look out, look out! The hounds were coming directly toward us I soon detected something coming down the blind road at my right and when within forty yards it stopped behind a bush. I shot at the fellow that I saw, when almost immediately two deer came out of the bushes at my left and crossed the road within a few yards of me. My father, who stood on my right, and Mr. Webster and friend, who stood at my left, all fired and one deer fell. I ran into the woods where I had shot and, not finding anything, returned, found that Mr. Webster and friend had jumped into their wagon and ran their horse to West Pond road to intercept the other deer at the crossing, as the dogs had gone on in track of the other deer. Father advised me to hurry on and he would stay there with the dead deer and wait for Sam and Waldo to come up. Uncle Tom had come up and kept on in his carriage toward West Pond, and while he was driving the deer came within gunshot and he shot at it from his wagon. The deer, slightly wounded, now came back directly toward the guide-board crossing again. I, hearing the dogs, hurried back. The deer jumped into the road some ninety yards off and we all fired. The deer fell but gained his feet and bounded away, falling at every jump. Running up the road we all chased it except father, who reloaded, and running the old mare overtook and shot the deer. We now whooped up all hands and had a joyful lunch, washing it down with something good from Mr. Webster's lunch basket. We now concluded to start for home, as it was about 2 o'clock. We decided that Mr. Webster and his friend had shot the buck and my father had shot the doe. Mr. Webster gave us a dollar each and he and his friend took the buck, which was a nice one, and father gave the other two men fifty cents each and took the doe, as three of us were at my father's. I, feeling a little dissatisfied with my first shot, took one of the hounds and went up the blind road where I first shot. The hound, snuffling around, soon found a large red fox dead within ten feet of where I shot at him. We now took our bells from our wagon boxes and returned home jingling, as was the custom if successful. G. F. W.

THE DUTCHESS COUNTY LAW.

WITH many others of your readers I have taken great interest in the good work you are doing in bringing together the farmers and sportsmen.

Your plan applies to the river counties as well as to Long Island.

I send you a game law that we have been fortunate enough to have passed by the Supervisors of Dutchess County. We have two gentlemen in the Board—one a devoted amateur of the gun, the other of the rod—to whom I am indebted for the inclosed copy; it is the same that has been for some time in force in the county of Ulster and has been found there of much service.

We hope that some of our sister counties may adopt it next year and that we shall then be enabled to protect our game from the annual incursions of professional gunners, encouraged in their unholy work by the marketmen of your metropolis.

Besides giving the game no rest, even upon Sunday, and not infrequently mistaking a chicken for his wilder cousin, the ruffed grouse, they bring sportsmen into such discredit by their unsportsmanlike behavior that in parts of our neighboring country the sight of a stranger with dog and gun has the same effect on the farmer as a red flag would have upon his bull. NEMO.

ORDINANCE No. 8.

An Act for the further protection of birds and game in the County of Dutchess.

The Board of Supervisors of the County of Dutchess, at their annual meeting, held at their rooms in the city of Poughkeepsie, in said county, on the seventeenth day of December, 1880, pursuant to the power vested in them by Section 37 of an act of the Legislature of the State of New York, passed June 20, 1879, Chapter 534, and the act amendatory thereto, passed May 31, 1880, do enact and ordain as follows:

SECTION 1. No person or persons, either resident or non-resident of the County of Dutchess, shall, after the passage of this act, take or kill in any manner, within the limits of said County of Dutchess, any woodcock, quail, hare or rabbit, squirrel, ruffed grouse, commonly called partridge, meadow lark, snipe, rail or wild duck for the purpose of selling or marketing the same, or for any fee, hire, or reward from another, for the taking or killing any of said birds or game for such other person; nor shall any person, persons, company or corporation market, sell or have in possession for sale, or offer to sell or dispose of in any manner (except than by absolute gift), either in or out of said county, and of the said mentioned birds or game taken or killed within the limits of said County of Dutchess.

SEC. 2. No person, persons, company or corporation shall aid or assist in the violation of this act by carrying or transporting, either for themselves or for others, any of said birds or game for the purpose of marketing or selling, the same having been taken or killed within the limits of said county.

SEC. 3. It shall not be lawful to take or kill, or have in possession after the same has been killed, any squirrel or woodcock taken or killed within the limits of said county during the month of August in any year (except that squirrels may be killed during said month by the owner of any fruit or grain if in the act of destroying the same).

SEC. 4. Any and every person, company or corporation violating any of the provisions of this act shall be liable to a penalty of twenty-five dollars for each offense; all penalties to be recovered, execution enforced and proceeds applied in the same manner as provided for in Section 33, Chapter 534, of the Laws of 1879, for the recovery and enforcement of the penalties mentioned in said act.

THE GAME LAW AMENDMENTS.

THE following correspondence has been handed to us for publication:

THE LONG ISLAND SPORTSMEN'S ASSOCIATION,
BROOKLYN, N. Y., Feb. 7.

Hon. ROBERT B. ROOSEVELT:

My Dear Sir—Herewith I send you a copy of the "New York Market and Index Journal," containing proceedings of the Long Island Sportsmen's Association at the annual meeting last Friday, and also the new game law proposed by its committee with the special report stating changes. As President of the State Association, I am anxious to receive a candid expression of opinion from you and others as to the merits and demerits of the bill. An unfavorable impression of the association has been created by an editorial of the FOREST AND STREAM followed by your circular through our mutual friend John B. Sage.

On Friday next, 7 P. M., at the Brooklyn Music Hall, Royal Arcanum Room, corner Flatbush avenue and Fulton street, Brooklyn, the bill is to be open for free discussion. It may contain some unwise provisions, but I feel sure it possesses some valuable features. It is specially desired that you and other members of the New York City Association should be present and give us the benefit of your experience. If this be impossible, may we not have a written communication from you on the subject.

It seems to me that we who hold the interests of the State Association for this, the first year in which this section of the State is to be honored with a convention, should endeavor to prove incorrect the statement that the association has degenerated, and should do all the reasonable service in our power to obtain a game law equally fair to all classes. If we succeed, I firmly believe stability will result, and the prohibitions be enforced by common consent, as certainly as is possible with any penal legislation.

I have the honor to be yours truly, ABEL CROOK.

FEBRUARY 8.

ABEL CROOK, Esq., Secretary Long Island Sportsmen's Association:

Dear Sir—I acknowledge the receipt of a copy of "The New York Market Index and Journal," containing the proceedings of the Long Island Sportsmen's Association in reference to the game law, and also your letter requesting "a candid expression of opinion as to the merits or demerits of the bill." I will lay the proposed law before the New York Association for the Protection of Game at its next meeting, on Monday night, when it will probably be fully discussed.

Replying to your letter as an individual, I regret to say I see little besides demerit in all the important changes proposed. It is probably without intention and only through the inexperience of those having the matter in hand that these changes are made wholly for the protection, not of the game, but of the illegal vender of game.

No one—not even the honest sportsman—requires the aid of the law against the dealer who sells out of season so much as the honest dealer, whose trade may be injured because a less scrupulous person in the same business has game for sale which he cannot conscientiously sell. The inexperience of your committee is shown by their retaining all the incongruities and inconsistencies of the present law, and most conspicuously in paragraph eighteen, which, by mistake of the engrossers, or in some other way, says precisely the contrary to what it means and transposes the open and close seasons and which, nevertheless, with its manifest blunder, your committee has retained *verbatim*.

The principal changes you suggest are: Firstly, that the purchaser shall be equally guilty in law with the seller (although he is not in morals) so as to close his mouth as a witness against the real criminal; secondly, that a dishonest dealer must be convicted of "wilfully" having the prohibited game in possession, although what is the legal meaning of the word "wilful" and what proof is required to sustain its allegation I do not know; thirdly, the penalties are so changed that many pending suits would have to be discontinued. I know of no reason for such changes and do not mean to imply that your committee have suggested them "wilfully," but attribute them to the same inexperience which, as you said in nominating your President, "knew nothing of the workings of the State Association for the Protection of Game till two years ago." Finally, you propose that the dishonest dealer may escape liability, even after suit brought, by surrendering his illegal game to an officer to be appointed by the State Association expressly to relieve him from punishment.

I think I need say no more to a body of sportsmen, although my objections are founded on a very hasty examination of the proposed changes, but this I will add, no one desires to convict a dealer who innocently or ignorantly receives game out of season which he has not ordered, and no such case has to my knowledge ever been prosecuted. The New York City Association has, practically speaking, carried on all the prosecutions in this part of the State for infractions of the game law, and has not only never brought any unfair prosecutions, but has shown every liberality with the purpose of winning as I think it has now the confidence and support of the honest dealers, and if any legislation is needed for the protection of the latter it will unite with them most freely to obtain it.

I do not elaborate my objections because I suppose I am spreaking through you to gentlemen who understand the subject and can appreciate and if necessary explain them.

Yours very respectfully, ROBERT B. ROOSEVELT.

ST. ANDREW'S BAY—*Cedar Keys, Fla., June* 25, 1880.—Notes of a six weeks' hunt on St. Andrew's Bay and its tributaries in the months of January and February—My boy Jim, two dogs and myself arrived at my camps on Big Sandy Creek, up East Bay, January 10. This creek is about fifteen miles from the entrance of the bay. St. Andrew's is a beautiful sheet of water, entirely land locked, with plenty of water for large vessels to enter, there being eighteen feet on the outer bar. It is one if not the best and safest harbor for both large and small vessels we have on the Gulf coast of this State. There are three arms to this bay, known as the North, East and West Bays. The scenery here is different from any part of East or South Florida—very picturesque

High and rolling lands border the entrance to North and East Bays, with palmetto, oak, spruce, pine and a few magnolias. This margin of woods extends only a few miles from the entrance of the bay. The balance has high banks, pine woods to the water's edge, a clear and open view, and the land very rolling for miles back. The most convenient camp grounds imaginable. Good spring water, fish and oysters, plenty of wood, all in fifty yards of your tent. And more deer, bear, and all other game peculiar to Florida than I have found at any other place in the State. I killed twenty-eight deer with a 32-calibre rifle, one of the smallest make, weighing four pounds. I mention this from the fact that this gun does not come under the head of a sporting rifle, and is rarely used for game of this size. I kept no account of what I killed with my shotgun—frequently more than I knew what to do with. You can hunt on foot here all day without getting them wet, which is different from most parts of Florida. The bottoms where the deer lie can be overlooked by the driver or huntsman, and not a deer that's jumped but can be seen climbing the hills on either side, and rarely ever escapes unhurt. On a stream leading into East Bay from the direction of the Dead Lakes I saw the first beaver I ever saw in Florida. Something of these animals in my next. WANDERER.

A TENNESSEE RESORT.—*Nashville, Tenn., Dec.*—Will Erwin, one of our best amateur shots and anglers, has just returned from a three months' sojourn at Guntersville, a small town on the Tennessee River. This famous game country is of easy access by rail to Decatur, Ala., or Bridgeport, and thence up or down the river, Guntersville being equidistant between those places. Quail is so abundant that hunters trap them as a cheaper method than shooting them. In the immediate vicinity of the town are seven large droves of wild turkeys; in the hills not many miles away deer are numerous and black bears not uncommon. Bill Brown, a jovial fellow, keeps one of the two taverns in the place, and a more home-like, comfortable house cannot be found in the country. He or some of the boys are always on the *qui vive* for a hunt. Within a radius of a dozen miles there are ten or fifteen creeks and bayous, teeming with bass and perch, two of these streams take their source from warm springs, and in them during very cold weather ducks, geese and swan take refuge, and finer sport than they offer would be difficult to find. The fishing is likewise good. In one afternoon Mr. Erwin and Brown creeled sixty-eight bass, ten of them running over three pounds each. He says that so plentiful are large fish that when a small one is caught he is certain to be thrown back into the water. Jack and spike-tailed catfish abound in the Tennessee River, particularly at a point where Short Creek empties into it. These are taken frequently, tipping the beam at from ten to twenty pounds. The people are hospitable, and are glad to see strangers come among them. The morning Will left for home he had for breakfast squirrels, quail, rabbit, venison and bear meat on the table. Board about $1 a day. Where can sportsmen do better? J. D. H.

GROUNDS FOR A PRESERVE.—On Long Island, within fifty miles of New York, there are patches of land where the wild fires have killed the timber, "root and branch," so that now the land is covered with small scrub oak, sweet fern and a coarse grass we call broom sedge, the whole not more than knee high, making splendid cover for quail. Near Patchogue as much as two hundred acres of this land can be found together, which can be leased of the several owners at a very small price for the purpose of propagating quail. My plan would be to plow in the spring a few furrows, say five or six at intervals of twenty rods, and sow wheat at the same time. Set free two or three dozen pairs of quail. By so doing I have no doubt that a half-dozen gentlemen would have all the shooting they could reasonably desire next fall. The opportunities for protecting the quail from poachers are excellent. If you think there is anything in the idea I shall be pleased to receive any gentleman at my house and will show him the ground. G. F. C.

THREE TURKEYS AT A SHOT—*Butler, Ind., Jan.* 24.—While shooting in Defiance County, Ohio., in December, 1880, I made the champion turkey shot. I killed three turkeys at a single shot from the right hand barrel of a breech-loading shotgun. The shell was loaded with four and a half drams of Orange lightning powder and one and a fourth ounces of chilled shot (No. 4); distance about fifty yards. I used two pink-edged wads over the powder and a cardboard wad over the shot. Many good sportsmen entertain doubts as to whether a wild turkey can be killed with any shot smaller than No. 1. I was among the doubting ones, and was so astonished at what I had done that I entirely forgot to use the left hand barrel of my gun, and so let the turkeys that were not killed run and fly away. F. P.

A man is reported to have killed recently at one shot five wild turkeys near Toccoa, Ga., but as he did not report the exploit to FOREST AND STREAM of course it cannot go on record.

AN ILLINOIS CROW ROOST—*Dudley, Edgar Co., Ill., Jan.* 15.—On the north side of this county is a crow's roost, where the birds congregate by thousands. It is a small strip of timber about one mile long by one quarter wide, and is about eleven miles from any other timber. The crows come in from dusk until as late as one and two o'clock at night. All this time they keep up a most hideous noise. At peep of day they begin to scatter in all directions. About the most particular damage they do is picking holes in fat hogs, which cannot avoid them. Our county is very closely divided, politically, and when a candidate has been successful he is presented with a nail keg of crow heads. Z. J. B.

THE LONG ISLAND SPORTSMEN'S ASSOCIATION held its annual meeting last Friday night and elected the following officers and committees: President, George A. Chappell; vice-presidents, Abel Crook, B.W.West, Henry S Lott, Chas. E. Folke, Robert Furey; secretary, Henry Thorpe; assistant secretary, Theodore Alston; treasurer, Robert Robinson. Special Prize Committee—Charles E. Fiske, N. Beggs, B. W. West, Frederick Mather. Ground Committee, including police, trap shooting, rifle and pistol and fly casting—Robert Robinson, A. Elmendorf, William Engerman, John McMahon, Theodore Alston, Frederick Mather, Charles Dexter, G. F. Gildersleeve, E. H. Madison. Reception Committee—Judge Henry S. Lott, Charles W. Havemeyer, Abel Crook and others.

Consideration of the game law proposed by the committee of the association was deferred until Friday evening, February 11

Sea and River Fishing.

PROTECT THE ROCKFISH IN THE DELAWARE.

ODESSA, Del., Dec. 29.

PROFESSOR BAIRD:

Permit me to call your attention, as Chief of the United States Fish Commission, to the rapid depletion of the rock or striped bass of the Delaware River and Bay and the necessity of having legislation for their protection.

Some seven years ago when you asked me if I noticed any decrease of those fish I told you that I did not; but I now see, for the last few years, a great decrease and the causes that produce it. You are perhaps aware that I have given a great deal of attention to those fish for many years and have come to the following conclusions: The mature fish are seagoing, the same as shad, salmon, etc., returning in the spring, about the middle of April, for reproduction. The young fry remain in our waters until maturity, and it is from these we get our food supply. They live on small fish and, of course, there is plenty of food for them and it is natural for them to remain until maturity. If they make migrations it is only from the mouth of one bay or river to another.

The causes of their depletion comes from a large number of sturgeon gill-nets that are now fished in the river and bay—a comparatively new industry.

These nets are fished during the whole of the spawning season of the rock and, of course, capture large numbers of the large, mature fish, some nets taking as many as fifteen in one day. These fish are scarce at best and this wholesale capture is calculated to destroy the whole breed before many years.

The fish are sold to the sturgeon butchers, principally located in New Jersey, who ship them to the New York market. The fishermen realize about $1 each for fish weighing from fifty to sixty pouds, when a ten-pound fish during the winter and early spring is worth, in the Philadelphia market, from $1.50 to $2, so you see that but little is realized from them. Prior to this gill-net fishing the regular seine-fishermen for rock in the spring had a regular rule of honor among them to turn loose all the large fish for breeders. I have seen from ten to fifteen turned loose from a single haul.

The fishermen will not respect this rule any more and they are all sold. You will therefore see the necessity of some legislation to protect this most valuable fish that we have in our water as it is captured in greater or less quantity at all seasons of the year, and good size fish command in the Philadelphia market in winter from two to three cents per lb. more than salmon.

Now I would propose, inasmuch as the legislatures of Pennsylvania, New Jersey and Delaware will all be in session this winter, to have a law passed by them all for the protection of this fish.

The shad and herring are protected fully by law. This fish has no protection in law.

Now I would propose that there should be a fine of $5 for the capture and killing of any striped bass or rock-fish weighing over twenty-five lbs. by any fisherman, and a like fine for any person having one in possession, for sale or otherwise, and requiring every person capturing such fish to carefully release them and turn them loose in the water.

Each State to provide means through their fish commissions to see that the law is fully carried out. The gill-net men tell me there would be no difficulty in releasing them as they take alive many of their sturgeon and place them in pens for future use.

In regard to hatching these fish I am satisfied since our trial with Mr. Anderson that we can only be successful by having large and substantial pens in which we could handle the fish from time to time as they mature, for I am satisfied that only a small portion of the immense spawn matures at one time, and it is emitted from time to time as it matures—over a period of two or three weeks.

I would like your co-operation in getting this law passed. I don't think there would be any trouble in this State on your recommendation; neither do I think there would be in either Pennsylvania or New Jersey, but there would be the most trouble in New Jersey. Please let me have your opinion.

Yours truly, E. R. NORNY.

NETS IN LAKE CHAMPLAIN.

FERRISBURGH, Vt., Jan. 22.

THE following law was enacted by our Legislature in 1878:

"SEC. 1. It shall not be lawful for any person to catch any fish in the waters of Lake Champlain, or any of the rivers emptying into said lake, not to exceed ten miles from the mouth of said rivers, by the use of any seines, nets, or other device for entrapping or snaring. The same, except with seines, during the month of October and during the fifteen days of November in each year, for the space of five years from the passage of this act.

"SEC. 2. It shall be lawful for any person at any time to catch fish in the said waters by the use of hook and line.

"SEC. 3. Any person who shall violate the provisions of the first section of this act shall pay a fine of ten dollars for every fish so caught, to be recovered in an action on the case founded on this statute, one-half to be paid into the treasury of the town where said fish may be caught, and one-half to the informer and prosecutor."

Will you inform us Vermonters of the Champlain Valley whether New York has a similar law, especially relating to the waters, or a general law prohibiting all netting, which would be as effectual if enforced? A favorite argument with the enemies of our law is "that it is only saving the fish for the Yorkers," for it is notorious that netting is openly carried on on your side at the south end of the lake. If you have a law that will reach these netters of yours, its enforcement would greatly strengthen our hand. R. E. ROBINSON.

New York law permits the use of nets in Lake Champlain from Oct. 1 to Nov. 15, and prohibits them at all other times. Violations in New York waters should be reported to S. J. Palmer, Game and Fish Protector, Indian Lake, Hamilton Co., N. Y. In a recent trip to Lake Champlain Mr. Palmer and guide captured twelve nets between the the mouth of South Bay and the four channels, some of which were frozen in too badly to get out readily were destroyed, while the others were taken to Whitehall and stored. Those which were got out entire had quantities of fish in them, which were returned to the water. They also found ten nets on the Vermont side of the channel which they did not disturb. It was thought that there were more nets, but a heavy snow had covered all tracks, and they could not be found. Some of these fykes had wings or leaders reaching from shore to shore. Mr. Palmer was in doubt about his authority on the Vermont side and so gave the nets there the benefit of the doubt.

We think that the officers of both States could co-operate, and then all questions of jurisdiction would be settled.

THE TROUT LAW.—*New York, Jan.* 29.—Some time ago, being impressed with the urgent necessity of fixing some limit to the size (or undersize) of trout allowed to be caught by law, I recommended in your columns a penalty for any trout had in possession under eight (8) inches in length. By a report of the Game Committee of the Long Island Sportsmen's Association I am glad to see that after consultation with the Fishmongers' Association a limit of one-quarter of a pound is advised to be fixed by law. If something of this kind be not done even fingerlings can no longer be found in our streams. Every angler has been disgusted by being shown in a boasting way two strings of poor little troutlings no longer than one's finger, caught by some country boy, and oftener still by some would-be sportsman. Cannot such murder be stopped? Possession of such infantile fish ought to be sufficient proof of having committed the infanticide.

MANHATTAN.

SOME SINGULAR SALMON.

STRIPED BASS ON THE PACIFIC COAST.

SAN FRANCISCO, December 23, 1880.

Professor Spencer F. Baird:

In the issue of FOREST AND STREAM of 16th inst, I read a communication to you from Mr. Samuel Wilmot, dated "Dominion of Canada, New Castle, October 20, 1880. In this letter Mr. Wilmot says: "I am also getting puzzled in mind about your California salmon," in which he says he has a three-pound fish which he caught in April last and has kept in a tank of spring water, but has never seen him eat and that he is looking a little thin just now." Perhaps I can give a reason for the thinness of the California grilse. I have frequently found the adult fish when left in a stream after spawning, and in every case they would not take bait, and as time passed, became thinner and thinner. In one instance a salmon, which had remained an entire season in a pool in the creeks, retained almost the full size of its head, while the body was attenuated to a third, or possibly, a fourth of its normal thickness.

I cannot understand about a female salmon—a *spent* fish—having sharp, hooked-like teeth in each of its jaws. If it were a male I could, as I have seen many spent males which resembled the description given by Mr. Wilmot. Some of these fish were almost repulsive in looks and had no apparent resemblance to the male salmon taken before spawning. I hardly understand where these fish were taken by Mr. Wilmot, whether in Lake Ontario or along the St. Lawrence River, but in either case it is probable the salmon had returned from the sea. If taken in Lake Ontario the fish must have traversed a long stretch of fresh water while in a nearly ripe state. In this condition it would take no food, would have to stem long stretches of rapid running water, entailing much labor, and finally cast its eggs or milt in an almost dying condition.

In reference to the singularity of the great preponderance of female salmon taken by Mr. Wilmot, it seems possible the following may account for the lack of males, if the habits of the fish are the same there as on the Pacific coast. The experience of fishermen here is that the great bulk of the male fish always precedes the females on their way to the spawning-grounds. This often happens before the close season takes effect and many are taken by netting. Possibly the male fish may encounter other enemies while in their run which the females escape by coming later. I offer these views that they may be examined to be verified or not, believing that links in a chain of knowledge are often obtained that way. I make it a rule to ask questions of all persons, who, I think, have knowledge of fish habits, and often think I obtain more reliable information of farmers and other country people than the more highly educated people of cities and towns.

I have also read with much interest the letter to you from Mr. S. R. Throckmorton, one of our State Fish Commissioners, regarding the rockfish or striped bass introduced into our waters last year. One of these fish taken in June last was brought to Mr. Throckmorton who indentified it beyond any doubt. I to-day saw a party who reported that he knew of three other striped bass having been taken in Oakland Creek about seven miles from this city, and that he had been informed by a friend that he (the friend) had taken some lately in the same place but of an increased size. That these fish will find congenial haunts in the vicinity of this city I do not doubt, but I have grave apprehensions as to whether they will increase so long as the present system of netting in our bay prevails. Nets of all sizes are used by both the Italian and Chinese fishermen, some of them with meshes that you cannot get your little finger through. Immature fish by the many millions are taken by the Italians, who waste the larger portion of their catch, while that quantity are dried by the Chinese and exported to Asia. Neither one of these two nationalities give any thought that fish must be left to meet the wants of those who will come after them. The Italians are a lawless set and defy arrest, while [as] to the Chinese everything they net is dried and sent to China. It is common in our city markets to see large piles of smelts and similar fish not as thick as an ordinary lead pencil, while the Chinese dry flat-fish of the size of a half-dollar and a great variety of other young fish from the size of a small shrimp to an ounce in weight. We have laws forbidding the taking of these fish under penalties, but they are a dead letter as to their enforcements. Occasionally a raid is made by the police to obtain the penalties, the Chinese being selected in almost every case. The Fish Commissioners are not able of themselves to prevent the infraction of the law, owing to inadequate appropriations to employ suitable help, and our Sportsmen's Club confine their efforts to occasionally preventing front from being taken out of season.

During the past close-season, from August 1, to September 15, the Italian and Greek fishermen on the Sacramento and San Joaquin rivers took salmon in immense numbers in defiance of law. These fishermen set their nets openly in broad-day light in these rivers, and the few who were arrested and taken to city, the county seat of Solano county, were not convicted although the plainest evidence was given that they had committed the alleged offense.

I have to apologize for writing so long a letter. I intended at commencement to write only about Mr. Wilmot's letter, but the subject increased as I wrote.

I have received the last publication of the U. S. Fish Commission a few days since, which contained many interesting and valuable articles on fish culture. I hope to write you soon in regard to some of the habits and peculiarities of our salmon and other fish. I am sometimes too much pressed to write at length so you will please excuse any disjointed membra of information I may send you.

P. S.—In regard to the theory of Mr. Phillipe Gauckler that his experience has proved that dry impregnation produced an excess of female fish, while wet or the use of water always brought a preponderance of males, I cannot agree. There could have been no change in the germs of milt taken from the male fish whether used in a so-called dry state or with water. Further, I cannot understand how the sex of the minute fish could be ascertained by Mr. Gauckler, as he certainly would have to keep them for a very long period to ascertain, which he would not be likely to do with a great number of troutlings of salmon parr. H. D. D.

UNEXPLAINED SCARCITY OF SALMON.—We had occasion last summer to refer to the unusual absence of salmon from the rivers where they are ordinarily found in greatest abun-

dance. Experts of largest and longest experience were wholly unable to account for this scarcity. Various theories were broached. Among them: The vast ice-floes on the Gulf coast; the great number of sharks noticed on the routes usually taken by the salmon from the sea to their rivers, and the vast schools of porpoises infesting the same waters. Either of these causes might affect in some small degree the ingress of the timid fish; but the difficulty of accepting either of these theories was heightened by the fact that while salmon were scarce, codfish, who travel nearly on the same lines, were more than usually abundant. In August it was assumed that, if either of these causes had interfered with the first run of salmon the deficiency would be made up subsequently. But results did not confirm this expectation. The dearth continued. The nets were mostly taken up at the mouth of the rivers early in July, and the season closed with a smaller catch, with both hook and seine, than had ever been known within the memory of the oldest inhabitant. But this curious season has resulted in other developments more inexplicable even than the scarcity of fish—namely, the almost total absence of male salmon from among those caught for breeding purposes. This scarcity of salmon this year is not the result of any known natural cause. If a scarcity shall ever come from excessive depletion it will come gradually. But last year the fish were as abundant as for many years previously. This fact adds to the mystery. The most serious result of this year's deficiency will be the loss of a year's natural increase, for salmon only breed in the rivers, and, comparatively speaking, there have been no fishes in the rivers to breed. This fact will not of course affect next year's run nor the run of the year succeeding, for this year's fry will only show themselves as salmon three years hence. But then and afterward the deficiency will begin to show itself.—*Albany Journal.*

MAINE NOTES.—A Sullivan correspondent of the Ellsworth *American* says: "When the ice is first forming in the fall, and again when breaking up in the spring, large quantities of frost fish and smelts are occasionally kept under the ice by large flocks of sea gulls, until the tide leaves them bare on the flats and under the ice. Then it is not very difficult to pick up the fish by hand or in any other way. Sometimes boat loads are thus taken."

The Belfast *Journal* thus speaks of smelts: "The smelt fishery of Belfast the present season is a failure. But very few tents are upon the ice, and those are occupied by a class that fish more for the sake of fishing than for profit."

RANGE OF CATFISH.—*St. Cloud, Minn., Jan.* 12.—As Dr. Sterling does not seem to prosper in his search for the most northerly range of the catfish, I am prompted to give him my experience with the "bird." Have caught them in the Mississippi, below St. Anthony's Falls, of from thirty to forty pounds weight, in latitude 44 and 45. Have caught them in the Red River of the North, in latitude 50 and 51, but smaller than in the Mississippi, also in the Missouri, in latitude 48. They are plenty in the waters tributary to Hudson Bay, the Mississippi and Minnesota rivers, and most anywhere east of the range. That 500lb. black-tail got away with the cake. We were always satisfied in Montana and Idaho with them weighing from 175 pounds to 225 pounds. C. S. B.

A BOND OF FELLOWSHIP.—*Medford, Ont., Dec.*, 1880.—I look forward with pleasure to the day on which I receive the FOREST AND STREAM, as each number brings something new and interesting. I follow my fellow-sportsmen (there is always a bond of good-fellowship among true sportsmen) o'er hill and dale with as much interest as though I were really with them.

Fish Culture.

THE CENTRAL FISHCULTURAL SOCIETY.

[CONTINUED.]

MR. BOOTH: The paper which has just been read is just such a one as might be expected from a young man with no experience on the subject. An experience of thirty years in fishing with nets of many kinds has shown me that it is the pound nets which are so destructive, and not the gill-nets.

MR. BALLOU: I don't think that my youth should enter into the question. I am supported in my views on the gill-nets by Prof. Milner. I did not say that these nets were wantonly destructive.

MR. CLARK: I agree that the fishes of Lake Michigan should have some kind of protection, but am not willing to indorse the condemnation of the gill-net.

MR. BOOTH: Of the methods which destroy fish life, the gill-net is most humane; it takes only fishes of the size to which it is adapted and lets the small fry pass through. The pound net takes everything.

MR. CLARK: Concerning the capture of fishes in their spawning time, I would like to ask Mr. Ballou how we are going to take whitefish if not then? It is the only time we can get them in numbers. Also, if there are no pound nets in Lake Erie, how can the lake herring be caught? I have seen millions of young whitefish thrown out of nets, but in Lake Erie no small whitefish are taken. The United States Fish Commission is now hatching quantities of whitefish at its hatchery at Northville, Mich., of which I am Superintendent, and there are now in process of hatching thirteen millions of eggs, the young from which will go in the great lakes.

MR. FAIRBANK: If there are no gill-nets we would get no whitefish. The only time they are taken is in the spawning season, when the small ones run through the gill-nets, but the pounds take all sizes.

MR. CLARK: I took over three million whitefish eggs in one of the pound boats in one day, while a man in a gill-net boat in Lake Erie only took half a million eggs. The pounds get more ripe fish and we can get more eggs there than with the gillers.

MR. MILLER: There is no doubt about the fact of the pounds being more destructive than the gill nets, and both Mr. Booth and Mr. Clark agree to this and they have had experience in this matter and knew what they were talking about. I think Mr. Ballou has made a mistake.

The following paper was then read:

BREEDING CALIFORNIA SALMON IN FRESH WATER.

BY N. K. FAIRBANK.

The question as to whether the salmon will live and thrive without access to the ocean or some large body of salt water is one that has been much discussed by fishculturists and by the general public; but most of the discussion heretofore has been done without any other fact as a basis than the well-known one that salmon exist in the oceans and that they come once or twice in the year to rivers to spawn and return again to the sea. Beyond that all was speculation.

Having a decided opinion upon the subject, and believing that salt water, merely because it was salt, was no element in the problem, I decided to make a thorough experiment and demonstrate, if possible, the practicability of my theory, which, in the main, is that the salmon and many other of the fishes found only in salt water can be transplanted to bodies of fresh water, and that they will grow and thrive and breed there, provided the water is deep enough to be cool at the bottom and the lake or river is extensive enough to give them a good, free range and has a sufficient supply of food.

Geneva Lake, in Walworth County, Wisconsin, seemed to offer all these requisites. It is about nine miles long and from half a mile to two and a half miles wide. The water is remarkably pure and clear, being fed wholly by springs, and entirely free from lillypads and bullrushes. The shores are clean gravel or boulders, with good depth of water all around, and through the middle the average depth is one hundred to one hundred and fifty feet. There are also many places where there is twenty-five feet of water two hundred feet from the shore. It abounds in the native fishes found generally in this region, except the big-mouthed black bass, *Micropterus salmoides*, and wall-eyed pike, *Stizostedion*. Black bass, pickerel, yellow perch, rock bass, sunfish, suckers, bullheads and minnows are found in great numbers, in addition to which it is favored in being the home of the cisco, which was for a long time popularly believed to exist in no other waters. This, however, is a mistake, as they are found in one or two of the lakes in the vicinity of Oconomowoc, and also in Lake Michigan.

Having all the requisites which I considered essential to the experiment—viz., pure, deep water, a moderately sized lake, with room for range and exercise and plenty of food—I began in the spring of 1876 by depositing 25,000 California salmon which we hatched at the U. S. hatchery at Northville, Michigan, by Mr. Frank N. Clark, and were sent to me by Prof. Baird, U. S. Fish Commissioner. The Wisconsin Commission also put in about 15,000 shortly after.

In April, 1877, I also procured from Prof. Baird about 25,000 and from the Wisconsin Commission 25,000, and in the fall of '77 I received from the U. S. Commission 100,000 eggs from the McCloud River, which I hatched and put into the lake in the spring of 1878. I also deposited 200,000 in the spring of 1879, 100,000 last April, and 100,000 yearlings last October; making in all, in round numbers 590,000, hatching count, deducting for losses from various causes. And I estimate that I have placed in Geneva Lake half a million young California salmon in excellent condition.

They began to make their appearance and attain considerable size very soon, and during the summer of 1878 there was an occasional one caught by parties who were fishing for bass. I had four sent me one day which weighed three-quarters of a pound each, and one of them went a trifle over a pound. In the summer of 1879 Mr. L. Z. Leiter, while trolling for bass, captured a very fine salmon which weighed four and a half pounds. Several others were taken during the summer, weighing two to three pounds each, all of which was reasonably encouraging; but not until the developments of the past summer have I felt that the experiment would prove a valuable one, and when, on the afternoon of July 29 last, I was presented with a beautiful specimen, which was twenty-nine and one half inches long and eighteen inches girth, and weighed twelve and three-quarter pounds, and when I had it boiled and served for dinner and found it to be a delicious fish; then I felt certain that the salmon would grow to a respectable size and condition in fresh water, and that at least, so far as that fish and my dinner of that day went, it was no longer an unsuccessful experiment—there was a reality, the "substance of things hoped for," which did much to strengthen and build up my faith.

In September they began to show themselves at the head of the lake near the mouth of a small creek having its source in a group of springs a mile back which empties into the lake. Mr. William Welsher, who has charge of the hatchery and ponds, there discovered eight fine specimens one day splashing about in this creek. They were up the creek nearly a mile, and as far as they could get, and were, of course, looking for a spawning bed. The following day he captured a fine female in the creek, which was full of eggs and quite ripe. Those which he saw in the creek he estimated would weigh eight to ten pounds each. The one he caught weighed eight and a half pounds, and one which he found up the creek a week later in shallow water, and which he picked up and put into deep water, he estimated would weigh ten pounds. He informs me that a month ago he saw a pair much larger than any before mentioned at the mouth of the creek, but they could not get over the little bar formed at the mouth. He estimated this pair would weigh twenty pounds each, and that the female might go up to twenty-five pounds. He also saw very decided indications of spawning nests in the gravel about the mouth of the creek; all of which facts satisfy me that the salmon will not only attain a large size but will also breed in fresh water. Unlike Brigham Young, they find they can be very good Mormons and increase and multiply without going to a Salt Lake.

In conclusion I desire to call the attention of the Michigan and Wisconsin Commissioners especially to this subject. I believe that by an extensive and liberal movement on their part, and by hatching the salmon by the million instead of by the thousand, that Lake Michigan and the creeks and rivers which empty into it can be made to abound with salmon. I am of the opinion that the Atlantic salmon is preferable to the California one, if the eggs can be found in sufficient quantities. I began and have continued with the latter in Geneva Lake, for the reason that I could not get the Atlantic salmon eggs and could get from the United States Fish Commission the California eggs in great quantity.

I have mentioned particularly the Commissions of Michigan and Wisconsin for the reason that they have virtually abandoned the propagation of the salmon—for the reason that they have not yet seen any result of their early efforts. This I attribute to the very limited extent of their work on this fish—a few hundred thousand per annum deposited in the extensive rivers of Michigan can hardly be expected to manifest themselves to any visible extent.

If I had only planted in Geneva Lake ten to fifteen thousand instead of five hundred thousand I have no doubt the result would have been so trifling as to hardly merit a continuance of the experiment.

RESTORING EXHAUSTED FISHERIES.

WE are permitted to publish the following interesting answers from Mr. B. F. Shaw, Fish Commissioner of Iowa, to a correspondent, as the subject is one of general interest:

ANAMOSA, Iowa, Jan. 4.

MR. H. MATHEW, Grand Marais, Lake Superior, Minn.:

Dear Sir—In reply to your questions—

1. "Are fresh water fishes local in their habits?"

In my opinion they all have their spawning, feeding and winter grounds, upon which, at the proper season, each family of fishes may with certainty be found.

2. "Will over-fishing upon any particular spawning ground tend to destroy the fishing in that particular locality?"

I think taking large quantities of fish from a spawning ground and the destruction of their eggs will certainly destroy the value of any fishery and believe the history of all old fishing grounds will prove this to be a fact.

3. "What is the best method of preserving the value of our lake fisheries?"

By artificial propagation where practicable. Where this cannot be done, I think some method should be adopted by which all the mature eggs of fish taken should be fertilized and returned to the water.

The fish being taken upon their spawning grounds, the eggs, properly vitalized, should be put back there as the most suitable place. In natural spawning but a small per cent of the eggs are fertilized; by artificial means nearly all are impregnated.

Seed of fishes sown upon a spawning ground are, in my opinion, as certain to produce returns as seed sown on any farm. I am quite certain that a fishing ground, properly managed, can be fished to its fullest extent and continually kept at its highest value, and that even depleted fisheries can by this means be made valuable again.

To make this work effective, the fisherman must learn that these are facts and then in some way, by proper legislation, they must be made secure in the enjoyment of the fishing grounds that their own labor is to make valuable or their own negligence and carelessness destroy. Be properly instructed by competent persons how to do the work effectively and I am sure good results would follow.

If the mature eggs of lake trout and whitefish that have been destroyed during their spawning season had been properly impregnated and returned these fish would have increased instead of being destroyed by the fishing.

Is it wise to go on destroying? or is it better to increase the value of your fisheries by the little labor it costs to impregnate and deposit these eggs? B. F. SHAW.

REPORT OF THE KANSAS COMMISSION.

THE second biennial report of the Fish Commissioner of Kansas, dated Topeka, Kansas, 1880, is at hand. The difficulties which attended him as a novitiate have been dissipated by experience, and success has attended where disaster waited in his former trials, and he has turned loose in the waters of the State 500,000 fish with 100,000 more in the hatchery nearly ready to shift for themselves. His means are limited to only $500, and but for "generous hands" and free transportation by the railroads it would not have been possible to accomplish so much. On this subject he says: "If Kansas expects to keep pace with Missouri, Nebraska, Iowa, Colorado and the other Western States in fisheulture as in other internal improvements that she has so proudly led, she must, as they have done, appropriate funds to build a hatchery and a liberal appropriation to operate it, and pay its commissioner a sufficient salary, so that his time and energy can be given to the work necessary, so that our streams may become as productive of wealth as the fertile valleys through which they flow, and compare favorably with the streams of our adjoining and sister States."

Rev. Charles Reynolds, chaplain, U. S. A., writes Mr. Long that the quinnat salmon have been captured in the Smoky River, and that he has purchased and eaten them on several occasions; and Mr. Louis Hanback, of the Land Office, saw many of the fry hauled ashore in a net on the Wakarusa, in Shawnee County, which he restored to the water.

Mr. C. F. Morse writes the commissioner that in March and April, 1879, he saw several "small strings of shad" which were caught in the Kansas River, and were from ten to fifteen inches in length, or from one to one and a half pounds. He thinks that there were two or three hundred shad caught there last summer, and claims to be familiar with the shad of the Atlantic coast.

Of the carp he received 160 for persons within the State who had applied to Prof. Baird for them, and of this fish he says: "They are a domesticated fish, hardy as the catfish, and in quality equal to the trout." In May he received 10,000 of the land-locked salmon eggs from Mr. C. G. Atkins, which were hatched and distributed. From Prof. Baird 160,000 shad fry were received, which were planted in the streams, while in 1878 and 1879 there were 30,000 quinnat salmon received each year from the same source. Shaw & Co., of Cedar Rapids, Iowa, furnished some lake and brook trout which, owing to railroad delays, were not in good order.

The appendix contains the list of fish commissioners from FOREST AND STREAM and the fish and game laws of Kansas.

REPORT OF THE ILLINOIS COMMISSION.

THE first report of the Illinois Fish Commission is at hand and comprises the work done in the years 1879-'80, the Board not being organized until July of the first-named year began their work in August.

Attention is called to the fact that every year the Mississippi and Illinois rivers overflow their banks, backing the water into the low places, shallow lakes and sloughs into these places the fish go to deposit their spawn, which is there hatched, and as the water recedes the parents find their way back to deeper water; the young are left to perish, either from the drying up of such places or from being frozen out in winter. The Commission has done good work in saving the bass, croppies and wall-eyed pike for distribution in other places more favorable for their support. They have taken from such places, where they would have died if not rescued, and deposited in the rivers and lakes along the Mississippi and Illinois rivers, as well as other waters within the State, one hundred and ninety-nine and three-quarter bushels of the young native fish of the species named above, as well as perch, sunfish, catfish, etc. These fish were estimated at 20,000 to the bushel, or, in the aggregate 3,995,000 fish.

The State has no hatching-house and it seems doubtful if one is required, there being few streams adapted to trout and salmon, and the necessary whitefish or other salmonidæ can be obtained at a low figure, provided the Legislature gives an appropriation sufficient to work with. Some scale carp and leather carp were received and have done well.

On the subject of fish laws, the report says: "To violate the law is the rule of the majority of those engaged in the business of fishing in our rivers and lakes; whether from ignorance of the law or disregard for it we cannot state, but the fact of the law being violated at all times exists. During the close season, when seining is unlawful, fish of all kinds have been openly offered for sale. Complaints to the Commissioners from all parts of the State have been frequent, asking us to prosecute or suggest some means of

relief." They replied that the law gave them no more power in this matter than any other citizens had, etc.

On the subject of fishways they say that there are many complaints of streams unprovided with fishways, and that while the State dams have them they are not of a practicable kind

BIENNIAL SPAWNING SALMON.—*Portland, Me.*—In the report of the Maine "Commissioners of Fisheries and Game," for 1880, there will be seen an allusion to the fact that several hundred salmon have been marked and liberated in the Penobscot River. Several years ago Mr. Atkins marked some salmon, and a few were afterward retaken. But as the number of fish marked was very small as compared to the thousands of salmon that now frequent the Penobscot waters, and as it would be by chance only that any of the marked fish would be taken, the fact that several were taken in one season and none the next preceding or following season, furnishes only incomplete, and at best, but negative evidence in regard to the theory of "biennial spawning." This fact is the more apparent when we bear in mind that if a marked fish should be taken at any illegal time, or by illegal means, no report would ever be made of the fact of its capture. And furthermore, many marked fish might escape the notice of the fisherman, even if not losing the labels ere caught. Or if a label should be observed on a fish its import might not be comprehended by the fisherman, nor the fact of its observance be reported.

Hence the desire of the Commissioners to have these salmon that are taken for the Orland Breeding Establishment annually marked for a consecutive number of years, until some of them are retaken on succeeding seasons and kept alive until autumn, when, if the male and female fish that were "stripped" the preceding year manifest a normal development of milt and spawn, the fact will demonstrate the fallacy of the theory that our Atlantic salmon breed only during alternate years.

I have devoted some attention to studying the habits of salmon, upon both sides of the Atlantic, and still seek for more light upon this subject. It is often as easy to form theories and then adduce facts in support thereof as to form all sorts of religious creeds and support each and every one of them by quotations from the bible My own observations of the natural habits of salmon, so far as they extend, will not admit the above referred to "biennial" theory to be founded on fact. EVERETT SMITH.

POISONING ILLINOIS WATERS.—Mrs. L. Harrison, of Peoria, Ill., writes to the Germantown *Telegraph* as follows: "The fish in the Illinois River are being destroyed, first by one agency and then by another. Two years ago large numbers died in the vicinity where the Illinois and Michigan Canal empties into the river. Some persons attributed their destruction to the diverting of the waters of the Chicago River into the canal. In this vicinity great mortality is caused by the waste from the glucose factories, which never cease, night or day, Sundays and all days, in pouring their deadly chemicals into the river. This poisonous waste poss esses a strange fa-cination for the fish. They swim around in the outskirts of it, eating the corn-meal, but as soon as they enter the warm current they jump out, flop two or three times and turn up dead. Schools of minnows jump out like so many sparkling diamonds and then float off. Dogs wade in and bring the dead fish ashore; and in some places the fish are driven in shore by eddies in such numbers as to produce a fearful stench."

MAINE FISHING NOTES.—We take the following from the Belfast *Republican Journal:* "The Kennebec Association for the Preservation of Fish and Game has adopted resolutions disapproving Governor Davis' course in removing Hon. Everett Smith, of Portland, from the position of Fish Commissioner. The nomination of Henry O. Stanley, of Dixfield, as Fish Commissioner, has been confirmed by the Executive Council. The smelters on the Bagadoce are doing finely, catching from ten to 150 pounds daily. Receipts to those who ship average ten cents per pound. The Eastport sardine factories have closed business for the season. Next season they will employ about 1,500 hands. The number of cases of sardines exported from Eastport during the past year is estimated to be about 65,000, valued at about $650,000. During 1879 there were 25,000 cases, valued at $250,000, exported. In that year there were only six factories in Eastport against thirteen now. Fishery fishing is in order. Fishing men at North Auburn are pulling out twenty-five or thirty a day, and the Augusta *Journal* reports a catch of sixty in one day's fishing in Dam Pond last week. A seven-pounder was taken the same day."

FISHCULTURE IN NEW HAMPSHIRE.—The Fish Commissioners of this State have been crowded with work at their hatchery, more so than at any previous season, and have been compelled to put in a hydraulic ram in order to increase the supply of water from some springs below the level of the house, but brought having affected the upper springs. They have now in the boxes 60,000 salmon eggs taken at Plymouth and 419,500 from the Penobscot, the larger portion of which were presented by Prof. Baird, who also sent 45,000 subling eggs received from Germany, 60,000 eggs of the "shad waiter," a species of *Coregonus* from Lake Winnepesaukee: 100,000 brook trout taken at Plymouth. They expect to add to this 120,000 eggs of the winnish, or land-locked salmon; 20,000 *Salmo fridea* and 50,000 whitefish eggs, which will fill their house and give them plenty of stock to plant in the spring.

JUMPING POWERS OF CARP.—Mr. H. D. McGovern informs us that the carp is a vigorous leaper. He recently had some of two pounds weight in tin cans, and two of them jumped out of a narrow mouthed can, clearing fifteen inches over the can, and leaping about two feet above it. Also, one which was confined in a box placed in a pond jumped two feet in the air and landed on the side of the dam, where Mr. McGovern saw it make its way along and across the dam, a distance of twelve feet, a journey which occupied seven minutes by the watch.

IMPORTATION OF SAIBLING EGGS.—On Jan. 22, the North German Lloyd Steamer "Mosel" arrived, bringing 60,000 eggs of the saibling, *Salmo salvelinus*, to the U. S. Fish Commission. 50,000 of them were a present from the Deutche Fischerei Verein, and 10,000 from Mr. Carl Schuster, Freiburg in Baden. They were received by Mr. F. Mather, the American agent for the Verein in good order, and sent, by direction of Prof. Baird, to the hatchery of the New Hampshire Commission at Plymouth, in charge of Commissioner A. H. Powers, of that State, who reports that the loss in transit will not exceed 5,000. We will have more to say about this fish by the time these are hatched and ready for distribution.

A NEW TRAWL.—Mr. John Rowe, of East Gloucester, Mass., 74 years of age, has shown the Cape Ann *Advertiser* drawings of a trawl for which he claims great advantage over that now in use. It is especially adapted for shore fishing, and is formed with two floats at the surface of the water. These are connected with four other floats which extend about half way down, and are anchored to the bottom. A line is connected to these floats to which the hooks are fastened and are kept in position near the bottom.

EXPORT OF TROUT EGGS.—On January 29 the Bremen steamer Mosel took out 100,000 eggs of brook trout (*S. fontinalis*) to the Deutsche Fischerei Verein. Half of these were from the well-known ponds of Stephen Annin, Caledonia, N. Y., and the remainder from Mr. Gilbert, Plymouth, Mass. Mr. Annin also sent the same week 50,000 more to Holland by steamer Amsterdam.

NEW PUBLICATIONS.

THE B. AND O. RED BOOK.—We have received the NEW B. & O. Red Book. That its compilation and preparation have cost time and labor of no mean order, is proven by the completeness of the work. The aim has been to present the returns of the late election in such form as will most clearly show its results, and to this end the returns of previous elections are shown, and from them the gains and losses compiled. The returns for 1880 are given as sent under the official seals of the county clerks of each county and subsequently revised from official reports received from Secretaries of State. So such extended and thorough compilation of political results was ever before attempted. The present edition is confined to Congressional returns. The Red Book will be sent without money and without price to all who care to write for it to C. K. Lord, Baltimore, Md. The inclosing of a three-cent stamp will pay the postage, and the book will be sent promptly upon application

The Kennel.

FIXTURES.

Rock River Valley Poultry and Kennel Club show—Sterling, Illinois, Feb. 10, 11 and 12. R. B. Commerford, Sec.

April 1, at Columbus, Tenn.—Close of entries, National American Kennel Club's second American Field Trial Derby. Joseph H. Dew, Sec.

ALEXANDRA PALACE DOG SHOW.

(From the *London Field*, Jan. 23.)

THE Kennel Club held their sixteenth exhibition on Tuesday, Wednesday, Thursday, and Friday last, the 18th, 19th 20th and 21st inst., at the Alexandra Palace, in the Central Hall, a *locale* which is most eminently suited for a show of the sort, there being plenty of air, room and ventilation. Unfortunately, the weather was dead against the success of the affair, a heavy fall of snow taking place just before the show opened, so that not only were the London contingent prevented from patronizing Muswell Hill, but, as most of the trains was delayed or stopped throughout the land, many country visitors, who might have come to the exhibition, had perforce to remain at home; and, all considered, we imagine that the club will be very heavy losers by their venture. This is greatly to be deplored, as the arrangements were all that could be desired; and it may be as well if the authorities were to take the hint, and hold their show at a time of the year when the weather is likely to be more stable. The feeding of the dogs was intrusted to Messrs Spratt, and it was seen to in an irreproachable manner. Three rings were provided for the judging, one of them—and the best—being the ring which had been in use lately at the Palace for circus performances. As long as daylight lasted the judges were enabled to carefully examine the various specimens which were brought before them; but, unfortunately, the days now are very short, and many of the classes had accordingly to be judged by gaslight, and the burners were provided in such meagre quantity that a semi-darkness reigned supreme for hours over the scene, and this may possibly account for the wrong decisions which here and there were come to. The judging began on Tuesday, at a little after nine—the time officially announced for operations to begin—and it was not over until Wednesday, very late in the afternoon, the Messrs Willitt taking really an unconsionably long time in coming to their decisions, which after all were not indorsed very unanimously in all cases. That judges should take their time over their awards, of course every one will admit; but that they should examine over and over again, almost *ad nauseam*, specimens between which exist startling differences in quality, is a sort of thing which is apt to tire onlookers. Now Messrs Willett are certainly very painstaking; in fact, we think they carry this quality to quite too extreme a degree, and their dilatoriness over their decisions became the subject of comment; so much so that, barring those exhibitors who were interested in the actual decisions, every one became weary of their slow proceedings. In case some should think that remarks are made in a captious spirit, we have only to state that, as a matter of fact, these critics took the best part of the day on Wednesday to judge only a part of the spaniels, five or six classes. At last we became quite disheartened, and took it for granted that the next day would also be occupied in coming to the spaniel decisions.

Mr John Douglas was general manager of the show, as usual, and the arrangements reflected great credit on his skill and experienced care. The judges were: For Smooth-haired Fox Terriers—Mr. J. Burbidge; Wire-haired Terriers—Mr. S. E. Shirley Bloodhounds, Mastiffs, St. Bernards, Boarhounds—The Rev. W. J. Mellor; Newfoundlands, Dalmatians, Smooth-haired Terriers, Yorkshire Terriers, Italian Greyhounds, Toy Terriers—Mr. H. Mapplebeck; Spaniels—Major Willett and the Rev. A. L. Willett; Deerhounds, Extra Classes, Pomeranians, Pugs—The Rev. G. F. Hodson; Greyhounds, Setters, Bedlington Terriers, Black and Tan Terriers—Mr. Sam'el Lang; Pointers—Mr. J. H. Whitehouse; Retrievers, Sheep Dogs, Bull Terriers, Irish Terriers—Mr. S. E. Shirley; Dachshunds, Bassets—The Rev. G. F. Lovell; Bulldogs, Maltese, Blenheim Spaniels, Toy Spaniels—Mr. J. W. Berrie; Poodles—Capt. the Hon. F. Greville; Dandie Dinmonts—The Rev. E. S. Tiddeman; Skye Terriers, Hard-haired Scotch Terriers—Capt. Villiers Hatton.

In champion Bloodhounds, Nap'er, who is now Mr. Brough's property, and who looked well, was alone, and took the prize. In the open dog class the winner, Mr. R. G. Hurrell's Marcero (late Judge H.) fairly beat Brave, who took second; and Lucifer, who is short of leather, was awarded third. Margrave was eventually removed by order of the veterinary surgeon. Luath XL, who was very highly commended, is too well known to need much comment.

If his color was correct, and he was a bit straighter, he would be the *beau ideal* of a bloodhound. Artists never tire of taking him for their model, as his peak, wrinkles and loose skin generally stamp him as the handsomest hound of the day. Of the remainder the best were Rupert and Nimrod. Robin Hood, highly commended, was shown in bad condition. The whole of the class, we may add, was noticed, which unfolds a tale—as far as quality was exhibited. In the bitch class, Dr. Forbes Winslow brought out his Bell in such excellent form that she readily secured the first. Mr. Morrell's Belladona was placed second, and his Morna third, but we would have reversed their positions. Rosamond II. is of a bad color, and has no bone, and therefore was rightly passed on. In the puppy class, first went to Mr. M. Beaufoy's Riparta, who is of a good color, and has plenty of wrinkles and a fine peak—on the whole a very promising puppy. Tyrant, highly commended, is of a bad color, nevertheless cheap at fifteen guineas. Muriel made a very good second, and, taken as a whole, the class was very fair, but we do not think that any of the entries will ever cause any great sensation, except perhaps the winner.

In the mastiff champion dog class, Mr. Beaufoy's Nero beat his kennel companion and Mr. W. K. Taunton's brindle Cardinal. Nero looked as well as ever we have seen him, and his great size, bone, substance and quality fairly entitled him to his place. Only one champion bitch appeared, viz., Gwendolen who is not a first-rate bitch, although she is a champion, being very small-headed. In the open dog class, first and cup went to Mr. H. C. Joplin's Vulcan II., a good dog. Dr. J. S. Turner's Cedric the Saxon, who was in very good form, was classed equal second with Mr. Beaufoy's Cæsar, who has a good head, but is of a poor color, and a that respect was beaten by Dr. Forbes Winslow's Othello, who shared the third prize with Dr. Russell's long-faced Lord Darnley. The commended Romulus is hollow-backed, and wants size; Surajah, very highly commended, is too short in the muzzle; and Don II. is too light, and was deservedly unnoticed. Mastiff bitches.—In this class, first and the cup for brindle were awarded to Mr. A. D. Bartlett's Tayra, a very excellent bitch, full of quality, and very straight fore and aft; second went to Mr. Beaufoy's Dinah, and third to Mr. H. Woolmore's Dena, a nice-colored bitch; the commended Vera II. is too short-faced; Negress, very highly commended, is small-headed; Maggie, commended, is too small; the brindle Nell V., very highly commended, is only fair, and Isledon Countess is light-boned. Thekla, very highly commended, is a good bitch; but Bardon Queen who received a similar card, is thick-skulled and has no color. O'Tarra, highly commended, is a fair bitch; the very highly commended Zulu Empress is toy-faced; and the well-known Ilford Baroness had to be content with a very high commendation, although a very fair bitch indeed. In Mastiff puppies (dogs), first went to a very big puppy, Mr. H. G. Woolmore's Crown Prince, who, all going well, should be heard of again; Mr. H. Hill's Banquo received second and cup for best brindle, but he is only a poor specimen; and the highly commended Donardar, a very nice youngster, should have occupied his place. Monarch V., highly commended, is big, but poor behind; and Sultan II. is too rough-coated. The puppy bitches were a bad lot, barring the recipient of first, viz., Mr. H. G. Woolmore's Malinda, a very good bitch, possessing some wonderful points: Mr. E. Nicholl's Boomah, placed second, is decidely poor, and should not even have figured in the commendations; Gazo, highly commended, was shown in low condition, and she has also very bad legs and feet.

Three champion St. Bernards appeared—Barry, Cadwallader and Othman. The latter was out of form, and Cadwallader took the prize over Barry; but in this we do not agree, as Barry was in the best of condition, and he is, barring head, superior in every other point to the winner.

In rough-coated St. Bernard dogs, Dr. J. Russell's Katerfelto won. He is a very fine-headed dog, but, when that is said in his favor, that is about all. Second went to the poorly-topped Keele, who should not have been placed over Oscar II., as the latter is far better in every way. Tell IV., very highly commended, was in bad coat; Hermit, very highly commended, was shown in a very dirty state; and Rocket, very highly commended, was not worthy of his card. Zu is a nice-headed dog, but Egbert is wanting in head properties. Oswald has a fine coat and good bone, but is poor behind. Gresham is not a bad dog, but was in bad form; as for Cedric he is a nicelsh specimen, and is better than the second-prize taker, Keele. Young Avalanche, Capalon and Faust are all bad in head. Lord Byron was nowhere, and should not have been noticed. Save is a fair dog, but has no dew claws; and Lion III., highly commended, is a mere weed. The rough-coated bitches were a bad class, in which first went to Mr. H. G. Sweet's Gretchen, who is one of the right sort, but two small; and the Rev. G. A. Sneyd's Hope was correctly placed after her. Mr. J. F. Smith's Norma II. was given third, but she is bad in head, and has no markings; and the very highly commended Dutch is a very poor St. Bernard.

The smooth-coated dogs were well placed, Dr. Russell's Rupert winning. This dog has a good coat, color and markings, but is pinched in the face. Mr. R. Thornton's second-prize taker, Dustman, is of a good color, and has acceptable markings; and Tyrus deserved his card for his place. That very highly commended Beauchief is a good dog, but is neither smooth nor rough-coated; Monk, who received a like notice, has a good head; but the highly commended Ross should not have had a card: and Druid, very highly commended, is too long in the muzzle. The bitch class was well handled, first going to the best bodied of the lot; and the best headed to took second.

St. Bernard puppies (dogs) proved an easy win for Mr. R. Thornton's Malcolm—a very grand puppy indeed. Mr. J. Adams's Druid, who came second, is like a skulled, but is well-grown, and has a nice coat and good color. The very highly commended Hector II. has plenty of bone, and is nice headed; but Sultan II. was in poor condition and mangy, and Thorwold was about the next best after the prize winners. In the bitch class, Dr. Russell's Ninette won; she has a nice head, but she is hollow-backed and short barrelled. Mischief should have been second, as she is too poor headed; and Gladys, a fairly good one, might have filled her place. Lady Gladys is a nicelsh bitch; and Madam is also acceptable, and deserved her card.

In champion Newfoundlands Mr. E. Nicholls' Nelson was alone. He is nicely built, although a small dog, but has a very objectionable head, his hair standing on end in anything but Newfoundland champion form. The open black dog class had three entries, and Mr. W. W. Thompson's Captain Murphy very readily scored, as he was the best in substance, coat and in head properties. In bitches, Lady Beaconsfield, who did not show well, and is long in the face, took first; second going to Nancy, who has a very nice coat, but is small headed, and third to the retriever-faced Dolly.

In Newfoundlands other than black, Mr. Farquharson secured another first, Trafalgar—who has good bone, but wants filling—winning from Mr. G. Chapman's Prince Charlie, who shows too much cord in his coat by a long way; and Nero III., very highly commended, would have been in his place. Nero V. is shelly and cow-hocked; and the judge rightly forsook him.

In the class for boarhounds or Great Danes Cæsar was the best looking specimen; but as it seemed that a piece of his tail had been taken off, he was not noticed, first going to Mr. H. L. Pemberton's Hector, second to Mrs. J. Davis's Imperium, and third to Jezebel, who is very small—a poor class.

Deerhound dogs saw the Brussels winner Rory at the top of the list. He looked better and was better trained than we ever remember seeing him. Mr. W. W. Thompson's Oscar, who took second, is bigger than Bevis, but he was shown in bad condition, and his ears are too big; and Rory made an excellent third. Two very nice St. Bernards were entered by mistake in this class, unfortunately for their owners. In the bitch class Mr. W. M. Chinnery's Bruce II. took first and an extra prize, but we thought that Bevis should have had the latter honor. However, be that as it may, Minna made a very good second. Linda was not in form and could only come in for third, and Maida was out of condition. Lufra is a nice bitch, and should have been noticed. Again in this class a St. Bernard appeared. How such mistakes in entries can occur we are at a loss to conceive.

Greyhounds were well placed, Fascination winning easily, Magnolia showing age. The winner exhibited a lot of hard muscle, and her condition reflected great credit on her owner.

bitch, who shows a deal of breeding. Empress II.—the Dublin winner—is a very pretty bitch, but was unaccountably overlooked; and Meg Merrilies arrived too late for competition, unfortunately, for, although small, she shows blood, and she would very probably have figured in the prize list. Countess Prim and Countess Plover, both by Count Windsem, who took first and second in the puppy class, are as smart a brace of youngsters as Mr. Llewellin could desire to breed; and Plum, placed third, is very promising. Scotchman, to whom we alluded in the adult class, was here deservedly very highly commended. Rockster was out of form, but looks a workman. Glen III. is too ragged. Hartford Rock, highly commended, is a fine dog, with a good body. Banquo has poor loins, and was rightly passed over; but Danger decidedly deserves his card.

In the black and tan dog class Mr. J. Jacob's well-known Marquis took first, his excellent body properties and flat coat entitling him to that rank above Young Jock, who was placed second, and shows quality, but who was much too fat. Grouse, a good dog with excellent shoulders, came third. Rex II. looked stale, and Donald is rough-headed; but Lorne, very highly commended, was in fine condition, and several sportsmen thought he ought to have been higher. Mr. W. Richardson's Kate, who won in bitches, was perhaps the best-bodied one in her class, but she is wedgy-faced, and Busy, who followed her, must have pressed her hard. The puppies were not very numerous, only six being entered, and Mr. E. L. Parson's Bishop was very properly selected for first prize. Geant, unnoticed, is a big puppy with good bone, but is coarse-headed, and the very highly commended Sir Derrick is too wedgy.

In Irish setter dogs, the good, flat-coated Garryowen beat Count who was shown in capital condition. Dunkettle had, unfortunately, no feather, Whisper II. was too ragged, and Frank had an open coat, which greatly militated against his chances. Mr. T. M. Hilliard's Tilly, the winner in bitches, was not entitled to that place, as she has no bone; Mary Mackrec, the second, is very small; and the Rev. R. O. Callahan's Hebe and Grouse II. both show more quality, and have grand coats and heads, and therefore should have been in the prize list. Whisky was in good form, Kathleen has a nice coat, Sloe was not well shown, and Pegtop, although small, is a fair bitch. In puppies, Zelstone again won.

In curly-coated dogs, we would have reversed the positions of King and Sultan, as the latter has a nicer head and closer curl than King. Young True is a good-bodied dog, but looked a bit sour. The bitch class was very well handled, and the puppies, also left nothing to be desired, the judge going in for body properties and closeness of coat in his decisions. In the other than black, the well-known Garnet experienced but little difficulty in catching the judge's eye, and he is certainly the best specimen of his kind we have seen. It is a great pity he exemplifies so strongly the uncertainties of breeding.

In Irish water spaniels the quality was decidedly meagre, and it was no great feather in Mickey Free's cap to take first, although, as the breed goes nowadays, three or four of the dogs shown are considered acceptable specimens. But we do not, as we will never admit an open woolly-coated dog to be a true-bred Irish water spaniel. As things go the judges rightly gave their awards.

Looby won readily in the champion Clumber class, and, in the open dog class, the Duke of Portland gave us a treat in his Dash II. and Bob III. These dogs have immense bone, substance and quality, and we heartily thank his Grace for the rare sight he gave us with his strong team of Clumbers. In the dog class under consideration, Psyche had to be content with third place. In bitches, the Duke again scored with Fairy, a beautiful big bitch. Lance's capital flat coat placed her over Libnah and Lottie. Libnah shows bone and substance, but has a little too much rag in her coat; but she looks, nevertheless, and probably is, workmanlike in the field. In the class for the best team of spaniels, his Grace showed no less than a dozen Clumbers—a truly grand lot, exceedingly level, with tremendous thighs and loins. Only two or three of them showed a little curl; and we can safely say we have never seen such a team before.

In the Champion Sussex Special Class, champion Rover III. and Maud were the only two that were entered, and the bitch got the award. We never liked her style of head, which is too toyish for Sussex stamp, and Rover is far better than she is in every respect. In the open dog class Guess won, beating Guy, but both were in good form. In the bitch class, the toy-faced and ragged-eared Progress scored; but we liked Merrythought and Romp better; and Cypress, unnoticed, should have been commended. The field dog spaniel dogs (over 20 lbs.) were a good class; but Kafir and Young Bob II. were the only two really in it for first place and Kafir's flat coat, which is a miracle of neatness, gained him the flat. Brush and Bosco were well shown and deserved equal thirds. Ben, passed over, is too leggy, and France, this time, was too ragged and his coat too curly for a mention. In bitches, with first and second we thoroughly agree, but Beatrice, who took third, is short of feather and she wants more length of leather. We liked Smutty vastly better and she should have taken her place. Bramble was too leggy for show form. The class for dogs and bitches not exceeding twenty pounds was only fair, although Otho won well. The other than black spaniels (any weight) had half a dozen entries and of the class we liked best Alonzo, Lass of Devon and Don Pedro. The first and last were placed as named, but the Lass was only very highly commended. Floss shows too much curl for her card.

Fox terriers mustered in enormous strength. In the champion dog class five were entered. Brokenhurst Joe was picked out as the best of a superb class, when he took not only the champion prize, but the Fox Terrier Club challenge cup and silver medal and a cup for best smooth-haired fox terrier in the show. Altogether he must have won some sixty odd guineas for his owner. In bitches Dorcas, looking exceedingly well, took the prize and a cup for the best fox terrier bitch owned by a member of the Fox Terrier Club. In the open dog class (eighteen pounds or under) we were sorry to observe that Pincher was beginning to show age and, being blind of one eye, his chances were totally extinguished. Mr. Redman brought his Despot into the ring in the pink of condition, but Brokenhurst Stung proved just a little too much for him. Richmond Jack came next rightly, but Hunton Dick was a bit too thick for our taste and Vivid, commended, wants more muscle behind. As for Wasp, the fourth, he is but a toy. In the over-eighteen-pound dog class we agreed with the decisions, but would have liked Racket to have been higher, and we were surprised to find that Vulcan had been unnoticed. Then in the bitches (seventeen pounds or under) that Bloom should win was a foregone conclusion, but that the handy Daisy should be placed next surprised us, as Nell and Beeswing were very much her superior in every way. Three bad ones were shown in this class—Topsy I., a mere toy; Tansey, beagle-faced: and Strelna Nettle, whose loins are not of the best by any means. In the over-seventeen-pound bitch class the winner is a bit too full in the eye and Blossom, who took second, should have beaten her; the next best were Achievement and Natty. The puppy dog class contained an immense lot of useless rubbish. The winner, however—as we remarked upon him when dealing with the Fox Terrier Produce Stakes last month—is very much out of the common. Vishnu, placed second, is rather slack-loined, so far, but that may improve yet. The judge was a little sparing in his commendations, and he might have noticed Burgundy, Todlebén and Sir Peter Teasle. Tory II., passed over, is also a fairish specimen, and Besique, commended, was one of the best dogs shown. In bitches the Produce stakes winner scored again; Jeopardy, who came next, is a fairish terrier, and Phœbe Pickle is promising. There was less quality in this class than had been shown among the dogs. In wire-haired champions Tassel figured alone and he looked as well as he did at Bristol, when he took the challenge cup. In the open class for dogs and bitches exceeding eighteen pounds Workman has grown too big and hardly deserved his second prize, and Toiler might have taken his position. The first, Tyke, is a terrier all over, having a good body, depth of chest, good legs and feet and showing terrier character. In the not-exceeding-eighteen-pound dog class first and cup went to a very grand puppy named Oakley Topper, belonging to Messrs. Harding Cox and Wright Nooth. This dog gives every promise of filling into something of great excellence and he won very easily in his class, beating the well-known Peter. His kennel companion, Peter Teasle, has an excellent coat, but was fairly beaten for quality by the winners. In the bitch class the famous Bundle scored, second going to a small wiry bitch of Messrs. Cox and Nooth's and third to the same gentlemen's Mendicant, who deserves a special notice, inasmuch as, although she had pupped but two or three days previously, she looked almost as fit as ever, and the thing appeared hardly credible. The puppies were smothered again by Oakley Topper, which we have already mentioned in the open adult class; so that the youngster scored two firsts and a cup at the Alexandra Palace—a good beginning this to a promising career. Mr. Carrick's Nelly III. was shown in a very dirty state, which was a pity, the bitch being smart. W. Broad, Jr., was only commended, as he was fairly beaten by his kennel companion and by Nelly.

In champion dachshunds Zigzag won. In the open black and tan dog class the winner was Handsel, who has good bone and a fair body, but who is very bad in ears. Cetewayo came next, and was better; but Dietrich, placed third, is too leggy. In bitches Alma, who has, in a little too straight—a defect shared by Wild Bad. Scylla is out at elbow and short-barreled, but Diana has the best bone and crook of the lot and should have won, but she was only very highly commended. Frida is too light-boned, but Grafina has a nice coat and a good, long back and deserved her second place. In the class for dogs other than black and tan the winner is best forward in his crook, which is not the proper type, and, strange to say, the second had also the same defect. Zef, placed third, had proportionally the best bone; and General was a red basset, with excellent crooks. Octavia, the winner in the bitch class, was wrong in her elbows, Olympia showed bone and Flink exhibited better points than the winner, only she was not in show form. The puppies were a goodish class as regarded bodies and head properties, but most of the crooks were forward ones.

Basset hounds had two classes, but in the bitches Pallas only appeared, and her immense quality was greatly admired. Her kennel companion, Fino de Paris, had no difficulty in securing first in his class, although Mr. H. E. Munroe showed a strong team of four. They were mostly high and short-eared, however, but good behind and in bone.

In champion sheepdogs Cocksie, shown in as good a form as ever he has appeared, took the prize. His coat and frill were admirable, and we think that no cavilling could be indulged in as regards that decision. In the open rough-coated dog class Charlemagne and Fox took first and second, but Highlander, who came next, was so well shown that he must have pressed the latter very hard. Pirate, highly commended, is too weedy; Bob Bruce is a bit thick, Mr. Alwin showed a goodish puppy in Badra, but Mr. Webb's Jess is too long-eared. Bitches were a fair class, in which Bell III., placed second, was rather handicapped by her having no frill, Lady K. is a pretty bitch, but she is too light, and Caledonia was short of coat. Messrs. Charles showed in Guy's Cliffe a wonderfully forward puppy, who took the prize in his class, beating two good-coated ones in The Major and Guy. As for Broadie, his bad ears will always tell against him. The puppy bitch class was better than the last, and here again Messrs. Charles scored with Flurry, who only beat the long-faced Puppet by a head, we did not care much for the latter, and thought better of Norma, Gweuny and Jewel. In the smooth-coated dog class Mr. W. W. Thompson owned three of the four entries and his well-known Hawk won somewhat easily; and in bitches his famous Yarrow, shown in capital form, readily disposed of Lady and Lassie—the latter looking a bit stale.

[We shall conclude the account of this show in our next issue.]

A PICTURE OF THORNTON'S DASH.

IHE other afternoon I dropped into one of the many old bookstores in Nassau street, and while looking over some pictures I chanced upon an old engraving, 25½x20, of Col. Thornton's "Dash," drawn from nature by S. Gilpin and engraved by R Pollard It was published February 11, 1788, by S. Gilpin, Knightsbridge, and R. Pollard, 15 Braynce Row, Spa Fields, London, making it ninety-three years old. It represents "Dash" pointing two birds. I had it carefully mounted on thick bristol board and neatly framed, and now it adorns my wall. I deem it quite a curiosity and a valuable acquisition to my sporting collection, and I value it for the following reasons. It gives me something to compare the modern breed with, and beside, in Vero Shaw's Chapter on Pointers, he says that probably this was the production of the first cross of the foxhound on the pointer in England, and lastly, being a correct and original representation of this wonderful dog, which sold for the then enormous sum to Sir Richard Symons of one hundred and sixty pounds worth of champagne and Burgundy, a hogshead of claret, an elegant gun and a pointer, with the stipulation that if accident befel the dog he should be returned to his owner for fifty guineas, which took place from a broken leg.

I have just sent my pointer bitch "Maid" (by McConnel's "Joe" out of "Maud," of Jones' Landing, Arkansas, they both being by and out of Arthur Gibson's Lily and Lancaster's "Sam," etc., same breeding and blood as the Baltimore Kennel Club's "Lilly," formerly "Colgate's" formerly "Gaido's Lily"), to be served by Crosteth at the Guymard Kennel. From this union I look forward to the happiest results, as she is a first-class bitch in looks, A1 nose, but had her forelegs cut by a mowing machine, which disabled her for field work. If I am successful in raising a fine litter, my intention is to chloroform her and send 'mid quiet and pleasurable dreams her spirit to that happy hunting ground, where she can ever point birds of Paradise In connection with my sending her I must state to you that the United Express Company charged me something like $4 to send her about seventy miles from New York. All I paid to have a full-grown pointer sent from Lake City, Minnesota, about 1,700 miles, was $5. Now what do you think of this? It cannot be avoided, so one must grin and bear it.

I had a letter from a friend of mine in Ulster County, N. Y., and he says he is afraid that all the quail are exterminated by the severity of the winter. Now this seems most strange to me. In the first place, why should the severity of our present winter kill more quail than the old-fashion winters we used to have that were so severe? Now old residents will tell you that on Long Island in years back they had snows two and three feet deep, and that it covered the ground for months. But the quail thrived and were not killed, as sportsmen of that date will testify to the plenty of the birds and the good shooting they enjoyed each year, and beside, the Island was not as thickly settled, and consequently there should not have been so much grain for them or feed, or the same to be covered up by deep snows. And again, in some far Western States, where they have always plenty of snow, they have also plenty of quail. I am a little skeptical on this head. I think that trapping and shooting them huddled is far nearer the truth and secret. I am well satisfied on one point, that all the legitimate shooting on the wing over points would never decrease the stock to such an extent as to give us any fears for a famine of quail, or for that matter of any game bird. Well, I have spun my scrap to quite a length, and will close with the unfortunate news, more anon. WASHINGTON A. COSTER.

Flatbush, L. I.

THE FATE OF "HUNTER."

BANGOR, ME., Jan 18.

IN the winter of 1866-7 a party said to have belonged to the city or State of New York, were hunting with a hound on the Piscataquis River in the vicinity of the village of Milo, Maine. The hound was white marked with yellow, the latter color predominating on the head, breast and shoulders. When the party were about leaving their ground the hound was missing and could no where be found. A reward was offered for his recovery and search made for him, but nothing definite was known of him until some time in May following he presented himself at the house of a gentleman then living in the town of Brownfield, tired and hungry. When he came to the house the family were at dinner and, the door being ajar, he quietly walked in, approached the table and, leaping on a chair, sat down and then gently put one of his paws on the table as if he had been taught to do so. It was remarked by some one at the table, "this is a pet and trained dog." The family and the hound sympathizing, he remained and a great friendship arose between them. The hound remained with this family and was a great pet with them for about a year, when he suddenly disappeared and was never again seen alive. Some month or six weeks after he was missed. A farmer cutting wood on splitting open a fallen hollow pine log found the remains of the hound and a fox. It would seem that both had entered the log and as may be supposed, each with a different object and unable to retreat perished from starvation. The hound always answered to the name of Hunter. If this item should meet the eye of the former owner of Hunter he can console himself with the reflection that he died with honor, true to his race, and in the arms of victory. J. C.

NEW CHAMPION CLASSES NEEDED.—The growing popularity of certain strains of dogs, and the interest which is now being taken in their improvement makes it imperative that champion classes should be established for several varieties that have not yet received in this country the attention which they deserve. This is especially true with regard to the collies which are fast becoming great favorites with all our people. We are inclined to recommend at coming dog shows the establishment of a champion class for collie dogs and bitches, and an open class for the same. It is a manifest injustice that dogs which have never been shown should be obliged to compete in the same class with animals like Lassie, Lass o' Gowrie, Tweed II. and Rex that have at the different shows carried off all the honors in the collie classes. This dog is constantly growing in favor not only with the farmer—to whom indeed his services are indispensable—but with the man who wish for a house dog an animal that is not a toy, and that possesses intelligence of a very high order. We hope that at the bench shows of the coming year such classes may be established. There are two other classes that deserve more recognition than has ever yet been accorded to them in this country. These are beagles and fox-terriers. Both classes are popular and are constantly growing in public favor, and we believe that it would be a wise policy to establish a champion class for each. The hopelessness of entering dogs hitherto unshown in a class which contains one or more well-known prize winners has in the past deterred many owners from exhibiting their dogs. Aside from the need of such new classification from a dog lover's point of view we have no doubt that it would prove a financial success.

THE NAT-GLADSTONE HEAT.—*Providence, R. I., Feb. 2.—Editor Forest and Stream:* While I had fully decided to avoid any and all newspaper controversy regarding the Robin's Island Field Trials, after publishing my challenge I feel that in justice to your Kennel Editor it is my duty to notice the article of which you make mention in your last issue, and which the Field Editor of the paper publishing it so kindly gives Mr. Whitford the credit of writing. I don't wish to comment upon any part of the article, except that which says that Mr. Bloodgood was satisfied with the decision. Instead of the FOREST AND STREAM reporter caused him to be dissatisfied. That is absolutely not true for I had no conversation with him about it until long after the heat. The heat was a long and good one, and to my prejudiced mind Nat was the best dog, while to the prejudiced mind of the judges he was not. I made no kick at the time although many of the lookers-on did. I am not much of a "squealer" any way, and should never have been heard from regarding this heat had it not been for the barefaced highway robbery perpetrated in the Smut-Sensation heat. That was too much for any interested party to stand, and I simply expressed my opinion, and backed it up with an offer to run the dogs again for $1,000. By the way in all of the articles published about me and mine since this challenge, have you found any acceptance of it? H. S. BLOODGOOD.

AGE AND WEIGHT.—Bulwer, in one of his descriptions of a heroine, a fair widow of great endurance, writes that "her age was between thirty and forty—that is she was thirty-nine years and eleven months." We once knew a lady of about 220 pounds who always said that "the last time she had been weighed she tipped the scales at 125 pounds," but then as she had not been weighed for some forty years her record went for naught. Now, while we are glad to publish interesting phenomenal cases of the longevity of life of the canine race, and score the immense weights attained by the same persuasion, we beg of our correspondents to be accurate in their figuring, for by "every dog has his day, and the bitches their Sundays," we cannot be responsible for doggy Old Parrs and Daniel Lamberts.

HARE BEAGLES—*Granby, Conn., Feb. 5.*—In reply to "Lepus" I wish to say that I was not aware that I had made the "announcement" of possessing a new strain of beagles by using the term "hare," which others use and which I suppose is intended to distinguish the larger from the smaller rabbit or basket beagle, which is about ten inches in height, while my pack of twelve average 13 10-12ths inches. In color my beagles are all white, black and tan (many of them mottled and ticked with same colors) and the average spread of ears is about sixteen inches. N. ELMORE.

COCKER SPANIEL KENNEL.—*South Acworth, N. H., Feb. 1.*—We wish to notify your readers that our kennel will hereafter be known as "The Cummings Cocker Spaniel Breeding Kennel."

C. B. CUMMINGS AND SON.

KENNEL MANAGEMENT.

61 G. W., Grand Rapids, Mich.—The best book giving instruction how to train cocker spaniels for field work is Hutchinson's "Dog Breaking." We can furnish it. English edition, $3.15; American, combining Dinks' and Mayhew's treatment of diseases, $3.

62 SETTER.—1. Can you tell me anything about red setters; dog and bitch Nix and Elsie? 2. I have a young Irish setter, fifteen months old, that has not been worked more than two or three days in his life. Do you think he will work all right next fall? 3. Would you advise me to take him out after snipe this spring? 4. Where shall I send his pedigree to have it registered? Ans 1. The gentleman you refer to is reliable. The dogs in question are of good stock. Elsie is Irish red in color, of medium height and racy build. She is by Mack out of Belle II. Mack was bred by Dr. M. Goldsmith; whelped October, 1876; red and white, Irish and English; by Plunket out of Carrie; Plunket by Grouse out of Beauty; Carrie by Prince (Laverack) out of Dan (Irish). Belle II. bred by W. H. Humphreys; whelped July, 1876; red; by Jack out of Humphreys' Belle; Jack by Putnam's Dan, out of Palmer's Belle; Humphreys' Belle by Bang, out of Belle. Nix is a liver and tan, by Devonshire setter imported by an English gentleman named Messiter, whose experience in all kinds of shooting was scarcely be excelled, out of a gyp, red in color, owned, we think, by Mr. Mullin, of Mt. Holly, Penna. 2. Your question is indefinite. If your dog has been yard broken, is obedient and has a good nose, he may do well at the end of next season. As "one swallow does not make a summer," so does not taking a dog out in the field twice or thrice constitute a good working and killing animal. 3. Yes, by all means. Your dog should, from his age, be worked at once, and as much as possible. We prefer to break our dogs on snipe, as the nature of the ground admits of their being kept constantly in sight. Working a dog on a wet meadow makes him hold his head up. If we lived in the West we would break our dogs on chickens, as the long grass would have the same desired effect. 4. Write to Charles De Rouge, 61 Broad Street, New York city.

KENNEL NOTES.

*** *Breeders and owners of sporting dogs are invited to send memoranda of names claimed, bred, whelps, sales, etc., for insertion in this column. We make no charge for the publication of such notes; but request that in each case the notice be made up in accordance with our form, that the name of both owner and dog be written legibly, or printed, and that the strain to which the animal belongs be distinctly stated.*

NAMES CLAIMED.

Nora—Mr. H. E. Capen, of Brookfield, Mass., claims the name of Nora for a black and white English setter bitch puppy, out of St. Cecelia by imported Frank II., purchased of Mr. Charles S. Lincoln, of Warren, Mass.

Pride of the Dominion—Mr. T. Davey, of London, Ont., claims the name of Pride of the Dominion for white and black ticked dog, out of Belle by Paris, purchased of Mr. W. B. Harrison, Tilsonburg, Canada.

Romp and Spot—Mr. James M. Stevenson, Bridgeport, Montgomery Co., Pa., claims the names of Romp and Spot for two orange and white setter puppies, the former a dog, the latter a bitch, black points, whelped December 29, 1879, out of Mr. H. W. Stevenson's Gerome by Mr. Thomas Baker's Frank. The above is a correction of note in issue of 5th instant.

Maud—Mr. Watson Dorchester, of Geneva, N. Y., claims the name of Maud for his pure red Irish setter bitch puppy, whelped November 15, 1880, out of Mr. Sid Caldwell's Nora by same owner's Rover.

Benedict and Beatrice—The Lachine Kennel Club, Whitestone L. I., claims the name of Benedict for imported black spaniel dog by champion Bachelor out of Negress, and imported black spaniel bitch by Nigger out of Belle.

Josie—Mr. George P. Jones, of Florence, Ala., claims the name of Josie for setter bitch puppy, whelped September 28, 1880, out of Mr. G. W. Campbell's Fannie by champion Joe, Jr.

Fleet II.—Mr. T. C. Sandford, of Yonkers, N. H., claims the name of Flirt II. for beagle bitch puppy out of Flirt by Juber. They out of Fly by Rambler, both imported.

Buck—Mr. Russell Waldron claims the name of Buck for his white, black and tan beagle dog puppy out of Lucy by Major.

Black Duke—Mr. G. S. Mackey, of Philadelphia, claims the name of Black Duke for black cocker spaniel dog puppy dog, whelped August, 1880, out of black Bell by Harvey's Diver.

Home Ruler—The Lachine Kennel Club, Whitestone, L. I., claim the name of Home Ruler for imported Irish terrier, whelped April, 1880, by champion Sporter out of imported Kathleen. Home Ruler was imported in utero.

Dick Belton and Nol Belton—Mr. L. Gardner, Mt. Vernon, N. Y., claims the name of Dick Belton and Ned Belton for his white, liver-nut and tan setter puppies, bred by Mr. John Bolus, Kilbuck Kennels, Wooster, O., out of his Bonnie by his celebrated imported Belton, whelped September 20, 1880.

Topsy C.—The Cumnings's Cocker Spaniel Breeding Kennel, of South Acworth, N. H., claim the name of Topsy C. for black cocker bitch, whelped May 8, 1880. Sire and dam not given.

Drake—Mr. M. Woolsey Borland, of Boston, Mass., claims the name of Drake for Chesapeake Bay dog puppy, six months old, out of Rose by Rake, both owned by Mr. Gard. G. Hammond, of New London, Conn.

Joe Campbell—Mr. F. H. Bates, of Marion, Ala., claims the name of Joe Campbell for lemon and white Campbell setter puppy, whelped September 28, 1880, out of Sam by Stevens, jr.

Gleam—The Montview Kennel Club, of Columbia, Tenn., claims the name of Gleam for setter dog puppy, white with little lemon on ears, whelped December, 1880, out of Blaze by Lincoln.

Gilda—The Montview Kennel Club, of Columbia, Tenn., claims the name of Gilda for blue Belton setter bitch, whelped April, 1880, out of Floy by Gladstone.

Beanie—Mr. H. P. Dortsch, of Goldboro, N. C., claims the name of Beanie for dark liver and white pointer dog, whelped February 23, 1880, out of Vivian (Shot II.-Fly) by Sam (Caper-Perkin's Imported Rose).

Bounce—Mr. H. P. Dortch, of Goldboro, N. C., claims the name of Bounce for dark liver and white pointer dog out of June by Bow, purchased from St. Louis Kennel Club.

Lucile—Mr. H. P. Dortch, of Goldboro, N. C., claims the name of Lucile for dark red Irish setter bitch out of Norah (Ist, N. Y., 1880,) by champion Rory O'More.

Dan II.—Mr. T. Davey, of London, Ont., claims the name of Dan II. for liver and white ticked dog puppy, out of Belle by Paris, purchased of Mr. H. B. Harrison, Tilsonburg, Canada.

Flash—Mr. Frank Wilcox, of Dunkirk, claims the name of Flash for red Irish setter bitch out of Polly by Irish Mack, purchased from Mr. John Bolus.

Guess II.—Mr. C. A. Holmes, of Somerville, Mass., claims the name of Guess II. for his red Irish setter, twelve months old, out of Fan by Eric.

Fyke—Mr. C. A. Holmes, of Somerville, Mass., claims the name of Fyke for lemon and white pointer bitch puppy, whelped August 22, 1880, out of Ruby II. (Sunshine-Ruby) by Snipe (Colburn's Belle-Sensation).

Beauty II.—Mr. George Pownall, of Christiana, Pa., claims the name of Beauty II. for his white, black and tan beagle bitch puppy out of two-prize-winner Beauty at Philadelphia, 1879, by Victor (imported Rattler-imported Bluebell).

BRED.

Flora-Carlo—Mr. J. B. Harrington's (Buffalo, N. Y.,) dark liver and white ticked cocker bitch Flora (imported Fan-Rake) has been bred to Mr. J. H. Whitman's (Chicago, Ill.,) imported champion cocker dog Carlo.

Juno-Benedict—The Lachine Kennel Club's (Whitestone, L. I.,) liver and white spaniel bitch Juno (imported Jack-imported Kitty) on February 3-5 to their imported black dog Benedict (champion Bachelor out of Negress).

Temple Bar—Dr. Emlen Physick's English setter bitch to Mr. A. H. Moore's Temple Bar.

Clymont-Sensation—The Baltimore Kennel Club's lemon and white pointer bitch Clymont to Westminster Kennel Club's Sensation, January 29, 1881.

Juno-Lofty—Mr. W. Sargent's, Jr., Llewellin setter bitch to Kentucky Kennel Club's Lofty.

Daisy Dean-Lincoln—The Montview Kennel Club's Daisy Dean to Lincoln.

Kathleen-Home Ruler—The Lachine Kennel Club's (Whitestone, L. I.,) imported Irish terrier Kathleen (Tinker out of Rosey) on February 1-3, to their imported Home Ruler (champion Sporter out of Kathleen).

Liddesdale-Orange Prince—Mr. T. G. Davey's (London, Ont.,) setter bitch Liddesdale to Mr. John Davidson's Prince of Orange.

Pix-Dash—Mr. Dalmage's (Hamilton, Ont.,) imported liver colored cocker Pix to Mr. E. Tinsley's (Hamilton, Ont.,) Dash.

—— Leicester—Dr. Emlen Physick's English setter bitch to Mr. A. H. Moore's champion Leicester.

Leigh-Berkley—Mr. J. H. Roberts' red Irish setter bitch Leigh to Mr. A. H. Moore's champion Berkley.

Kirby-Joe, Jr.—Mr. J. F. McIntosh's (Leesburg, Va.,) Llewellin setter bitch Kirby to Mr. G. W. Campell's Joe, Jr., January 29.

Buck, Jr.-Joe, Jr.—Mr. G. W. Campell's Buck, Jr., to Joe, Jr., on January 26.

Dogs-Victor—Mr. George Pownall's (Christiana, Pa.,) white, black and tan beagle bitch Rose (Rose-Jack) to Victor (imported Rattler-imported Bluebell) on Jan. 12, 1881.

Fanny V.-Victor—Mr. George Pownall's (Christiana, Pa.,) white and tan black and tan beagle bitch Fanny V. (Venus Jack) to Victor (imported Rattler-imported Bluebell) on Jan. 23, 1881.

Minnie Trouble—Miller & Co.'s pure white, seven-pound English terrier Minnie was bred Dec. 15, 1880, to P. Sharkey's twelve-pound pure white English terrier Trouble, all of New York city.

WHELPS.

Bess—Mr. Joseph L. Locke's Irish setter bitch Bess, whelped January 29, fifteen puppies, eight dogs and seven bitches, by Dash Elcho (Elcho-Rose), winner of first in puppy class, Boston, 1879.

Queen May—Westminster Kennel Club's Queen May (Native-champion Fan) whelped February 1, 1881, eleven puppies by Rattler, son of Pilley's Ranger, three dogs and four bitches, all black and white preserved.

Arrow—Mr. A. R. Heywood's Arrow (St. Louis K. C.'s champion Bow out of Sleaford's Maid) whelped January 21, 1881, six puppies, three dogs and three bitches, orange and white, and four liver and white, by Bang (champion Bang out of champion Lass), imported by the Moorefield Kennel and half brother to champion Bird. The whole litter are evenly and beautifully marked and are doing well.

Nellie—Imperial Kennel's (Toms River, N. J.,) setter bitch Nellie (Rover-Lady) whelped January 30, 1881, nine puppies, four dogs and five bitches, by same owner's Shot (Charley-May).

Blanche—Imperial Kennel's (Toms River, N. J.,) setter bitch Blanche (Pride-Nellie) whelped January 31, 1881, seven puppies, three dogs and four bitches, by same owner's Frank (Duke-Dido). All the puppies of both above litters are either black, and white and black, white and tan.

Black Bess—Mr. James T. Walker's (Troy, N. Y.,) black and tan setter Black Bess (1,056 N. A. K. C., Stud Book, vol. 1) whelped February 5, 1881, eight puppies, two dogs and six bitches, by owner's Dash (956 N. A. K. C., Stud book, vol. 1).

Minnie May—Miller & Co.'s Minnie May, whelped Feb. 1 (nine days ahead of time), seven dogs, four dogs and three bitches. Seldom a pug weighing only eleven pounds proves so prolific. Sire Mr. Halstead's (Morrison-Pug, Punch, all of New York city.

Bonnie—Mr. Elliott Johnston's collie bitch Bonnie (Downey's Lassie-Watch's Roy), whelped Jan. 25 nine pups, five dogs and four bitches, by Hamilton's Rex. Some of these will be for sale. See future advertisement in this paper.

SALES.

Rake-Rose Whelp—Mr. Gardner F. Hammond, of New London, Conn., has sold to Dr. F. B. Greenough, of Boston, Mass., a Chesapeake Bay bitch puppy, whelped January 4, 1881, out of Rose by Rake.

Juno—The Lachine Kennel Club, Whitestone, L. I.,) have obtained from Captain C. E. McMurdo the liver white spaniel bitch Juno, by imported Jack out of imported Kitty. Juno is perfectly broken to all sorts of game.

Black Spaniel Whelps—The Lachine Kennel Club (Whitestone, L. I.,) have purchased a brace of black spaniels from Mr. T. Jacobs, Newton-Abbott, Devonshire, the dog, aged eleven months, by champion Bachelor out of Negress, the bitch, aged seven months, by Nigger out of Belle.

Ray—Mr. E. S. Bradford, of Holyoke, Mass., has purchased the liver and white ticked large pointer dog Ray, out of Lincoln & Hellyard's Daisy by Whitlo's Duke. Ray was awarded second at New York, 1880, in a class of eighteen entries.

Rose—Mr. N. Elmery, of Granby, Conn., has purchased from Mr. George Pounall the beagle bitch Rose (Jack-Music), she in whelp to Victor (imported Rattler-imported Blue Bell).

Charlie II.—Mr. A. H. Moore, of Philadelphia, Pa., has sold to Mr. Thomas Adams of Franklin, Pa., the liver and white cocker puppy Charlie II. out of Daisy II. by Charlie.

IMPORTATION.

Mr. J. F. Kirk, of Toronto, has purchased from Mr. T. Jacobs, of Newton-Abbott, England, a pair of liver-colored cocker spaniel puppies about six months old. The dog pup is by Kaffir-ex Squaw and the bitch pup by Zulu-ex Lass of Devon. At the recent Birmingham show Kaffir took first prize in blacks and Spurgin's cup for best spaniel of any breed. He is mentioned by the *Live Stock Journal* as the "finest spaniel we have ever seen." Squaw took first prize in black bitches in a very excellent class. Zulu is litter brother to Kaffir, and took second prize, ranking after Kaffir, and beating champion Brush, who is illustrated by Stonehenge in the latest edition of "Dogs of the British Islands," and whom Stonehenge characterizes as the "best specimen of the breed." Lass of Devon took first prize in her class—Spaniel bitches other than black. The dogs are to be shipped from England immediately.

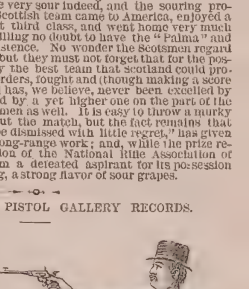
"That medicine goes right to the spot, refreshes, revives and cures."—A patient on Hop Bitters.

Rifle and Trap Shooting.

HOW TO MOULD BULLETS.

I HAVE learned how to mould rifle bullets, and propose telling how any one may cheapen their ammunition one-half. Shells, after firing, should be soaked in good vinegar, or oxalic acid and water, then well rinsed with water, after which operation set them in a stove oven until perfectly dry; re-cap the shells, being sure that the primers are pressed well down below the base of the shell; put in the proper amount of powder, tapping the shell so that the powder is well and evenly settled, and seat the ball, previously well coated with tallow, to which a small amount of beeswax is added. If the ball fits too loosely in the shell the shell requires reducing with a die manufactured for the purpose, which operation, of course, is done before priming and loading the shells.

The manufacture of good balls requires a mould with plenty of metal to retain the proper amount of heat. To one pound of lead add one-half ounce block tin; put over a good, bright bed of coals, using an iron ladle, or almost any seamless iron vessel, to melt it in. Remove any oil that may be on the bullet mould, and lay the mould in the coals until it is almost as hot as the melted lead; dip the ends of the mould handles in water until they are cool enough to be held in the hand when protected by a leather glove, then dip out sufficient lead from the ladle to fill the mould, using a clay tobacco pipe for a dipper; pour in sufficient metal to fill the mould and leave a small button standing on the top of the mould; tap the mould two or three times on the floor, table or block on which you are moulding; allow a small interval of time for the lead to set, then cut off the surplus lead and turn out of the mould. If the lead sets too rapidly in the mould, heat the mould; if the lead sets too slowly, let the mould cool. By the above process I have moulded bullets that would not vary one grain one from another in a hundred bullets, and as good, practically, for hunting purposes as swaged bullets, dense, smooth and uniform in size There is nothing gained in weight of materials carried on a trip, but there is the satisfaction of making your own cartridges, a saving of one-half the cost of same; and last, but not least, the occupation furnished for an idle hour in camp when you do not know what else to do with yourself, and old hunters know there are many such times when occupation of some kind is a pleasure. NAUTICUS.



THE PALMA MATCH.

SOUR grapes can find sustenance in almost any soil, may flourish in any clime, and may be plucked by any one so disposed. In short, the crop is springing up at all times and in all directions. We think we detect a very lusty growth in far-off Glasgow, where *The Military Record and Volunteer News* reprints what the FOREST AND STREAM had to say on the Stanhope letter of invitation, and then tails it as the Palma as follows:

"The ambitious American match, got up during the centennary celebration of Independence of the United States, is once again before the rifle shooting world, and again it does not seem to make a very dignified appearance. We need not revert to the muddle at Wimbledon in July last, regarding been informed by telegraph. From the beginning this "Palma" trophy match has been a *fiasco*. The American rifle Association seem never to have been able to arrive at a definition of what is meant by an international all-the-world match. They have followed this country to represented by Irish teams and by a Scotch team, under cover of the stretched-out word "International." We have always held that the form in which the match was first heralded to all-the-world, so far as Great Britain and America were concerned, meant that the teams should be imported and republican, and, so far as colonies were concerned, it meant they should be teams from colonies having a system of self-government. At the very outset, however, a Scottish team was accepted by the American International Association as one of the strongest proofs of the great shooting authorities at Wimbledon, and to the serious disturbance of long-range rifle shooting in Scotland. A couple of years ago we seemed at length to be getting into the right groove, but last summer's misunderstandings again upset everything, and we do not know if we should grieve much over the matter, if the reception Earl Stanhope's letter has received, should send the "Palma Match," at least so far as what the NEW YORK FOREST AND STREAM chooses to call the "Moribund American Association" is concerned, into oblivion. The Palma Match has never really risen higher than a club match, and, so far as the Council of the American Association is concerned, it would seem they would have been quite prepared to accept a Welsh team or a Highland team, an Ulster team or a Connaught team, if the districts designated by these names could show historically or mythologically that they had ever had claim to have been governed by separate rulers. The dignity of the whole grand idea was lost when the Americans allowed all-the-world to be split up into little sections to come on against their united phalanx selected from all the states as Creedmoor. The editor of FOREST AND STREAM speaks out very plainly to his countrymen in the article to which we have referred, and it is a pity his sound advice should not be taken. If, as FOREST AND STREAM suggests, the American Rifle Association is in a humiliating condition, we can only say that it has lived a short and not very eventful life, and Britain has long been regarded, on this side of the water, as the home of rifle shooting, and its forests the training ranges of its riflemen; the shooting at Creedmoor has been exceptionally good and the admiration of our British riflemen. Therefore, a good understanding and an occasional contest between the accredited rifle champions of the Republic and the Empire might have been desirable but as the matter now stands we think it may, for the time being, be dismissed with little regret."

The general feeling in this country has never been excelled by a Scotch team) were defeated by a yet higher one on the part of the Americans, and by the Irishmen as well. It is easy to throw a murky atmosphere of politics about the match, but the fact remains that this match, which "might be dissed—used with little regret," has given us the best on record for long-range work; and, while the prize remains quietly in the possession of the National Rifle Association of America, any comments from a defeated aspirant for its possession have, as we set out by saying, a strong flavor of sour grapes.

THE NEW YORK PISTOL GALLERY RECORDS.

AS far as can be ascertained the first pistol shooting tournament for general competition was inaugurated by James S. Conlin, Jan. 2, 1877. It was continued for thirty days, and the scores made during that time were considered marvelous, all previous records having been excelled.

The leading scores were as follows, the condition being twenty shots with 10-inch barrel pistol, fifty feet, at Conlin's Ready Measurement Target:

TOTAL MEASUREMENT.

J. T. B. Collins	17 7-16
Thos. Neyvelle	21¾
H. Baragwaith	23 5-16
H. Silberhorn	23¾
F. Kanebly	23¾
E. J. Shipman	23¾
Weston S. Vale	24
Wm. Remsen	24¼
John Traueser	24¾
Louis Livingstone	24¾
J. D. Gaffney	24¾

These gentlemen were all crack shots, and fairly represented the skill of New York city and vicinity There were only three styles of shooting at the target, viz.: deliberate aim at a 3½-inch bullseye on paper target word shooting, and shooting at pipes. J. T. B Collins was then credited with the best scores on record, same being seventeen consecutive bullseyes, all shots in bullseyes, at the word of command—1, 2, 3, and hitting fifteen consecutive bullseyes in twenty shots, eight pipes in twelve shots at deliberate aim. By comparing these scores with those which are now made, the advance toward perfection made by present pistol marksmen is apparent. Now we have crack shots who split cards, cut threads, drive tacks, light parlor matches, cut baseball bats in two pieces with pistol. It does not seem possible pistol marksmanship can reach a greater state of perfection, but we can tell.

The accompanying cut shows the approved position now taken by the contestants at Conlin's.

NEW YORK MILITIA PRACTICE.

ADJ.-GEN. F. TOWNSEND, in his annual report to the Governor as commander of the militia of the State of New York, makes some remarks on rifle practice as follows:

"The infantry is armed with the Remington rifle of the calibre of fifty hundredths of an inch. For manifest reasons it is certainly to be regretted that the calibre is not the same as that of the weapon with which the United States infantry is armed, the calibre of the latter being forty-five hundredths of an inch; but the objection is very much lessened in having in the arsenals of the State a reserve of 650,000 cartridges always on hand, suitable to the calibre of this piece. In this connection it is but just to the military authorities of the State to remark that they are not to blame for this dissimilarity of calibre. At the time of the purchase of the Remington rifles the United States calibre was fifty hundredths of an inch, and the change to forty-five hundredths was not dreamed of. Perhaps the change may have been one of the extraordinary developments of rifle practice, but I am fully persuaded, notwithstanding all of this, for at least several years to come the Remington rifle, exactly as it is found in the hands of the troops, is an admirable weapon, well calculated effectively to respond to all the demands likely to be made upon it.

It cannot be doubted, however, that breech-loading arms of precision have considerably modified the system of warfare in developing the necessity of thin skirmish lines, and the necessity that every enlisted man should be capable of delivering this fire. To this necessity to a refinement it is desirable to husband the military fund to be disbursed, firstly, in disciplining and instructing citizens in those other duties of the soldier which enable them to be so managed in mass that on the delivery of battle shall they be destructive on the skirmish line. In my judgment the primal necessity at this juncture is the annual encampment of every organization of the National Guard for a period of from five to ten days, and the latter the better where every guardsman may be thoroughly instructed progressively in the profession of the soldier, environed by the actualities of the soldier's life. To be able to accomplish this for the guard, there must be at least a great deal less money expended for rifle practice in the future than in the past. Since the year 1874, when the practice came to be general, there have been expended by the State in the matter of rifle practice alone, the following amounts:

In 1874 (including $25,000 in 1872 to purchase Creedmoor)	$55,656 89	1877	$48,309 25
		1878	65,921 34
		1879	47,258 99
1875	54,380 24	1880	23,494 25
1876	38,442 70		

Making a total for seven years of $312,679.06; and average outlay of $44,668.52.

Now it is not contended that this annual average sum would have been sufficient for the annual assembling for ten days each organization of the whole guard of 20,000 men and pay and rations the same, but it is asserted that the annual sum expended for rifle practice yearly for the past three years would be ample for the expenses of a new regiments each year in camp. While it is not desirable by any means to dispense with rifle practice, it is proper and necessary to administer the system relatively to the other needs of the force, and with a view to economy, I would recommend the immediate abrogation of the orders whereby prizes and decorations are furnished at the expense of the State, and for the time when the practice of all rifle practice by the guard until the force shall have been reduced to within twelve thousand officers and enlisted men, and the State shall have provided the proper camping sites, with butts thereto, for the drill and discipline of its troops in all that pertains to the duties of the soldier.

MEDFORD—*Mass., Feb.* 2.—Never was there a time when the wind gauge had to be altered so much as it was on this afternoon at Bellevue Range by the score of riflemen who, notwithstanding the extremely high wind blowing from the nor'-west, the thermometer registering the meanwhile 4 deg. zero, blazed away at the target for four hours with the following results:

C R Grilling	5 5 4 5 5 5 4 5—47	H Wilmington	4 5 5 4 4 3 5 5 5—45
W Jacobs	5 5 4 4 4 5 5 5—44	J R Teel	4 5 5 4 4 4 5 5 4—43
C Richards	4 4 4 5 5 5 4 4—43	W Henry	4 2 5 3 5 4 4 4 5—42
W Hill	4 4 4 5 3 4 5 5 4—42	C Rogers	5 3 5 4 4 4 5 4 4—42
J Richardson	4 4 4 3 4 5 5 4—41	J Winslow	5 4 4 3 5 4 4 4 4—41
G C Riley	5 4 5 4 4 4 4 4 3—41	M P Williams	3 4 4 5 4 3 4 4 4—39

BOSTON—*Mass., Feb. 5.*—A bright, crisp, delightful winter day the citizens enjoyed at Walnut Hill. The wind came from the northwest carry in the shooting, steady and reliable, which shot the marksmen easily controlled. Later in the day it became somewhat erratic, and of that lifting kind which proved that high elevations were not in order. Notwithstanding, the best shooting of the season was done, and worthy of especial mention was the fact that the lowmen came to the front. In the record match, Massachusetts target, phenomenal shooting was done, conditions seven rounds. Mr. A. C. Gould made seven consecutive bulls eyes on the paper target, and secured 71 out of the possible 84. Adams took 71, Mr. Bennett 74 and Rabbeth 73—the best work done during the season. The following shows only the best scores made among the large number of entries and re-entries:

Record Match (Creedmoor).

G Warren	5 5 5 5 4 5 5 5 5 5—48	J S Bennett	5 4 5 5 4 5 5 5 4 5—47
H S Harris	5 5 5 5 4 5 4 5 4 5—47	F Bennett	5 5 5 4 4 5 4 5 4 5—47
F J Rabbeth	5 5 4 5 5 5 5 5 5 4—48	T Robbins	5 5 5 4 4 5 4 5 4 5—46
A B Archer	5 4 4 5 5 5 4 5 4 4—46	C H Grilling	4 5 5 5 4 5 3 5 4 4—46
A C Adams	4 4 5 5 5 5 5 4 4 4—46	E A Borel	5 5 4 5 5 3 5 4 4 5—45
C H Grant	4 5 4 4 5 5 4 5 4 4—44	G E Fielding	4 5 5 4 4 5 5 4 4 4—44
J Borrowdale	5 4 4 4 4 5 5 4 4 4—43	E Bradford	4 5 5 4 4 4 4 4 4 4—42
J Burroughs	4 4 3 5 4 4 5 4 4 5—42	G M Cook	4 3 2 3 4 4 5 3 3 4—35

Badge Match (Creedmoor Target).

F J Rabbeth	5 5 5 5 4 5 5 5—48	G L Dodge	5 5 5 5 4 5 5 4 5—48
A C Gould	4 5 4 5 5 4 5 5 5—47	C H Grilling	4 4 4 5 5 4 5 5 5—46

C Gollinger	6	5	10	0	8	4	7	11	9	10—70

A challenge has been received by the corps from the Wheeling (West Va.) Rifle Club to shoot a match at 600 yards, "Massachusetts target." It will probably take place this month. The corps has applied for an act of incorporation to hold land, etc., at Beachmont.

NEW ORLEANS, *La., Jan.* 30.—The fine weather and love of rifle shooting drew over forty adherents of the New Orleans Rifle Club to the rifle park near the Boys' House of Refuge to-day. It was by far the largest turnout that has been witnessed for some time past, and proves that the club is getting into trim once more.

It has been decided, in order to allow new members a chance, to continue the competition for the medal every Sunday until the first Sunday in April, when it will become the property of the winner. As only "cartons" count, it is expected to be a well contested match. Several scores were shot off yesterday at 200 yards with the following result:

Cartons		Cartons	
R Malony	6 6 4 6 6 5 6 5 4—4	H H Haskins	4 5 2 3 4 4 3 6 6 5—3
Dr Ludwig	5 6 5 3 6 5 5 5 4—3	T P Devoe	5 4 4 5 3 5 5 4 3—0
Geo Muller	5 2 4 4 6 4 5 6 5—3	R M Sirling	4 4 5 5 5 4 5 5 3—0

NEWARK, *N. J., Jan.* 25.—The annual meeting of the Frelinghuysen Rifle Club was held this evening, and the following officers were elected: W. F. Lynn, President; C. T. Wake, Vice-President; A. C. Nourse, Secretary; Geo. A. Weyman, Secretary; Geo. A. Weyman, Captain; R. Westerman, Inspector; W. F. Lynn and J. E. Walsh, delegates to N. R. C.; Wake, Wigman and Dennis, and Secretary and Treasurer, Board of Directors; Westerman, Koch and Neumann, Range Committee; Soden, Walsh and Zimmer, Investigating Committee.

The Columbia Rifles of this city elected the following officers: Fred Taylor, President; William Ploughright, Vice-President; William Clain, Recording Secretary; Charles Hasbrett, Financial Secretary; Andrew Gebold, Treasurer; Robert Johnson, Captain; A. Welsher, Inspector of Rifles; Julius Howlet, William Leonard, Fred Walsh, scorers.

ELIZABETH, *N. J., Jan.* 27.—At the annual meeting of the New Jersey State Rifle Association, held to-day, the reports show it to be in a flourishing condition. The following were elected as directors for three years: Colonel C. P. Howard, Newark; Colonel J. M. Dart, Captain W. H. Benhart, Geo. *I.* Squire, of Elizabeth, and H. F. Anderson, of Rahway. Captain I. R. Denman, of Newark, was elected for one year to fill vacancy.

THE Newark Rifle Association has sent a challenge to the New York Rifle Club. No date has yet been fixed for this off-hand match.

THE 1,000-yard range of the Stockton (N. J.) Rifle Range will be constructed in time for the shooting season in the spring.

Oh, how refreshing, palatable and reviving is a draught of cool water with Hop Bitters in it, to a fever patient.

Yachting and Canoeing.

LIGHTS IN BOATS "PROPELLED BY OARS."

A SOMEWHAT startling announcement appeared a few days ago in the Washington correspondence of the daily press, and inquiries very soon began to pour in upon us. The paragraph referred to reads as follows:

"The board passed another very important rule, whereby small boats propelled by oars shall display, between sunset and sunrise, a bright white light from a flag-staff at the bow of the boat. A failure to comply with this rule subjects the offender to a fine of $200 for each offense."

As such a sweeping regulation affecting every yawl, gig, dingy, canoe or shell-boat happening to be caught out after sundown, seemed both ridiculous and impracticable, as well as a stretch of authority on the part of the Board of Supervising Steamboat Inspectors, we directed an inquiry to the proper authorities who have kindly sent the following in reply. It unfortunately still leaves the matter open to some doubts, for we take it that the rule relates in reality only to "boats propelled by oars," etc., engaged in trade and transport or to boats of any character when anchored in a fairway. If the rule is intended to apply to every boat without the limits we have indicated, it is simply absurd and impracticable, for it would imply that in every man, woman or child out for a pull in gig or shell should provide lamps, wick, oil, and also become lamp-trimmer and lamplighter, and perform feats impossible in many boats, and certain to cause the loss of more lives than already sacrificed by reckless steamboat pilots:

TREASURY DEPARTMENT,
Office Supervising Inspector General of Steamboats,
WASHINGTON, D. C., Feb. 3, 1881.

Sir—Rule 12, of Section No. 4,233, Revised Statutes, provides that "coal boats, trading boats, produce boats, canal boats, oyster boats, fishing boats, rafts or other water-craft, navigating any bay, harbor or river by hand-power, horse-power, sail, or by the current of the river, or which shall be anchored or moored in or near the channel or fairway of any bay, harbor or river, shall carry one or more good white lights, which shall be placed in such manner as shall be prescribed by the board of supervising inspectors of steam vessels."

The rule passed yesterday was simply in compliance with the provisions of the sections just quoted, which requires that the Board of Supervising Inspectors shall prescribe the proper lights to be carried upon the class of vessels described in the first section of the paragraph, a matter which had been previously overlooked, and to which attention had been called by the proper authority.

The penalty feature formed no part of the new rule, that being a matter regulated wholly by existing statutes.

Very respectfully, JAS. A. DUMONT,
Supervising Inspector General.

SHARPIES *vs.* KEELS.

Editor Forest and Stream:

All my life I have been hearing about sharpies—how they were the fastest boats built, how they were the safest; that they work to windward best and went free like lightning; how, in other words, they "beat all creation." like the true Yankee inventions that they were, and combined in themselves all the good qualities a perfect yacht can possess. And now comes Mr. Clapham to reassert these assertions and offer to back them up by a boat and to windward, "outside the blue" in a heavy sea, against any of the be-praised little keelers. I have no prejudices about other people's views. Those persons who like to go straight out to sea and then come straight back again, like the king who marched up the hill, and fancy they are having a good time, or are proving themselves to old salts and sea dogs," and who look down on shallow-water sailors as contemptuously as the driver of a team of horses gazes at the pedestrian, very wisely for themselves pick out a boat that won't capsize if it does always sail on its side. Like the Frenchman who ate the crow, I do not dispute about tastes, for I do not harbor any fear or sort of loathing. I live on a bay a hundred miles long, four miles wide and two feet deep, and so cannot conveniently use a boat twenty-five feet long and drawing seven feet of water, as the perfect modern model has become in the great and glorious Commonwealth. Moreover, when I cruise I want to run in to all the harbors and explore the inlets, bayous, marshes, creeks, bights, lagoons and water ways of our coast in pursuit of fish, flesh and fowl, which are not found in the limitless expanse of the mighty ocean, where, in fact, boating else is to be found but the winds and the waves and one's self. The charm to me in the sailor's life is the variety and change of land and water in cruising, the sport of rod and gun, and the adventures in "fresh fields and pastures new;" and, while we admit the virtues of a deep centerboard boat, we do not admire a keeler that goes on its side when it is "hove down," and lies on its side when it is a-ground—an accident which will happen to all your yachting readers now and then, except that one who says he can judge of the depth of the water by looking over the side of his boat, a power not generally given to man, and which would make him an invaluable pilot if he could only judge of the depth of the mud equally well. Now, if the sharpie combines all the superlative qualities claimed for her, and only draws six inches of water to forty feet of length, that is the boat we long-shore cruisers want. We will allow the "toilers of the sea" to lord it over us, and boast of their prowess in handling in a sea-way and out in "deeply, darkly, desperately blue," like the pedestrian who, while he confesses that he is despised by the carriage rider, feels the satisfaction of knowing that he is strengthening his limbs and saving the fare, so we will continue to creep along shore, but we want the best boat for the purpose, and that as yet we have not found. The sharpie may be the coming boat, or rather she may have come, for I have heard her praised, as I say, since I was a boy. But, as I said, this is another age, and we always is in this mundane sphere. Oh, that our accounts in this world only had no other side! The reverse of the sharpie picture is, as I have heard, that they are intolerably slow, that they are cranky, that they are awkward to handle and that they go like an ox working to windward at all unless they are steered by a long oar and a padded shoulder. I am not calling it a sea-way and out in "deeply, darkly, desperately blue," like the pedestrian who, while he confesses that he is despised by the carriage rider, feels the satisfaction of knowing that he is strengthening his limbs and saving the fare, so we will continue to creep along shore, but we want the best boat for the purpose, and that as yet we have not found. The sharpie may be the coming boat, or rather she may have come, for I have heard her praised, as I say, since I was a boy. But, as I said, this is another age, and we always is in this mundane sphere. Oh, that our accounts in this world only had no other side! The reverse of the sharpie picture is, as I have heard, that they are intolerably slow, that they are cranky, that they are awkward to handle and that they go like an ox working to windward at all unless they are steered by a long oar and a padded shoulder. I am not calling it a sharpie, but I shall before the year is over, if any of your readers have a good one to sell and will communicate with me through you. Hence I cannot tell the truth if I would, and very few of us will, when so much is involved. Claphamites are sharpie-ites to a man, and I, for one, am not fully converted. Clapham's boat was the darling of the king of the knife-blade sailors. I offered to race that forty-foot sharpie, ten feet wide and three and a half feet deep, against the latter's twenty-five foot yacht, which draws seven feet of water, the race to take place in a heavy sea-way to windward, and what do you suppose he answered? He would race me if my boat was to be only four feet less than his? In other words, he was to have a boat twice the size of mine on his own course, in his favorite style of sailing. That settled him and his cutter and his authority in yachting in my mind. Why, a boat twenty-five by ten by seven is as large as another forty by ten by three and a half, whether she is sailed on her edge, her side or her end, I do not care which; and certainly, for practical use, the latter, if equal in other respects, is worth three of her. There is great comfort in having two "sails to sail by," and both inboard, that is by the mast, and to reef your sail by wrapping it around the mast, and it is a release from labor to hoist your canvas by merely straining out a light boom on the lower end. Where would be your cutter or your cat boat or your sloop for single-handed cruising if the sharpie is all that is claimed for it; and, if it is, why has not the world found it out by this time before, and all of us gone to yachting in sharpies and been happy, comfortable and safe? Will not some kind person tell us why? R. B. R.

Our correspondent's query at the end of his letter we leave open to the decision of experience. In general we should certainly advise every one to have his coat cut to measure. A seven-foot giant underway in an ulster built for a five-foot person would be as much of an incompatibility as a yachtsmen trying to navigate in two-foot water with seven-foot draft. Our correspondent is right in including sloops in the same category with cutters in the matter of draft, for many of the modern sloops already draw *more* than cutters. Incidentally, the above letter shows how radically unfair and absolutely untenable is the custom of sailing on length as a criterion. If allowing time on a length basis had the slightest sense or logic, it is evident that two twenty-five-foot boats should sail on equal terms, whether they happen to be dubbed sharpie, cutter, sloop or anything else. That our correspondent's objections to the match mentioned are perfectly legitimate and sound no one will dispute or question in his own mind even for a moment. It illustrates in the most simple and forcible style the glaring stupidity and impossibility of classing different models by length, and, as no two sloops or schooners are alike, the system can no more be applied with equity to yachts of the same technical designation than to a sharpie and cutter, though the error and injustice become less serious, of course, as the yachts raced approach each other in similarity of form and size. That a rule against which the common sense of a school boy would revolt should ever have come into popular use, or can for an instant be entertained by any one capable of adding two and two, surpasses our understanding. There has never been as much as a single sound argument advanced in its favor, and one might suppose that a most simple and ever present illustration of its fallacy, such as our correspondent brings forward, would condemn such a ridiculous proposition as length measurement without giving it the slightest further consideration. Can any one blame us for losing patience when such a brainless custom is still the standard with the majority of yacht clubs, and which is rejected with contempt every time a private match is to be sailed between yachts of different models? Length measurement is a piece of legerdemain whereby a large yacht swindles the smaller one out of prizes and a record, and establishes for herself a fraudulent reputation, to which the value of her model is not in justice entitled. Length measurement is a puerile, shallow sophistry, and a misleading, mischievous delusion, or else our correspondent must sail his twenty-five foot sharpie against a twenty-five foot cutter or sloop without allowance, an undertaking no sane person will for a moment deem either rational or equitable, or productive of results of the slightest value as a basis of comparison between the speed of the two boats. It is about time that length measurement ceased to proclaim yachtsmen, through their sailing rules, as incapable of mastering the multiplication table. Yacht clubs owe it to themselves to abolish such baby-like verdancy, which they would not tolerate for an instant in the book-keeping of their professions. Why, then, such incapacity as soon as the subject of yachting is reached? If the membership of a club does not include any one capable of mastering elementary questions of the kind, it would be much better to hire a teacher in rudimentary mathematics for a few evenings than to quietly submit to a gross fallacy simply because "they all do;" and every one is afraid to correct an abuse as it might involve a little more labor than gossip.

NEW YORK YACHT CLUB.

DURING the economical era there was at one time danger of the N. Y. Y. C. giving up their pleasant quarters on Madison avenue and scattering their collection of models and books to the four winds. Fortunately this danger no longer threatens, for the annual report shows the club rooms to be self-sustaining, and we may congratulate ourselves upon the permanent establishment of at least one yachting headquarters worthy the name. About forty new members have been added lately, and, with $2,000 in the treasury, it is fair sailing for the year, with anything like beneficial management. The following officers were elected: Commodore, John R. Maxwell; schooner Dauntless; Vice Commodore, James D. Smith (schooner Ketchel; Rear Commodore, Hermann Oelrichs (sloop Hildegarde); Secretary, Charles A. Minton; Treasurer, James G. Piouilit; Measurer, A. Cary Smith; Fleet Surgeon, Alexander M. Fisher, M. D.; Regatta Committee, Chester Dubois Pond, John R. Bryan, G. L. Haight; House Committee, T. B. Asten, Henry N. Alden, W. Lindsay Biatch, C. R. Flint and C. A. Childs; Committee on Admissions, William H. Thomas, John S. Dickerson, John H. Platt, F. W. J. Hurst and William H. Osgood.

That something must be done to revive racing and interest in the club affairs seems to be conceded, and consequently a proposition has been entertained to invite the Eastern Y. C to join squadrons in New York harbor some time in July, the usual club sailing matches to be done away with. The proposition must have been offered in sheer desperation, for it is difficult to see how the contemplated "programme" is going to help matters much. There is even less wind to be expected in July than in June, and racing is more likely to turn into tedious drifting while the inducements to cut to Block Island are certainly of the most unsubstantial kind. It is not likely that many Eastern yachtsmen can be induced to cover 300 miles to a city notorious for its dusty, filthy streets and broiling heat, simply to visit a grand reception given by the classic Hibernian Club, at which the raw Hibernian and the festive goat hold carnival, when the romantic coasts of Maine and Mount Desert offer scenery, refreshing breezes and superior attractions in many ways. It seems like a deliberate attempt to give the New York Y. C. an *eclat* which it needlessly confesses itself unable to sustain without aid from abroad, we hope that some of the Eastern schooners will actually turn up in our waters and heroically submit to a duly sun and successfully withstand the many temptations offered by the attractive beauties of South Brooklyn, its goats, tin cans, hoegays and ash barrels. But let us welcome the bran as the premonition of a shift of wind.

SLABS AT SEA.

Editor Forest and Stream:

I read in your journal that Nokomis came to grief recently off the Southern coast. Before the last bow was put on she was nothing but an old centreboard boat with a keel plastered on. But a keel covers a multitude of sins. One keel boat has just been built in this province of many. Her dimensions are: Over all, 84.31 ft.; beam, 22 ft.; depth, 8 ft.; draft, 8.2 ft. extreme; draft at middle of L. W. L., 56 ft., without keel. Now, they may have made her much deeper all over, but I doubt it. Such is the kind of craft that is sold to men for sea cruisers, and which brings discredit upon keel boats.

The Mischief on the other hand has been decried as a "racing machine" by people who do not know the first thing about the matter, yet she draws in fact as the middle of her load line on a length of only 61 ft. It is just as you say—we need to drown some" prophinet citizens" out of the slab boats to infuse common sense into the yacht builders who persist in modelling flat bottoms for sea cruising through sheer ignorance, many builders never having been to sea a single day in their life! Several new schooners are being built this year, and for off shore work, but they are at best treacherous, clumsy boxes which will come to grief sooner or later if put to hard work. ANTI-SLAB.

New York, Jan. 22.

YACHTING NEWS.

AMERICA CUP.—The New York Yacht Club has appointed a committee to draw up a clear and definite set of challenge rules for the America Cup, to be reported March 24.

HERRESHOFF COILS.—The yacht Carrie, of Philadelphia, was blown up at Stockton, New Hampshire, January 2, four persons being killed and the boat completely wrecked. It will gradually dawn upon the steam yacht owner that there are boilers in the market which cannot blow up, weigh less, take up less room, cost less, and will get up steam in less time than the antediluvian affairs of the locomotive type, but it takes very long to make some people see their own interests. They are conservative to the verge of stupidity. The *Scientific American* has the following to say concerning the Herreshoff's and their safety boilers:

"The Herreshoff multiple steam vessels turned out by the Herreshoff Manufacturing Company, of Bristol, R. I., have attracted world-wide attention, and in a very few years have earned a reputation which is truly enviable. These boats have not only been indorsed by the Bureau of Steam Engineering of the United States Navy, but their merits have been acknowledged by European engineers, and the English government has given its opinion in an emphatic way, by ordering a number of the boats to be used in the English navy.

The Herreshoff Brothers possess, by inheritance, great talent for mechanical construction, especially as applied to steam engineering, and this talent has been developed by practical experiment supervised by these indefatigable inventors. From first to last success has followed their efforts, and, judging from the present showing, a prosperous future is before them.

"The distinguishing feature of the Herreshoff system of marine steam machinery is the safety coil boiler, which has been brought to great perfection and patented by the Herreshoff brothers.

"The engine used in the Herreshoff system for coil boiler in any of its forms are marked and are apparent almost at first sight. The coil is absolutely safe from destructive explosion, and weighs less than one-half as much as other boilers of the same capacity, and in point of economy is superiority is undisputed. It is capable of raising steam from cold water in from five to seven minutes. This is an important feature, especially in steam launches and torpedo boats, where time is an all important matter.

"The engine used in the Herreshoff system for marine purposes are of the compound condensing type, having feed and air pumps attached. The machinery of this system is especially noteworthy for its extreme lightness and for the judicious distribution of material, all of the parts having ample strength, and no portion being loaded with useless metal, which would rather detract than add to the efficiency of the machine. These engines use the steam with the highest economy, actual and prolonged tests having proved the efficiency to be at least 40 per cent. greater than that of the non-expanding type, as to minor details of construction, finish, proportion and general design these engines leave nothing to be desired."

We believe FOREST AND STREAM was the first journal to give full weight to the manifold and important advantages of the coil system, and to pronounce the Herreshoff boiler essentially "the boiler for the people." We have no hesitation in saying that it will displace shell boilers altogether at no distant day. The only question yet to be decided is the limit in power to which the coils can be constructed. For yachts, for mills, for pumps, for mines, for electric lights, for elevators, for use at home and for the railroad, for power in any place for any purpose, the coil carries off the palm.

SINGLE HANDER.—Owing to press upon our columns, the design for a two-tonner cannot appear before next week.

THE SWEEP OF REFORM.—When the light-draft hobbies were at their height in this country, the rage took possession of yachtsmen across the border. Sober sense, however, has once more returned, and the lessons of actual practice are no longer disowned by Canadians. A correspondent writes that iron keels are looking up in Toronto waters. The Alaria, 35-ton yawl, has been improved with

outside iron, and the Escape, 10-ton yawl, a new centreboard craft last year, has repented, and comes out this spring with a keel and 1,800 lbs. of ballast where it means most business. Others are to follow suit.

ANOTHER NONPAREIL.—Mr. Clapham is building a little 16x6 ft. craft for Boston parties to sail in the Mosquito Fleet.

THE PACIFIC FLEET.—We extract from a letter: "I am glad to say that in our fleet of thirty vessels we have not one sailing master. All the owners sail their own boats. The new ones, who do not know how, soon learn. I am sorry to observe, however, a tendency to increase the size of the yachts. The three new ones recently added to the S. F. Y. C. are, two of them, 60 feet long, and the other 80 feet, and we have another 97 feet. Next season I expect will be a very exciting one. The last-mentioned new vessels each thinks she can beat all creation, and the Chispa, consuelo, and old Nelly intend to give them a lively time for it. One of the new vessels, the Aggie, 80 feet long, is by a new builder, Hall Brothers, of Puget Sound, who have built some of the fastest merchantmen afloat, but this is their first yacht, and they have much to learn about a yacht or I am much mistaken. She has a great deal too much beam, 25 feet, and carries it well along and she has only 30 inches freeboard, much too little for a vessel of her size. The new Nellie, 60 feet long, is Turner's last, and I think by far his best. She will be a dangerous one for any of them to tackle. She has more freeboard than his other vessels, and takes her bow up more, so that she will not be eternally rooting her nose under as his former ones do. Stone has nearly finished a 60 footer; I have not seen her; they say is a beauty; all his boats are and they sail well. I am sorry that so many of these new boats are to be rigged as yawls, the builders' prejudices overrule the wishes of the owners, as all are anxious to take the prize this year, and you cannot convince the old-fashioned that a yawl is faster than a schooner, but I know from experience she is, and I believe they know it in England, where they make a schooner sail at three-fifths of her tonnage, a yawl at four-fifths, and a cutter at her full tonnage. The season of the san Francisco Y. C. opens April 14 with a cruise to Mare Island."

A NEW CUTTER.—They are going off like hot cakes as fast as the frames can be set up. A 40-ft. cutter is to be built by Lawley & Son, of South Boston, off the moulds of Mr. Burgess' new sloop.

NEW MEASUREMENT RULE.—We all know how the old Thames rule has pinched English racers into "planks set on edge." It was recently proposed to build a five-tonner, 40 ft. water line and 5 ft. beam, with a fair chance of the next one being 60 ft. with 4 feet beam, and about to feet depth with a lead shoe of something like ten-tons on the keel. These and similar propositions, which would have driven all previously built craft to the wall, have finally proved too much even for the well-known conservatism of our cousins across the water, and so, at last, a strong and influential move has been set on foot to modify their old measurement rule, hallowed by the traditions of ages. The new proposition, which meets with hearty indorsement, originated with Mr. Dixon Kemp, we believe. It is to multiply the square of the length by the beam and divide by 1,200. The theory upon which the rule is based we will revert to at some other time. The new rule appears to give a very fair classification to yachts of all types, and, should it work well in experience, we hope it may become international in its scope.

BLOCKS.—We call attention to the advertisement of the Providence Tool Company. They offer blocks of all sizes and patterns especially adapted to yachts gear. For quality they need no indorsement, as the standing of the company is well known. The new patterns have come into wide use and favor in the East, and will be supplied to several New York owners this spring.

SOUND VIEWS.—It is gratifying to note the growth of sound views concerning yacht designs. A writer in a Philadelphia paper, after working off superfluous energy by repeating stale and oft-refuted superlatives, winds up with a bit of sense, in which he concedes all this journal has ever claimed or advocated: "Extreme beam is only applicable to small open boats adapted to surface sailing ..... fortunately there is a happy medium." This from one who, judging by his letters in print, allows a superabundant amount of red-hot patriotism swelling in his manly bosom to interfere with the sober working of his five senses, is proof that the leaven is working as we wish it should.

SOUTH BOSTON YACHT CLUB.—The thirteenth anniversary of this club was properly celebrated by the members, Wednesday, Feb. 2, at the Seaside House, over a hundred covers being laid. After some routine business, the evening was given over to social enjoyment, and yarns and songs flowed freely. The committee for the evening was composed of Messrs. Kiley, H. J. McKee, T. Christian, W. Morris, R. Disbrow and F. G. Cooley.

ESSEX BOSTON YACHT CLUB.—The following are the officers for the year: Thomas Stone, Commodore; John Morrison, Vice-Commodore; Fleet Captain, John Mack; James L. Meagher, secretary; Edward Curran, Treasurer.

WASHINGTON VILLAGE YACHT CLUB.—At the annual election officers were elected for the year as follows: Commodore, James Mansfield; Vice-Commodore, Frank Daniels; Fleet Captain, John Stewart; Secretary, Edward Laning; Treasurer, William Lincoln.

SALEM BAY YACHT CLUB.—At the annual meeting, Feb. 3, the following officers were elected for the ensuing year: Vice-Commodore, A. L. Huntington; Rear Commodore, W. P. Parker; Secretary, A. S. Brown; Treasurer, C. H. Goss. Regatta Committee—Chas. A. Benjamin, Edw. C. Brown, G. W. Mansfield, J. A. Wallis, V. P. Carwen. M.

TEACHING BOYS WOODCRAFT.

MR. W. H. LADD, the principal of the famous Boston Channey Hall School, says the Boston *Herald*, while at Rangeley Lakes, last spring, made the acquaintance of Capt. Fred Barker, a famous trapper of the Maine woods, and, thinking it would afford his scholars a treat never before enjoyed by Boston schoolboys to hear a real hunter and trapper describe forest life, made arrangements with him to deliver a series of talks upon that subject during the present winter. The first talk took place last week and so entertained the scholars that they begged the principal to allow them to bring their parents and friends to the next that occurred on a Saturday evening lately. Long before the speaker arrived the hall was well filled with scholars, many of whom were accompanied by their parents and friends. Among the audience were quite a large number of well-known sportsmen of this city, and also a delegation of Harvard students, some of whom camped with Barker last summer. The speaker appeared in his hunting costume and opened his address by giving the boys instructions regarding their outfit and behavior while camping out. He advised beginners to employ a guide acquainted with the locality and who was also competent to take charge of a camp. He told the boys that they should have two tents, one a wall tent to sleep in, and a smaller one to keep their cooking utensils in. Among the necessary paraphernalia for camping purposes he suggested a good axe, a camp kettle, a teakettle, a six-quart pail for water, and plenty of plates, knives and forks. For food, plenty of potatoes, onions, beans and salt pork were recommended. If the party has no guide it should have some definite plan of action, and should elect one of the party captain and another cook, or "pot rastler," as the logging camps term *chef de cuisine*. In selecting a place for a camp particular attention should be paid to the location, which should be on high ground, close to water. The speaker illustrated the proper manner of building a fire. Select a smooth, hard piece of ground at the foot of a high, flat boulder or stone, and then take three large sticks of wood, the larger the better—for the work of one person cut up a lot of small wood that burns out before morning, leaving the campers nearly frozen—and place one on the other against the rock. After this arrangement has been completed, chop up a lot of small dry wood and place in the fireplace and start the fire. At the time of retiring pull down on the fire the two upper logs that rest against the stone and throw a green stick on them. This will keep a good fire until after midnight, when you should throw on another stick, which will last until morning. A proper stone for the back cannot be found, stakes driven in the ground will answer the purpose of holding up the front logs. With some boughs that he brought for the purpose the speaker illustrated the process of making a bough tent, such as is used by trappers who only intend making a short stay in one place. A number of questions were asked the speaker on the subject of camping out, all of which he answered in a manner which showed him to be thoroughly conversant with his subject. He then detailed the characteristics of, and the method employed in hunting moose, caribou, deer and bears. He described in a graphic manner the experience of a new hunter in his first attempt to shoot deer at nightfime by the aid of a "jack," and his description of the adventures and misadventures of the new-fledged deer hunter kept his audience convulsed with laughter and elicited at the close a storm of applause. His description of the "buck fever," which always catches the novice in his first attempt at deer hunting, was laughable in the extreme and delighted the boys, who did not fail to show their appreciation by heartily applauding the speaker. In his advice to the boys about camping out he said that the main feature of a good time was good nature, and he also said that there was no place in the world where a man or boy would more thoroughly exhibit the good or bad qualities he was possessed of than when camping out. At the request of one of the audience Capt. Barker gave a minute and graphic description of life in a logging camp. He also illustrated the method of hunting deer with a "jack" on the hunter's head, and with his rifle explained to the boys the method of taking aim under those circumstances. When asked as to the best course to pursue when lost in the woods the speaker said the only way was to keep a clear head and use common sense.

PROTECTION FOR WILD PIGEONS.

CECIL CO., Md, Dec 31.

I AGREE with Jean, whose letter on the above subject appeared in your last issue, that it is time something was done for their protection But the trouble is that many of the men who are influential in getting laws passed for the protection of other game are trap shooters, and are interested in having plenty of wild pigeons for their matches, and as they can only be trapped in large quantities when nesting, nothing has been done to prevent their slaughter at that time If it is wrong to trap or shoot quail when nesting, it must be wrong to do the same with pigeons; they also belong to the people of the whole country and are game, and should be protected as such, independent of the question from a humane point of view. A great deal has been written about the cruelty of trap shooting, but the worst is in taking the parent birds from the young, which leaves them to starve. Some sportsmen have a queer way of looking at these matters, for the same man who has just returned from shooting at say fifty nesting wild pigeons in a match, or is picking his teeth after a good dinner of squabs (which have been clubbed out of their nests) will sit down and write a long letter to his sporting paper about the horrible barbarity of the pot-hunter who shoots into a flock of young quail huddled together on the ground, or the farmer's boy who traps the old birds on the nest Now, the farmer and his boy are just as much defrauded by the trapped pigeons as the sportsman is by the trapped quail. P. T. B.

Obstructions of the kidneys and attendant organs will prove fatal if not removed by Hop Bitters.

Answers to Correspondents.

☞ **No Notice taken of Anonymous Communications.**

M. A. M.—See our last issue.

J. A., St. Albans, Vt.—No lottery is reliable.

A., Summit, N. J.—See notice at the head of this column.

J. H. L., New Bedford.—Write to W. F. Redding, Lorrento, Fla.

M. W., Ridgwood, N. J.—Address Edwin S. Harris, 177 Broadway, N. Y.

F. J. New York.—For live quail near the city see our advertising columns.

J. A. Z., Albison, Neb.—C. Gunther's Sons, Fifth avenue, N. Y., deal in furs.

C. B. T., Auburn, N. Y.—You will find good sport in the vicinity of Aiken, S. C.

E. H. L., Chicago.—There are several different styles of shooting suits manufactured. See advertisements.

T. K., Wilkesbarre, Pa.—You may possibly get old sails by applying to Jno. Sawyer, No. 52 South st., New York.

J. B. H.—The guns are as good as any for the price. The charge of five drams is larger than we should advise you to use.

J. N. G., Picture Rocks, Pa.—You will find the subject of hunting rifles very fully discussed in recent numbers of this paper.

WINNEBAGO, Portage, Wis.—The gun is a serviceable one and has been highly commended by many sportsmen who have used it.

W. H.—Is there any danger to gun barrels in using wound cartridges? Ans. You will have no difficulty provided that you use right size of cartridges.

J. W. P., Albany.—See advertisements of powder manufacturers elsewhere. The brand you inquire for is made, we think, by the Hazard Company.

H. B. W., Grand Rapids, Mich.—The snow-shoe slippers are highly commended by those who have worn them. You may obtain a pair through Mr. Everett Smith, Portland, Me.

H. B., New Brighton.—The route to Cobb's Island is via rail or Old Dominion steamer to Norfolk, thence to Cherrystone, and across the peninsula, where you take steamboat for the island.

G. A. C.—The articles on bay snipe shooting were published in our issues of August 5 and 12 and Sept. 24, 1880. You may address the New York Gun Club, care of Mr. John Hoey, 59 Broadway.

Monongahela, Pittsburg, Pa.—For notice of live quail see our advertising columns, also game columns last week and this week. We cannot tell you of express charges. Inquire at your local office.

S. C., Troy, N. Y.—The "Bird Notes" containing all the ornithological matter of the first fourteen volumes of the FOREST AND STREAM is now in the printer's hands and will be published at an early date.

XII. YORRIS.—Dr. Asa Packard's Zoology, reviewed in our issue of Aug. 26, 1880, is published by Henry Holt & Co., New York City. The price is $3.50. The manufacturer of the Baker gun is L. C. Smith, Syracuse, N. Y.

CARBINE.—The carbines are not made for the accurate work of the hunting and target rifles. The Springfield arms are not in the market. They are made for the Government only. We have never seen the book you refer to.

J. P. T.—I had a valuable German gun blown to pieces with 2½ drs. Dittmar powder and 1¼oz. shot. Now I am about to buy an American gun. What is your opinion of the arm mentioned? Ans. It is highly recommended, and the only drawback is the unpopular action.

W. H. A., Philadelphia.—1. Glass balls are as follows: Bogardus', $6.50; Huber, $5.50 and $3; Hatch, $3; Mole rotary $9 single and $11 double; Card rotary $10. Write to A. H. Bogardus, Elkhart, Illinois. 3. Vero Shaw's "Book of the Dog" and "The Dogs of the British Islands," first is sold in parts; see advertisement elsewhere. Second costs 40c. We can send it to you.

G. S., Ithaca.—Duck calls, made specially for calling blue-bills, we have never seen. The clause of the law touching the case forbids the use of floating battery, tableau or device whereby gunner is concealed, or shooting therefrom, use of decoy or construction of bow house at distance from shore more than twenty rods, made misdemeanor, with added penalty of $50.

H. A. M.—The term "pot-hunter" was originally employed to designate the shooters of that class who kill game for the purpose of selling it. As professional shooters of this class have little regard for game laws, shooting in season and out of season, the expression has come to be significant of the lawless and unreasonable pursuit of game. Like the other term, "true sportsman," it means little or nothing, accord to who employs it.

HEADER.—Please inform me what kinds of game are found in Virginia within a radius of ten or fifteen miles of Richmond, and what species of fish are abundant or are caught in the James and Chickahominy rivers? Ans. Coons, opossums, rail (sora) in season, snipe, woodcock, ducks, etc. In the James are black bass (local name chub), striped bass (local name rockfish), perch, sunfish. We do not know about the Chickahominy.

J. S., Dallas County, Iowa.—The wolves are making sad havoc here among sheep, and we cannot catch them. Can you, or your readers suggest any plan? What is a good book on trapping? Ans. Try poisoning them; that would be easier and quicker than trapping. Use strychnine in meat balls, or in tallow. If you use tallow place it in holes bored a log with an inch and a half or a two-inch augur. The wolves will keep licking the tallow as long as there is any left, or until they die. Use a drag bait to bring them to where the poison is laid.

HAZEL KIRKE, Baltimore, Md.—1. How many parts of Vero Shaw's Book of the Dog have been published? Who is the agent for it in New York? 2. Pedigree and full description and color of the cocker dog King, owned by Lemuel Willey, of Baltimore, winner of first at New York show, 1880; number of entries in class with whom he had to compete? 3. Where can I procure the music sung by Emmet in his "Fritz in Ireland"? Ans. 1. Eighteen parts. Messrs. Cassell, Petter, Galpin & Co., 737 Broadway, New York city, are the publishers. 2. King was imported by Mr. Peterson, of Boston; he has the pedigree, but Mr. Willey never got it from him. Mr. Peterson is now living, we believe, somewhere in Colorado. King is for sale. 3. The music sung by Emmet in "Fritz in Ireland" can be procured of W. A. Pond & Co., 25 Union Square, this city.

F. S., Bristol, Pa.—1. My 12 bore gun is chambered 2⅞ inches. I use 2¾ inch brass shells. Would the difference in shooting be material if I used shells the exact length of the chamber? 2. Can 1⅛oz. shot in a 12 bore be used to better advantage than 1¼oz? 3. Can you give pedigree of E. Orgill's Rush? Ans. 1. Slight, but hardly material. 2. No, for to so good advantage. 3. Mr. Edmund Orgill's lemon and white pointer dog Rush was bred by him and whelped April 17, 1876, out of Guido's lemon and white Lily by Sweet's lemon and white Flake. Lily out of Gibson's Lilly by Lancaster's Sam. Gibson's Lilly out of Atkinson's Fanny by White's dog. Sam out of Col. Morgan's bitch by same owner's dog. Steel's Flake out of Schieffelin's imported Juno by Dr. Strahan's Flash. Flash out of Peg by imported George. George was from the Duke of Beaufort's Kennel and imported by Sir Fred Bruce.

—Any subscriber or reader of FOREST AND STREAM in want of any kind of carpetings, oil cloths, rugs, etc., etc., can be sure of fair treatment at the hands of John H. Pray, Sons & Co., Boston. Call or correspond with them, and get their prices before buying. It will pay you to try them.—*Adv.*

PUBLISHER'S DEPARTMENT.

Holabird Shooting Suits. Upthegrove & McLellan, Valparaiso, Ind.

No sense in having sickness in the family if you will use Hop Bitters in time. Ask those who know.

B. F. NICHOLS & Co., of 36 Beach street, Boston, have made extensive preparations for the spring trade by manufacturing a fine stock of their split bamboo rods, which earned such a good reputation last season.

THE WINCHESTER REPEATING ARMS COMPANY have removed from their former salesrooms, No. 245 Broadway, into more spacious quarters at No. 312 Broadway, where they can avail themselves of better facilities for displaying the fine arms always to be found in their varied stock.

FOREST AND STREAM,

A WEEKLY JOURNAL,

DEVOTED TO SHOOTING, THE KENNEL, THE RIFLE, ANGLING AND OTHER FIELD AND AQUATIC SPORTS, PRACTICAL NATURAL HISTORY, FISH CULTURE, THE PROTECTION OF GAME, AND THE INCULCATION IN MEN AND WOMEN OF A HEALTHY INTEREST IN OUTDOOR RECREATION AND STUDY.

Published by FOREST AND STREAM PUBLISHING COMPANY, NOS. 39 AND 40 PARK ROW (Times Building), NEW YORK.

Terms:

Four dollars per year, in advance; two dollars for six months; one dollar for three months. Trade supplied by the American News Company.

Advertisements.

Inside pages, nonpareil type, 25 cents per line; outside page, 40 cents. Special rates for three, six and twelve months. Reading notices on editorial pages, 80 cents per line—eight words to the line, and twelve lines to one inch.

Advertisements should be sent in by the Saturday of each week previous to the issue in which they are to be inserted. We cannot receive new advertisements, nor alter standing advertisements later than Tuesday morning.

Correspondence.

Communications intended for publication must be accompanied with the name of the writer, not necessarily for publication, but as a guaranty of good faith. Anonymous letters will receive no attention.

Secretaries of Clubs and Associations are invited to favor us with reports of their movements and transactions, and sportsmen and naturalists are urged to contribute to our columns their experiences and observations.

Address.

All communications, of whatever nature, relating to the business or editorial departments of this paper must be directed simply

"THE FISHING LINE."

TAKE THE

Grand Rapids & Indiana R.R.

Mackinaw, Grand Rapids and Cincinnati Short Line

FOR THE

Trout, Grayling, and Black Bass Fisheries,

AND THE

FAMOU SUMMER RESORTS AND LAKES

OF

NORTHERN MICHIGAN.

The waters of the

Grand Traverse Region

and the Michigan North Woods are unsurpassed, if equaled, in the abundance and great variety of fish contained.

BROOK TROUT abound in the streams, and the famous AMERICAN GRAYLING is found only in those waters.

The TROUT season begins May 1 and ends Sept. 1.

The GRAYLING Season opens June 1 and ends Nov. 1.

BLACK BASS, PIKE, PICKEREL and MUSCALONGE, also abound in large numbers in the many lakes and lakelets of this territory.

The sportsman can readily send trophies of his skill to his friends or "club" at home, choice for packing fish can be had at many points.

TAKE YOUR FAMILY WITH YOU. The scenery of the North Woods and Lakes is very beautiful; the air is pure, dry and bracing. The climate is peculiarly beneficial to those suffering with

Hay Fever and Asthma Affections.

The hotel accommodations are good, far surpassing the average in countries new enough to afford the finest of fishing.

During the season Round Trip Excursion Tickets will be sold at low rates, and attractive train facilities offered to Tourists and Sportsmen.

Dogs, Guns and Fishing Tackle Carried Free at owner's risk.

It is our aim to make sportsmen feel "at home" on this route. For Tourist's Guide (an attractive illustrated book of 80 pages), containing full information and accurate maps of the Fishing Grounds and Time Cards, address A. J. SMITH, Gen'l Pass. Agent, Grand Rapids, Mich.

Chesapeake & Ohio R.

The Route of the Sportsman and Angler to the Best Hunting and Fishing Grounds of Virginia and West Virginia,

Comprising those of Central and Piedmont Virginia Blue Ridge Mountains, Valley of Virginia, Alleghany Mountains, Greenbrier and New Rivers, and Kanawha Valley, and including in their varieties of game and fish, deer, bear, wild turkeys, wild duck, grouse, quail, snipe, woodcock, mountain trout, bass, pike, pickerel, etc.

Guns, fishing tackle, and one dog for each sportsman carried free.

The Route of the Tourist,

through the most beautiful and picturesque scenery of the Virginia Mountains to their most famous watering places and summer resorts,

The Only Route via White Sulphur Springs.

Railroad connections at Cincinnati, with the West, Northwest and Southwest; at Gordonsville with the North and Northeast; and at Richmond and Charlotteville with the South. All modern improvements in equipment.

Old Judge Smoking Tobacco.
The Only Tobacco Ever Manufactured that does not Bite the Tongue.

Something Important for Cigarette Smokers to Know.

THE MAJORITY OF SMOKERS are perhaps not aware, that in smoking Cigarettes made of the ordinary pure rice paper, they have been inhaling THE MOST DEADLY OF POISONS, thrown off by all burning paper, namely: The Oil of Creosote. CHARLES G. EMERY, of the firm of GOODWIN & CO., manufacturers of "OLD JUDGE" Cigarettes and Smoking Tobacco invented and patented a process, March 5th, 1878, by which the Rice Paper used as wrappers for "OLD JUDGE" Cigarettes has been so prepared that the unpleasant ODOR and the injurious effects of the Oil of Creosote are completely neutralized or destroyed, and the paper made saliva proof to prevent its breaking or melting in the mouth. The unprecedented popularity of "OLD JUDGE" Cigarettes is owing to the fact that this process has been used exclusively in their manufacture, no one else having the right to use it. The great advantage and importance of this invention will at once be recognized by all smokers, and its truth demonstrated by the first "OLD JUDGE" Cigarette they smoke.

Sold by all leading dealers. Try them and you will use no others.

Manufactured by GOODWIN & CO., 207 and 209 Water st.,
NEW YORK

Philadelphia Fishing Tackle House

A. B. SHIPLEY & SON,

Manufacturers of Fine Fishing Tackle of Every Description,
503 COMMERCE ST., PHILA.

A specialty of the celebrated Bethabara Wood, for Archery Bows and Fish Rods, as tough and elastic as steel.

Great Reduction in Prices for 1880.

Reversed Wing Trout and Bass Flies on hand, and tied to pattern; Mist-Color Leaders, fine Trout and Bass Reels, Lines, etc.

Our BETHABARA FLY RODS and INSIDE ENAMEL SPLIT BAMBOO RODS received the Centennial and Franklin Institute Medals.

Prices as low as the lowest, and always first-class Goods.

Price-list of wood and rod mountings free. Our 65-page new Illustrated Catalogue of Fishing Tackle sent, post-paid, on receipt of ten cents in stamps.

THE FISHERMAN'S
Automatic Reel.

New in its construction and effective in its working. In size, weight and general appearance does not differ from ordinary reels. With its aid the sportsman can capture fish so slightly hooked as to be entirely beyond the control of any other reel. For descriptive circular, address LOOMIS & PLUMB, manufacturers, No. 1 Onondaga County Savings Bank Building, Syracuse, N. Y.

GUNPOWDER!

Dupont's Rifle, Sporting and Blasting Powder.

THE MOST POPULAR POWDER IN USE!

DUPONT'S GUNPOWDER MILLS, established in 1802, have maintained their great reputation for seventy-eight years. Manufacture the following celebrated brands of powder:

Dupont's Diamond Grain.—Nos. 1 (coarse) to 4 (fine) unequalled in strength, quickness and cleanliness; adapted for glass ball and pigeon shooting. Packed in 1lb canisters.

Dupont's Eagle Ducking.—Nos. 1 (coarse) to 8 (fine); burns slowly, strong and very clean; great penetration, with a close pattern; adapted for glass ball, pigeon, duck and other shooting, with either muzzle or breech-loaders. Packed in 1lb and 5lb canisters and 6¼ and 12½lb kegs.

Dupont's Choke Bore.—Specially adapted for "Choke Bore" Guns, and particularly for prairie and upland shooting. Burns slowly, strong and moist; does not cake or burn on the barrels, gives both a good penetration and a close pattern, will be found well adapted for glass ball and pigeon shooting. Made of two sizes, only No. 7 and No. 5. No. 7 being the coarsest. Packed in 6¼lb kegs and 1lb canisters.

Dupont's Eagle Rifle.—A quick, strong and clean powder, of very fine grain for pistol shooting. Packed in 1lb canisters and 6¼ lb kegs.

Dupont's Rifle Fg. "Sea Shooting."—FFg. and FFFg. The Fg. for long-range rifle shooting, the FFg. and FFFg. for general use, burning strong and moist. Packed in ½lb, 1lb and 5lb canisters, 6¼, 12½ and 25lb kegs. Fg coarse, FFFg. fine.

Dupont's Sporting, Mining, Sawing and Blasting Powders of all sizes and descriptions. **Special Grades for Export.** Also Rifle, Cartridge, Musket, Cannon, Mortar, Mammoth, Hexagonal, Cubical and Pellet Powder, U. S. Government Standard.

Powder manufactured to order of any required grain or proof.

Agencies in all the cities and principal towns throughout the United States. Represented by **F. L. KNEELAND, 70 Wall Street, N. Y.**

N. B.—Use none but DUPONT'S Fg. or FFg. for long-range rifle shooting.

The Hazard Powder Co.,

MANUFACTURERS OF

GUNPOWDER.

Hazard's "Electric Powder."

Nos. 1 (fine) to 6 (coarse). Unsurpassed in point of strength and cleanliness. Packed in square canisters of one pound *only*.

Hazard's "American Sporting."

Nos. 1 (fine) to 6 (coarse). In 1 lb. canisters and 6¼ lb. kegs. A fine grain, quick and clean, for upland prairie shooting. Well adapted to shot guns.

Hazard's "Duck Shooting."

Nos. 1 (fine) to 5 (coarse). In 1 and 5 lb. canisters and 6¼ and 12½ lb. kegs. Burns *slowly* and very clean, shooting remarkably close and with *great penetration*. For field, forest, or water shooting, it ranks any other brand, and it is equally serviceable for muzzle or breech-loaders.

Hazard's "Kentucky Rifle."

FFFG FFG, and "Sea Shooting" FG in kegs of 25, 12½, and 6¼ lbs. and cans of 5 lbs. FFFG is also packed in 1 and ½ lb. canisters. Burns strong and *cool*. The FFFG and FFG are favorite brands for ordinary sporting, and the "Sea Shooting" FG is the standard *Rifle* Powder of the country.

Superior Mining And Blasting Powder.

GOVERNMENT CANNON and MUSKET POWDER; also, SPECIAL GRADES FOR EXPORT, OF ANY REQUIRED GRAIN OR PROOF, MANUFACTURED TO ORDER.

The above can be had of dealers, or of the Company's Agents, in every prominent city, or wholesale at our office.

TO CORRESPONDENTS.

The FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen.

Communications upon the subjects to which its pages are devoted are invited from every part of the country.

Anonymous communications will not be regarded. No correspondent's name will be published except with his consent.

The Editors cannot be held responsible for the views of correspondents.

All communications of whatever nature should be addressed to the Forest and Stream Publishing Company, Nos. 39 and 40 Park Row, New York.

FOREST AND STREAM.

Thursday, February 17.

INTRODUCING FOREIGN BIRDS.

THE suggestion of a correspondent elsewhere will meet with a ready response in the hearts of many of our readers. Unfortunately, however, it is not altogether easy to carry out such a plan as the one which he advocates. At various times a number of the most admired European birds have been turned out in the vicinity of New York, but without any very satisfactory result.

In transporting a species of bird to a new country and firmly establishing it in its new home there are many difficulties to be overcome. Most important among these are the changed climatic conditions to which the introduced species is exposed, and which in most cases it knows not how to escape. Then, too, it is exposed to the attacks of new enemies, which, perhaps, it has not yet learned to fear and, on the whole, under the altered conditions of its life it has not the benefit of that experience which is so necessary to success in the great and unintermitting struggle for existence which is going on in the organic world.

The attempt to introduce a new animal, whether it be mammal, bird or fish, must, under ordinary conditions, take place on a large scale, if it is to be successful. The introduction of the migratory quail to our fauna is not yet an established fact, even though thousands of the birds were turned out under very favorable conditions, at different times and in different localities, and though all classes of our population united to protect them so far as it was possible to do so.

The idea of introducing the skylark is not a new one, but the attempts which have been made in this direction do not seem to have been crowned with any marked degree of success. In 1874 Mr. Henry Reiche turned out fifty pairs of these birds, which established themselves on Long Island, near Newton; but beyond the occasional killing of a specimen or two each summer for a few years subsequent to that date, but little has been heard of the birds. The Cincinnati Acclimatization Society freed a number of skylarks previous to 1874, and it was at one time said that the birds did well in this locality and were becoming numerous near that city. We should be glad to hear from any of our Cincinnati readers, and indeed from all those interested in the subject of acclimatization, any facts which they may be able to furnish us which bear upon this topic.

Skylarks are not the only European birds that have been turned out here. The starling, the English blackbird, chaffinch and pheasant, the Java sparrow and the Japanese finch are all reported to have been introduced at various times in the Central Park, but we know of no record of the results of the experiments. That some of them survived and bred seems, however, probable from captures that have recently taken place. One of the most noteworthy of these was the killing of an English blackbird in New Jersey near the Hudson River last May. The collector was killing warblers for a taxidermist when he discovered the bird sitting on a stone wall, whistling, as he said, "exactly like a robin." He killed it, supposing it so be a melanistic robin. It showed no evidences of ever having been caged, and it seems fair to suppose that it may have been a descendant of those turned out in the Park long ago. Last December a starling was killed on Blackwell's Island and brought to Wallace's to be stuffed. It was clean and smooth in its plumage, and did not look like a caged bird.

If any steps are to be taken toward the introduction of foreign birds to this country they should be taken at once. It does not follow that because the English sparrow has proved a nuisance other birds would do so. Our readers will remember that Col. Rhoades, of Quebec, urged some time ago the introduction of the English blackbird, and left with us a substantial contribution toward a fund to be used for this purpose. The FOREST AND STREAM would be glad to contribute to so laudable a project, and if any of our readers are similarly inclined they can communicate with us, and if enough money can be raised to make success seem fairly probable we will set the ball in motion.

WHY IT SHOULD NOT BE PASSED.

THE new game law, proposed for this State and drawn up by a committee of one wholesale game-and-fish dealer and two sportsmen, will permit woodcock shooting from July 1st to August 1st. This is one good and sufficient reason why the bill should not be passed.

Section 11 provides that snarers and trappers of birds, railroad employees who peddle snared or trapped birds and marketmen who deal in snared or trapped birds cannot be punished for such offense until it shall have been proved that the trapping, peddling and sale was "willful." This is a second good and sufficient reason why the bill should not be passed.

Section 34 provides that woodcock, quail and ruffed grouse may be sold in the markets for five weeks after the expiration of the legal time for killing that game. This is a third good and sufficient reason why the bill should not be passed.

The same section provides for the sale of venison for two months after the expiration of the legal time for killing that game. This is the refrigerator amendment "compromised," and affords a fourth good and sufficient reason why the bill should not be passed.

Section 38 provides for the appointment of so-called "county game protectors," to whom—in case the "willful" provision fails—offenders may, upon detection, make voluntary surrender of snared or trapped birds, and thereby secure for themselves immunity from prosecution. By a like voluntary surrender dealers who are detected in illegal traffic in game may secure similar immunity. This is a fifth good and sufficient reason why the bill should not be passed.

In short, as we pointed out last week, successive clauses are so worded as to render wholly inoperative any attempt to punish the illegal killing of game and the illegal traffic in game. The bill, if made a law, would encourage and protect the destruction of game out of season. Although going to Albany ostensibly from the Long Island Sportsmen's Association, it is in reality the work of certain New York marketmen; but it does not represent the views of the most sensible and far-seeing dealers, nor can it be indorsed by all the members of the Long Island Association.

It was announced when this movement was first talked of that the bill would be presented at Albany by the regular Standing Committee of the New York State Association. That plan has not been adhered to, probably for the very good reason that the committee would not father such a bill. It will instead be presented by the unequally-yoked committee of refrigerator marketman and sportsmen.

The bill ought to defeat itself; if it does not, it should be defeated by the earnest efforts of the sportsmen of the State of New York.

NEW JERSEY AND ITS GAME LAWS.

BOTH the old and recent records of the State of New Jersey, now in the possession of its Historical Society, show that from its earliest settlement, in about 1618, down to the present time, it has been a natural section wherein almost variety of game has abounded. The geological features of the State are so diversified that it has offered a home and a breeding-place for both upland and aquatic birds. Its direct coast line of 120 miles, exclusive of the shores on the Delaware, Raritan and Newark bays, and its tide meadows traversed by numerous tidal water courses; its grand inland lakes hidden away in the fastness of the northern mountains, and its low drowned lands, watered by broad rivers and springy streams, have all in turn teemed with wild fowl and other aquatic birds. The surface of the northern portion of the State is mountainous, the central portion hilly, and the southern low and gently undulating. At the north the drumming of the ruffed grouse has kept awake the echoes of the mountains, while far below in the wide and beautiful valleys nestling at their feet the quail has made merry with its kind. Along the mountain swales and in the lowland swamps the woodcock has bred in great numbers, and to the boggy bottoms the English snipe has paid its visits twice a year. The same variety of game has also been scattered over the central and southern portions of the State, where the ruffed grouse, and more particularly the quail, were found in far greater numbers than was the woodcock.

It was along the seaboard in the lower section of the State that, more than one hundred years ago, the pinnated grouse (prairie chicken) was found to be plentiful. In those days they were simply called "the grouse," thus distinguishing them from the ruffed grouse, which were termed then as now "the pheasant." An exceedingly interesting letter is now in our possession, the graceful writer of which was Mrs. Richard Bache, the only daughter of Benjamin Franklin. It was written to her daughter then residing in Philadelphia, and describes the return of her husband from a shooting trip of ten days "beyond the pines," with a large wagon-load of grouse. It appears that Mr. Bache was a great lover of shooting, and that every autumn he and a party of gentlemen, one of whom was Mr. Ingraham of Philadelphia, used to drive from Mr. Bache's estate on the Delaware River, in a large covered wagon, which contained stores, cooking utensils and a famous negro cook, to enjoy magnificent sport, over several superb pointers which had been sent to Mr. Bache from Settle in Yorkshire, England. Game laws then did not disturb the sportsman's mind, and the materialized bug-a-boo called the "pot-hunter" had not yet been hatched out. But although no legal restraint was placed upon those who handled the "fowling piece," yet there were moral lessons instilled by old Mother England that did far more than all the game laws that have ever been cooked up in this country to save and protect, at the proper seasons, the denizens of the mead and woodland.

Grand and good old times must these have been, when the gun was safe from being knocked out of the sportsman's hands by every passing train! Refrigerators were not even dreamed of, and market men and legislators were not their hand-in-glove. It saddens us to see some of the game law tinkers of to-day, mere reflections cast upon a soiled sheet from the sooty lanterns of the professional game dealers, and

herein lies one secret of our unsatisfactory laws that very few experienced sportsmen have a finger in the legislative game pie. Tinker, tinker, tinker at the pot for the market shooter. Laws good, bad and indifferent are passed, only to be repealed to make way for further experiments; for after all when power is vested in the hands of persons who are totally ignorant of the subject with which they have to deal, it is not to be wondered at if the wrong bull is taken by the horns, nor indeed if the bull has things all his own way.

It seems useless to attempt to stay this blundering, and to ask that all laws of a new departure be given a patient and practical test. A case in point now comes before us in the shape of the repealing of that excellent law, passed last year, prohibiting the shooting of woodcock during the summer months. A new bill has been framed which will permit the slaughtering of the few woodcock that find their way back to their old haunts before the noise of the first patriotic cracker is heard in the land; on July 1 the season will open, and for thirty-one days (for the stable door is not to be closed until August 1), the sportsmen and market suppliers of New York, Pennsylvania, Connecticut and of other States are invited to visit the State of New Jersey, hold high carnival, aid in killing the goose that lays the golden egg, and join in the requiem that will sound in honor of the extermination of the half fledged woodcock and mother birds on their nests! We have frequently recurred to the working of this disastrous system which, if pursued, as it can be proved by those who have watched the apparent decrease from year to year, will lead to the utter extermination of the woodcock.

It was an unthinking change made this year based upon the result of last year's experience. Never can we remember having seen a season so dry as it was last autumn. A drought of many weeks parched the most springy ground, and of course when the fall flight was on the birds from the North found no feeding spots and passed along. They certainly could not be expected under these conditions to stop, and consequently the autumn shooting, save in one or two sections, was not good. But it should be remember that had the same dry season extended over June, July and August there would have been the same scarcity of birds in those months. In Connecticut, where the experiment of abolishing summer shooting has been tried, the change has worked like a charm, and for two years back the autumn woodcock shooting has improved and been really excellent. But even with this fact in favor of our argument, we hardly consider it fair to try and prove by the records of one State what is expedient for another. In this vast country to attempt to regulate the game laws by the individual boundaries of each State seems to us unwise and impracticable, and particularly so in those situated in the areas of moderate temperature which migratory birds use as stopping places on their route. A glance at the map of the United States shows us that the northern part of New Jersey extends as far north as New Haven and the southern portion almost as far south as Washington, D. C. Is it, then, wise to try and frame game laws to cover this large area? Will not the changes of climate from year to year produce distracting results? and will not the residents of the southern part of the State be in constant antagonism with those living in the north? and will not the game laws of the State be a tug of war until they are regulated according to the latitudinal lines, or framed especially for the counties? True, the extreme length of the State is only 167 miles, but, nevertheless, we have often found the season open in South Jersey several weeks before the frost and snow were at all diminished in the northern part of the State. Consequently, unless a sportsman shoots all over the State in which he lives he is in no position to judge of what the game laws should be, except in his own local section. Assuming that the period of incubation of the woodcock does not exceed eighteen days, it can be readily understood that birds in Cape May County will be out of the shell in some years before other birds have prepared to lay in Sussex County. It is therefore unwise to name the same date for the opening of the season in both localities, especially when it treads so closely upon the acknowledged time the breeding is carried on.

THE FLY CASTING TOURNAMENT.—The fly casting tournament of the New York Sportsman's Association at their next meeting at Coney Island in June, has been placed in charge of Mr. Fred. Mather, of FOREST AND STREAM, who proposes to enlarge the number of classes so as to give a chance to amateurs, and all who are interested in this beautiful art. Several valuable prizes have been promised, and enough will be obtained to make this one of greater interest than any which have preceded it. There will be more to say upon this subject as soon as the plans are perfected, and all promises of prizes will be recorded in our columns as soon as made. Correspondence is invited.

THE RANGE OF BROOK TROUT.—Those anglers who are interested in the range of their favorite fish will do well to read carefully the article on the saibling, by Prof. Goode, in which he treats of this question in an incidental manner and gives more valuable information concerning the *habitat* of our friend in motley than is often found in a volume.

STUD BOOK.—Mr. Jos. H. Dew, Secretary of the National American Kennel Club, sends us a notification, which we take pleasure in publishing in our kennel columns. All those wishing to make entries in the second volume of the stud book can do so by addressing Mr. Dew, at Columbia, Tenn.

THE ANGLER'S RETROSPECTION.

OVER the mantlepiece hangs an old rod whose days of usefulness are past. It was beyond rejuvenating; and was an old rod many years ago, long before we had moistened our maiden feather. It was owned by a lover of angling; one who taught us its uses. It is a four-jointed, hollow butt, eleven ounce affair, made before a later generation of skilled mechanics had acquired the art of making stronger rods of half its weight. Years ago it ranked as a masterpiece of artistic workmanship; to-day it is a curiosity and as worthless for its original purpose as a dead twig, and yet there clusters around it a world of sunny memories.

The hour before twilight, on that long-ago June afternoon when we hooked and landed our first trout with it, seems as yesterday; and the friends who were with us, though some have reeled up their lines and crossed the dark river, are all often in our thoughts, and the world seems better to us that we have known them. And brighter than this rises up the stalwart form and the genial face of the dear old friend who gave to us our first lesson in fly-casting. Though old enough to be our father, he was like a foster brother and a playmate. Strong of limb, he was brave as a lion, gentle as a lamb. With older men sensible and dignified, with youth the youngest and jolliest of them all.

He believed with wise Solomon that the rod was an essential instrument in the education of children, but he would place the rod in the hands of the child and let him catch fish with it. More than one lover of the woods and waters reverses his memory, and many a time in town and camp have we heard him spoken of fondly and reverently, as one speaks of a dear mother.

The mind of the veteran angler is a storehouse of pleasant memories, a storehouse filled to the very roof. Though the season is passed and the silvery hairs have asserted their supremacy, the lustre has faded from the eye and the hand has forgotten its cunning, his memory is never so obscured by the film of age as to render him unconscious or forgetful of the almost unnumbered charms that have attended his angling rambles. The aching feet, the bruised arms, the legs, every bone rebelling against comfort, the crabbed look of Fortune as she repulsed his advances, all the hosts of discouragements and accidents that have at times occurred are forgotten or forgiven and he is mindful only of the sunniest smiles.

The old crippled veteran loves to fight his battles over again, and what a world of pleasure he derives from their recital! He will recount to you almost with his last pipe the afternoon's sport he had at some favorite pool years and years ago, how lustily fought that grandee below the falls, his scouring runs and desperate leaps, and final surrender. These he remembers with all their attending minutiæ—the fly he used, the hour, his length of cast and way of playing. These reminiscences are full of pleasant incident always, excepting the extemporized ones.

But the angler's thoughts turn not alone back to the fishes favors. The dear old faces he knew and saw by the evening camp-fire, the long pulls down the river and across the lake, the tramps over and around the mountains, the early starts and late returns, the tangled woodland, the picturesque roads and rugged gorges, the songs and stories before the turning-in hour, when spoon-fashion he laid and dreamed of pleasures past and to come—all these form a swift procession of sunny memories. These impressions are indelible. They never even become momentarily obscured, but grow brighter and brighter while other events may touch the heart, but never become so thoroughly enrapped as to become part and parcel of one's nature. It is a memory that never dies; a sort of fast-color recollection that will wash and not fade in the slightest degree. It is altogether too tenacious, for the well regulated angler, no matter how near his final dissolution, will involuntarily exaggerate, and yet never overstep the bounds of verity. He has learned in his journey from youth through manhood to old age to value truth and his yarns are no longer "fishy." Oh, no! He is too near his journey's end to deal in anything but truth, pure and unadulterated. Oh, yes!

When he can no longer join in the wantonness of the rollicking chorus around the evening camp-fire, when teeth are gone and voice is cracked so he can no longer hold on to high "C" with any certainty he will applaud his successors and wish them such joys as have been meted out to him; and if they have half as much their cup of healthy, life-giving sport will be well filled.

Then here's to the youngster who indulges in the pleasures of hope; and here's a kindly greeting to the old man who must content himself in recalling the past! MILLARD.

A NEW RIFLE ORGAN.—The dispute over the late Wimbledon Meeting of last July, and the scandal connected with it, has hurried the production of another paper specially devoted to the interests of the volunteers, and the *Volunteer Review* is now to appear as the contemporary of the *Volunteer Service Gazette*, which for so many years has come freighted with good things and rich with varied discussion of all the minutiæ of rifle practice and militia organization. The establishment of this new organ of the volunteer force and exponent of rifle practice is a protest against the systematic practice of the Council of the N. R. A. of Great Britain to discredit those who have ventured to bring before them any suggestions for reform. Our own Board of Directors were open to the same indictment, but we live in hope yet that our new Board may change the current.

WE REGRET TO RECORD the death of Mr. Charles H. Pond, Secretary of the Sharps Rifle Company, of Bridgeport, Conn. Mr. Pond had been severely afflicted with rheumatic complaints for the past two or three years, and since his recent return from Europe had been at his home in Milford most of the time, where he died last Tuesday night of a rheumatic affection of the heart. He had been favorably known in the gun trade of this city for the past thirty years, and was formerly of the firm of Cooper & Pond, 177 Broadway, this city, the site now occupied by Edwin S. Harris.

THE COCKER CLUB.—Those of our readers who are interested in spaniels will no doubt be pleased at the progress made toward the organization of the Cocker Club, as announced in another column. The committee chosen to form a standard and to take preliminary steps toward organization includes a number of our most prominent breeders, and will command the respect and have the good will of cocker men at large

THE INDEX OF VOLUME FIFTEEN, which is published with this issue, is the best possible exhibit of just what the FOREST AND STREAM is doing. This simple catalogue of the contents of the paper for six months contains abundant evidence of the wide scope, high character and practical value of its successive numbers.

"HINTS ON DEER SHOOTING" is one of the many practical papers published in these columns which deserve careful reading because of the instruction contained in them.

SPURGEON'S SERMON ON DOGS is commented on by an American clergyman in another column.

The Sportsman Tourist.

AFTER THE LAST KICK.

SOMETHING eminently respectable is there about shooting in a nice country, not ill-peopled nor too rough; to go out at morning with a clever dog, bang away now and then, tramping home at sunset with a comfortable bagful or less. Let no bag scale more than fifteen or twenty pounds. Don't knock down fences, and spoil the farmer's disposition. Have an eye for something besides brown feathers; then, whate'er betide, fat bag or lean, you shall be on the best of terms with that right good fellow, yourself. Long not overmuch for the sight of mighty game of hoof and horn, for something of such have I to tell. It is a fine thing to shoot big game, yet truly it is in some respects like drawing the famous prize elephant.

One summer's evening, while the days were yet long, a boat moving quietly and inoffensively up a narrow stream was stopped by a self-important old moose. Intruded upon at his fashionable 8 o'clock dinner—for, be it known, our present swell customs with respect to square meals are only those of the wild deer—he not only refused to grant a passage, but, erecting his mane, evidently contemplated an attack upon the two voyagers. Threatened at a distance of twenty-five feet by an old ruin of a muzzle-loader, his lordship only looked still more morose; at which juncture, in sheer self-defence, there came from the boat a big bang from four drams of indifferent bad powder, a little bang from a dram and a half of the same, followed by a preparatory shuffle of moccasins as though some fellow rather expected to give up the ship if boarded by the foe. There was a great leap, a flying of spray, a plunge, a gurgle, and in thirty seconds from the shot the moose found himself under water, all but a horn.

"Aha," said the travelers, as the deep pool became again placid in the twilight; yet, in removing the obstruction having burned the last grain of powder within ten miles, they proceeded not further into the enemy's country, but anchored straightway to the upstanding horn.

Of course, the good paddle was held by Ned Norton, the shaky gun by R., the undersigned, while the moose-infested stream was, as must be, in Tom Chester's domain at Second Lake.

Imagine a dead horse in a stream—a dead horse with a pair of shovel blades set close to an immense ugly head, with less tail than a rabbit, and you have the situation; adding, if you will, the fast-gathering darkness of night under the black firs.

"Lift his head into the stern," said Norton, balancing himself in the bow.

"Lift" I did, and master Ned came a great deal nearer—according to the capers of Saranac boats in general—to being pitched bodily into the stream than did the ungainly head to coming aboard. Ten minutes of balancing and tugging brought success to the attempt, whereupon we poled and towed the carcass a few rods below to a sort of landing at an old moose path, there scrabbling together a bit of a fire for the benefit of a lot of blood-scenting mosquitoes as well as for light. The bank was soft and pretty steep.

Now, without being heavy weights, either of us could trot a hundred-pound boat about the woods and not mind, but for our lives we could not get that moose more than two-thirds out of water, though we toiled like a couple of ants at some huge bug. Regardless of blood and sand I embraced the warm limp carcass as a long lost brother, but wrestled, as did N., to no purpose except to get beautifully besmeared; the hindquarters remained beneath the surface.

About this time the distinctively eminent respectability of partridge shooting on my own native hills began to appear. I wanted to give up till morning, but the dauntless N., with, "You hold the light," attacked the prey at the water line with his razor-like knife. For a minute I stood it, while N., sleeves rolled back from his ensanguined arms, delved and pulled away like a vulture, but presently took to flight before the vile odors, cautiously returning on the windward side upon a demand for "more light." Case-hardened by long experience to all manner of "insides," Norton kept steadily on, somehow containing his own inwardness as he shoved the enormous paunch of the moose into the stream; yet coughing and gasping at intervals, during which he would nearly disappear within the growing cavity. "'Nough—to—er—stink—er—dog out of—er—gut—cart!" came up explosively from the water side, and he slapped at the mosquitoes most viciously.

The unsavory task done at last, we put to sea again, landing on a little flat island or spit near by, and our burden being

lightened two or three hundred weight, we bent our backs to better effect, finally getting the old fellow ashore, though neither high nor dry. Next to load him into the boat.

He was stiffened now, his legs doing service as levers with which to work his back around to the water's edge and to the boat. First the head was lifted in, then the hind quarters. "Carefully!" warned N., as I put a shoulder to the fore leg in order to roll the whole body in. I heaved on the leg, and before we knew what was up the moose was floating about in the middle of the stream and the boat bottom up. He went in one one side and out the other. "Don't talk so loud," entreated N., in anguish, for there's nothing worse for alarming game than the human voice, and N. is very careful on his hunting ground. Another round of engineering operations brought boat and venison again into position, the second attempt proving successful.

It was two miles to the landing, for the voyage to which place I perched myself triumphantly upon the venison, paddle in hand, to find at the first sunken log that the night's back-breaking work was far from being ended. The loaded boat could not pass, so at every log we splashed over into the water to help the craft over. The stream has its source among the wild mountains of the boundary, also taking water from the cold caribou bogs near by, and if any one thinks it fun to drop into an unexpected pool in such a stream let him try it at midnight under a clear sky. On clear nights evaporation from the bogs cools the air nearly to freezing, no matter how warm the day. By dint of much wading, accompanied by wet trousers and cold legs, the tortuous dead water was left at last behind, when, just as N. swung the bow to the landing, there came out of the woods the most diabolical scream that ever reached my ears.

"A panther!" I thought, "and no powder!" For an instant my hair fairly stood up as I seized the hatchet. The yell came again—from the top of a tree—and a certain familiar accent on the end of its long-drawn intonation impelled the holder of the hatchet to send it flying to shore, an act followed by a laugh all around and shared by his owlship in the spruce top. An acquaintance of ten years' standing, *Bubo virginianus* never before had let off in my presence such a fiendish and cat-like howl.

Then ensued a stumbling walk by lantern-light over the mile and a half to the lake, for we must go home to Uncle Tom in spite of the grim forest which attempted revenge for the death of one of its children by stretching guarled roots to cast us headlong; then a pull equally long on the more friendly lake toward the guiding beacon in the east window and a final tumble—into bed—at one o'clock. Before the camp a loon laughed mockingly as I sank to a dream, born of aching bones, in which I was trampled by a colossal moose of grisly aspect and jeered at in screeching tones by wooddemons from the trees about.

Two gentlemen went up with us in the early morning, so that the odds being now against the moose he was ignominiously hauled up the bank at the end of a rope. Taking the head off scientifically at the atlas, Norton being "big knife," we fell to skinning and cutting up, adding three hours of bending over to the general back-breaking account. If the animal had been hung up like a deer the heels would have been eleven and a half feet high, with the nose touching the ground. The skin stuck abominably. Finally, covering the neatly divided quarters from the flies, we struck for dinner, N. sacking the weighty head, while my own chief amusement, by the way, was derived from a trifle of skin and meat, sixty pounds. However, it was only a scant mile and a half to the lake.

After dinner came the grand tug. Impressing Harding, Chester's man-of-all-work, the three moved upon the pile of meat. Taking each a quarter, we strung our over the trail with teeth set and many a groan. Across the path were several logs—some high, some low—and if ever I thought hunter's life a sell, the moose-killer a fool, it was when crawling turtle-fashion under one of these logs, or balancing a-top to calculate the chances of getting back to earth with a whole neck. The momentum of a heavy load swinging about among the trees is something crushing. Lose control of your pack and it runs the direful career of a cannon loose on a man-of-war in a seaway, the inevitable wreck coming a great deal quicker. The Old Man of the Sea was never half so exacting a burden as a quarter of moose.

The first to start, I left my better half at the lakeside, and with steps a yard high from the relieved strain went back to enjoy the misery of the others. A "last straw" look was in Norton's face, but he stood it well; the sight to be seen was 115 lb.-Harding staggering over the roots under nearly his own weight. Far through the woods appeared a shapeless something bobbing along, showing when very close a pair of slim legs planting themselves into the moss as he stepped. But the cunning old sailor had "triced up," as he said, his meat in some blue-water fashion beyond our ken and was not so badly off after all.

N. started for the settlement to set up the head, Harding disappeared mysteriously according to his wont, while the writer disposed his aching self in the big chair till supper time.

Though it may seem about time to finish up with that moose, I did not get off so easily. Toward night Thomas and I went over the tiresome carry again, cut the meat from the remaining hind quarter, killed ten thousand midges, and got back after dark too tired, myself, to sleep.

The final transaction next day was, of all passages in the life of this scribbler, the most mal-odorous. I had agreed with N., since he could not attend to the matter himself, to remove all the refuse which had been thrown into the stream, for if allowed to remain no moose would water there again during the season. Shouldering a shovel instead of a gun I had started bravely off to play the scavenger. Two days of sun developed the flavor of the substantials in question to a point best appreciated by a buzzard, the paunch having swelled to the appearance of the capitol dome as it loomed up around a bend. One way or another I tumbled everything into the boat to the last wisp, paddled two miles with the fragrant breeze coming across the whole mess to my nose, dug a hole and buried the three hundred pounds of delectables therein. Dropped into bed at eight o'clock to open eyes only when, sixteen hours after, Uncle Tom's smiling face appeared with, "Dinner's ready."

Such is my tale. The sportsman does not have the toilsome afterpart of the shooting unless he so choose, and indeed there is ordinarily enough of the wearisome which cannot be done by guides. For myself, having had unusual privileges, amounting to *carte blanche* on the summer months of college vacation, it has been a pleasure to do as hunters do, being in the woods. To be called by the name of hunter, so far as entitled, rather perhaps than that of sportsman, is the fancy of

RANGIFER.

A HUNT FOR FISH IN NEVADA.

BY COSMOPOLITAN.

ON August 21, 1872, one of the party belonging to the expedition for exploring west of the 100th meridian, commanded by Lieut. R. L. Hoxie, U.S.A., was encamped at Young's ranch, Snake Valley, Nevada. To this party the writer was attached as surgeon and naturalist, and since leaving Fairfield, or old Camp Floyd, celebrated in the annals of the Mormon war, he had been able to do little or nothing in the way of collecting specimens. At this place, too, there seemed little chance of gaining anything of value, and for two or three days subsequent to arrival the country had been scoured in all directions in pursuit of mammals, birds, reptiles and bugs, but much time was wasted with poor results.

At this time we had with us an Indian guide rejoicing in the cognomen of Antelope Jake, who seemed never tired of watching me unpack and repack my specimens, and manifested the utmost regret when I returned after a hard tramp with little or nothing in my collecting bag. Of course, it was impossible to explain to him for what purpose the specimens were intended, and he conceived the idea that they were for medicine, although this I had denied several times when he made a remark to that effect, but he remained unconvinced and several times he had brought me a lizard, toad or small snake which, he said, were good for medicine. He probably expected my favorable influence in his physical welfare by such gifts, for the Indians have great respect for doctors. One evening, while sitting in front of my tent, I said that it was a great pity there were no streams near by, for in them, perhaps, some interesting fishes might be found. Jake, who was sitting near by, gave a grunt and said: "May be so catchem fishes in Snake Creek." Where is it? said I, and how far? "May be so one, two, three, four miles." Not to weary my readers with Jake's half-broken English, I will say that after a severe course of questioning he informed me that he knew of a place not far from camp, near the camp of Black Horse, a sub-chief of the Gosh-Utes, where the Indians were in the habit of fishing with good success, although the fish were all of one kind, as he said, and not very big. For a douceur he offered to guide me there the next day. Later in the evening some of us went up to Mr. Young's ranch, and I mentioned the fact of my proposed trip, against which he warned me, for he said that Black Jake was one of the meanest Indians in those parts and could not be trusted. "But," said I, "even if he were evil-disposed our camp is so near at hand that he would fear to bring down on his band the soldiers."

"Well, I call fifteen miles far enough away for him to gobble you and your mule up and get away to the mountains before your soldiers could know anything about it. Anyhow, if you will go, take some soldiers with you, and Antelope Jake, who is a faithful fellow and can speak the language." I thanked him for the caution, and made up my mind that go I would. Our preparations were made over night, and the commanding officer gave me one good soldier on whom I knew I could depend, for I did not think it necessary to ask for more. We carried with us our provisions and water for the day, a scoop and drag net, my collecting bag and lots of small bottles. Bartlett, the soldier, was armed with his carbine and revolver, Antelope Jake with revolver and my double-barrel breech-loader, and I carried my Henry-Winchester carbine and a six-shooter; plenty of ammunition was provided besides. We saddled our mules at 5 A. M., jumped on and away we went, Jake taking the lead. It was a beautiful morning, cool and pleasant, and as we rapidly cantered along a fair road my spirits were exhilarated by the fresh air, and our expedition seemed all the more attractive and fascinating from the possible element of danger in it. Jake seemed in good spirits, too, and crooned to himself as joyous an Indian ditty as he could compose and, not to be behind him in musical ability, Bartlett hummed softly to himself the old popular soldier-song:

> "Then fare you well, my own true love,
> Ten thousand miles away"—

or words to that effect. Our ride was interrupted by but the one incident of meeting an Indian who had strung upon some pieces of grass twisted together eight or ten Nevada lizards, *Crotaphytus wislizenii*. I asked Jake if the individual intended to make medicine with them. He laughingly replied, "May be so; eat 'em, heap good." An offer of a silver half dollar and the reptiles were transferred to the collecting bag. These lizards are among the most beautiful of their class, and are extremely numerous in Nevada. They are ground dwellers, digging a hole from ten to eighteen inches deep and live in pairs—at least the Indians say so. The Indians, if unable to capture them while asleep or sunning themselves on the rock, drag them out of their holes with a long, slender wand, having fastened to the end, at an angle, a piece of sharp wire or nail filed to a point. Jake informed us that he would gladly accept them. I had bought them for his own dinner, as they are really considered by his people a "bonne-bouche," superior even to the far-famed gastronomic luxury, the Rocky Mountain locust.

The sun was now getting pretty high, and we must have ridden nearly twelve or fifteen miles, still no signs of the Indian village, but Jake kept at a lope, with the unerring instinct that characterizes the American aborigines. He finally stopped, took a good look, turned around, and pointing out a little column of smoke said "Ugh! there Injuns." He rode in its direction and shortly reached the wicky-ups of Black Horse. To my surprise not a woman or child was to be seen, and in the central screen of bushes, which served as a shelter from the weather, sat about eighteen or twenty men in a half circle about a smouldering fire. I was about to dismount, walk up and shake hands, when Jake, who appeared quite nervous and anxious, came close to me and said: "May be so, go home. Injuns mad—no good." I paid no attention to his remark, but directed him to inform the chief who I was and what we wanted, which he did, but without eliciting the slightest notice from the scowling gang. I saw we were in for perhaps a little trouble, but determined to put a bold face on the matter and trust to luck. I directed Bartlett to watch me carefully and at the first sign of treachery to shoot the chief first and then crack away at the others, and I would look out for myself as best I might. Jumping from my mule I gave the bridle to Jake, who could not be induced to dismount, handed him my carbine, although I retained my six-shooter hidden, and deliberately walked up to the Indians, saying, "Mike-tig-a-boo?"—"How are you, my friends?" No one answered, and I can assure the reader that the countenances of my red friends were anything but pleasant to look upon. I cast a backward look at Bartlett and saw he had his carbine across the pommel of his saddle all ready for action, and, summoning all my resolution, I quietly sat down alongside the chief, gently pushing away an Indian to make more room. Still no sign, not a word, and I was almost at a loss what to do next. Jake's countenance was a study. In it were expressed fear, admiration and a sort of curiosity to know how the affair would terminate. A happy thought struck me. Drawing from my pocket my trusty and well-browned meerschaum I leisurely filled it with tobacco, picked up a lighted ember from the fire, Indian fashion, with a twig bent in the middle, and lighted it. Inhaling a few puffs, I handed it to the chief, who, after gazing at it for a moment, took hold and smoked it for a moment or two, passing it to the next man and so all around the circle. It was amusing to see with what celerity Jake leaped from his mule the moment he saw the chief place the pipe in his mouth and at once he joined the circle and the palaver began. I should say that after the pipe had passed around we saw quite a number of bucks emerge from different places of concealment, painted and armed as if for a fight, and I then knew that we had a narrow escape. I instructed Jake to inform the chief that Washington (for so the Indians call the President) had heard of the great Black Horse and his tribe; that he had sent me one of his young men to visit them, find out how they were and ask permission to catch some fishes in his creek to take back for medicine. From the length of time Jake took to translate the message, I inferred he had added somewhat to its import. The chief replied and I demanded what he said. He says: "May be so all right—how much pay?" Always an eye to the main chance among the red men, I had supplied myself with a lot of trinkets, looking-glasses, tobacco, beads and matches for distribution, and turned the whole lot out of my hammock at the chief's feet. He was apparently perfectly satisfied, for he called a dwarfed sample of humanity to his side, and in a few minutes more a horse was led up to where we were standing, which he mounted and started off. We followed his example, for Jake told us that he would guide us to the fishing creek. Away we went, up hill and down dale, at the slow trot that an Indian prefers to all other gaits, and I must own that before reaching our destination my bones were stiff and sore. We had no let up for nearly eight miles, which added to our ride of fifteen, before we reached the village, made a pretty good day's exercise. Arrived at Snake Creek we found that by the chief's direction a number of squaws and boys were at work getting ready to fish, and it was fortunate that it was so, for owing to the nature of the stream and its excavated overhanging banks, we could not have used our nets. The squaws withdrew from the bushes, which had served to conceal them, some baskets made like the pictures of old-fashioned hencoops, open at one end which flared, and tightly woven of cottonwood twigs, leaping into the water, they would seize them by the small end and gradually move up the stream, holding the flaring mound against the bank, while the boys would jump and stamp on it to drive the fishes from their places of concealment.

In this manner, in less than an hour, several bushels of small fishes were secured, curiously enough, all of the same species, which has been called by Professor Cope *Siboma atraria var. longiceps*. The species, as a food fish, is poor, the flesh being extremely insipid and full of bones.

It is a fact worthy of note that in Schell Creek, not many miles distant from the stream we fished, no fishes of any kind are to be found; this is the more curious as the conditions of life are apparently the same. In Utah Lake the *Siboma* or mullet are very numerous, and grow to a much larger size than those we found in Snake Creek. Selecting a number of good specimens from the large pile placed at our disposal, and adding a few that Bartlett had secured with hook and line, we again mounted and retraced our way to the village, at the same old eternal jog-trot. We rested until four o'clock, shook hands with our red brethren and started homeward. On our way we espied, a short distance in front, crossing the road, a good-sized rattler, which seemed exceedingly anxious to get out of our way. I drew my revolver and was about to shoot it, when Jake stopped me, saying, "I catch him." He dismounted and borrowing my short-handled Indian quirt, followed the reptile, who, finding he could not get away, threw himself into a coil and rattled most viciously. The Indian advanced close enough to him to snap the lash of the whip and touch his coils, the snake would leap half his length, hiss, and again stepping back in time to avoid the blow, then coil again to be again provoked and tantalized. This continued for some time, every once in a while the snake trying to get away. I directed Jake to break his back, which he did with a dextrous blow of the whip and, handing him to me, I delivered the *coup de grace* by running my knife blade in the back of the head, near where the brain and spinal cord join. He was consigned to the collecting sack and we rode on.

Jake ridiculed the idea of any one being afraid of rattlers and said some of the Indians regarded them as sacred and would on no account destroy them.

I have been informed by Lieut. Wheeler that during his partial ascent of the canyons of the Colorado, in 1871, his Mojam Indians, who were employed to pull the boats up stream, moved barefooted about the rocks, which swarmed with numbers of the rattlers, called "side-winders" in Arizona, the *Crotalus cerastes* of authors on herpetology. I believe that under ordinary circumstances the rattlesnake is a cowardly and inoffensive animal, biting only when provoked, but I cannot think, with old Bartram, that he is a paragon of magnanimity, as related in his "Travels in Carolina," 1791.

During our ride home the sky to the westward, over the chain of mountains, became overcast and a violent thunder storm broke over us, although very little rain fell. As it cleared up, a beautiful rainbow showed itself, and I casually hazarded the question to Jake if he knew what it meant. His reply was about as follows: "Yes, yes; I sabe; heap, heap moons gone; Good Man, He heap mad at Injun, make water come ober, everybody water-dead (drowned); one good Injun and he people hab big canoe; he lib. Maybe so little while he show hisself (pointing to rainbow); Good Man say no more water-dead Injun." I must admit I was suprised and pleased at the extent of knowledge displayed by this poor red man and, questioning him still further, was informed that he also knew that "bad white man had killed God's lily boy." I was more surprised than ever and the reflection of these matters afforded me much gratification. We rode on silently side by side—the Indian crooning to himself, I pondering—when a soldier rode up at full speed and gave me a message from the chief of the party, directing me to return at full speed, as one of the men had accidentally shot himself while playing with his revolver. Jake said: "Sojer heap big dam fool," which was all the sympathy that could be got out of him; and, plunging the spurs into our now tired ani-

mals, in a short time we reached camp, to find, fortunately, that the wound was merely superficial and required little attention.

That night, as my chief and I reposed in front of our tent, smoking and chatting over the events of the day, I could not refrain from alluding to the knowledge of sacred things shown by Antelope Jake, at which he laughed heartily and incredulously. I called Jake up and made him repeat what he had told, but Hoxie, more practical than myself, said: "Jake, how did you find out about all these things?" "White man tole me," was the answer, as he stalked away. Kind reader, I was yet but a very verdant Western pilgrim and away went another cherished illusion regarding the myths, traditions and religion of the North American Indians. I did what seemed best under the circumstances—shook out my pipe and stole quietly away to my blankets.

Natural History.

TWO KINGS OF THE FEATHERED RACE.

THE IMPORTATION OF THE SKYLARK.

WINSTED, Can., Feb. 8.

I WISH to speak of two kingly birds. First, of the foreign quail. Yesterday, as the sun was pouring his splendor on the snow, I put my horse to the cutter and drove off to visit a friend in an adjoining town. The final cause of my visit (as the philosophers say) was a flock of European quail that are wintering near my friend's house. They were hatched in the neighborhood and have been there all the fall and thus far through the winter.

You doubt it? So did I, for though I had seen them in December I had supposed that they had followed the migratory instinct and left some weeks ago for warmer climes. My friend is an old shooter and knows our Bob White perfectly, and he is positive that these are not our quail.

Two weeks ago he shot one out of the flock with the purpose of sending it to your office, but the snow drifts prevented. He thus describes them: they are smaller than common quail, their legs are black (not light-colored or brown), dark feathers on breast and the toes are longer, so that he can tell them by their track on the snow. I hope to secure one from this bevy and send it to you and that will settle the question. And yet we should hardly be surprised to find some of these birds remaining behind, for they are found at times all through the winter in England and elsewhere in Europe, while in India and other warm countries they are permanent residents.

May I call the attention of the officers of game clubs to another matter? These fish and game clubs are doing a noble work for our land, but have they not been too exclusively governed by motives of utility in their labors?

We are all poets in a degree and lovers of the beautiful, and Mrs. Browning has said that "the true poetic heart is more than all poetic fame." Sportsmen, as a class, are appreciative of the beauties of nature, but our clubs have thus far given no attention to the esthetical element within us.

I plead for the skylark. If there is one songster in the grand choir of the fields which America cannot afford to be without it is this wonderful bird.

His power is seen in his place in literature. We have all read of the skylark from our childhood, but our ears have never heard the wild, exulting music which he makes.

We meet him in poetry everywhere—in ancient and in modern times; nor alone in the works of foreign authors, for our American poets have paid their tribute to his charms and set him among the harmonies of their songs.

Gentlemen of the rod and gun, lovers of the meadows and the streams, why have you forgotten the skylark? You send the young of the fishes about the continent and to lands across the sea; you have captured the quail of Sicily and planted them in your fields; but the king of the song birds of the world is only heard in foreign lands!

A few years ago I was sauntering among ancestral meadows (a stranger owns them now) in a land on the other side of the sea, when up from my feet leaped a lark, springing into the air and rushing upward as if he would gain the sun. I threw myself on the grass, in order to keep my eye on him and to lose nothing of his song. Up, up he soared till he appeared the merest speck in the blue sky, and at last was quite gone from sight, but still he rained the music down and filled the air with melody. Some lines of Shelley's fine poem came to my lips:

> Higher still and higher,
> From the earth thou springest
> Like a cloud of fire;
> The blue deep thou wingest,
> And singing still dost soar, and soaring ever singest.
>
> In the golden lightning
> Of the sunken sun,
> O'er which clouds are brightening,
> Thou dost float and run;
> Like an unbodied joy whose race is just begun.

In the February *Scribner's* John Burroughs, the poet of the birds, tells of finding a skylark by the Hudson. He thus speaks of his discovery: "Yes, that unstinted, jubilant, multitudinous song can be none other than the lark's. Presently I was fortunate enough to catch sight of the bird. He had reached his climax in the sky and was hanging with quivering wings beneath a white cloud, against which his form was clearly revealed. I had seen and heard the lark in England, else I should still have been in doubt about the identity of the singer. I was soon in the meadow above which I had heard him; and the first bird I flushed was the lark."

Mr. Burroughs thinks the bird escaped from a cage or was a survivor of a number liberated some years ago on Long Island, and adds, "there is no reason why the lark should not thrive in this country as well as in Europe, and if a few hundred were liberated in any of our fields in April or May I have little doubt they would soon become established. And what an acquisition it would be! As a songster the lark is deserving of all the praise that has been bestowed upon him. His voice is the jocund and inspiring voice of a spring morning. It is like a musical clapping of hands."

The importation of the lark has frequently been urged in American journals, but the task is too large for individuals, and the only hope of setting this splendid singer in the fields of our continent is through the sportsmen's clubs. A small contribution—say five or ten dollars—from each of our game clubs, would be sufficient to secure him for America. They could be imported on favorable terms if a large number were ordered, for they are captured for the table in England and France during the winter months. JOSEPH PULLMAN.

CALIFORNIA QUAIL.

OAKLAND, Cal., Jan. 25.

Editor Forest and Stream:

I see by your issue of Jan. 6 that one of your correspondents, signing himself S. H. C., wishes to know something about California quail, and as I have lived in California all my life and have hunted the quail and have observed their habits to a certain extent, I think I can enlighten him on a few points concerning them.

The so-called California valley quail (*Lophortyx californicus*) abounds from the Columbia River to Lower California in the valleys and on the mountain slopes up to about three thousand feet, above which it is replaced by the mountain quail (*Oreortyx pictus*).

In the fall of the year they congregate in flocks of from fifteen or twenty to several hundred. In the spring they pair off and lay their eggs during April and May, oftentimes raising two broods in a season. The number of eggs varies from ten to twenty and even more. They are very easily tamed, either when taken wild or raised from the eggs, and will lay in captivity.

These birds are found in this part of the country near thick brush, which they stay in during the day, coming out in the morning and evening to feed, but on the slightest alarm they immediately retreat to the brush, where it is very difficult to dislodge them. They do not lie well to a dog unless thoroughly frightened. In coming suddenly on a flock they all rise with a whirr, and then if not shot at they will run quite a distance after lighting. But if you shoot when they first rise they scatter and lie quite close after that. I have shot into a flock as they rose, and have seen several plunge headlong into the brush at the crack of the gun. They oftentimes fly into trees and conceal themselves so closely in the foliage that they are discovered with great difficulty.

During one of our dryest years, 1877 or '78, I don't remember which, a large number of quail did not pair off and breed. Large flocks could be flushed in the midst of the breeding season, and it seemed as if, through some wonderful foresight, the birds knew the season would be dry and there would not be food enough for their offspring. This fact was not only noticed here but at Santa Barbara as well.

As for the mountain quail they are not found in this part of the State, and as a consequence I do not know much about them, so I will leave a de-cription of their habits to some abler and more experienced pen than mine.

As to introducing either of these species into the Eastern States, I think the attempt would be a failure. In regard to the valley quail I am personally acquainted with a gentleman living in Central New York who made the attempt. The first winter it was so cold for the birds in the woodshed that they had to be brought into the kitchen to be kept alive. There is no doubt about it, the birds cannot stand the cold weather. Mr. J. G Cooper, an authority, says on this subject: "They (valley quail) are carried East in almost every steamer, but no account of their successful naturalization in our more severe Atlantic climate has yet been published. They are, however, said to be very numerous in France, where they have found a suitable climate and are well protected. Experiments made in England have not been so successful."

They might, I think, be introduced with success to the "Sunny South," but as for introducing them successfully into the Eastern States or any State, in fact, where they have severe snows, I think it would be throwing time and money away to attempt it.

As to introducing the mountain quail to the Atlantic coast, I have no doubt that they could stand the cold, but I think they rather shun civilization, for they live up on steep mountain sides in rough places. To take these birds from their mountain fastnesses and retreats and introduce them into the cultivated fields of Long Island or Massachusetts would be like bringing the Esquimaux from their desolate ice fields or the Bushmen from their arid deserts and leaving them in the beautiful flowery tropics. In either case the result is the same—they would pine away and die. CHICO.

See FOREST AND STREAM, Jan. 6 and 20, 1881.

HAMMOND, N. Y., Jan. 31.

I have just returned from Ogdensburg, where, through the kindness of the Hon. Dan. Magone, to whom they belong, and to whom they were sent from their place of nativity in Oregon, I had the pleasure of examining twenty Oregon quail. My first feeling was surprise, as they exceed in beauty anything I had before been accustomed to recognize as quail. The following description may help you to see them as I can yet in my mind's eye. They are much more upright in carriage than our variety; legs much stouter, bird larger, wings and back snuff brown, edges of wings pencilled with white, head and back of neck grey, extending around on to breast; throat a lustrous maroon; wing supports chestnut, barred with white; a handsome tuft on the crown of head from the centre of which grow two long, narrow feathers. If you can, from this meager description, you will please give further particulars relative to this bird, also your opinion as to the probable success of attempts to propagate in confinement or well placed where they could have care, food and protection, and where, in your opinion, is the best place to turn them out.

I was requested to make these inquiries by Mr. M., as he intends to turn them out in the spring. H. A. M.

The birds, from your description, are evidently the Mountain quail of the Pacific coast (*Oreortyx pictus*). We do not see why they might not do well if turned out in proper country and looked after a little in winter. On the Pacific coast they inhabit the mountain sides and elevated plateaus of the ranges, and are thus more or less accustomed to cold and snow. They are beautiful birds, and we regard the flesh as excellent. If possible they should be turned out in a country as nearly like that from which they come; that is a rough, mountainous or hilly district. If they escape the combined assaults of vermin and sportsmen during the first summer we may hope to hear of them again. We do not know whether they would breed in confinement or not.

Please keep us advised as to the progress of this attempt at acclimatization.

SEVERAL SEALS have been seen off the Long Island coast this winter, and one day last week a small gray seal was seen on a cake of ice drifting toward Bedloe's Island, in New York Bay. Two boatmen from the Battery rowed to the cake and killed the seal. It measured three feet seven inches in length and weighed twenty-five pounds. It had a pistol-shot wound in the head and is supposed to have been the same seal that was shot at by two sailors several weeks ago.

The occurrence of these animals in this neighborhood is not, however, at all uncommon, and we have seen them in considerable numbers on the Connecticut coast, both in spring and fall. Last spring a seal was killed in the Housatonic River, not far below Derby, Conn. All the specimens recently captured in this vicinity appear to be be the common *Phoca vitulina*.

MINNESOTA BIRDS.—The St. Paul *Pioneer-Press*, of January 30 contains an interesting list of the winter birds of Minnesota, by Mr. Thos. S. Roberts. Fifty species are mentioned, divided into "permanent residents," "winter visitants," "half hardy" and "accidental." Mr. Roberts' article is very pleasantly written and conveys a good deal of information of a character not often found in a daily newspaper.

HORNS OF MOOSE AND DEER.—IN FOREST AND STREAM, February 3, I notice your correspondent, "J. C.," of Bangor, is in doubt about moose and deer shedding their horns every year. I have killed over fifty moose and hunted over thirty years in the northwestern part of Maine, and I have never known an instance of moose, deer or caribou retaining their antlers, excepting occasionally a spike-horn bull moose. These carry a straight prong on each side, from six to ten inches long, through the whole year. Moose always shed their horns in the first thaw in the winter after January comes in, and then one antler at a time. I never found two together, except on the moose's head. J. G. RICH.

HABITS OF RUFFED GROUSE.—Had Harry Woodland inquired in what manner does the ruffed grouse leave her young of, say, a day old, when driven off, I would have replied that if notes were to be taken on the spot a mighty nimble pen would be required to jot them down if all their movements were recorded as they occurred.

In going through a large body of woods in northern Michigan, in the summer of 1878, I stopped for a moment to call to a companion who was some distance away. As I called, an old grouse came out from under a thimble berry bush right at my feet, ran a yard or so, then flew possibly five more, dropped on the ground and fluttered and tore about at a furious rate, creating quite a little tornado among the dry leaves that covered the ground. Having attempted, when a boy, to catch an old bird under similar circumstances, hurt as this one seemed to be, without very good success, I concluded to watch proceedings. For an instant after the old bird left the bush the young ones fairly swarmed about my feet; the next, not one was to be seen, though the woods was comparatively open. As I made no attempt to capture the old bird, she finally righted up and commenced to make off. Both wings were trailing and she tipping, first to one side, then the other, making much more of an effort to navigate than she probably would have done a few moments later, if dropped in thick cover with a broken wing, particularly if one had no dog and only a single barreled muzzle-loader. After waddling off two or three rods and failing to induce me to follow, she came part way back, tipping more and more, at times rolling clear on to her back, in which position she would remain for a few seconds, working her legs back and forth as though just gone. Having a little curiosity to see something more of the young ones than I was at first permitted, I commenced very carefully poking among the leaves, and soon had them in my hat, a common felt. They were unable to jump out, and though hardly more than out of the shell were in every respect true to nature. It was amusing to see the manner in which the little things, in response to their mother's quit, quit, cur-r-r, cur-r-r, would squat and straighten out in the bottom of the hat, and how lively they scampered off and found cover under some large leaf the instant they were again at liberty. I did not watch proceedings further, but doubt if the little things were left to themselves long, as the old bird was probably at no time more than twenty yards away. This was in a section where grouse were very plenty, and where they are less accustomed to the report of guns than in more thickly settled districts, in many of which they are fast becoming a thing of the past.

North Bloomfield, Ohio. SUBSCRIBER.

PHILADELPHIA NOTES.—I have been looking about among the taxidermists for snowy owls during the past week, impelled by curiosity to learn where these Arctic birds have gone, as we all felt confident they would be numerous in our vicinity. We have discovered that collectors in Baltimore and Virginia have been killing fine specimens, and that this winter many are showing themselves further South than ever before.

Mr. James Sevard, the artist, has recieved an order from Hamilton Disston, Esq., of Philadelphia, to paint for him a duck shooting scene, and Mr. S. is only waiting for open weather to begin his work; for he intends making a sketch on the ground to be selected. Your correspondent visited his studio last week and was shown a fine portrait of Mr. J. Fassett's setter dogs Dash and Frank, some very natural dead game, and a capital trout-fishing scene with the well known Vogel in a very life-like position just striking or hooking a fish.

Mr. John Krider's son Joe, with his friend, Mr. Abbott, of Philadelphia, are making preparations for a tour to the Northwest for the purpose of collecting rare winter birds, and their stay will in all probability be prolonged until April or May. Joe naturally falls into the bird department of "Uncle John's" establishment and is fast becoming expert in the taxidermist art. HOMO.

PINE GROSBEAKS IN MAINE—Bethel, Maine, Feb. 5.—Editor Forest and Stream: I notice in your issue of January 27 your correspondent Fred. Lewis speaks of a flock of this bird seen near Jamaica Plains last month.

This winter small flocks of them are almost every day about my farm and sometimes fly into my barn; even in the coldest days, when twenty and more degrees below, they are frequently seen.

I also saw this week two sparrows in my door-yard which resembled the English sparrow, and as the cold is intense and the snow four feet deep, and there has not been an hour for sixty days that it would give under foot, it is quite unexpected to see these birds. Twenty-five miles northwest of here, at the Umbagog Lake, and through the whole region of lakes north of that, I have never in thirty years past seen a pine grosbeak summer or winter. But the lake country is about ten or twelve hundred feet higher altitude than this place.

The American crossbill are abundant there. In any warm wintry day they come in large flocks about the doors of houses and camps. The Canada jay is also very abundant there, also the Canada partridge, at all seasons of the year.

J. G. RICH.

WINTERING IN MAINE—Vinalhaven, Me., Jan. 30.—*Editor Forest and Stream:* I saw to-day six robins (*Turdus migratorius*). I have noticed that these little fellows, or about the same number, have remained with us for the last three winters taking up their residence in a large swampy tract of land covered thickly with a small growth of evergreen trees. During the middle portion of warm, sunny days they all sally forth to hunt among the weeds and along the seashore for food, which consists of seeds and small salt water worms and insects. They seem to be cheerful and hearty, and apparently in good condition. Is it not somewhat unusual for these birds to remain so far North—about 45 deg during winter? I have also noticed for two or three winters past three or four king fishers (*Gerlyc alycon*) around the outer shores. I have never seen one perched upon a stub or tree watching or diving for fish, as is their habit in warm weather, but they apparently depend upon what they can pick up around the shore line at low water. I am aware that Verrill says they are sometimes seen here in Maine in winter, but I am of the opinion that they are rare so far North as a winter residents.

MEDIOUS.

DEVOURED BY WOLVES.—We clip the following item from the St. Petersburg *Golos*. We do not have, happily, wolves of this kind on this side of the water at the present time. The extract says:

"On the 12th of January Alexander Vassalwitch Ellaieff, a medical student, the author of many articles that have from time to time appeared in Russian journals, and an indefatigable student of the archæology and anthropology of the ancient province of Novgorod, arrived on the estate of a Mr. Vassilief, in old Russia, in order to hunt wolves. He was desired to stay the night at the house, and not to face the dangers of the chase alone. To this he agreed, but when Mr. Vassilief, who had been obliged to absent himself during the day, returned in the evening he learned that his guest had left the house about 4 o'clock in the afternoon. His return was looked for from hour to hour, but the whole of the night passed without his arrivel. On the following day, toward evening, a peasant brought the intelligence that the young man had been torn to pieces and devoured by wolves. When a search was made the snow was found to be covered with blood-stains, and scattered around were pieces of clothes and hunting appurtences. Not far from the place were found several large bones, and the stock of the student's gun, with the barrel broken off in the life-and-death struggle which he had evidently maintained with his numerous foes. The many wolf-tracks and blood-stains all around showed that a severe struggle had taken place, and that several of the animals had been killed and devoured by their fellows."

BIRDS AT THE WINDOW.—On a recent evening, while Mr. George Devoe, of Spotswood, N. J., was entertaining a large party, a quail flew against the parlor window, breaking the glass. The bird was caught in the room and did not appear to be much hurt.

Last week a singular incident occurred at the residence of Mr. C. E. Gibbs, near Billingsport, in Gloucester County, N. J. A few days ago Mr. Gibbs was attracted to his room by a grand commotion within, and found a large hawk, frightened by the unusual situation in which it found itself, flying wildly about the apartment and playing havoc with all the smaller articles in the room. The bird was a powerful and vicious one and was only captured with much difficulty, fighting, with beak and claw, any one who approached it. It had evidently swooped down upon the canary bird hanging within the window, not seeing the glass between it and its prey, as the panes were broken and the cage upset.

On Tuesday last a hawk made a dash at a canary bird, the cage of which was hanging near the sitting-room of Capt. V. W. Mount's hotel in Hightstown. The hawk was stunned by contact with the glass and fell to the pavement, where it lay for several minutes, then revived and flew away.

During the recent campaign, as a torchlight procession was passing the house of the writer, a number of English sparrows fluttered wildly against the window. When the sash was raised the birds entered the room and perched on the picture frames.

A.

WHAT DO THEY MEAN BY IT?—Oswego, N. Y., Feb. 1.—During the past four days quite a number of duck have passed over this city, headed for the Lake or Canada. Flocks of about fifty or sixty have been seen. Every feeding ground is frozen solid hereabouts, and I am sure the prospects are no better across the Lake "Ontario." The mercury stands at zero to-day. Where can those duck be going unless to a freeze-out? Their appearance has not brought (as predicted by a few) any thaw, but we are in hopes this three months spell of cold may let up and trust these duck are posted. Last fall nearly every duck left our preserve (Sandy Ponds) Nov. 10 and 12. A severe snow storm came Nov. 15; since that time everything has been frozen up here, which proves they knew what was coming and left for warmer parts. It was a singular occurrence, as ducks usually remain on those ponds until considerable ice is formed, and much later.

LEATHER STOCKING.

A TRI-PEDAL ROOSTER—City Hall, N. Y.—I noticed in a recent number an account of a three-legged hen, which was regarded as a great curiosity. I owned, until a few weeks ago, a rooster with three legs. Unlike the hen, however, his third leg was useless. It was attached to his body between and a little behind his other legs, and was fully developed and perfect in every respect. He kept it drawn up a little way so as not to interfere with locomotion. He was a white leghorn, and a good healthy bird, able to perform all the duties expected of a rooster. I do not know what became of him as he disappeared mysteriously, but I suspect that my spaniels know all about it.

W. H. L.

OLD SQUAW IN THE NIAGARA RIVER.—Notwithstanding the intense cold of the present winter the hardy old squaw is abundant at present on the Niagara River. A St. Davids, Canada, correspondent writes us, under date February 10, as follows: "Cowcens in immense numbers are congregated in the Niagara River in every little open spot—I say open spot, for you know the river has been completely frozen over this winter for the first time within the memory of 'the oldest inhabitant,' and some people have been foolhardy enough to cross on the ice."

HIBERNATING SNAKES.—The employes on the work train on the Erie and Pittsburg Road, one day last week, while loading gravel from a pit near Harbor Bridge, unearthed a den of seventy snakes which had gone into winter quarters in one mace. The snakes were of six different species and measured from five inches up to three and a half feet.

LIST OF ARRIVALS AT CENTRAL PARK MENAGERIE FOR WEEK ENDING FEB. 9.—One deer, *Cariacus virginianus*, presented by Mr. Anson Phelps Stokes, New Brighton; one horned owl, *Bubo virginianus*, presented by Col. A. J. Clements, Liberty, N. Y.; two double crested thickness, *Pelecanus bicristatus*, *Bab.* Mexico, presented by Capt. W. Powis Gladwin, S. S. Arran; two peregrine falcons, *Falco peregrinus*, *Hab.* India, presented by Capt. Alexander Webster, S. S. Bengier. These birds flew aboard the vessel in the China Sea; one zebu, *Bos indicus*. Born in the menagerie: one lion monkey, *Cercopithecus nigroviridis*, and one spider monkey, *Ateles ypsilonotus*, purchased.

N. A. COCKRAN, Director.

Game Bag and Gun.

THE FIRST EDITION of the FOREST AND STREAM'S pamphlet on the "Dittmar Sporting Powder" having been exhausted, a second is now in press and will be ready Saturday. Copies will be mailed free upon application. The articles contained in the pamphlet were published in this journal as follows:

Sept. 23, 1880—The "Dittmar Sporting Powder."

Sept. 30, 1880—Evading Detonation.

Oct. 7, 1880—The Detonation of "Dittmar Sporting Powder."

Dec. 9, 1880—The Dittmars' Abracadabra.

HINTS ON DEER SHOOTING.

NO man can more fully realize than the writer the difficulty of undertaking this knotty subject, and no one is more convinced that all the books from here to Halifax will not teach a man to hunt deer, or any other game, for that matter. So all I will endeavor to do is simply and purely to give a few hints, more with the view of helping out a tyro than with any egotistical ideas on any definite mode or style of action. For verily, to hunt successfully and kill the white-tail deer is a rare accomplishment, and one that requires much patience, observation and many fine points in woodcraft, which may be learned at any age, even after years of labor.

No comparison can be drawn between deer shooting and the killing of any kind of feathered game, as to do the former in a legitimate way no appliances can be brought to bear, whereas decoys, calls, blinds, etc., are frequently used in the latter by our best and most thorough sportsmen, and last, but far from being least, the trusty dog does the lion's share, especially in finding the game, which, after all, is the most difficult part of the performance. So I repeat, that a man who kills many deer as a "still hunter" is perforce a good hunter, and one who knows thoroughly the haunts and habits of the animal, besides being endowed with a large quota of common sense.

Although I have killed a great many deer in the Northwestern States and Territories, I consider myself nothing but a novice, and don't think I ever would become an expert, as I have not sufficient patience, and am apt to rely too much upon making up for my many deficiencies by my confidence in my marksmanship. This is a grand mistake and one I have paid for many a time to my sorrow.

I know nothing about driving deer into a lake and butchering them with a knife, paddle or shot gun. I have never watched a salt lick or killed a deer from a tree top with a howitzer or blunderbuss, but I have killed several after tracking them perhaps for hours, and I have also killed some from a good stand on a runaway, therefore I will confine myself to these latter modes of hunting, being somewhat familiar with them.

I remember with what delight I hailed the first snow after the opening of the deer season, when up North, and how anxiously I waited for it. I also remember equally well that I have frequently hunted with the thermometer 20 deg. below zero, and fired ne'er a shot; but then these are exceptions, and, being unpleasant ones, I will banish them and say no more on this doleful subject.

Given a good deer country, two inches of snow, a Winchester repeater (preferably the Express, but, if not, any other model of same make, loaded with hollow pointed bullets) and suitable clothing, all these backed by a substantial breakfast, a good pair of legs, and off you go. In still hunting over a level, timbered country there is but little choice of ground, and the wind must decide the course; but in a hilly, rolling piece of woods keep well up on the backbones as much as possible, as it is far easier to look down hill than up, besides the deer are more likely to be in low ground in cold weather, so keep well above them to avoid coming on them too suddenly. Travel slowly, scrutinize each bush; and, above all, don't race over the ground, as that does no good, tires you out, scares away the game and leaves you nothing but disappointment. The most successful deer hunters I have ever seen were easy going, poky old fellows who would go wandering along in a meandering course at a snail pace, gawking at everything, never breaking a twig, keeping clear of all brush, and, in fact, going along as though they were trying to put in as much time as they could and cover as little ground as possible without stopping dead still. Those fellows see everything, don't tear their clothes, don't go stumbling over logs and into briar patches. They go winding along through windfalls and tamarack swamps as though a road had already been cleared for them, and when a deer does jump up, why there they are, cool as a cucumber, stock still, so slow, silent and easy is their progress that oftentimes the deer is not sure of their whereabouts, and the only information he has of their proximity is a puff of smoke and a ball behind the shoulder—sad, of course, but true.

When first I hunted deer in what I then considered "still" hunting style I don't believe I killed on an average one deer a week, in fact, sometimes I didn't see one a week, and when I did bowl one over it was purely accidental and entirely owing to being a good snap shot—that, being an inborn gift, I deserve no credit for it. There were plenty of deer, too, as every now and then I saw a fresh, warm bed and hundreds of tracks. But, alas! how I bungled. I thrashed around from one thicket to another, sprawling over logs which I vainly attempted to straddle, coming to grief against thorns, barking my shins against stumps, leaving pieces of flesh sticking to brambles, becoming irretrievably entangled in vines and creepers, and getting snarled up generally, going headlong down banks, riding-on-a-rail fashion over logs that spanned streams and frequently dropping some useful article into the water below, running great risk of decapitating myself against overhanging boughs, plowing down holes, and, to sum it up short, making racket enough to scare away all the deer within a radius of 300 yards. I don't suppose every one is as clumsy as I was, still it must be admitted that to travel through the brush and undergrowth is simply an art; and, what is more, there are very few who are masters of it, and to walk steadily along without breaking twigs under foot or rubbing against frozen branches is only acquired by long practice and the exercise of a great deal of caution, requiring constant attention and unremitting watchfulness.

Be sure of one thing, a deer's ears and nose are his best friends, his eyes being of secondary importance. I have worked up to within a hundred yards of deer in the open, when had they been as keen sighted as antelope I never could have managed it. But what they lack in sharpness of eyesight they fully make up in acuteness of hearing and smell. Give them credit for being about perfect in these accomplishments and you will save yourself many hours of fruitless toil. Again, a deer when lying down has a much better opportunity of seeing a man walking through the woods than the man has of seeing him—as one is stationary and the other is moving, besides being, in that position, so much the larger of the two. Consequently move slowly, noiselessly and carefully, so as not to draw his attention or excite his alarm; and even then, be you ever so careful, they will often skip off without even being seen; and that generally settles it, for a deer once startled is all the more vigilant, and although he may not travel far yet he will usually keep out of harm's way and keep his weather eye on his back track.

While hunting in the pineries of Minnesota I once met an old half-breed who taught me more in a few days than I ever learned before or since. It was when I compared my scanty superficial knowledge with his sound practical lore that I discovered the lamentable extent of my ignorance and how much I had to learn. This old veteran was about fifty years of age, and he had hunted deer for over thirty-five years, making it a specialty. It can be readily understood that his advice was worth taking, and I am only sorry I did not prolong my hunt with him, as every deer brought out some new strategem, and every move was checkmated by this unerring, steady old Nimrod. He was a regular hound, and could find more game than three ordinary hunters; but, what an anomaly—he could not shoot. Actually, if a deer moved, or even wagged his ears, the old fellow would quietly wait till he was stock still, and then blaze away. Sometimes he would kill, but that was not by any means a foregone conclusion; and as he would insist on using a single barrel muzzle-loading rifle, of course the deer was off before he could "do it some more." To miss with him seemed rather a matter to be expected than one to get mad about, so, nothing daunted, he would reload his rifle, sit on a log, light his pipe, soliloquize and ascribe reasons for his maladroitness, and make wise resolutions for the future, and having put in about half an hour, go ahead, take up the track of the doomed deer, and eight times out of ten get another shot, with varying results, inside of an hour. How he did it I never could tell; all I know is that I have followed him for days, from morn till dusk, and have seen him shoot three or four times at the same deer in a day, and generally bag him in the long run. When we became better acquainted, it was mutually agreed and understood that he would do the finding and I the shooting; and by that means we generally had the pleasure of hanging up a deer or two a day without his firing a shot. At first I ascribed his finding the deer merely to good luck, but I soon got over that. He would follow a fresh track a short distance, and without giving any reason, and guided by an unerring judgment, which was simply supernatural, would leave it or strike out at right angles, and shortly come upon the same track, or else point out the deer, perhaps fifty or one hundred yards away, sniffing and watching his back track, while his foes were either in his flank or rear. On such an occasion it was merely a matter of target shooting with me and not interesting, being entirely too mechanical, so that I frequently purposely made a noise to start the unsuspecting stag to give him a chance.

This conduct on my part was sure to be followed by a blessing from the veteran, who recognized no rules or laws governing such shots, and as I seldom missed, it was difficult to make him perceive the difference, as to any case the deer was "venison." One day I missed clear and clean, and as the doe kept out of my sight I could not shoot again. The old man, in a fit of rage at my blundering in having made the deer run before I fired at him, threw up his rifle and, without taking any aim, let fly. Down came the doe, all in a heap, shot through the neck, and dead as a nail. The funny part is that to this day the old fellow thinks I did the killing; whereas I only fired one shot and that was away high.

This man's antipathy to a breech-loader amounted to absolute hatred, and it was only after repeatedly showing him its advantages that he so far condescended as to allow me to hunt with him while carrying my Winchester. I shall never forget the queer expression on his tough, weather-beaten countenance when at last I convinced him of the superiority of the repeating rifle.

As I said in the beginning, there is no giving precise advice on the finding and killing of deer, and all I can do is to repeat what I have said, and emphasize it by repetition—Go slowly, make no noise, keep your eyes open—don't be guided by the pace of others, but cover only as much ground as you can thoroughly examine, let your friends bang about as much as they please, keep in their flank and you will probably get more and better shots than they do.

In driving deer to a runaway, let the noisy ones do the driving and the quiet ones stand. Keep well out of sight and don't move. Frequently a deer upon being started runs a short distance and stops to discover "what's the row." Having reassured himself as to direction, etc., and that danger is approaching he runs on a little further perhaps before emerging into the open. Now if you move you will be sure to be discovered, and the deer will change his course, so keep still and quiet, and don't get uneasy for, often when you least expect it, on comes the deer, and that makes up for many an hour of suspense and fatigue.

When the deer is killed it is always better, if possible, to take it to camp at once as, however much caution is taken in searing the venison against depredations by wolves, foxes, crows, etc., it sometimes happens that the meat is badly used up in one night, and indeed I have seen a whole carcass so badly torn up and disfigured that it was of no further use. To avoid this hang up the meat so that it will leave the head at least three feet from the ground. This is no easy matter when it happens to be a big buck weighing 125 pounds and over, and one man has all he can do unless he is an expert. I have

tried a good many ways, and when I hunt alone I carry a stout line wound round my waist, say ten feet long, and a small iron pulley in my pocket, with these I can hang up anything in the deer line in short notice, and time is sometimes an object, especially when the deer is killed at dusk. Where crows abound they prove very destructive and are not easily kept off the carcass, the usual method is to cover it with boughs—the best way is to kill a crow if possible, hang just above the meat and that will be a stopper sure enough.

The easiest way of carrying a deer is to drag it to a fallen tree, place it on it lengthwise, back up against it, catch the hind legs in one hand and the fore legs in the other and strike for camp; you then have the whole weight on the back of the neck and shoulders, and when you want a rest back up against a tree with rough bark, or if very tired let the carcass rest on a fallen tree and proceed as before. A deer after being disemboweled will average about 80 to 100 pounds; that with rifle accoutrements is quite a good load, especially if your path is through thick woods and underbrush.

The cleanest and best way to dress a deer is to hang it up head uppermost, slit down the stomach and then take out the entrails, with a little caution the hide and meat can be kept perfectly clean. If done on the ground keep the head well uphill that the blood may run clear of the meat, of course when cutting a deer's throat this position should be reversed.

If the hunter's clothing is of any importance in any kind of shooting here is just where most care should be observed, and I consider that this requires some attention. Whatever be the material, let the color be such that it cannot be easily distinguished from the woods in which you hunt. In other words, dress so as to be as little conspicuous as possible, and avoid all clothes that won't stand rough usage. The feet are first to be considered. In intensely cold weather or even when it freezes (say 15 above zero, and from that down to 25 deg. below) there can be nothing as good as a buckskin moccasin, as it allows perfect freedom to the feet and toes, does not slip and is noiseless. First put on a pair of cotton socks, then two or three pair of heavy woollen home-made socks, then the moccasins. If the feet are very tender have the moccasins made with extra heavy soles, or if that won't do sew a piece of buckskin to the sole making them "double deckers." The heavy buckskin, however, is generally quite sufficient. Be sure that the moccasins have good long canvas tops so that they can be wrapped well around the ankles, and thereby protect them as well as the socks from being injured by the brush.

In damp weather a pair of woolen socks, strong leather slippers and arctic overshoes are excellent, being light waterproof as far as they go and comfortable. If marshes have to be crossed in open weather the dreadful rubber boot has to be worn, and chances taken regarding galled feet, tired and worn out limbs, etc. The underclothing should be of the heaviest flannel, trowsers of buckskin, corduroy or canvas. But in any case the finest arrangement is to have some strips of soft, well-tanned muskrat skins sewn on to the pants, especially about the knees and on the outside of the legs. This prevents the frozen branches from rattling against them when passing through thick underbrush, and also protects the trowsers. Ordinary canvas pants, especially when new, are about as noisy in the brush as a pair of stove pipes would be if worn in a similar manner. Therefore keep out of them in still hunting. Buckskin has one great disadvantage, it becomes very heavy and soggy when wet, and shrinks alarmingly when dried if not handled with the greatest care. The jacket should be double-breasted and pea-jacket shape, and the one "par excellence" is the English dog skin, but mole skin, corduroy, velveteen, buckskin or even canvas with heavy woolen lining are all good enough so that the color is right. A vest is of no use. I greatly prefer a guernsey or cardigan, they being all wool are very warm and light, and do not bear upon any part of the body, these with a thick blue flannel shirt and turn down collar will keep one warm, and at the same time leave every part of the body free and easy.

Never wear a fur cap in the woods. They are the cause of much trouble, especially when hunting. Many a good fellow has had his cap mistaken for a coon and goodness only knows what kind of animal, to the distorted vision of some bungler, and found himself converted into a target at short notice. On these occasions the aforesaid bungler never pulls the wrong trigger, always shoots accurately, and never has a miss-fire from careless loading; so look out, for although this man can't hit a barn under ordinary circumstances, he will make a plumb centre at any distance and with anything on a fur cap with a human skull as "filling"—so beware. If you must keep your head and ears warm, my bald-headed friend, why be sure you cover your fur cap with something that resembles no living animal, even an antediluvian one, as that is dangerous when near a man who would fill a horse with lead, thinking it was a deer.

Mittens with a forefinger and thumb are just the things. A belt worn around the waist is the most convenient way of carrying cartridges, and is also a good place for the knife. For brush use don't buy a knife of the dirk pattern with a guard, as this guard will catch in branches, etc., and goodbye knife. I have lost several in this way and speak feelingly on the subject. There are several contrivances to hold a knife in the sheath, but they soon get out of order. Get an ordinary extra heavy butcher's knife and carry it in a big leather sheath—one that will hold all the blade and one-half of the handle—leaving out just enough so you can get hold of it. Then it won't get pulled out, no matter where you go. Wear it over the right hip pocket and well behind, it is then out of the way. Always select a knife with the blade extending its whole length and buckhorn handle riveted on, as any other kind will go all to pieces if chopped with, and that is sometimes indispensable.

I would never handicap myself with a hatchet, but would rather put the extra weight into my knife and rifle barrel, although, of course, there is no denying its use. Every ounce counts, and with me everything gives way to the rifle, which should weigh between 8¼ and 10 pounds.

One word more about my old instructor. I am happy to say he now uses a Sharps, one that I bought for him at St. Paul, Minn., and with which he has killed hundreds of deer. I saw this grand old man in 1876—met him by accident at a road station in Dakota. He came forward, erect and strong as ever, the very picture of an athlete, shook my hand about as if and, turning to some of his friends, said, "This is the man who bought that rifle (pointing to his Sharps) and the man who shoots crows on the wing with a Winchester. If I could handle a gun as he does I would willingly give all I am likely to make this winter, both by trapping and shooting." So genuine a compliment, coming from the heart as it did, could not help affecting me, and I felt myself blush like a school girl and shook hands with the good old boy with a feeling of gratitude I will never forget.

The train moved on and he soon was lost to view, but I shall ever picture him as he is, cool, brave and true hearted, honest and truthful to a fault, a staunch friend and patient preceptor, equal to any emergency and full of expedient, in my estimation the best and most thorough hunter and trapper I ever knew and, although untutored and unlettered, still I would gladly walk ten miles to have a chat with him, and smoke a pipe as of old, seated on a log, and listening to every word as it came out, short cut and to the point, stamped with an air of truth that defied all doubt and precluded misapprehension. Should this article ever be read to him I vouch he will recognize the picture and remember

TIRADOR.

MICHIGAN SPORTSMEN'S ASSOCIATION.

SECRETARY'S MINUTES—TUESDAY AFTERNOON SESSION—JAN. 25, 1881.

THE sixth annual session of the Michigan Sportsmen's Association convened at Lansing, in the room of the State Board of Charities, in the Capitol building, courteously granted for this occasion by Congressman H. W. Lord, and Mr. D. B. Briggs, Deputy Secretary of State. Dr. E. S. Holmes, of Grand Rapids, President of the Association, called the meeting to order at 3:20 P. M. In his opening remarks the President expressed his pleasure in meeting so large a delegation of representative gentlemen from all portions of the State drawn together by one common interest, and commended to their careful consideration the various questions which will come before the Association, and especially the project now under consideration of establishing a game preserve for the purpose of keeping quail alive through the winter. The President referred to the spirit of earnestness which seemed to possess every one present, believing that good results would come from the present meeting and concluded by appointing as Committee on Credentials, Messrs. E. C. Nichols, C. W. Higby and E. H. Gillman.

The Committee on Credentials reported auxiliary clubs represented by delegates as follows:

East Saginaw Game Protection Club—G. L. Remington, J. R. Livingston, V. Kindler, W. B. Mershon, H. B. Roney.

Battle Creek Sportsmen's Association—Mayor E. C. Nichols, N. A. Osgood, H. H. Hubbard.

Hart Sportsmen's Club—L. A. McIntyre.

Lake St. Clair Fishing and Shooting Club—L. W. Tinkre, Geo. H. Hopkins, Hon. Don M. Dickinson.

Central City (Jackson) Sportsmen's Association—Hon. C. W. Higby, Hon. Grove H. Woolcott, T. J. Besmer, Geo. Allen, Geo. Mann.

Bay Point Shooting Club (of Erie, Mich.)—A. J. Keeney, Dr. W. B. Gifford.

Kent County Shooting Club (of Grand Rapids)—T. Stewart White, W. C. Dennis, Geo. A. Gould.

Saginaw Sportsmen's Club—R. J. Birney.

Point Mouillie Shooting Club—E. H. Gillman.

Bay City Shooting and Fishing Club—S. A. Van Deusen, Charles W. Catt, Edward Carrier, F. H. Lord, Geo. C. Greenwood.

Hastings Shooting Club—Geo. E. Goodyear.

Grand Haven Shooting Club—Thos. Friant.

Kalamazoo Gun Club—Hon. T. S. Cobb, Hon. S. S. Cobb.

North Channel Shooting and Fishing Club (Detroit)—Hon. H. W. Lord.

Bay County Sportsmen's Association (Bay City)—Mayor John H. Wilkins, John Heath, Geo. E. Aiken, E. Y. Williams, Hon. C. F. Gibson.

There were also present, Mr. J. G. Portman, of Pokagon, Superintendent of Michigan Fisheries, Messrs. A. J. Kellogg, of Detroit, and Dr. J. C. Parker, of Grand Rapids, Mich., Fish Commissioners, Mr. Frank N. Clark, Superintendent of the United States Fish Hatchery, at Northville, Mich., and a number of others, including Senators and Representatives.

The following gentlemen were elected individual members of the association: Wm. B. Mershon, East Saginaw; Chas. W. Cate and F. H. Lord, Bay City; Chief of Police A. J. Rogers, E. S. Barbour, T. W. Edwards and Robert P. Toms, Detroit; Chas. S. Hamilton, Marshall; Thos. Friant, Grand Haven; T. Stewart White, Geo. A. Gould and W. C. Dennis, Grand Rapids.

The Secretary read a letter from Wm. C. Colburn, Secretary and Treasurer of the Detroit Bridge and Iron Works, to E. H. Gillman relative to this meeting, in which the writer urged the importance of a law prohibiting the shipment of game from the State; advised shortening the deer, woodcock and quail hunting season, and also the prohibition of shooting ducks after sunset or from batteries, and the passage of a law prohibiting Sunday shooting.

The Secretary also read the following letter from the same writer:

DETROIT, MICH., Jan. 21.

DR. E. C. HOLMES, Prest. M. S. Ass'n.—Dear Sir—A severe attack of rheumatism has so disabled me that I find it impossible to attend the annual meeting of our association which convenes at Lansing on the 25th inst. I regret the fact exceedingly, as I am more and more impressed with the great importance to our State that we speedily have more efficient laws for the protection and preservation of our game animals, birds and fish, and I feel that every sportsman and good citizen of the commonwealth who has given thought to the subject and informed himself as to the facts in the case is in duty bound to render such aid as he can in procuring the needed legislation. Our association has in the past few years done an important work in awakening public opinion upon this subject, and the information which has been gathered and which will be laid before the present Legislature, it seems to me ought to be decisive in influencing such amendments to our game laws as will at least place us on an equal footing with our neighboring States. In presenting our case to the Legislature too much stress cannot be put upon the fact, that our mission is in no wise a selfish one; that what we ask is for the best interests of the State at large; that the value of our game, as a food product, is greatly underestimated by the masses of our people, and the great danger is that its true worth will only be appreciated when the supply has been exhausted, which, under the existing condition of things, may be looked for at no distant day.

I trust that the meeting will prove, in all respects, a successful one, and that we shall receive at the hands of our legislators such consideration and support as the merits and importance of our work are clearly entitled to. Yours truly,

W. C. COLBURN.

The President appointed J. R. Livingston and Thos. Friant to serve with E. C. Nichols as Committee on Voluntary Essays and Papers, in the absence of the other two members of the committee.

On motion the entire matter of reports of standing committees was referred to the Committee on Voluntary Essays and Papers, to report a programme for this evening.

Mr. Roney offered the following resolution:

Resolved, That the members of the Senate and House of Representatives, the Governor and State officers be cordially invited to attend the sessions of this association.

On motion adjourned until 7:30 P. M. H. B. RONEY, Secretary.

WEDNESDAY EVENING SESSION.

Meeting called to order by the President at 7:30 P. M.

Minutes of the previous meeting read and approved.

The Committee on Voluntary Essays and Papers reported a programme of essays, letters, etc., which was then ordered to proceed.

The Secretary read the following letter from Mr. Seth Green:

ROCHESTER, N. Y., Jan. 13.

MR. PRESIDENT: I am in receipt of a circular from the Michigan Sportsmen's Association announcing a meeting on the 25th inst. I am very glad to see that you are making a move in the right direction; at best it will not be a great many years before the game in this country will be exterminated. The advance of civilization and the improvements that are constantly being made in trapping and hunting, and assisted by the killing of game out of season by unprincipled men, are bound to complete their work of devastation in the course of time. But the longer the game can be preserved the better, and it is left for such associations as yours to make suitable laws and see that they are enforced, and by so doing the public will owe you a debt of gratitude which they can never repay.

The New York State Sportsmen's Association was organized for the purpose of protecting the game and fish in this State, but I regret to say that the purpose for which the association was organized has almost been lost sight of in the interest that is taken in trap shooting and the prizes offered for competition.

In this vicinity we are especially favored by having an active and efficient game constable appointed. Thirty of the best citizens of Rochester signed an article agreeing to stand by him in all his lawful undertakings; by so doing we have given him encouragement and confidence to pursue and prosecute law-breakers. He has had a good many lawsuits, but has as yet lost none.

Although it is my opinion that the game will be become extinct before many years, the fish supply can always be kept up through the means of artificial propagation and protection. We have hundreds of small inland lakes throughout the United States and with scarcely an exception they are capable of producing fish food for all the people living in the vicinity of them, provided they are not allowed to be taken in any way except by angling with hook and line and are protected during their breeding seasons. Every man should be made to feel that the waters in his locality is his fish barrel and no one has a right to deplete the waters by any wholesale manner of fishing.

I sincerely hope that your association may be successful in the good work you have begun, and if at any time I can be of service to you let me know. Yours, SETH GREEN.

The Secretary read the report of the Committee on Laws for the Protection of Game Animals of Fur and Feather and Insectivorous Birds, and discussion thereon was deferred until the next session.

The last mentioned report, as amended and adopted by the association, appears in the report of the next session.

Mr. Frank N. Clark, chairman of the Committee on Fish Laws, including propagation as well as protection, then read his report on fish laws, which will be published in the next issue of FOREST AND STREAM.

Mr. J. G. Portman, Superintendent of Michigan fisheries, spoke at length upon the Michigan fish laws, calling attention to various imperfections and weak points therein, and suggesting several important changes in relation to the law governing the taking of whitefish, and quoted extensively from the fourth report of the State Commissioners and Superintendent of State Fisheries.

The Secretary then read a letter from Mr. Edgar Brown, of Escanaba, Delta Co., Mich. Mr. Brown suggested that there be a game commissioner appointed in each of the lower and upper peninsulas, the same as in the State Land Department, for trespass. He says: "There are parties here who last winter shipped from this location 22,000 pounds of venison alone. They commenced it this winter and I made a complaint, and last Tuesday the sheriff seized two boxes that contained about 1,200 pounds of saddles of venison. It was marked 'Fresh fish.'" Mr. Brown also stated that owing to the bounty on wolves having been taken off, they were on the increase and were committing great havoc among the deer in the upper peninsula.

On motion the Committee on Enforcement of Game, Fish and Trespass Laws were allowed further time to report.

Mr. J. E. Long then read the following essay on sporting dogs, game, etc.:

DETROIT, MICH, Jan. 24.

HON. E. S. HOLMES, President M. S. S. Association—Dear Sir: Feeling a deep interest in the protection of our game birds, animals and fishes, if not trespassing too much on the time of the association, I should like to place my views relative to the passage of such laws as will best attain that end, anticipating that it is the intention of this honorable body to advise a general revision of our at present defective game laws. I also would suggest that in recommending to the Legislature of this State any revised law that it will include the protection of our sporting dogs. In my opinion, the payment of taxes upon them, as we are obliged to do, should at least make them subject to the same protection as other animals upon which a like tax is made. I trust you will give this matter the attention it deserves.

I am also strongly in favor of abolishing summer shooting. I am in favor of running or extending the close season further into the fall on all our game birds.

With your kind indulgence I would suggest the following, taking the game as it rotates to us. I will commence with "Spring Duck Shooting."

I am in favor of a law allowing the shooting of migratory ducks, such as red-heads, blue-bills, canvas-backs, butterballs, pin-tails, etc., protecting only mallard, teal and wood ducks, at that season. Shooting to end April 30, and opening again on all ducks September 1. The stoppage of night shooting, as also the prohibition of battery shooting at all seasons. Next we come to spring snipe shooting. I am in favor of a law allowing them shot up to May 1, the season opening again September 1. I am inclined to this belief from a life-long observation of them, and am fully convinced that what snipe we do have in this latitude are simply those that stop in their migrations between the North and the South.

Woodcock—I understand that our present law protects them when they should be shot, and *vice versa* owing, I believe, to a typographical error of the State printer or some one else. But be that as it may, I am strongly in favor of abolishing summer shooting at this beautiful game bird. To shoot them in July when only half-grown, is simply murder,

and in August they are generally moulting, making them totally unfit for the table.

I would suggest that September 1 is early enough for the commencement of the open season. It allowed to be shot during July and August, I fear many a ruffed grouse is brought to bag and styled "short-billed woodcock."

Fall Duck Shooting—Our present law, beginning September 1, meets all the requirements.

Ruffed Grouse—For this grand bird I must express a high esteem. I believe it to be the gamest bird in the world, and so believing I would respectfully ask due consideration of any law pertaining to his preservation. From an extensive experience with them I am led to think that November 1 is as early as the open season should begin, and allow them to be shot until January 1. By lengthening the close season as above the birds become more mature, while in September they invariably take to trees, making themselves an easy prey to the merest tyro of a hunter, while a month later they avoid this to a large extent and test the skill of the most experienced wing shot.

Quail—I can only say "Twin brother in excellence to the ruffed grouse." I think November 1 early enough for the open season to begin. I think every true sportsman will agree with me in my statement that during October at least three of every five bevies that are flushed are not sufficiently grown, and also that during said month they are to be found in the open, lying close to dogs, often giving the pot-hunters a full swing for their murderous propensity of "bunch shots," which a month later it would be hard to attain. I recognize also that two months of the twelve is about the proper length of open season. I therefore recommend the following letter, viz.: Make the open season the months of November and December.

Wild Turkeys—Open season to be October, Nov. and Dec.

Deer—I believe too much consideration cannot be given to this fast disappearing and noble animal. I am strongly in favor of making the open season shorter than our present law allows. A law making the open season from 15th of September to 15th of November, would be my idea. I presume there are gentlemen at this convention who will present statistics to you relative to the unprecedented slaughter of this as well as other of the game of this State. I am also strongly in favor of a law to be passed, if possible, to prevent the shipment from our State of all game, except in limited quantities. A similar law is at present in effect in most of the Western States, and is found to materialy assist in the preservation of game, shutting off as it does the Eastern market hunter, who yearly visits our State, not in pursuit of gentlemanly sport, but for pecuniary purposes alone. I understand that there is some question as to the constitutionality of such a law, but it strikes me as singular if such law is respected in our sister States, why not in Michigan? From good legal authority I am told that a law can be so worded as to avoid this, and yet make it operate as desired. I therefore urge that this convention give its entire support to attain such law. While I do not desire to seem selfish toward brother sportsmen of sister States, yet I cannot but feel that the passage of such law is only self-protection, which I claim is God's first law.

In giving you my views in detail as I have I trust you will accept them in the spirit in which they are offered, and not attribute them to any personal or selfish motives, assuring you that I only desire the fullest protection to our game. There are gentlemen composing your honorable body far more competent than I am to plead this, yet I cannot allow the occasion to pass without putting in my feeble plea.

That your honorable body shall cause such laws to be passed as will best attain this object, is the sincere wish of

Yours in the cause, JOHN E. LONG.

The Secretary read a letter from Mr. A. F. Young, of Escanaba, Mich., advising that the time in which prosecution may be commenced be extended to one or two years, instead of three months, as at present, and urging the prohibition of "jack-light" shooting.

Mr. Brown continues:

"Wolves should have a good bounty on their heads. The deer have been all run out of the country the past fall by them. I would make one more suggestion. There should be a stringent law against 'pits.' I am told that only a few miles from here it is not safe for a man to go through the woods. I feel that there is nothing more cruel than the pits as they are made. I am told by one who has seen them that before covering or concealing them they drive stakes in the, bottom and sharpen the tops, so that in falling the poor deer is impaled in a most cruel manner."

The Secretary read the following letters from the Secretary of the Wisconsin Sportsmen's Association:

FOND DU LAC, Wis., Dec. 10.

SECRETARY STATE ASSOCIATION—My Dear Sir: I take the liberty of addressing you with relation to the protection of the deer on the Lake Superior portion of your State and to learn what, if any, action you expect to take as to amendments to the present laws.

For years I have visited the woods, and since the Menominee River Railroad has been completed our States in that section lie in such close proximity we ought to have a uniform law.

Our State Association will meet sometime the present month and we hope to better our laws the present year. Our law now opens September 1 and continues till November 30, and this is too long with the present destruction.

What would your association say to making October and November, or to November 15, the open season, and prohibit the use of lamps?

I was in the woods during the month of October and your State and ours are overrun with poachers, and we must do something to help the deer, or they will be exterminated. I should be pleased to hear from you on these points.

Very truly yours, L. M. WYATT,
Vice-Pres't Wisconsin State Sportsmen's Ass'n and Sec'y Fond du Lac Game Club.

FOND DU LAC, WIS., JAN. 7.

DR. E. S. HOLMES, President—My Dear Sir: Your esteemed favor of the 18th ult. came duly to hand, also the report of your State Association. I have so much enjoyed reviewing them that I presume to comply briefly with your request for items on preservations so far as to give you some notes from observations made in the northern part of your State, the Upper Peninsula, fearing that from its remoteness from your standpoint of deliberations you do not fully appreciate the value of this grand domain you open to poachers so early in the season.

For fifteen years past I have made annual pilgrimages to this delightful region, and had come to almost covet it and hope it might become a portion of my own State; but after reading the report you sent me I have changed my mind; I take it all back, and only hope that our State Association may prove as worthy to preside over its present domain as the Michigan Association over the chosen retreat I have referred to.

Since the completion of the Menominee River Railroad an opportunity is afforded the poachers to invade the summering ground of a large district, and the demand for venison along the road and facilities for shipping have afforded them the best opportunity to make the killing remunerative.

The road has been patroled night and day by a horde of hunters sufficiently large to annihilate the whole species, and these vandals hesitate at no scheme to gather in the spoils of all ages and in all conditions. An estimate given me by a civil engineer who is a gentleman sportsman, and is, cent the greater portion of the season on the road and vicinity, places the number of hunters at not less than two thousand and the deer killed at five thousand.

This record calls loudly for a remedy, and in my opinion can only be secured by shortening the season. Meet it squarely with no tinkering, or the deer will be obliterated.

Wisconsin, until last year, had an open season of from five to seven months, and furnished all the facilities the most ardent poacher could desire. Last season we secured a change, making September, October and November the open season, and we hope to hold it at this, or shorten it to October and November, or September 15 to November 15.

As the law now stands, you take the crowd at the opening and we get it at the close.

On one point we have been weak, that is, in not securing the aid of the railroad officials to prevent shipping out of season.

It would surprise you to see a large amount of pork shipped from points that raise no hogs.

I should very much enjoy accepting your hearty invitation to be present at your annual meeting, but duty and distance will preclude it.

I enclose you printed report of State proceedings yesterday at Milwaukee; although in some respects it is quite unsatisfactory, yet it was a meeting.

I should like to have you correspond with our President with especial relation to the deer law, and urge a uniform time for both States; also let them know the conservative spirit that pervades your deliberations.

If not asking too much, I should very much like a copy of your next meeting's proceedings.

In closing, I beg to assure you of a readiness on my part at all times to render aid in securing conservative practices.

Very truly yours, L. M. WYATT.

The Secretary then read the following letter from the President of the Wisconsin State Sportsmen's Association:

MILWAUKEE, Wis., Jan. 14.

MR. E. S. HOLMES, President Michigan Sportsmen's Association, Grand Rapids, Mich.—Dear Sir: Your very kind invitation to be with you at our meeting on the 25th inst. is at hand. While we cannot be with you in person, feel assured that we are in spirit. Our interests are common. We are trying to do as you are doing. We organized by adopting your constitution, of which I send you a copy. I send you also a paper containing the proceedings of our first meeting after the organization. We are to hold a meeting at Madison on the first proximo, at which we will be pleased to see you personally or by delegation. We hope at such meeting to have a large attendance of sportsmen of the State. It would indeed be instructive for us to know what you have recommended as to the open season on various game, on spring shooting, on exportation, etc. Our deer country lies contiguous to part of your State. And the deer, though a knowing animal, it is safe to say has not learned State lines, but the more cunning pot-hunters have. For all migratory game we ought to have the same protective laws in Michigan, Wisconsin, Illinois, Indiana, Minnesota and perhaps other Northwestern States. A uniformity in such laws of course can only be brought about by the efforts of associations.

Our association has been so recently organized that we have scarcely become acquainted with our own members, and the true sportsmen are not fully agreed as to what we need. They all agree, however, that unless something be speedily done many of our finest game birds will soon become extinct. I hope to hear from you again.

Very respectfully, FRED. RIETBROCK,

TO BE CONTINUED.

THE NEW YORK CITY ASSOCIATION.

THE monthly meeting of the New York Association for the Protection of Game was held Monday evening. Among the well-known sportsmen present were Messrs. Charles H. Houseman, B. L. Ludington, William E. Laimbeer, James Meyer, Jr.; Edward Wight, Wakeman Holberton, James Curphey, Wisner H. Townsend, C. Dubois Wagstaff, J. Harson Rhodes, Henry T. Carey, John Lawrence, Fayette S. Giles, Dr. Stephen H. Main, Alexander R. Strachan and Alfred S. Post.

Mr. Ludington read from the *Times* a report of the meeting of the Long Island Sportsmen's Association, in which a summary of the amendments to the game laws, which it was proposed by that body to have introduced in the Legislature, appeared. He condemned several features of the proposed bill. The demerits of the amendments proposed by the Long Island Associations were fully discussed. The speakers, without exception, condemned the proposed bill as tending rather to destroy than protect fish and game, and as calculated, if passed, practically to abolish all existing laws for the protection of game. The more objectionable features of the bill, the speakers considered, were those which give dealers the privilege of selling game beyond the killing season, provided that it be preserved by freezing or refrigerating during the open season, and the provision which requires it to be proved, before conviction can be had, that all offenses against the law are willful. Were such a bill to pass, it was contended, there could be no protection for fish and game, and the game laws would be a dead letter. Some of the speakers thought the association seemed to be acting in the interests of the marketmen and dealers rather than in the interest of true sportsmen. After speeches from Messrs. Roosevelt, Cuthbert, Rhoades, Holberton, Ludington, Curphey, Townsend, Meyer and Wight, Mr. Rhoades proposed the following resolutions, which were seconded by Mr. James Meyer, Jr.:

Resolved That this association does not approve of the bill for the protection of fish and game as proposed by a sub-committee of the Long Island Sportsman's Association, believing that the effect of such a bill, if passed, will be to aid in the destruction of fish and game rather than their preservation, and that a committee of three of which the president shall be one, be named by the chair to confer with the Long Island society in an endeavor to correct the objectionable features of said bill,

Resolved, That this committee be empowered to take such action as they may deem necessary in the premises.

Resolved That a copy of these resolutions be forwarded to the New York State Association for the Protection of Game.

The resolutions were adopted unanimously, and the chairman appointed, in addition to himself, as such committee ex-Senator Alfred Wagstaff, Jr., and Charles E. Whitehead. A letter from Mr. John F. Davis, of East Chester, condemning the amendments to the game laws proposed by the Long Island Association, and suggesting that the recompense of game constables throughout the State be increased was referred to the Committee on Admendments to the Game Laws. On motion of Mr. Townsend, seconded by Mr. Rhoades, the officers were directed to take steps to have the association incorporated under the laws of the State. At the conclusion of the meeting Mr. Rhoades entertained his fellow members at supper.

MATCH HUNTS.

RUTLAND, Vermont, Feb. 5.

I LAY down my paper to offer a suggestion to your correspondent "Fox Squirrel," who writes from Charleston, Ill., under date of Jan. 17, and whose communication appears in your issue of Feb. 3.

"Fox Squirrel" starts out with the statement that birds are scarcer in his locality, then proceeds to relate the exploits of a company of twenty men, who, on the 26th of Nov. deliberately set out to see how great a slaughter they could make with the result as stated, of 562 head of game killed in that day by that party.

Now, how in the name of common sense can a county endure such havoc as this?—and why should the inhabitants of such localities expect to have any game at all left if they countenance such proceedings?

The writer of this well remembers the time, and not many years ago either, when the country about Charleston abounded in game birds, and a good and sufficient bag could be made by any fair shot in a few hours. If the birds are gone now whose fault is it if not that of such men as made up this party of twenty?

The fact is match hunts are not usually made up or joined in by sportsmen and should be by sportsmen discouraged and frowned down.

True sportsmanship does not consist in slaughter for count, not even where the suppers or the drinks are the incentive. This particular slaughter of the innocents is an accomplished fact, and the dead cannot be brought back to life, but if this protest has the effect to set men to thinking what match hunts really are, it will not have been wholly in vain.

VERDE MONTE.

TRAPPING NOTES—Dugdale, Pa., Feb. 15.—The present low prize of skunk and other fur common to eastern Pennsylvania has greatly lessened the catch of the present winter. Trappers do not have the same inclination to scour the hills and county over that they had a few years ago when the price of skunk and our other fur commanded higher prices. The early part of the season a great many skunk were caught with hunters by dogs at night. They are not trappers, but hunters who travel over much of the surrounding county in quest of skunk that may be wandering about the fields looking for mice, bugs and insects. The weather best suited for most varmints to travel is a mucky, rainy night, during the dark of the moon. Some of the fur bearing animals common to the United States are very shy, and but seldom seen by the trapper or hunter, others can be seen frequently at different times in various localities. We have been quietly walking along some small creek of an early morn when the weather was dull or probably a light drizzling rain falling, and noticed the gentle riffle in the eddy below a huge pile of old drift from which was soon seen a large mink emerge and again disappear among the roots of an overhanging tree. Muskrat may be seen at most any time when the creeks are high or they may be seen often in day time in a quiet place along the bank of some mill race or at the head of some mill pond. The otter is more wary and but seldom seen except in very high water when their hiding places are completely shut off by excess of water. Eastern Pennsylvania is too thickly populated to admit of any good trapping, and those desiring enjoyment in this line must look elsewhere in counties less thickly settled. Nothing in the trapping line amounts to anything like business unless it be skunk here in our locality, and of them it would almost seem that the more there are caught the more there are to catch. The long protracted spell of extreme cold weather we have had since before Christmas seems now to be broken, and in all probability considerable amounts of skunk and muskrat will be caught yet before spring opens. J. LEE SMEDLEY.

FORKS OF THE KENNEBEC—It may be of interest to your readers and to sportsmen generally to know of a spot, away from the world, the idle summer traveler and lazy campers, and yet accessible to those who find recreation in sport—a tract of land whose dense woods are inhabited by moose, caribou, deer and bear, more numerous here than on any hunting ground ever visited by me, and whose many lakes and streams are filled with trout. It is needless to quote the amount of fish caught in one day or deer or caribou shot during a short trip. Laughter would be most likely the result of my quotations, and they would be considered as one of the "many ducks" shot by sportsmen.

I only advise friends of sport to visit this lovely country, situated around the Forks of the Kennebec. At the Forks a very comfortable hotel will serve sportsmen as headquarters, and Mr. Clark, the proprietor, would, I have no doubt, willingly assist in procuring a good guide. If you can succeed in getting Oliver P. Adams, who lives at the Forks, Maine, you will find him a hunter and fishermen in the truest sense of the word, a faithful and reliable guide, who will help you to game if at all possible. You reach the Forks by stage from Skowhegan. A branch road of the Maine Central R. R. connects Waterville with Skowhegan."

I can give no higher recommendation to the above named hunting grounds than by assuring you that were I a permanent resident of your country and not a foreign intruder, who has been stealing some of the glorious sport it affords, I would never willingly assist to make those grounds near the Forks known to the many friends of FOREST AND STREAM.

N. B. V. Z.

SPORT ABOUT GREELEY—Greeley, Col., Jan.—Our two rivers and the innumerable sloughs that line both banks, together with the numerous lakes lying all around within a few miles of the city, afford great resorts for the thousands of ducks that stop here for two or more weeks on their flight southward

both in spring and fall. The wild geese seem to be as plenty as the ducks. Our farming district lies parellel with the Cache La Poudre, and ends at the junction of this river with the Platte. The geese are continually flying up and down the former river. They stay in the Platte nights, and when ready to go South they all cross at this junction. The ducks and geese continually throughout the winter, when we have warm spells, are always on hand, in fact a great number of the blue-winged teal ducks make this their stopping place all winter. Several flocks of canvas backs have been reported, but this is a rare thing. We have the powa rabbit or cotton tail, and the jack rabbit in very large numbers. The latter is a fine animal to hunt, and affords a great deal of sport. Just get an inexperienced dog after one, and they present a scene similar to that described by Mark Twain on the Cayote. It takes a pretty good hound to catch one, and then it is rarely done. Antelope swarm on the plains all around us, and they often approach very near the city. The mink and muskrat are found in large quantities in the small streams and sleus, and are very easily trapped. I have observed several woodcock in some parts of the county, and I hope they may increase. Prairie chickens are very scarce; no quail at all, but some ptarmigan and sage hens. Wild pigeons breed here in large quantities. Besides all these we have badgers, foxes, wolves, coyotes, skunks, prairie dogs, etc., in large numbers. On hawks there is a bounty of twenty-five cents per head, also fifty cents per scalp on wolves. I have observed that east of town in some running sleus a few beavers have made their dam. There are several houses standing quite near, yet the beaver seem not alarmed. I shot a full grown one by watching nearly all night for it, and a few days later I shot another one, a kitten, or one about half grown. There are several beaver dams up the river a few miles. PTARMIGAN.

"BAGGING" ROBINS.

A Franklin, Tennessee, correspondent writes under date of Jan. 31:

The present winter has been an unusually severe one here as elsewhere. Although the mercury has not yet touched zero at any time yet snow storms have been rather frequent, though the snow has not been deep nor continued long, so that the birds are not materially diminished in number nor showing a waste of flesh. During the worst weather the quail deserted the cover of the cleared lands, and betook themselves to the neighboring woods where beech mast was plentiful.

About ten days since the red breast (*Turdus migratorius*), made their appearance here in incredible numbers feeding during the day on beech-mast and various kinds of seeds, and at night roosting in a corn brake two miles from town. Here the mighty hunters of all sizes, colors and condition went nightly, each armed with a short candle and a small stick, the glare of the light confusing the bird so as to make it an easy matter to tap him with the stick or even take him with the hand. I went one night last week as a spectator, and on reaching the hill overlooking the corn brake it had the appearance of an irregular torch light procession, there being more than a hundred lights within an area of less than six acres. Many of the parties killed over a hundred birds each. Despite this wholesale slaughter the numbers of the birds were not apparently diminished. Of course the hunters were not so much after sport as after meat, and as the birds are extremely fat it is fair to presume that they were placed where they would do the most good. Whether from diminution of their food or from constant pursuit of their enemies, the robin departed as suddenly as he came.

BLUE GRASS CLUB.—This club was organized at Winchester, Ky., about four years ago, for the purpose of fishing and hunting, but last year the club engaged in ball shooting, and became somewhat noted in that role. There are eighteen members of the club and sixteen of them pull a fatal trigger. A local paper says: "Fifteen of the number have broken 80 out of 100 balls from a rotary trap. Seven have broken over 90 out of 100. J. E. Garner has broken 105 consecutive balls. C. B. Fox, ex-Sheriff, has broken more than 125 balls from a rotary trap without missing a single shot. In a match with the Georgetown Club at Donerail last summer the latter club was victorious, but in a subsequent match with the same club at Winchester the victory was reversed, when fifteen members of the Blue Grass Club made an aggregate score of 417 out of 450 balls. The following is a list of the officers and members: Dr. Wash Miller, President; Charley Swift, Vice-President; J. W. Poynter, Treasurer; Wm. Miller, Secretary; G. B. Nelson, A. R. Spbar, W. D. Rash, S. R. Zinn, W. H. Garner, James Evans, C. B. Fox, Dr. Burgin, B. F. Phillips, W. B. Ford, Dr. J. A. Mills, S. D. Goff, J. E. Garner and P. B. Dudley. It is believed that seven members can be selected from this club that will break an aggregate of 137 out of 140 balls.

HOUNDING DEER.—Prospect, N. Y., Feb. 12.—The very excellent letter of "Wollat" in your issue of this week attracted my attention, as he referred to my letter published some weeks ago. I would say that I am as strongly in favor of the protection of the deer, or any other game, as I am for the protection of trout. In my reference to deer in that letter I did not intend to encourage in any manner the hounding of deer out of season. I mentioned the fact that the snow was so light that the deer had the advantage over the dogs in case they undertook to hound them out of season, it being very different from many winters, when we have deep snows, with occasional thaws, which make a crust. Then they are helpless, and the penalty in my judgment is not half enough for killing deer out of season. "Wollat" expresses my own feelings so completely in his letter, and in so much better shape than I am able to, that I hope we shall hear from him often. W. P. DODGE.

MARSHALLTOWN SHOOTING CLUB—Marshalltown, Iowa, Jan. 27.—The club has elected: President, George Seick; Vice-President, J. H. Brunner; Treasurer, Geo. Will; Secretary, Geo. Neil; Executive Committee, F. H. Griswold and Dr. Thornton. Our club is comprised of genuine sportsmen with both rod and gun and we propose to see that our game law is enforced, and woe be unto him that violates it in this section of the country. We have our regular monthly shoots for the club trophy, which is a silver cup in vase shape, with four guns crossed under the fowl. On the base are two dogs in bronze and a vine. It is a perfect ornament and a rare token to the man winning it, which he will be compelled to do three times in succession to call it his property. J. H. B.

SAGADAHOC ASSOCIATION.—The Sagadahoc County, Me., Association for the Protection of Game and Fish has elected the following officers for the current year: President, Dr. Chas. A. Packard, of Bath; Vice-Presidents, A. Q. Gould, of Topsham and James H. Millay, of Bowdoinham; Secretary, Chas. H. Greenleaf, of Bath; Treasurer, Ira P. Booker, of Brunswick; Executive Committee, S. W. Carr, Bowdoinham; E. W. Johnson, C. L. York, Brunswick; A. Q. Gould, Topsham; Geo. H. Nichols, Bath. The following gentlemen were admitted as members: Thomas A. Hine, Dr. E. M. Fuller, Frank M. Reed, Bradford Matson, Augustus Hatch, Bath; Alfred E. Hall, Melville C. Hall, C. H. Small, Topsham, and Capt. F. C. Jordan, Brunswick.

NORTH CAROLINA QUAIL SHOOTING.—From Nov. 4 to Dec. 12 I was hunting in Rockingham County, N. C. Found quail very abundant, could start from twelve to twenty-five coveys in a day's tramp. I returned there Jan. 15 after the deep snows and very cold weather. The snow was about gone except on the north sides of hills and fences. We found but few birds, and but from three to seven in a covey and very poor. Hawks more plenty than quail. We made up our minds that the snow and cold weather had killed the quail. I fear the hawks will not leave enough in that section to stock up for next season's hunting. I hope some of your correspondents will inform us how the quail have wintered further South and the prospect for next fall's hunting. D.

THE MASSACHUSETTS GAME LAW—Boston, Feb. 7.—This State has the best game law that it or any other State ever had, as it protects all our game birds during the summer months from indiscriminate slaughter before the young birds are fully developed or able to take care of themselves. If other States would make laws to conform to this as nearly as possible and thus have a uniform law throughout the States, as has often been suggested in your valuable paper, it would be a great blessing not only to this but to future generations; for the men who frame laws to protect our game birds are like those who plant fruit trees for the benefit of those who come after them. Many of our best sportsmen helped to frame this law, and also help to sustain it, seeing the vital importance of taking steps to prevent the extermination of what few birds we have left. Let sportsmen in other States go and do likewise. DON CARLOS.

AT A MEETING of the Long Island Sportsmen's Association held last Friday evening, the proposed amendments to the game law were adopted with the following changes: Open season for deer, Aug. 15 to Dec. 1; sale of venison in market to extend to Feb. 1. Open seasons for woodcock, July 1 to Aug. 1, and Oct. 1 to Dec. 25. Sale in market to extend to Feb. 1. Squirrels and ruffed grouse, open season, Oct. 1 to Dec. 25. Sale in market to extend to Feb. 1. Quail, open season, Oct. 25 to Dec. 25. Sale in market to extend to Feb. 1. It was also proposed to offer a bounty on hawks and to prohibit the killing of birds on Long Island, for natural history purposes, out of season. The bill will be taken to Albany by Messrs. Chappell, Fury and Steers.

THE LEATHER STOCKING CLUB, of Oswego, N. Y., held a meeting last week to consider the new refrigerator amendment, which had little sympathy here, and instructed our Secretary to send a petition to our member, Mr. Culman, at Albany, to help squash it. The club prizes were also delivered to the following gentlemen, being won by them the greatest number of times at pigeon trap-shoots during 1880: Geo. P. Matteson, an elegant gold medal, first, won four times; Dr. G. D. McManus, fine silver-mounted revolver, second, won twice. LEATHER STOCKING.

FEEDING THE QUAIL.—Peekskill, Feb 8.—Have driven out through this section of the country the past week, making inquiries among my sportsmen friends and farmers as to the fate of the quail. It is thought that many have perished, but only one bevy have been found frozen thus far. Cortlandt Foster, a farmer, while drawing wood in the highlands, very near Peekskill, found a bunch frozen hard. Several kind farmers are feeding and otherwise protecting several bevies. I am now feeding a fine, large bevy within the corporation limits of Peekskill. Many were left over and we anticipate good shooting next season. W. H. PIERCE.

KILLING A DEER WITH NO. 9 SHOT—Bryan County, Georgia, Jan. 20.—While shooting woodcock here last week a full grown deer (an old doe) got up behind my dog and ran within a few feet of me, and I killed her with No. 9 shot. Now, I frequently see deer while woodcock shooting and always carry buckshot cartridges with me, but did not happen to have one in my gun at the time. This is the only case I ever heard of a deer being killed on the run with No. 9 shot. GEO. LYMAN APPLETON.

ILLINOIS NOTES—Aurora, Ill., Feb. 9.—This winter has been very hard on all kinds of game. I have found a great many quail along hedge fences that have been frozen to death. I found a bevy of seven one day last week that had died in that way. Pinnated grouse were unusually scarce last season. I think that the very wet spring drowned out a great many nests. I have not seen many more than half a dozen old birds this winter. In our timber ruffed grouse are very scarce. I do not think they will ever be plenty again. L. A. H.

WOLVES AND PANTHERS IN THE ADIRONDACKS—Canton, N. Y., Feb. 5.—It may interest some of your readers who visit the North Woods to learn that the Treasurer of St. Lawrence County has paid bounties on five wolves and two panthers since January, 1881. The wolves were all caught in traps. The two panthers were followed on snow shoes and treed with a dog. Both were killed by Hiram Hutchins and son—Hiram, Jr., of this place, during the past few weeks. Mr. Hutchins is a veteran hunter and one of the best guides in this county.

QUEBEC ASSOCIATION.—The headquarters of the Fish and Game Protective Club of the Province of Quebec are at Montreal. The officers are: Alderman J. C. Wilson, President; E. C. Monk, Esq., Vice-President; W. H. Rintoul, Treasurer; G. H. Matthews, Secretary. Committee—Messrs. R. H. Kilby, F. Bendy, H. R. Ives, I. H. Stearns, R. A. Alloway, M. D., Geo. U. Abern, E. H. Goodacre, D. W. Goodwin, A. V. Shewan, J. Johnston, Jr., G. A. Boyer, J. B. A. Mongenais, I. R. Hall, J. B. Robertson.

GLASSES FOR SHOOTING.—New London, Conn, Feb. 8.—In answer to "Anon's" inquiry about near-sighted shooting glasses, would say I have a pair of steel spectacles made with round eyes, about 1½ inches in diameter. The nose piece put on higher than usual, will bring the lens lower down on the face. The nose piece must be short enough to bring the centre of lens to centre of eye. He can have them made at 162 William street, New York, for about $1 50. D.

FOR FLORIDA—New York, Feb. 9.—Mr. Jordan L. Mott, Jr., departed for Florida last week. He has taken a small arsenal with him, and as he is an ardent sportsman and a crack shot the slaughter of the game and alligator must therefore be great. S.

THAT BILL ought to be refrigerated.

All your own fault if you remain sick when you can get Hop Bitters that never fail.

Sea and River Fishing.

FISH IN SEASON IN FEBRUARY.

FRESH WATER.

Pickerel, *Esox reticulatus.*	White Bass, *Roccus chrysops.*
Pike or Pickerel, *Esox lucius.*	Rock Bass, *Ambioplites.* (Two species).
Pike-perch (wall-eyed pike) *Stizostedium americanum, S. griseum,* etc.	War-mouth, *Chænobrytus gulosus.*
Yellow Perch, *Perca fluviatilis.*	Crapple, *Pomoxys nigromaculatus.*

	Chub, *Semotilus corporalis.*

SALT WATER.

Sea Bass, *Centropristis atrarius.*	Smelt, *Osmerus mordax.*
Striped Bass, *Roccus lineatus.*	Pollock, *Pollachius carbonarius.*
White Perch, *Morone americana.*	

EEL-SPEARING BY TORCHLIGHT.

THE skies are dark; the moon is hid
Behind the dusky cloud of night.
A bank of drift-fog from the surge
Hangs heavy on the sea-shore height;
No hovering breeze uplifts its wing
Aside the misty gloom to fling.

But, see! a star along the wave
Move: slow and devious, to and fro.
Now, like a blazing camp-fire flares;
Now, flickering, trembles, faint and low.
Anon, it steady glows and burns,
As hither thro' the gloom it turns.

'Tis the eel-spearer's pitchy torch
That like a lightship's lantern flings
Its ruddy, quivering bar of light,
As in the rigging high it swings.
Nearer and nearer, thro' the dusk,
The smoky flambeau slow doth float,
And now the gnome-like fisherman
Shows dimly in his drifting boat.

Standing with trident spear upraised,
All shadowy on his task intent,
He shows like goblin of the mine
On some weird, fiendish orgie bent.
He pauses, for the shooting flame
Reveals the slippery prey below;
With sudden plunge he thrusts the spear,
Then draws it upward to the glow;
And see! the captives twist and coil,
Dark victims of his midnight toil.

ISAAC MCLELLAN.

THE SAIBLING OR BAVARIAN CHAR.

BY G. BROWN GOODE.

LIKE the red-spotted trout of northeastern North America, the saibling belongs to the division of the salmon family usually kuown under the name "char;" a group confined, for the most part, to fresh-water lakes and streams and distinguished from the true salmons by a peculiar arrangement of teeth on the little triangular bone in the roof of the mouth, known to anatomists as the "vomer."

The chars are also distinguished from the salmon by their very small scales, and usually by numerous crimson or orange-colored spots which are especially conspicuous in the breeding season. The saibling resembles in its habits the well-known blue-backed trout or oquassa trout of Rangeley Lake, Maine, rather than our brook trout. The chars of Europe, are, as a rule, lake fishes like the saibling, although at least one species, the hucho salmon of the Danube, inhabits a river. On the other hand, the chars of North America are usually found in streams and rivers. The oquassa trout, just mentioned, and the lake or Mackinaw trout, which, like the closely related form, the "siscowet," is apparently nothing but a giant char, resemble in their habits the chars of Europe.

There is probably no group of fishes in which individual specimens and the communities of individuals inhabiting certain areas of water, show more tendency to variation in color and form than the salmon family.

Dr. Gunther has very justly remarked: "We know of no other group of fishes which offers so many difficulties to the ichthyologist with regard to the distinction of the species as well as to certain points in their life-history, although this may be partly due to the unusual attention which has been given to their study, which has revealed rather a greater amount of unexplained facts than a satisfactory solution of the questions raised. The almost infinite variations of these fishes are dependent upon the age, sex and sexual development, food and the properties of the water."

No one who has ever seen the remarkable display of brook trout at the annual trout opening at Blackford's, in New York, can fail to have been impressed by the wonderful differences which exist between individuals of the same species from different localities—differences which might lead an untrained observer, or even an ichthyologist who has had no experience in the study of this group, to decide at once that several species were represented among the hundreds of specimens lying on the marble slabs.

The tendency of modern ichthyology, with its more exact methods and with the access to better and more comprehensive material for research than was formerly available, has been toward the rejection of many of the nominal species formerly recognized. Out of the forty odd species of salmon ten years ago believed to exist in North America, only thirteen or fourteen are now recognized. In Dr. Gunther's catalogue of "The Fishes in the British Museum," published in 1866, thirty species of chars were mentioned, while in his lately published "Study of Fishes" the same author ventures to enumerate only thirteen, all others being regarded as in-

sufficiently characterized. In his treatment of the chars of Europe, Gunther is, notwithstanding, one of the most conservative writers, for he regards them as representatives of eight species, while most other European students, following the lead of the great German ichthyologist, Von Siebold, consider them to be members of one polymorphic genus. As the sympathies of American ichthyologists are with the school of Von Siebold, it is in the light of our own observations difficult to believe that upon the salmon family in America, every little lake, or group of lakes in Europe, possessed a well characterized species of fish. For the present it seems safe to consider the chars of Europe as members of a single well-marked species which undergoes numerous variations under the influence of changes in temperature elevation, food and light, and that the saibling of Bavaria and Austria is one and the same with the "*omble chevalier*" of France and Switzerland, the "salmerino" of Northern Italy, the "torgock" of Wales, the "fresh-water herring" of Ireland, the "char" of England and Scotland, the "roeding" of Sweden and the "kullmund" of Norway.

This fish, whether it be regarded as a single species or as a group of closely allied species, is distributed over all of northwestern Europe and possibly also over a portion of Asia; although, since the Asiatic representatives of the genus have not been sufficiently studied, it is impossible as yet to make this generalization. It is emphatically a cold-water fish, thriving at a temperature little above the freezing point, and in the period of greatest vigor and perfection at the approach of winter, as is indicated by the fact that at this time the spawning period takes place. No fish of any kind has ever been found nearer to the North Pole than the char, a species having been discovered by the last English polar expedition sixteen degrees north of the Arctic Circle. In the south of Europe, its range is limited by the Alps, and in this region its study has brought to light a very curious fact which confirms still more strongly the idea just spoken of, that the fish thrive the best in a very cold climate. In the extreme North and in the extreme South this fish reaches its greatest perfection. The Northern race, found everywhere in the lakes of the Scandinavian Peninsula and Scotland, sometimes, it is said, attains the length of four feet. In England and France and in the lower lakes of Switzerland the char is comparatively insignificant, while in the deep cold Alpine lakes of Germany and Switzerland it is often found two feet or more in length and weighing ten or twelve, and even in exceptional cases, twenty-four pounds. A similar phenomenon is exhibited by certain sub-arctic plants, which thrive in the extreme North and upon the summits of the Alps, become dwarfed or almost extinct in the lowlands between. The highest development of the char, however, seems to be attained in the largest lakes—like that of Geneva—while in the shallower lakes higher up among the mountains the fish are smaller.

It is interesting, too, to compare the effect of temperature and, secondarily, of elevation upon the saibling and upon our own red-spotted trout. This species has its home between lat. 32½deg. and 55deg., in the lakes and streams of the Atlantic water-shed, in the mountain sources of a few rivers flowing into the Mississippi and the Gulf of Mexico, and in some of the southern affluents of Hudson's Bay. In the North, for instance, in the valley of the St. Lawrence, it is common in the lowland streams and estuaries and even in the adjoining parts of the ocean, and here it attains its greatest development. As we proceed further South, in accordance with the limitations of temperature, its range becomes more restricted, and in Southern New England it is only at certain seasons of the year—at the approach of winter—that they find their way into the lowland streams which are in summer too warm to be endurable, and at other times they are found near their sources among the hills. On Long Island, however, they are still found in the meadows and to some extent in the estuaries. Passing to the southward of New York—the natural southern limit of the salmon, the range of the trout becomes more and more restricted to the highlands, and although they are found as far South of lat. 32deg. in the Western districts of the Carolinas and the extreme Northern part of Georgia, they there occur only at great elevations among the mountains of the Alleghany chain. South of New York they are effectually land-locked by the prevailing high temperature of the lowland streams and are never able to gain access to salt or brackish water. Their supply of food is, consequently, limited and they are confined to brooklets among the mountains. Although the temperature of this region is usually very favorable, other requisites for high development are lacking and the species is represented throughout the southern part of its range by diminutive individuals. A similar phenomenon is met with in those instances where the European char exists in the high and comparatively shallow mountain lakes of the Swiss and Austrian Alps.

In the southern part of their habitat the American brook-trout finds its environment unfavorable to its perfect development; on the other hand, the European char meets, in the Alpine lakes conditions precisely similar to those of the lakes of Norway and Scotland, and under these favorable conditions has survived in a state of great perfection.

We have in the great lakes of North America fish closely allied to the chars, which, under remarkably favorable circumstances, with plenty of room and an immense supply of rich and easy attainably food, have developed into great size and commercial importance—the lake-trout and the siscowet.

The lake-trout found in the smaller lakes of Maine and Eastern Canada are very similar, in many particulars to the European char. The American species which bears the closest resemblance to the European char is, as has been stated, the blue-backed trout or oquassa trout, of Rangeley Lake; the red-spotted trout of the Pacific coast, *Salvelinus malma*, known also as the "Dolly Varden," being very similar in habits to the brook-trout of the East.

The resemblances between the saibling and the oquassa are as follows:

I. They inhabit the deepest waters of their lake home and are never seen except at their spawning season.

II. They spawn late in the fall.

III. At the spawning season they come into shallow water near the shores, or in the mouths of streams and may be taken with the greatest of ease.

IV. They never willingly inhabit streams of running water.

These peculiarities the two species have in common, and excepting the habit of autumn spawning they share them with no other members of the family. The saibling, however, is a much larger and finer species than the oquassa, and it is hoped that it may be suitable for cultivation in many of the smaller lakes in which our great lake trout is not likely to thrive. It is regarded as a very excellent food-fish and is doubtless more delicate in flavor than the lake trout, sharing most of the excellent qualities of the brook trout.

The saibling, which through the courtesy of the German Government is now being introduced into the United States, is the European char in its highest state of perfection.

The following account of its habits is translated from a sketch by Dr. Wittmack, of Berlin: "The saibling varies much in form, size and color, according to its age, sex and habitat. Those which come from the highest Alpine lakes, are always small, but those in the lakes of Switzerland and Savoy have higher bodies, larger scales and also a clearer color—yellowish-white with red belly. This form was formerly considered distinct and was known as the 'ritter' or 'knight,' among the river-trout, the species which is found at the greatest height above the sea. In Switzerland, according to Ischudi, it is found at a height of 4,400 feet; in Bavaria, according to Von Siebold, in the Green Lake at the height of 5,000 feet, and in Tyrol in the Gaislacher Sea at the height of 7,000 feet, and in the Plenderle Sea at the height of 7,603 feet. In the Green Lake, as well as in other Alpine lakes, this is the only species of fish which occurs. It seems certain that it is found at greater heights in the Eastern than in the Western Alps and is also more abundant. The breeding season occurs in the months of October, November and December, and continues until February; for example, in certain lakes in Steiermark. In Lake Fuessen it takes place in October and November, in Lake Messkvich, where they are artificially propagated in February and March; in the lakes at Salzberg they spawn from November to January and apparently also in February, and in spite of the extensive fishery during the spawning time there is no evidence of a decrease in their numbers. They feed upon small fish and also, when at liberty, upon the small crustaceans, Daphnids and Cyclopids. In the Alpine lakes these constitute their only food. In Germany and in Austria it has been found that the saibling is one of the most expensive fish to propagate artificially on account of its food. The ordinary size of the saibling is from eleven to twelve inches, and its weight from one-half to one pound. In the highest lakes they are, as has been mentioned, smaller, while when they are moved from such lakes into those that are deeper they increase rapidly in size. In the Saltzberg lakes, where they are taken upon certain spawning grounds from November to January, it takes about five of them to make a pound, but large specimens of three to twelve pounds are taken in August and September. In the lake of Zug, which, according to Hoch, yields more saibling than any other lake in Switzerland it takes five or six, often eight or nine, to make a pound. In the lake of Geneva they are often taken weighing from twenty to twenty-four pounds. Herr Hoch himself saw one weighing seventeen pounds."

To this may be added a paragraph from Millet's *La Culture "de Beau."*

"It is very voracious, and like the trout, very swift and active in its movements. It habitually feeds upon small fishes, upon crustaceans, upon mollusks and insects, and in two or three years, under favorable circumstances, attains the length of fifteen to twenty inches. Its flesh is very delicate and savory and about Lake Leman it is preferred to any other fish."

The saibling has been artificially propagated by German fish culturists for a period of ten years or more and thrives magnificently in captivity. The hatchery at Aussee produces yearly 300,000 or 400,000 of artificially brooded saibling, and plants them in the neighboring lakes. In the tanks at the late International Fishery Exhibition in Berlin, were exhibited many superb specimens of this fish; some of them over two feet in length, and one of these was sent to the National Museum by Herr Von Behr, president of the Deutscher Fischerei Vercin. It is as large as the famous Rangeley Lake trout, caught by Mr. George Shepard Page, which everybody has seen at Blackford's in the Fulton Market.

In selecting a place in which to deposit the saibling eggs just received, the Commissioner of Fisheries has endeavored to find a body of water as similar as possible in depth and temperature to the larger Swiss lakes, and he has, therefore, sent them to Lake Winnipiseogee, Maine. Here the whole 60,000 will be planted with the hope that by placing so large a number together in a lake of moderate size the experiment of introduction may be a success.

It is a question of some interest which of the many European names of this fish should be adopted in the United States, should the experiment of acclimation be a success. It would seem most appropriate that since the fish acquires its greatest perfection in Germany, the German name should be adopted, particularly since the German fish culturists, who have so kindly made this gift to the people of the United States, will regard as a compliment the adoption in this country of the German name of one of the favorite fishes of Germany.

SPEARING BUFFALO—Vail, Iowa, Jan. 26.—I saw on the street a few days ago a load of buffalo fish, *Bubalichthys*, weighing from thirty-five to fifty pounds each. They were speared through the ice in the Okehojis, which are situated in the northwest part of the State. It is a novel sight, to one unaccustomed to it, to see the ice dotted, as far as the eye can reach, with little black houses. These houses are about six feet square, made of rough boards and covered with tar paper to exclude all light. These are placed over holes cut in the ice, where the fisherman takes his position and awaits his game. Some of these fish are speared at a depth of forty feet, as the water in these lakes is so transparent that they can plainly be seen at that depth. The spears used have an iron handle (instead of wood) to give the required weight for spearing in that depth of water. Fish Commissioner Shaw has thoroughly stocked these lakes, East and West Okeboji and Spirit Lake, which is only a few rods distant, with such fish as are best suited to these waters. I know of no lovelier resort for the tourist or more attractive to the sportsman than the Okehojis. The lakes are teeming with fish and waterfowl in their season. E. B. B.

OIL YOUR REELS.—Every owner of a good reel should oil it. We are not sure how long we have known this, but it was recently recalled by Orvis, the reel maker of Manchester, Vt., to whom we sent one of his reels for repairs. The reel was a trout reel and had seen hard service on the sea coast in bluefishing with a trout rod, and having been wet several times in salt water the click rusted out. Perhaps we hadn't oiled it, but we can advise just as well as if we had used a gallon on it. We sent it to Orvis for a new click and he writes: "I think it will go all right now. A drop of oil now and then don't hurt a reel in the least. I think a reel ought to have as good usage as a wheelbarrow, and you know they sometimes oil them."

That is all right. We see the point and hasten to sound the alarm to such of our readers as own fine reels and inform them that a reel needs oil, like a wheelbarrow.

JUSTICE FOR POACHERS.—Some of those brave poachers who guarded Oneida Lake, N. Y., by patrolling it with guns to protect their rights to steal from its waters from any sudden swoop of a game protector, and who vowed to bar him at sight, have come to grief. The Oneida County Fishing Club, through State Game Constable W. P. Dodge, of Prospect, is pushing prosecutions for violation of the game laws. Before the Grand Jury, in session at Utica, Frank Pryne, J. C. Dibble, C. Morse and C. Morse, Jr., all of South Bay, were indicted for net fishing. Three parties, living at Lakeport, have also been indicted, and more are hinted at. The only thing to be regretted is that the action of the Grand Jury leaked out, and one of the persons, a town game constable at that, skipped to Canada after the manner of Sitting Bull before the howitzers of Captain Iges. Some of the newly-appointed game protectors are making poaching so unprofitable that there is danger of the business being abandoned by the noble men who steal the fish and game which belongs to the whole people, and of their having to abandon their occupation and to go to work, a calamity dreaded by them.

The Oneida Fishing Club evidently have some of the right stuff in them, and in co-operation with Protector Dodge, who still lives despite the threats, are evidently bent on giving honest anglers an equal chance with the thieves to what is the right of every citizen.

THE ENGLISH NATIONAL FISHERIES EXHIBITION.

WE have received from Mr. R. B. Marston, Editor of the London *Fishing Gazette*, a list of the special prizes for the best models, apparatus, plans, essays, manufactures, etc., prepared by the exhibitors at the National Fisheries Exhibition, to be held in Norwich, April, 1881. Mr. Marston, in a private note, says that this will be by far the best exhibition of the kind ever seen in Great Britain; and thinks that it will pay Americans to look it up, exhibit and compete. We referred to the fact that there was to be such an exhibition a long time ago, but as it is advertised as a National, and not as an Inter-national one, we supposed that it was not open to Americans.

The following is the prize list:

1. Plan or model of the best fishculture establishment, £25.
2. Fish hatching apparatus, full size, with appliances and implements, £5.
3. Model of fish pass, £10.
4. Essay on the acclimatization and cross breeding of fish, £10.
5. Essay on pisciculture as a source of national wealth, £20.
6. Model of a fishing trawler, £10.
7. Model of a fishing drifter, £10.
8. Apparatus and gear complete for a trawler, £10.
9. Apparatus and gear complete for a drifter, £10.
10. Collection of nets used in deep sea drift fishing, £20.
11. An improved trawl net, capable of allowing immature fish and refuse to escape therefrom, £20.
12. Crab and lobster pot, £3.
13. Plan or model of the best fish-curing establishment, £25.
14. Collection of inland fishing tackle, comprising an angler's outfit, £10.
15. Collection of sea fishing tackle, £10.
16. Collection of fishing implements, tackle, etc., used in the Norfolk and Suffolk waters, £10.
17. Angling Associations, the best code of rules for their management in a sportsmanlike manner, a salmon rod with winch, fittings and 12 doz. salmon and trout flies, R. B. Marston, Esq., Editor of the *Fishing Gazette*.
18. Model of a boat suitable for general fishing in the Norfolk and Suffolk inland waters; the models to be ½ full size, and the price not to exceed £12 complete with all fittings; each exhibitor must guarantee to supply as many boats as may be ordered of him at the price he may name; £10.
19. Boat, full size, complete with all fittings, for offshore fishing in rough weather, requiring not more than four hands; the first consideration being stability in a surf, the second, cost; the third; weight; each exhibitor must guarantee to supply as many boats as may be ordered of him at the price he may name; £25.
20. Dress for a life-boat crew, £10.
21. Plan for a trap or sluice for taking eels, so as not to interfere with other fish, £5.
22. Mode of fishing for shrimps, sprats and other fishes, such mode intended as a substitute for fixed engines in the estuaries of rivers, and must satisfy the following conditions:
    (1.) Its capacity for catching fish to be equal to that of the fixed engine.
    (2.) Its action not to be prejudicial to the fisheries of the river, £10.
23. Essay on oyster breeding, £15.
24. Essay on the utilization of localities generally suitable for the cultivation of oysters, £15.
25. Essay on the utilization of localities in Norfolk and Suffolk suitable for the cultivation of mussels and other shell fish, £25.
26. Essay on the artificial propagation of anadromous fish other than the salmon and the restocking the tidal waters of our large rivers artificially with smelts, etc., £10.
27. System of saving of fish at sea in the transport of fish from the fishing vessel to the carrier, illustrated by model, £25.
28. Plan of improved fishermen's dwelling, £15.
29. Model of refrigerating fish van, £20.
30. Ditto, fish van not refrigerating, suitable for general use by road or rail, the cost not to exceed £75. £30.
31. System of signalling at night for fishing fleets and vessels, £10.
32. Process for the utilization of condemned fish and fish refuse as a manure, £30.
33. Process for rendering innocuous to fish-life streams polluted by sewerage and chemical or other works, £20.
34. Essay on the salmon disease, its nature, causes and possible remedies, £10. R. B. Marston, Esq., Editor of the *Fishing Gazette*.
35. Essay on the parasitic and other diseases of fish other than salmon, £5.
36. Essay on the principle upon which any legislation on the fisheries of the country should be based, and is it desirable that Boards of Conservators should have the management of all the fisheries in the country, with power to impose licenses, £50 1st prize, £25 2d prize.
37. Collection of stuffed fish caught in Norfolk and Suffolk, £5.
38. Specimens of dried, salted, smoked and tinned fish of all kinds, £10.
39. Collection of inland aquatic flora and fauna, £10.
40. Collection of edible shell fish, £10.
41. A light, portable, waterproof package, to contain set of tackle for inland angling, with compartment for luncheon and suitable for carrying in the hand, £2.
42. Essay on the migrations and spawning of sea fish, especially soles, turbots, plaice and other flat fish, £20.
43. Essay, accompanied by maps showing localities where mussel beds can be established, and how existing mussel beds can be best cultivated and protected so as to afford an increased supply of mussels as bait for the long-line fisheries, £30.
44. Fishing rod, line and fittings complete, best suited for general use in the Norfolk and Suffolk inland waters, £2.
45. Essay on the causes of the migration of salmon from sea to river, as influenced specially by height of water, temperature and other atmospheric conditions, £15.

46. Essay on the natural history and habits of the herring, with suggestions for the improvement of the fisheries of the same in the United Kingdom, to be considered as a source of national wealth, £50.
47. Essay on the herring net, showing the best mesh for the capture of the matured fish, and means for making the use of such mesh compulsory in Great Britain and other nations fishing in the same waters, £21.

In addition to the special prizes and government medals, gold, silver and bronze medals and diplomas of honor will be awarded in respect of the exhibits considered most meritorious by the jurors in classes 1 to 5, and diplomas of honor only in class 6 of loan collections of the general classification.

W. OLDHAM CHAMBERS, Hon. Sec., Lowestoft.

Ice water is perfectly harmless and more refreshing with a little Hop Bitters in each draught.

Fish Culture.

THE CENTRAL FISHCULTURAL SOCIETY.

[CONTINUED.]

MR. CLARK: This experiment by Mr. Fairbank proves the importance of planting great numbers and making their presence felt by the force of those numbers. If all who plant new fishes in their waters would put in a half million or more, they would be able to see the result.

MR. MILLER: I agree with Mr. Clark on the value of planting in great quantity in one place, and in Michigan we have not done so on the salmon, although we have planted in years past 1,769,000. We are now bending our energies on the whitefish while awaiting the results on former plantings of salmon. In this connection it may be proper to give the exact figures of our work since 1874, which are as follows:

Planted, from U. S. Fish Commission, shad, 40,000.
Planted eggs from U. S. F. C., our hatching, land-locked salmon, 100,000.
Planted eggs from U. S. F. C, our hatching, Atlantic salmon, 220,000.
Planted eggs from U. S. F. C, our hatching, California salmon, 1,769,000.
Planted in inland lakes, lake trout, 1,000,000.
Planted silver eels, 1,000,000.
Planted brook trout, 500,000.

Of the latter 64,000,000 went in the Great Lakes and the Detroit River, and 16,000,000 in the inland lakes.

MR. WELSHER: I saw the salmon which my son caught, to which Mr. Fairbank refers, and I saw some others. When up at Geneva Lake last fall I noticed a female salmon which was too big to get up the creek; should think she might weigh twenty-five pounds. I also saw indications of beds in the gravel near the creek which runs from Mr. Fairbank's ponds. They were quite near the shore in the lake, which has gravel along its edges for some distance into the lake. I also have some young salmon in the Wisconsin hatchery which came from eggs taken from the State ponds.

MR. CAMERON then offered a resolution authorizing the appointment of a committee of three to draft a bill for the protection of fish in the Mississippi River and its tributaries, and report it back for action at the next meeting of the Society.

MR. SHAW: I am in favor of this resolution, and intended to ask all who are interested in fish culture, especially those whose interests are in the Mississippi and its tributaries, to give their views on this subject, in hope that something might be brought out which would be of value.

MR. MILLER: I would like to amend it so as to include the Great Lakes.

MR. CAMERON: I accept the amendment.

MR. BALLOU: In place of the above I beg leave to offer the following:

"WHEREAS, The food fishes of Lake Michigan are rapidly disappearing; and

"WHEREAS, A general law of protection should extend to all fishes, as to all birds and mammals; and

"WHEREAS, The United States government recognizes the jurisdiction of States over navigable waters within or bordering their coasts, by asking permission to fortify military positions, erect lighthouses, make coast surveys, remove obstructions to navigation and construct harbors, breakwaters, etc.

"*Resolved*, That a committee of three scientists be appointed to determine the protection, and time of the same, needed for fishes;

"That a committee of three from each bordering State be authorized to memorialize their respective Legislature on the action of the scientific committee;

"That the scientific committee confer with the United States Fish Commissioner relative to the passage of some law for the protection of food fishes of the great lakes and the Mississippi River."

MR. FAIRBANK: Rather than a committee of scientific men I would prefer to choose the committee from among the fishermen, the pound and gill-net men, who would sit down and talk it over, and who know exactly what they are talking about and what they want; men who know where their bread and butter comes from, and who would take care that no hasty legislation cut it off. They would be more apt to get a satisfactory bill framed than any others. I object to men who are merely scientists, and nothing else, framing laws. If you go to prohibiting fishing during the spawning seasons, through a sentimental feeling that it is not right, you will get no fish to eat. The shad, the whitefish and several other fishes are away beyond reach except at their spawning seasons.

MR. BALLOU: My object is to prevent the wanton destruction of fish by taking them in the spawning season.

MR. CLARK: No doubt the gentleman means well, but he is mistaken in some of his facts. The whitefish spawn at different times. Were you aware of that?

MR. BALLOU: I would like proof of that. Who says so?

MR. CLARK: I say so, and I presume that there are men here who know whether I have had experience enough to warrant me in speaking as an authority on the habits of whitefish.

MR. BOOTH: I am willing to accept Mr. Clark as authority on this subject, he certainly has worked with the fish long enough to know their habits.

MR. CLARK: We find that the whitefish of the Detroit River, and those at Alpena and Petosky spawn at different times.

MR. LYTLE: As late as Nov. 25 we took whitefish eggs for the Wisconsin Commission at Escanaba and got the best spawners.

MR. MILLER: My experience bears out Mr. Clark's statement. We took eggs at Alpena on the 10th of November, until prevented by storms, and afterward went to Petosky and took some near the middle of November, from 7th to 10th. We then obtained some from the Detroit River in December, being obliged to work as we could by permission of the weather. I am satisfied that there is no necessity for other protection than a close time when no fish are taken. There is a misapprehension about nets, the pound nets being more destructive than the gill-nets, for the latter seldom take the spawning fish.

MR. CLARK: After finishing in deep water the gillers go in shore.

MR. FAIRBANK: I am opposed to meddling with the laws for protection, and think we are wasting time in discussing questions of little value.

MR. MILLER: That is my opinion also. I think we need laws, but we can't get them. If the general government will give Prof. Baird liberal appropriations, and our States will follow the same course with their commissioners, we can hatch the fish in such quantities that the stock will be more than kept good, and so fish will be plenty without quarreling with the fishermen about when they will catch them.

MR. MATHER: The last remark of Mr. Miller reminds me that I have often thought that it made little difference, when a fish was taken the result was the same. If you take a trout in the spring of the year she can't spawn in the fall, and is as much out of the way of increasing her species as if she was allowed to live all summer and killed in August. A whitefish taken on the spawning beds is no more of a loss than if killed two months before, and that, as so many of the gentlemen have said before, is the only time to get them.

MR. CLARK: Fishermen should be licensed, and the money paid for their license should form a fund to be devoted to fishculture. The fee need not be large, not large enough to bear hard upon the fishermen, but the small sum paid by the many individuals would swell the aggregate to an amount which would pay for the stocking of the waters on a grand scale.

MR. BOOTH: I believe, both as a fisherman and a market-man, more in propagation than protection. We had a protective society on the Pacific Coast and protected the salmon in the Columbia River until we came to the end of our tether. The result was that six years ago the salmon ran out and the fisheries were abandoned. Three years ago, through propagation, three times as many were caught and the fishermen have come back. On this river, which was thought depleted a few years ago, until we were forced to abandon our fisheries, we organized a company for the propagation of salmon. This year the fish were scarce in June, but in July more were taken than were wanted, the result of the plantings four years ago. Prof. Baird had advised us to raise the means and put in more fish than the people could take out.

MR. BALLOU: I can only say that I think that propagation without protection is only a half-way measure.

MR. FAIRBANK: This is a very old question, the theoretical man runs against the fishermen and sometimes makes a mistake. There is no doubt but the capture of small whitefish tends to deplete the waters, but if a law is passed regulating the size of the mesh so that all small whitefish will pass through, then no herring are taken, and in trying to avoid one evil we fall into another, for the so-called lake herring is a most valuable food fish, closely related to the whitefish, and not a true herring at all. They are a very palatable fish and their numbers make their capture both profitable to the fishermen and the people who consume them, and I question if any one has a right to destroy this fishery, even to save the young whitefish, which, no doubt, are caught with and sold for lake herrings.

MR. MATHER: This subject having been argued at length I call for the question.

MR. CAMERON: Let us have the question and bring it to a test. It seems to me that we are almost unanimous on it.

MR. BALLOU: I will withdraw the resolutions.

MR. BARTLETT: I have been greatly intetested in the paper read by Mr. Mather on the wonderful growth of carp in this country, but notice that most of the reports which he quotes come from the Southern States. My own experience, which was given at the conclusion of the paper, was, of course, in the warm waters of Illinois. How will this fish thrive in Canada?

MR. MATHER: It is impossible to say how it will thrive where it has not been tried. But few have been sent to Canada and no reports have been received from there, but as their summers are warm there would seem to be no reason why they would not do well there. Since the paper which Mr. Bartlett refers to was written I learn that Mr. Munn, of the *Scientific American*, received carp of three inches long in May and placed them in his pond near New York city, where they grew to fifteen inches long this summer, so that while the Southern States may crow the loudest over their wonderful growth it is clearly established that the fish does splendidly in Northern waters, and as an article of food I believe that in twenty years the carp will produce more tons of food, from Maine to California and from Minnesota to Texas, than any other fresh water non-migratory fish within our borders.

The Secretary then read the following communication:

FISHCULTURE, FISHING TACKLE, HYBRIDIZING AND POUND NETS.

BY SETH GREEN.

N. K. FAIRBANK, Esq., President Central Fishcultural Society:

I note with pleasure that your society is to have a meeting. I am very glad to see that you are taking steps toward keeping up the interest in what I think is destined to become one of the greatest improvements of the age. There is nothing of more importance to the people than the production of that article which is necessary to keep soul and body together.

I am almost daily in receipt of letters showing the increase of fish in the different sections of our State, and the people are more than pleased with the success of the undertaking. The cases are very rare, where the fish have been judiciously planted, that the results have not been satisfactory. One of the greatest studies of a fisheulturist should be the adaptability of the different varieties of fish for the different waters. If this subject is carefully studied the success is insured from the beginning.

During last summer and fall I made several trips to our inland waters for the purpose of teaching the people the best methods for taking the fish contained in their respective lakes with hook and line, in which I was very successful. The principal fish which the people have difficulty in taking in our inland lakes are salmon-trout and black bass, more especially the former. The causes are that they are a deep water fish and the waters they inhabit are very clear and bright. The tackle generally used is so coarse and rough that in many cases it is more of a scarecrow than a bait. Fish are gifted with more intelligence than they are given credit for, and many an angler would have returned home with a better basket of fish taken by his own hand and not been obliged to stop at the fish market and have it filled had he stopped to consider that he is dealing with creatures who are as capable of detecting fraud in their element as man is in his. When the people learn how to take fish with hook and line the tendency will be to stop netting, which is doing so much to devastate our comparatively small waters. Once get the better class of people interested in the waters in their vicinity, and let them see that a mess of fresh fish can be had for the taking at their door most any day when they feel disposed to have a fish dinner, and they will take active measures toward protecting their waters from the depredations of a lot of individuals who at best can make a living but a few months in the year and the rest of the time cause themselves and families to live in great privation.

There is no deed of charity that the rich can do for the benefit of their poor neighbors than to keep our waters well stocked and protected from wholesale slaughter and during their spawning seasons.

No waters can be depleted by hook and line fishing alone. The attention of fisheulturists have been of late called to the subject of hybridizing. We have made several attempts at the New York State Hatchery with several different varieties. I will give you the results of two experiments that are the most fully developed.

Four years ago this last fall we crossed the male California salmon with the female common trout. But a small percentage of the eggs were impregnated. They hatched in about fifty days. The young fry were healthy, and we have succeeded in raising between seventy-five and one hundred up to the present time.

During November, 1879, I observed that they showed signs of spawning. I watched them carefully and discovered that there was either no males among them, or they were not far enough developed to assist in the process of incubation. To overcome this difficulty I placed in the same pond with them several male brook trout. November 28, 1879, we took from them a few hundred spawn. It was found in attempting to take the spawn that the vent was too small for them to pass their eggs, and we were obliged to enlarge the aperture to obtain the spawn. The eggs were nearly the size of salmon trout and the fish had brook trout vents. We used brook trout milt on them, but none were impregnated. The largest of these fish will weigh nearly a pound. They resemble both parents. A good many of them are deformed in some way and they are an extremely shy fish.

The result of the other experiment I have recently written for the papers and append the article as published:

At the New York State Hatchery we have a pond containing sixty hybrid trout, the cross is male salmon trout with female brook trout. They are now three years old, and will average one-half pound each in weight; the largest will weigh three-fourths of a pound. They resemble both parents, but are a little inclined the most toward salmon trout. November 1 they commenced spawning for the first time, and continued until November 12. We succeeded in obtaining 19,400 spawn. A remarkable fact concerning the spawn is that they are fully two sizes smaller than brook trout spawn. It may be necessary for me to state that salmon trout spawn are twice as large as brook trout spawn. One would suppose that the spawn would be in size between salmon trout and brook trout, but instead they are smaller than either. The eggs are perfect in shape, and a good percentage are impregnated and doing well. The formation of the fish in the egg can at present be seen plainly. They commenced to spawn just after the salmon trout had stopped spawning and just before the brook trout had fairly commenced. It is my opinion that they will make a fish well adapted to either lakes or streams. They are a well-formed and handsome fish, and the prospects are that they will be a valuable addition to our better class of food fishes.

We also crossed a few hundred hybrid trout eggs with male brook trout; a good percentage are impregnated.

All of the fish at the hatchery are looking exceedingly well. We shall take a large supply of brook trout spawn, also California mountain trout spawn; the breeders of this variety are in fine condition, and we shall be able to furnish all parties in this State desirous of procuring them for public waters with a good supply of young fry.

Improvement in fishing implements are keeping pace with all other inventions. The pound net is one of the great inventions for taking fish and they will deplete any waters where they are used unless the mesh is made large enough, so that they will let the young fish through. If the mesh is made so large that any fish weighing less than one and a half pounds can go through the fishermen will in three years from now take nearly as many fish as they do now, and in point of weight the increase would be many fold greater. They will take just as many large fish as they are taking now

with the fine mesh and in three years the small ones will be grown up and would be taken by the same fishermen that take the small ones now. Fish are local in their habits and know the lay of the water as well as men know the lay of the land. There are thousands of tons of young whitefish sold in New York markets, and all over the country, that do not weigh over half a pound. It is so strange to me that enlightened men will do so much to their disadvantage.

The trouble is that the fisherman thinks if he lets the little ones go some other fishermen will get them, and so they all go in and take all they can.

If it had not been for the work of the Fish Commissioners pound netting would not pay in but few places outside of Lake Superior.

The pound net owners are men of means—they have to be to own many nets—and if they would call a meeting and agree that no one should set a pound net with a mesh of less size than would hold a whitefish weighing one and a half pounds there would be no need of any laws by the legislators. The best kept laws I have ever known is a set of men get together and draw up an agreement and all sign it. That law will not be broken, for every one of these men has his eye on the other. Many fishermen have the idea that all engaged in fisheulture are their enemies, but that is not the case. We are the best friends they have, and if they would take the above points into consideration seriously it will be to their advantage in the end.

TO BE CONTINUED.

FISHCULTURE IN TENNESSEE.

A LECTURE upon fisheulture and angling was recently delivered by Rev. H. H. Sneed before the Iron, Coal and Manufacturers' Association, at Chattanooga, Tenn., and reported in full in the *Daily Times* of that city. After giving the history of its discovery in France by the Vosges fishermen, Gehen and Remy, and the establishment of the first hatchery in American by Drs. Garnick and Ackley, the subsequent erection of one by Mr. Ainsworth, of West Bloomfield, N. Y., and the rapid growth of the art, he goes on to the consideration of fisheulture in his own State from which we extract the following:

"That one section—embracing the Tennessee and its tributaries, hundreds of square miles—is well adapted for this work there can be no question. Streams are numerous, springs abound and our lands in many places are admirably suited for the location of hatcheries and fish ponds.

"One hatchery near this place, say on the Emory River, or on our blue North Chicamauga, or further up the river, about Knoxville, could supply this whole section, indeed all the country along the Tennessee, with fry. Every farmer might have his fish pond and the young fish supplied them every spring for the year's consumption. This we readily see might be the case when we visit some of the streams hidden away in our mountain gorges and find them alive with bass and perch. Green's Pond, Crawfish Spring, North Chicamauga and other places in our vicinity, doubtless, would be admirably suited for fish raising.

"While we have not the trout in our streams near us, we have what, indeed, furnishes quite as palatable a dish and as good, if not better, sport to the angler, and that is the black bass. Every stream in our vicinity—indeed, I may say the Tennessee and its tributaries—are stocked with this fish. Then we have the pike, known North as pickerel, the pike perch or glass-eyed pike, or jack salmon, as named by some, and the black perch, the white perch, the bream and the channel cat—all game fish and excellent for the table.

"In addition to these, we have the following food fishes: The buffalo, the sturgeon, the drum, the red horse, the common sucker and the yellow cat and a great number of smaller fishes. Our river is already well stocked with the latter-named varieties and there is no need that attention be given to their cultivation at the present. The buffalo, the drum and the cat are abundant, the last of which may be had at all seasons.

"The drum is most abundant in the spring, the buffalo in the latter part of summer.

"Game fish are not as abundant as they should be, but their existence and increase, where they are unmolested, lead us to believe that these varieties—and there are none better, either for the hook or fork—may be cultivated in ponds and streams with great success. I believe that North Chicamauga might be so guarded by weirs from the high water of the Tennessee that in a few years it would furnish all the sport that our anglers might desire, and I believe artificial lakes might be formed in several places in our country that would afford large supplies of food fishes, as well as fine sport angling.

"I might mention here also a fish that is coming into general favor as a variety easily cultivated in ponds, the German carp, which has been already introduced in many parts of our country. They multiply rapidly and are fine for the table.

"Nashville *American*: 'Notwithstanding the large number of carp distributed by Fish Commissioner George F. Akers to all parts of the State within the past few days, he now has on his desk nearly two hundred applications for fish. Prof. Ellzey, of the Agricultural College at Blacksburg, Va., writes Commissioner Akers that all the waters flowing from Virginia into the Cumberland and Tennessee rivers will be stocked from their hatching-house at Blacksburg with new varieties of game fish fry, provided our Legislature will give protection from seining, gigging, traps and obstruction to the month of streams tributary to the main streams leading from Virginia soil.'"

[We will quote from his remarks upon angling in a future number.]

REPORT OF THE DEUTSCHE FISCHEREI VEREIN.

THE Fishery Association of Germany issues reports called "circulars" as often as circumstances seem to demand. We have before us "Circular No. 6, 1880, dated Berlin, Nov. 25," in which many subjects are treated of both by the society and its correspondents. The receipt of 300,000 eggs of the quinnat salmon from the U. S. Fishery Commission and their distribution is recorded. Mr. Carl Schuster, of Freiburg in Baden, has an article on the transporting of live fishes. He has an arrangement of a tin can with a pipe through which air is forced from a rubber ball held in the hand. A better plan of his is a can within another, the space being filled with ice and wadding.

Mr. Hermann Haack has an article on the importation of American brook trout into Germany. In 1879 there were 1,000 eggs received and divided between the establishment of Herr Schuster and the government hatchery at Hueningen, and many have been received since. He finds them hardy and quick to grow, and this year he impregnated 32,000 eggs of the European trout, *Salmo fario*, with the milt of *fontinalis*, the hybrids making a rapid growth.

Prof. G. Brown Goode's paper on the first decade of the U. S. Fish Commission, which was read before the Association for the advancement of science, is translated and republished. Dr. Hermes has an article on the generation of eels, with figures of ovaries and testicles in *situ*, and a short article on the supply of crayfish for culture by Mr. Micha concludes the circular.

FISH CULTURE IN ENGLAND.—The late Mr. Frank Buckland has bequeathed his valuable Museum of Economic Fish Culture to the people of Great Britain, and on the decease of his wife a sum of $25,000 will revert to the nation to be applied for the purpose of founding a professorship of economic pisciculture in connection with the Buckland Museum and the science and art department at South Kensington. Mrs. Buckland has presented the museum with his private collection of casts and mounted specimens.

Professor Thomas H. Huxley has been appointed to succeed Mr. Buckland, as Inspector of salmon fisheries. In speaking of this appointment, the London *News* says: It is unnecessary to say that Mr. Huxley is peculiarly qualified for the special duties of such a post. No man, indeed, could come to the office better fitted in every way for the discharge of its duties. We confess that we feel some gratification in assuming that the duties of the office are nevertheless not very difficult or wholly engrossing. It would be greatly to be regretted if Mr. Huxley had accepted any office which would compel him to give up the other and more important studies to which he has hitherto devoted his life. Prof. Agassiz was once offered an occupation in the United States in which he was told that he would be sure to make money. He answered coldly that he was a scientific man and had no time to waste in making money. Every one would feel sorry if Mr. Huxley had been induced to accept a post which, whatever its special advantages or duties, was to withdraw him from what we may fairly call the business of his maturer years. But, then, everybody may feel perfectly satisfied on that head. Mr. Huxley certainly would not accept any post which could entail such a sacrifice. Possibly the effect of his having consented to take this office may tend in a certain sense rather to assist him in the great business of his life than to interfere with it.

A CAVE AND A TROUT POND.—The Kansas City *Times* tells the following: "About a year ago Mr. Strein bought a tract of land, located one mile east of Westport (Mo.), on the main road to the Blue, upon which was a wonderful spring of cool, pure water, which came bubbling from an immense cave which has been explored over 1,000 feet from its mouth. Soon after Mr. Strein secured the property, he bethought him of raising brook trout, and Mr. James Annin, Jr., a well known fisheulturist of Caledonia, N. Y., came to Kansas City to examine the water, and see if, in his opinion, the plan was a feasible one. Mr. Annin explored the cave, which begins just south of the main road leading by Mr. Strein's place to Westport, and after making the way underground about 600 feet, came to a small cataract, about three feet high, over which the water fell. In about 400 yards another waterfall was reached, but at this point a perceptible rise to crawl along, as the walls of the cave are very low, the ceiling being ragged and rough. About a year ago, when an investigation of the cave was first made a lot of old Indian arrow heads of flint were discovered near the first waterfall, and it is said in olden times the Indians used this cave as a sepulchre for their dead before they were sent to the "happy hunting" ground. In support of this theory it is known that within thirty yards of the mouth of the cave are the remains an Indian stone house, where not many years since dwelt a half-breed and his aged squaw. They were very reticent as to the use of the cave, but claimed the water which came from it had certain curing powers which their "medicine men" had discovered ages ago. The people in the neighborhood have all heard the stories, and the place has about it much of interest.

Mr. Annin told Mr. Strein that in his opinion the water from the cave was well adapted to raising fish, and on his return from Caledonia, he sent out 3,000 eggs taken from Caledonia Creek, and last March they were placed in a trough and the hatching began, and by the 20th of the month it was estimated that the 3,000 eggs had produced over 2,500 trout. The fry was immediately placed in a small pond, and are now three inches long.

SENDING YOUNG EGGS DRY.—In our issue of Jan. 6 we published an article under this heading from Mr. Max von dem Borne, the celebrated German fisheulturist He now writes us, under date of January 24, as follows: "Concerning my article on the sending of fish eggs which had never been in water, in a bladder with milt only, which you were kind enough to publish, I wish to add that a very large number of the eggs so sent were not impregnated, and while it was interesting as an experiment I do not wish to recommend it as the best manner of packing or sending eggs.

I am a regular reader of FOREST AND STREAM, and have a complete file of the numbers from the beginning, and will be glad to send you occasional notes from Germany if you think them of interest. The whitefish eggs recently sent over by favor of Prof. Baird arrived almost without loss. They are very healthy, and are now developing in my hatching troughs."

We will esteem it a favor to receive fisheultural, or other items, from Mr. von dem Borne.

DAMAGE TO THE CARP PONDS.—The recent floods which have inundated so many places have wrought great damage to the National Carp Ponds at Washington. We hope that the following account by telegrph is much exaggerated. It says: "The damage caused by the flood is at present pure conjecture. The Government will be a heavy loser. The fish pond and all the apparatus used by the Smithsonian Institute has been destroyed and the carp scattered to destruction. The basement of the main building, occupied by the Census Bureau, is filled with water, though most of the papers and records stored there were removed in anticipation of just what has happened. The steam fire-engines worked all day trying to keep down the deluge in this building, but gave it up, after hours of service, as a bad job, it being discovered that it was practically throwing water over a rail fence."

There is chance that the carp were buried in the mud and did not allow themselves to be washed out, but up to the time of our going to press no further particulars have been received.

CARP IN OHIO—Cleveland, Feb. 2.—The cultivation of the European carp is all the talk here nowadays among those who have waters suitable for their development, and this includes almost every farmer in this locality. Would it not be well to give some general information in FOREST AND STREAM on the construction of carp ponds and how to construct dams that will not break away? Two recipients of carp here have already lost their fish by this accident. DR. E. STERLING.

We will do it.

Truth is mighty and has prevailed. See its triumph in Hop Bitters.

The Kennel.

April 1, at Columbia, Tenn.—Close of entries, National American Kennel Club's second American Field Trial Derby. Joseph H. Dew, Secretary.

ALEXANDRA PALACE DOG SHOW.

(Concluded from the *London Field*, Jan. 23.)

WE would have reversed the awards in Dalmatians, the winning bitch, Treasure, being a weedy, light one, and we thought Morgan superior to her and to Stella.

White Pomeranians were correctly placed, but in the black ones we did not like black Jack, who took second, as he shows a tremendous lot of wave in his coat.

Again, in black poodles over 16in. high, clearly Peter the Great, who was placed second, has far better ears and bone than the winner, Puff. Sir Bevis was alone in the under 16in. division and he was well shown. There was a class for poodles other than black (any size), and in this first was given to Champion, who is a black one, whereas Mr. Whittingham's Charley, a very good white corded poodle, was unnoticed.

In champion large-sized bulldogs Monarch completely smothered Lord Nelson and, notwithstanding various rumors to the contrary, up to the time of our leaving the show no protest had been lodged against him. In the under 50 lb. champion class Smasher, in capital show condition—in fact, better than we have seen him for a long time—beat Leeb, his only opponent, Venom not having turned up. In the open over 50 lb. class the long-backed Faust, looking well, took the prize; and Caliban, v. h. c., has a good skull, stop, wrinkles and bone, Sampson, commended, is a little bit long-faced and would do with a little more loose skin. In the over 40 lb. and not exceeding 50 lb. dog division Lorne won. He is a good dog, with a fair skull and has a capital stop and chop. Byron, the well-known, came next, and Blunder, who is one of Mr. Benjamin's new acquisitions, showed such very good points that we thought he should have taken Byron's place, Invicta, h. c., is too long-faced. Nero is good headed, but too straight on his pins, and does not swing between them. Adrastus is only passable, and Tiger is no bulldog. The over 35lb. and not exceeding 50lb. Bitch class was rightly placed, but, good bitch as Rumpus is on most points, he'd she been in form she would have won. The Marchioness looked very well, but she was here outclassed. Her body is all that can be wished, but she is too long-faced for honors. The small-sized dogs formed perhaps the best class we have seen, and the only fault we find with the decisions is that Sir Bevis, placed second, is pinched in the nose, which detracts from his other good qualities, and for this reason, Fairwell might have taken his place. The under 35lb. Bitches exceeding 25lb. had only two in it, and Slaughter had to give way to the weak-jawed Maggie May. In the medium class, we thought that the highly commended Nectar was better than Beatrice II., and in the small-sized we also fancied the chances of Quick, very highly commended, far above those of Nelson II., who took second.

Bedlingtons were fairly taken in hand, but Wearside Lad should not have been passed over.

Two champions turned up in Irish terriers, Sting and Erin, the judge going for the latter, in which decision we do not agree. In the open dog class the judge rightly hit upon Terence for first prize, but in placing Nabocklish over Killuey Boy we think that he made a mistake. As for Lifter, he has grown shelly, and Jack III. is no good, and the judge was right in passing him over. In the bitch class, again, the judge went a bit wrong. Nettle deserved being in the money, but she could not have won outright, Colleen Dhas, being better; and Petticoat, had she been in coat, would have been a hard nut to crack for all comers. Glory, shown unctopped, has terrible ears, and Cora, who has been winning at Belfast, Newry and Nottingham, had too profuse a coat, and she is toy-faced. In the unctopped-ear division we do not think the exhibitors will indorse the judge's decisions, one of the very best, if not the very best, being Moya Deolan, and she was only v. h. c. Thiggin Thue rightly took second; but Poiteen, placed first, hardly deserved that high position. Begorra, h. c., has a capital coat.

The awards in smooth-haired were well made and in black and tans we also fairly agree with the decisions arrived at, except that we could not understand why Solicitor-General should be awarded a medal, as he is not particularly long-faced and was shown mangy. In the small black and tan class we fancied Rucetta, placed second, quite as well as Sample, who took first.

Drop-eared skyes were well settled, but in the prick-eared class Stirling, highly commended, should have taken third, instead of Rob Roy, and Princess of Thule should certainly have been noticed.

In the hard-haired Scotch terriers the judge appeared to give satisfaction. He certainly went in for a genuine varmint type.

Spaniels are also very well placed, particularly in the dog class; but in bitches the winner, Maida, seemed to us to be very light for her place. The puppies were so smart that all but one were noticed.

There were but two Yorkshires, Bradford Hero and Crack II., the former outdistancing his companion in the very easiest of canters.

There were three champion pugs entered, but Comedy was too late for competition and Sooty scored over the good-bodied Jenny. In the open dog class Young Peter, the winner, has no mask to speak of and is of a poor color. Banjo, placed next, was better, and Challenger, with his good wrinkles, deserved his third prize. Tum-Tum, unfortunately, has departed this world, else he would have altered the list. Zulu II., a good-bodied, well-wrinkled dog, had to be satisfied with a commendation and Cupid was passed over—his long ears detract sorely from his qualities. Countess won in bitches; and here again we strongly fancied Dowager, a nice-headed, good-eyed bitch, full of style. The puppies were well placed, we should imagine, with a youngster of a proper size and with excellent points. Miss Lea's dark, well-made Othello was but ill-rewarded with a commendation card, second prize going to Smutty, a son of Sooty, and a credit to his stock.

Lady Giffard, as usual, had the class all to herself in Maltese, and Blenheims, King Charles and Toys showed such a difference of quality that the decisions were easily come to. The puppy classes filled exceedingly well and we can heartily back the judge's awards with respect to these, except that we thought Mrs. Mayhew's pups deserved better than a bare high commendation, as they were really good.

This brings to an end our review of the January, 1881, Kennel Club Show—a show that will long be remembered by those who patronized it on account of the bitterness of the weather and the many inconveniences accruing therefrom, not only to exhibitors and visitors, but also to the dogs during their transit. One dog, at least, we heard, had been found frozen to death in its hamper, and when we state that it took a party of fanciers four hours to get from King's Cross to the Alexandra Palace, a distance of seven miles, it will strike readers that things must have been in a lively condition. We feel sorry for the Kennel Club, who really deserved a better reward for their exertions, and we sincerely trust that their next show will be favored by more suitable weather.

We append the official prize list of the principal awards:

Bloodhounds—Champion Class: Prize, F. Brough's Napier. Open Class—Dogs: 1st, L. G. Morrell's Margrave, late Judge II.; 2d, E. Brough's Bravo; 3d, E. R. Ray's Lucifer. Bitches: 1st, Dr. L. S. F. Winslow's Bell; 2d and 3d, L. G. Morrell's Belladonna and Morna. Puppies: 1st, M. Beaufoy's Ruperta; 2d, R. Fowler's Muriel.

Mastiffs—Champion Class—Dogs: 1st, M. Beaufoy's Nero. Bitches: 1st, W. K. Taunton's Gwendolen. Open Class—Dogs: 1st and cup, H. C. Joplin's Vulcan II., late Vulcan; equal 2d, Dr. J. S. Turner's Cedric the Saxon and M. Beaufoy's Cæsar; equal 3d, Dr. L. S. Forbes Winslow's Othello and Dr. J. Russell's Lord Darnley. Bitches: 1st and cup, A. P. Bartlett's Tayra; 2d, M. Beaufoy's Dorinda; 3d, H. G. Woolmore's Dea. Puppies—Dogs: 1st, H. G. Woolmore's Crown Prince; 2d and cup, H. Hills' Banquo. Bitches: 1st, H. J. Woolmore's Malinda; 2d, E. Nichols' Boomah.

St. Bernards—Smooth or Rough-Coated—Champion Class: 1st, Dr. J. Russell's Cadwallader. Rough-Coated—Dogs: 1st, Dr. J. Russell's Katerfelto; 2d, Rev. G. A. Sneyd's Keele; 3d, G. Etheridge's Oscar II. Bitches: 1st, H. G. Sweet's Gretchen; 2d, Rev. G. A. Sneyd's Hope; 3d, J. F. Smith's Norma II. Smooth-Coated—Dogs: 1st, Dr. J. Russell's Rupert; 2d and 3d, R. Thornton's Dunsan and Cyrus. Bitches: 1st, R. S. Armitage's Amy; 2d, J. Valentine's Ida; 3d, Lady Isham's Abbess IV. Puppies—Dogs: 1st, R. Thornton's Malcolm; 2d, J. Adams' Druid. Bitches: 1st, Dr. J. Russell's Nunette; 2d, G. Watmough Webster's Mistletoe.

Newfoundlands (Black)—Champion Class—Dogs: 1st, E. Nichols' Nelson I. Open Class—Dogs: 1st, W. W. Thomson's Captain Murphy. Bitches: 1st, H. R. Farquharson's Lady Beaconsfield; 2d, Mrs. Cunliffe Lee's Nancy; 3d, T. Lonler Browne's Dolly. Other than Black: 1st, H. R. Farquharson's Trafalgar; 2d, G. Chapman's Prince Charlie.

Boarhounds or Great Danes: 1st, R. Leigh Pemberton's Hector I.; 2d, Mrs. J. Davis' Imperium; 3d, R. Groom's Jezebel.

Deerhounds—Dogs: 1st, H. St. J. Stephens' Bevis I.; 2d, W. W. Thomson's Oscar; 3d, J. Haddon's Roy. Bitches: 1st and special, W. M. Chinnery's Bruce II., late Nora Creina; 2d, H. St. J. Stephen's Minna; 3d, W. W. Thompson's Linda.

Greyhounds—1st, G. Burgess' Farination; 2d, T. B. Swinburne's Magnolia; 3d, Mrs. A. M. Miner's Pat.

Any Variety (except Hoarhounds and Dassels)—Exceeding 40 lbs.,

1st and extra, W. K. Taunton's Sir John Franklin and Lupus. Not exceeding 40 lbs.: 1st, W. K. Tauntou's Admiral.

Pointers—Large Size—Champion Class—Dogs: 1st, R. J. L. Price's Wagg. Bitches: 1st, Major V. H. V. Lee, M. P.'s Maggie. Open Class—Dogs, 55 lbs. and upwards: 1st, R. P. Leach's Bang 1L.; 2d, R. J. Stranger's Don of Devon; 3d, R. P. Leach's Bonus Sanco. Very high com., the Sporting Dog and Field Trial Club's (Limited) Burstone. High com., Major V. H. V. Lee, M. P.'s Mango. Bitches, 50 lbs. and under: 1st, Major V. H. V. Lee, M. P.'s Mop; 2d, the Sporting Dog and Field Trial Club's Juno; 3d, E. Bulled's Sappho. Small Size—Champion Class—Bitches under 50 lbs.: 1st, R. J. L. Price's Bow Bells. Open Class—Dogs under 55 lbs.: 1st, E. Bolled's Sambo the Devil; 2d, R. J. L. Price's Little Ben; 3d, E. C. Norrish's Digby. Bitches under 50 lbs.: 1st, G. Pilkinton's Lilac; 2d, R. J. L. Price's Merry Bells; 3d, J. E. L. Lloyd's Daphne. Very high com., R. W. Leach's Bonus Bell. High com., W. P. Arkwright's Petal. Com., R. J. L. Price's Professional Beauty and W. Bishop's Bride. Griffins: 1st, H. Lowe's Lady Sefton; 2d, J. Usher's Jack. Very high com., J. J. Pollock's Forest Lilie.

Setter—English (except Black and Tan)—Champion Class—Dogs: 1st, R. LI. P. Llewellin's Rems. Very high com., J. Shorthose's Royal IV. Bitches: 1st, R. LI. P. Llewellin's Puzzle. Very high com., T. B. Bowers's Maid of Honor. High com., R. LI. P. Llewellin's Phantom. Open Class—Dogs: 1st, R. LI. P. Llewellin's Prince Royal; 2d, T. B. Bowers' Border Chieftain; 3d, R. LI. P. Llewellin's Count Paragon, late Paragon. Very high com., E. Freme's Young Rock. High com., J. Shorthose's Rollo. Com., R. LI. P. Llewellin's Dashing Ruthven and W. D. Duncan's Rory. Bitches: 1st and 2d, R. LI. P. Llewellin's Dashing Bear and Countess Moll; equal 3d, H. Lowe's Countess Kate and C. T. Fauntleroy's Paff. High com., R. LI. P. Llewellin's Ballie. Puppies: 1st and 2d, R. LI. P. Llewellin's countess Prim and Countess Plover; 3d, C. T. Fauntleroy's Plum. Very high com., E. Bishop's Scotchman. High com., J. Shorthose's Hartford Rock and J. B. Wilson's Danger. Black and Tan—Dogs: 1st, T. Jacobs' Marquis; 2d, M. Macdonald's Young Jock; 3d, J. Shorthose's Grouse. Very high com., H. B. Gibbs' Lorne V. High com., the Sporting Dog and Field Trial Club's Donald. Bitches: 1st, W. Richardson's Kate; 2d, E. L. Parsons' Busy; 3d, C. B. Hodgson's Regalia. Puppies: 1st, E. L. Parsons' Bishop; 2d, M. Macdonald's Dash II. Very high com., J. R. Richardson's Sir Derrick. Irish—Dogs: 1st, J. W. Gilfap's Garryowen; 2d, T. M. Hilliard's Count; 3d, Weyman and Buchanan's Dan kettle. Very high com., J. H. Salter's Whisper II. and J. J. Giltrap's Frank. Bitches: 1st, T. M. Hilliard's Tilly; 2d, J. J. Giltrap's Mary Mackree; 3d, Weyman and Buchanan's Sheelah. Very high com., C. T. Fauntleroy Quail II. and Rev. R. O'Callaghan's Grouse II. High com., J. J. Giltrap's Lady Palmerston II. Com., Rev. R. O'Callaghan's Hebe. Puppies: 1st, H. J. Clement's Eldon. High com., J. J. Giltrap's Clare.

Retrievers—Black—Champion Class—Wavy-Coated: 1st, M. McDonald's Mabel. Curly-coated: 1st, T. B. Swinburne's Chicory. Open Class—Smooth or wavy-coated—Dogs: 1st, E. G. Farquharson's Zelstone; 2d, G. Ansty's Moliere II.; 3d, J. A. Doyle's Jacobite. Bitches: 1st, R. J. L. Price's Floss; 2d, R. L. Pemberton's Mirth; 3d, Captain Weatherall's Whisky III. Puppies: 1st, E. G. Farquharson's Zelstone. Curly-coated—Dogs: 1st, S. Darbey's King; 2d, Leeson's Sultan; 3d, C. and J. G. Gamon's Young True. Bitches: 1st, H. Skipworth's Curly II.; 2d, Hill Salter's Bell Tinker; 3d, A. Large's Little Nell. Puppies: 1st, G. Culley's Jet II.; equal 2d, G. H. Granville's Black Pearl and H. Skipworth's Young King Koffee. Other than black: 1st, L. Mackenzie's Garnet; 2d, H. Skipworth's Merry II.

Irish Water Spaniels—1st, J. T. Skidmore's Micky Free; 2d, G. S. Hockey's Young Patsey; 3d, G. H. Loftus' Duck. Very high com., J. T. Skidmore Dan O'Connor. High com., G. H. Loftus' Duchess V.

Spaniels—Clumbers—Champion Class: 1st, W. P. Arkwright Looby. Open Class—Dogs: 1st and 2d, Duke of Portland's Dash II. and Bob III.; 3d, N. P. Stilgoe's Psycho. Bitches: 1st, Duke of Portland's Fairy; 2d, W. P. Arkwright's Lance; 3d and 4th, P. Pigott's Libnah and Lottie.

Team of Spaniels.—1st, Duke of Portland's Bustle II., Dart, Don II., Deuce, Dutch, Dash II., Trusty II., Bounce II., Bob III., Trudge V., Fairy and Lively.

Sussex—Champion Class.—1st, C. and J. G. Gamon's Maude. Open Class—Dogs: 1st, H. Greeu's Guess. Bitches: H. Greeu's Progress; 2d, C. and J. G. Gamon's Merry Thought. Black—Dogs over 20 lbs.: 1st, T. Jacob's Kaffir; 2d, J. Freme's Young Bob II.; equal 3d, J. Hill's Brush and H. B. Spurgin's Bosco. Bitches: 1st, F. Jacob's Squaw; 2d, H. B. Spurgin's Fancy; 3d, F. E. Barton's Betrice. Not exceeding 20 lbs.: 1st and 2d, J. Farron's Obo and Sally. Other than black: 1st, H. B. Spurgin's Alonzo; 2d, T. B. Bowers' Don Pedro, late Fop.

Fox Terriers—Champion Class—Dogs: 1st, two cups and medal, J. C. Tinne's Brokenhurst Joe. Bitches: 1st and cup, Rev. C. Fisher's Dorcas. Open Class—Dogs, 18 lbs. or under: 1st, F. L. Evelyn's Brokenhurst Sting; 2d, F. Redmond's Despot; 3d, F. L. Evelyn's Richmond Jack; 4th, H. Wright's Hunton Dick. Over 18 lbs.: 1st, T. Bassett's Archer; 2d, C. Burgess' Burton Buff; 3d, W. H. Wright's Bagman, late Partney Cudgel. Bitches, 17 lb. or under: 1st, H. Champion's Bloom; 2d, Rev. C. Fisher's Daisy; 3d, H. B. Gee's Jet; 4th, J. A. Doyle's Beauty. Over 17 lbs.: 1st, F. L. Evelyn's Needle; 2d, W. G. Marshall's Blossom; 3d, J. A. Doyle's Achievement. Puppies—Dogs: 1st and cup, F. Baguley's Rusty; 2d and cup, W. P. Arkwright's Vishnu; 3d, F. Baguley's Ready. Bitches: 1st, F. Baguley's Reine; 2d, J. C. Tinne's Jeopardy; 3d, Rev. O. Fisher's The Peril.

Wire-Haired Fox Terriers—Champion Class: 1st and special, F. L. Field's Tassel. Open Class—Exceeding 18 lbs: 1st, W. Carrick, Jun.'s Tyke; 2d, W. L. Beverly's Workman. Not exceeding 18 lbs.—Dogs: 1st and cup, Wright and Wright-Nooth's Oakleigh Topper; 2d, C. Burgess' Peter; 3d, W. Carrick's Victor. Bitches: 1st, F. H. Feild's Bundle; 2d and 3d, H. Cox and Wright-Nooth Violet Broom and Mendicant. Puppies: 1st, H Cox and Wright-Nooth's Oakleigh Topper; 2d, W. Carrick, Jun.'s Nelly III.

Dachshunds—Champion Class: 1st, M. Wootten's Zigzag. Open Class—Black and Tan—Dogs: 1st, A. C. Baker's Handsolt 2d, Major E. Cox's Ottewayo; 3d, A. O. Mudie's Dietrich. Bitches: 1st, A. W. Byron's Alma; 2d, Miss M. J. Bethell's Grumps; 3d, Other than Black and Tan—Dogs: 1st, M. Wootten's Zadkiel; 2d, W. O. Hodges' Driver; 3d, M. Wootten's Zeph. Bitches: 1st, W. P. Arkwright's Octavia; 2d, A. O. Mudie's Olympia. Puppies: 1st and cup, W. P. Arkwright's Ozone; 2d, M. Wootten's Zadkiel; extra 3d, Mrs. D. Murray's Rudolf.

Basset Hounds—Dogs: 1st, G. R. Krehl's Fino de Paris; 2d, H. E. Monro's Fino. Bitches: 1st, G. R Krehl's Pallas.

Sheepdogs—Champion Class: 1st, M. C. Ashwin's Cockie. Open Class—Dogs: 1st and prize and 2d, J. Bissell's Charlemagne and Fox; 3d, R. B. Lee's Highlander. Bitches: 1st, W. M. Chinnery's Coquette; 2d, E. Hart's Belle III; 3d, Rev. H. M. Hamilton's Eva. Puppies—Rough or Smooth-Coated—Dogs: 1st, J. and W. H. Charles' Guys Cliffe; equal 2d, J. Bissell's The Major and Rev. H. F. Hamilton's Guy. Bitches: 1st, J. and W. H. Charles' Flurry; 2d, Rev. H. F. Hamilton's Laura. Smooth-Coated—Dogs: 1st and high com. (2), W. W. Thomson's Hawk, Wait and Gilt. Bitches: 1st, W. W. Thomson's Yarrow; 2d, W. Easten's Lady.

Bull Dogs—Champion Class—Exceeding 50 lbs.: 1st, D. S. Oliver's Monarch. Not exceeding 50 lbs.—1st, A. Benjamin's Smasher. Open Class—Large Size—Over 55 lbs.: 1st, Capt. G. E. A. Holdsworth's Faust. Medium Size—Dogs over 40 lbs. and not exceeding 55 lbs.: 1st, W. Newton's Lorne; 2d, C. Collins' Byron II.; 3d, P. Rust's Adrastus. Bitches over 35 lbs. and not exceeding 55 lbs.: 1st, G. Raper's Redowa; 2d, A. Benjamin's Rumpus; 3d, W. Newton's Lida. Small Size—Dogs not exceeding 40 lbs.: 1st, G. Raper's Ringleader; 2d, N. W. Bourn's Sir Bevis; 3d, W. J. Tredenick's Farewell. Bitches—not exceeding 35 lbs.: 1st, G. Raper's Rosy Cross; 2d, O. Knott's Duchess.

Bull-Terriers—Champion Class—Exceeding 25 lbs.: 1st, R. J. Hartley's Magnet. Open Class—Large Size—Dogs exceeding 25 lbs.: 1st, A. George's Sir Robert, late Prince Royal; 2d, J. R. Pratt's Little Madman. Bitches—exceeding 25 lbs.: 1st, J. R. Pratt's Maggie May. Medium Size—Exceeding 16 lbs., but not exceeding 25 lbs.: 1st, V. A. Wood's Nelson I.; 2d, E. Burley's Beatrice II. Small Size—Not exceeding 16 lbs.: 1st, J. R. Pratt's Myrtle; 2d, A. Krehl's Nelson II.

Bedlingtons—1st, A. Armstrong's Projectile; 2d, J. Baty's Piper. Irish Terriers—Champion Class—1st, J. N. R. Pim's Erin. Open Class—Dogs: 1st, G. W. Ramsay's Terence; 2d, R. B. and T. S. Cary's Nabockbish; 3d, H. Waterhouse's Killiney Boy. Bitches: 1st, R. B. and T. S. Carey's Nettie; 2d and high com., H. Waterhouse's Petticoat and Melcha. With uncropped ears—1st, G. W. Ramsay's Rotteen; 2d and 3d, R. B. and T. S. Carey's Thiggin Thu and Whisht.

Smooth-haired Terriers—Except black and tan: 1st, J. H. Mather's Vril; 2d, W. Neven's Rose.

Black and Tan Terriers—Champion Class: 1st, J. H. Mather's Cyprus. Open Class—Large Size: Medal, W. K. Taunton's Solicitor-General; 1st, C. F. W. Jackson's Reveller, and J. H. Mather's Grand Duchess; 2d, C. Whitehouse's Norah; 3d, J. H. Mather's Grand Duke. Small Size—1st, T. B. Swinburne's Sample; 2d, C. Whitehouse's Lucette; 3d, T. B. Swinburne's Serf.

Skye Terriers—Drop-eared—1st, J. Pratt's Corrie; 2d, W. E. Eastern's Scottish King; 3d, J. Pratt's Donald. Prick-eared—1st, E. T. Rees' Clyde; 2d, J. Pratt's Sandy Grant; 3d, R. Mastie's Rob Roy II.

Hard-haired Scotch Terriers—Dogs: 1st and 2d, P. Pigott's Tartan and Tassell. Bitches: 1st, 2d and com., P. Pigott's Cavack, Syringe and Fig.

Dandie Dinmont Terriers—Dogs: 1st, J. C. Carrick's Teddy; 2d, H. S. Wipp's Pebble; 3d, J. C. Carrick's Peter. Bitches: 1st, C. H. Gates' Maida; Capt. A. Brownlow's (R. N.) Hexe; 2d, W. W. Reid's Selkirk Gyp. Puppies: 1st, A. Steel's Peregrine; 2d, J. C. Carrick's Harold; 3d, A. Steel's Heroine.

Yorkshire Terriers—1st and very high com., Mrs. M. A. Foster's Bradford Hero and Crack II.

Pugs—Champion Class—Any size; 1st, J. Lewis' Scooty. Open Class—Not exceeding 20 lbs.—Dogs: 1st, E. Field's Young Peter; 2d, Mrs. Foster's Banjo; 3d, J. H. Locke Challenger. Bitches, not exceeding 20 lbs.: 1st, E. Weekley's Countess; 2d, Miss M. A. E. Holdsworth's Dowager; 3d, E. Weekley's Zoe. Puppies: 1st, Mrs. L. Booth's Boffin; 2d, C. P. Warburton's Smutty.

Maltese—1st, 2d and 3d, Lady Giffard's Hugh, Rob Roy, Lord Clyde.

Blenheims—Red and White: 1st, Mrs. L. Booth's The Earl; 2d, W. Forder's Bo Peep; 3d, G. E. Branklyn's Duke of Bow.

King Charles Spaniels—Black and Tan: 1st, Mrs. J. A. Buggs' Alexander the Great; 2d, J. Garwood's Prince.

Other Toy Spaniels—1st, Miss V. Cameron's Conrad.

Italian Greyhounds—1st, W. J. Crisp's Fly II.

Toy Terriers—Smooth-haired—Not exceeding 5 lbs.: 1st, Mrs. M. A. Foster's Dinah; 2d, M. Michael's Zut; 3d, Mrs. M. A. Foster's Bell II., late Minnie. Other than Smooth-haired—Not exceeding 5 lbs.: 1st, Mrs. E. M. Mouck's Silk; 2d, Admiral Sir G. Giffard's Katie; 3d, Mrs. M. A. Foster's Pride.

Sporting Puppies—Except Fox Terriers: 1st, Mrs. D. Murray's Dachshund; 2d G. Foster.

Fox Terrier Puppies—Smooth or Wire-haired: 1st, G. T. Congreve; 2d, J. W. Corner.

Non-sporting Puppies—Except Mastiffs and Collies: Medal, H. Waterhouse's Irish Terriers; 2d, E. Weekley's pugs.

Collie Puppies—1st, J. Firie; 2d, C. W. M. Adam.

Mastiff Puppies—1st, W. K. Taunton.

Special Fox Terrier Prizes.—1st, Challenge Cup and Medal for the best fox terrier in the show, Mr. Tinne's Brokenhurst Joe; 2d, Cup, value £5, for the best fox terrier under 12 months old, exhibited by the breeder, who must be a member of the F. T. C., Mr. Arkwright's Vishnu; 3d, Cup, value £5, for the best smooth-haired fox terrier dog, owned by a member of the F. T. C., Mr. Tinne's Brokenhurst Joe. 4th, Cup, value £5, for the best smooth-haired fox terrier bitch, owned by a member of the F. T. C., Mr. Fisher's Dorcas; 5th, Cup, value £5, for the best wire-haired fox terrier, dog or bitch, owned by a member of the F. T. C., Messrs. Cox and Nooth's Oakleigh Topper; 6th, Cup, value £5, for the best fox terrier, dog or bitch, in the open classes, Mr. Bagaley's Rusty.

PHILADELPHIA KENNEL CHAT.

A FEW days since, while at Mr. John Krider's gun store, where all who are fond of dog and gun hereaway are wont to stop and chat on matters pertaining to shooting, I heard a very interesting discussion relative to field trials between gentlemen who have shot for many years and who are now killing their full share of game each season over dogs of their own breaking. I could not help but be impressed with the sound sense which was in great measure expressed and, without going into details, for I am sure it would be too personal for your columns, I will only narrate in part that which particularly struck me would add to the interest of field trials in this country.

It was argued that too much jockeying was beginning to be shown and that a class should be made and prizes offered for the best setter or pointer broken and handled by an amateur owner. By an amateur owner was meant the sportsman who broke his dog for his own particular use and who never received compensation for the training of either setter or pointer. Such a class as would be akin to the gentlemen riders of English hurdle races and in gentlemen driving classes in this country. Do you not think, Messrs. Editors, that entries of this nature in our field trials would prove interesting and tend to advance the standard of sportsmanship? I would not have it understood that I oppose in any manner the present style of running, as I am confident it has done great benefit, nor do I wish to cast any reflection upon those who now handle field dogs at trials; but you know there are always those who will stand aloof from anything of the kind where there is the least intimation of professionalism. Of course, the dog and gun, the former of his own breaking (and let me say here such persons are generally dangerous opponents; Frank Forester says: "Beware of the owner of one dog and one gun"), would, I think, be induced, if such a class were made, to enter, and would take great pride in showing what proficiency had been gained by careful management and, as one of the gentlemen who was arguing remarked, "We would see then how many owners of dogs would come forward."

Mr. Henry Schreiber, of Schreiber Brothers, animal photographers, a few days since gave me a very interesting account of his setter bitch Nellie, the last of the get of his old Grouse, once famous as a snipe dog on our meadows. Grouse was the father of Nellie and a litter sister when he was seventeen years old, and at the time both deaf and blind. Both puppies were puny and weak when born, one shortly dying and the other growing up dwarfed and apparently worthless, yet withal perfectly shaped. Showing great excitability and aptitude as she neared a year old, Mr. Schreiber paid some attention to her and late this season took her to Culpepper, Va., and, without any previous work on game of any kind, she took to quail naturally and was wonderful in her performance. But the strangest thing I have to relate of this animal is to follow. A bitch at or near Mr. Schreiber's place having given birth to a litter of puppies and dying five days after Nellie went to them (never having had puppies herself) and allowed them to suckle her; strange to say, in a day or two milk appeared and she raised the whole litter, certainly never known as a case similar to this before, but have read of like occurrences in some of the medical books where children have been reared by "other mothers," and one instance is related where an infant was nursed by a man. Your medica readers are no doubt familiar with the story. While writing I am reminded that I once saw at a side show accompanying one of the large combined circuses, or "aggregations," a full-grown and finely-formed bull that had a partly-developed adder, from which milk was drawn as from a cow.

Our mutual friend Dr. L. H. Twaddell has returned from Pittsburgh highly pleased with the bench show there and full of the beagle question. We know of no one better posted on the subject than he, having owned many, and a devotee to the chase of the hare of the Middle States. We trust the new class for "American beagles" will be made for future bench shows.

We do not hear a single word relative to a dog show to be held in Philadelphia in the coming spring, notwithstanding many would be glad to render aid and lend their support—(why there should not be a yearly exhibition of the kind in our city we cannot divine)—but we have learned from good authority that the gentlemen who managed the last display were so completely worn out by the endless amount of work and detail attaining such exhibitions that they cannot be prevailed upon to take an active part in a second. They would, however, be only too glad to give such advice as was needed, and to offer such assistance as would advance the interests of an exhibition in the spring.

Many sportsmen here are speaking in the highest terms of the position FOREST AND STREAM is taking against the evil of jockeying which appears to be creeping into field trials, and admire the boldness with which it deeries any attempt of winning by chicanery. If we cannot have fair trials of skill we should have none.

We notice in Vero Shaw's chapter on the English pointer in last week's FOREST AND STREAM that he refers to the tendency of breeders sacrificing nose for speed, and we are pleased that so able a writer throws out such a warning. As he remarks, "A speed dog looks flash, and by his great pace covers more ground, and therefore may be able to find more birds," but adds, "that a slower dog with superior nose would be far preferable for the sportsman as he would knock up his swifter companion in half a day." We have often noticed this in our sporting trips with friends when several dogs were worked together, and have always preferred the steady, careful and systematic worker to the fashionable goers that too often overran their birds up wind and always suddenly found themselves right in the midst of the covey down wind.

Philadelphia. HOMO.

FAVORITE DOGS.

ADAMSTOWN, Md., Feb. 9.

IT was my pleasure some time since to perrue an article in the FOREST AND STREAM of Dec. 16, 1880, from the pen of a gentleman, like myself, an amateur sportsman who styles himself "South Side." This article carries me back to the days of "Auld Lang Syne," when I too was young and in my prime, with a quick eye and steady nerve, when many a bird fell before my aim on the sedge fields of Cumberland and Buckingham counties, Va.

In those days I shot over a large black Irish setter known by the name of Sam. Gentlemen sportsmen of Cumberland, Buckingham, Nelson, Amherst and Campbell counties, Va., would all bear evidence of his superior merits. This noble animal was bred by my friend Col. S., of Frederick City, Md., an amateur in sport, and sired by the old imported dog of Gen. S. known by the name of Jet. All of his get that I ever saw were black or red with hazle eyes. They were very active and untiring hunters, firm and steady.

In those days I paid but little attention to retrievers, I endeavored to break my dogs to do their work prompt, quick and steady, no pottering. This family of dogs always traveled with head and breast high and at a rapid gait. They never false pointed or failed to locate their game. I never saw one afraid of fire. Their powers of endurance were remarkable. At the time I owned this dog I resided at Amherst Court House, Va. I have mounted my horse at 8 A. M., and ridden to my brother's who then resided in Cumberland County, Va., a distance of sixty-two miles, arriving there by 4 or 5 P. M. in the afternoon my dog following. He would range field after field on the road, frequently finding coveys and yet the last mile he would travel as game and fresh as in the morning. I am satisfied he would in the day's ride run over a hundred miles. Well do I remember a hunt by myself the following day after one of these long rides. The sun was warm, our route in the morning lay over high sandy land where water was scant. At 1 P. M., wearied, I stopped to eat my steak at a spring. At 2 I again started a hundred yards from this spring I found a covey; up to this time I had but six birds, from that time until night my dog worked beautiful, and after sunset I turned my face homeward with twenty brace of quail and four or five hares.

Pretty good work for a single dog and a muzzle-loader. I only averaged seven to eight in every ten shots. I do not believe I lost a single bird that fell within eighty yards of me. This is enough to show the merits of the setter. I have hunted him with the finest pointers of this section of Virginia, yet never saw but one compare with him, and that was a liver and white dog Mac owned by Mr. I. Wilson, of Langhorne, Cumberland County, Va. Like "South Side" I have bred dogs because I was fond of them and never sold one.

I have owned three of this family of dogs, and shot over many other, they all compared favorably with Sam. But alas! their race is extinct. I have owned other setters, some compared favorably, others were worthless. I do not mean to detract from the merits of the pointer, but to defend my old friend the setter, especially the Irish setter. He may be restive and heady in breaking as he is full of energy, but once well broken and he will repay you. So far as my experience goes with pointers I vastly prefer the old Spanish pointer. Years ago in Maryland and Virginia we had a breed of pointers with large heads, whose hips hung down like the fox-hound's that I conceit had finer scent and better nerve than the present race. My experience in southern regimes me to say, so far as scent is concerned, I know no difference. The pointer I believe is more tractable or easily broken, but the setter the most energetic, especially the Irish. NIMROD.

A HINT TO SPURGEON.

WINSTED, Conn., Feb. 12.

Editor Forest and Stream:

Your protest against Rev. Charles H. Spurgeon's treatment of the dog in his recent sermon on "Beware of Dogs," leads me to recall to your readers a fact which I do not remember to have seen in print, and which it might be well for the great London preacher to know. Does he like the Forest and Stream?

The Greek word in the Bible which is translated "to worship," means literally "*to act like a dog.*" The word is *proskuneo*, from *kuon*, a dog; and it occurs over sixty times in the New Testament, nor is it once found except with this honorable meaning of homage and adoration. For example, "Thou shalt worship the Lord thy God;" "All the angels of God worship him;" that is, let the angels act toward God as a dog acts to his master.

We who know the dog have often been amazed at his fidelity and affection, and we are able to appreciate the fitness of the term. How he looks up worshipfully into our face, waits upon our command, returns for our approbation and knows no self-denial in his efforts to please us! In the whole realm of nature there is no animal so highly honored as is the dog in this use of his name.

There is a deep reason and philosophy in the history of words. They do not come lawlessly out of the womb of chance. "Iliads without a Homer," Archbishop Trench has called them; and among all the words which he analyzes in his admirable "Lectures on the Study of Words" there is not one which is more suggestive or impressive than this old Greek word *to worship, to act as the dog.*

As I write there are two noble dogs lying in the patch of sunshine on the floor beside me; one sprung from the famous Ranger and the other, an orange and white, boastful of the blood of Leicester Dan. I confess I am very fond of them, nor do they dishonor the use of their name in that supremest duty of morials—worship God.

It would be well for Mr. Spurgeon to study his Greek Testament a little more.

And in the text in question Paul was not speaking of man's faithful friend, but of two-legged dogs, certain scalawags who were a reproach to the Church in his day and a thorn in his side.

It is true that dogs were not so highly esteemed in ancient times as now, but even then they had their friends and admirers, and the fact above noticed proves that they had made a profound impression on the Greeks.

Homer tells us that Telemachus took his two faithful hounds with him to the council of the chiefs, and it is a touch of nature when he makes the old dog in the house of Penelope recognize his old master Ulysses on his return from the wanderings even before his faithful wife.

Did it ever occur to you that the only two parties who had pity on poor Lazarus, in the Bible parable, as he lay at the rich man's gate, were dogs and angels? Dogs came and licked his sores and

angels stood by waiting to carry his spirit to Abraham's bosom.

Dogs and angels! Nor do they go badly together. That, too, is a touch of nature. J. P.

THE COCKER CLUB.—The ballots of the members of the Cocker Club were received up to the afternoon of Saturday, Feb. 12, at which time, as already announced, the voting ceased. An enumeration of the ballots cast, shows that the committee elected to decide upon the standard, and to take the preliminary steps toward the organization of the club consists of the following gentlemen: C. B. Cummings, South Acworth, N. H.; J. Otis Fellows, Hornellsville, N. Y.; J. F. Kirk, Toronto, Ontario; Geo. D. McDougall, Whitestone, N. Y.; M. P. McKoon, Franklin, N. Y.; A. H. Moore, Philadelphia, Pa.; E. Tinsley, Hamilton, Ontario; and J. H. Whitman, Chicago Ill. The committee covers a wide extent of territory, and includes some of the most experienced breeders of the cocker, and we feel sure that it will have the confidence and respect of all lovers of this excellent strain of dogs. It is of course desirable that steps should be taken without loss of time to organize the committee, and to get the work of preparing a standard under way as speedily as possible. We therefore suggest that the committee at once proceed to elect a Chairman and Secretary for this body, and announce the result to us not later than March 1 so that it may appear in our issue of the 3d proximo. To the properly authorized person we will turn over such papers as belong to the club. We cannot refrain from congratulating the cocker breeders of America, and especially the members of the club, that the agitator of this matter has had so successful a termination, and we hope before long to see the much vexed question "What is a Cocker?" speedily settled by competent authorities. It is a source of very great satisfaction to the FOREST AND STREAM to think that it has been instrumental in bringing about so desirable a result. We shall still be glad to do all in our power to further the interests of the cocker.

EASTERN FIELD TRIALS CLUB.—The regular monthly meeting of the Eastern Field Trials Club was held at the Astor House, Thursday afternoon, February 10. The following gentlemen were present: Messrs. W. A. Coster, R. C. Cornell, F. R. Ryer, E. A. Herzberg, J. N. Danforth, F. N. Hall, Dr. F. H. Aten, G. T. Leach, J. Otter Donner, Dr. J. W. Green, J. Pentz, H. N. Munn, J. Von Lengerke, P. H. Morris, A. E. I. Grainger, A. B. Godefroy, C. H. Raymond, T. F. Connolly, H. W. Livingston and Max Wenzel. President Donner in the chair. The auditing committee reported the accounts of the club for the past year correct, and recommended that some system be devised to simplify the keeping of accounts, and that the by-laws in regard to the paying of bills be strictly adhered to. The report was accepted, and a committee of three to be appointed by the chair are to revise the by-laws, and devise a system for keeping the accounts. The following gentlemen have resigned from the club: Dr. Arnold Stut, A. H. Moore and Gustave Walters. The following gentlemen were elected: James Wilson, Geo. W. Post, Frank F. Pike and J. J. Snellenberg. A committee of three are to be appointed by the chair to revise the running rules of the club. The treasurer, Mr. Munn, sent in his resignation but it was not accepted.

ENGLISH SETTERS.—Rufus II, the property of Col. Henry Smith, of Boston, Mass., is regarded by his owner as one of the best setter dogs in this country. His dam is Nina, owned by D. T. Charles, Esq., of Albany, N. Y.; his sire, champion Rock. The dam of Rufus II. has a clear pedigree back to 1784, of the oldest and best blood in great Britain. Rock was the champion of America. Rufus II. is black and white and ticked, and weighs fifty-six pounds. His head is medium as to length and size; eyes quite wide apart and placed in expression of great brain intelligence; his chest is medium as to length, and sits high on the shoulder; chest deep and ribbed up well toward the hips; stern medium and muscular; fore legs straight, and hind legs a little curved; feet round, well feathered between the toes. His scent is keen and he has been known to stop on a partridge twenty-five rods away, and creep up until twenty feet of the bird, and then come to a firm point, and wait for the word to flush the bird. If the bird is missed the dog shows great sagacity in marking her down and in leading his master to the spot where she has alighted. This is the second year of his work. This shows that from good blood you are likely to get a good dog.

A DIMONT SUCKLING KITTENS.—The facts of the case are these: Howard S. Jaffray's Dandie Dinmont bitch Judy came in season about 12 weeks since, and sometimes showed that she did not fancy the dog she was tied with, so refused to be lined by him. About the time the pups would have been due the bitche's teats swelled up and she had milk (in fact I have often noticed this in other bitches). The cat with whom the bitch had been in the habit of playing (she having been a kitten when the bitch was a pup) about this time had a lot of kittens, two of which Judy took and nursed, and has nursed them ever since. They have grown remarkably strong and seem to have been as well fed as if brought up by their own mother. When it is taken into consideration what a deadly enemy a Dandie Dinmont is to all cats it is very remarkable; but what is more remarkable is that the bitch had no pups of her own and was able to suckle the kittens, never having been pregnant. The kittens and the bitch are at Mr. Howard Jaffray's house at Irvington-on-Hudson, and I, as well as Mr. Jaffray, will vouch for the truth of the above statement.

J. E. I. G.

NEW YORK DOG SHOW.—The managing committee of the Westminster Kennel Club have fixed upon the last week in April for holding the fifth annual bench show, and the American Institute Building, better known as the Rink, between Sixty-second and Sixty-third streets in Third avenue, has been leased for the purpose. Mr. Charles Lincoln has been written to, and Mr. H. C. Cornell, secretary of the W. K. C., informs us that he will arrive here this week, and at once begin to make preparations for what promises to be the largest exhibition of the kind ever witnessed in this country. It is impossible as yet to give any correct idea of what the premium list will be like, but undoubtedly it will be a large one. The one judge system already tested and found to work so excellently at Toronto, St. Louis and Pittsburg will no doubt be adopted. Here we would suggest that the judges be selected at an early date, as we consider that all kennel club rules should direct that the names of the judges be made known thirty days before the closing of the entry lists.

STOLEN DOG.—Philadelphia, Feb. 14.—Editors Forest and Stream: The dog thief is loose again, and I am sorry to relate that he has taken a very promising pair of white, black and tan Belton dog puppies now nine months old, by Dash III, out of Cornelia. I had the puppies in the country at West Pikeland Township, Chester Co., Pa., and on last Friday evening some one unchained them from where they were tied in the barn. Have not yet been found or any clue to them. I hope through a notice in your paper I may obtain some clue to their whereabouts, and will very much appreciate and liberally reward any one who will give me any information that will lead to their recovery.

L. SHUSTER, Jr.

SPECIAL PRIZES FOR BEAGLES.—At the coming New York Dog Show the FOREST AND STREAM desires to offer two handsome silver-mounted hunting-horns, as special prizes for beagles These prizes will be offered, one for the best bench-legged and one for the best straight-legged beagle in the show, of any age or sex. The conditions under which these prizes will be offered will be announced next week.

PENNSYLVANIA FIELD TRIALS ASSOCIATION.—At the meeting of this association, held at Pittsburgh, Penn., on February 9, the proposition to open any of the stakes to dogs owned outside of the State was voted down. A very proper proceeding if the club wishes to encourage and protect the breeders in its own State and preserve its individuality.

MR. SNELLENBURG'S SETTERS.—It gives us pleasure to call the attention of all dog lovers to Mr. Snellenburg's notice in another column. From personal knowledge we consider this remarkable fine draft to be not only a healthy one, but in every respect worthy of both the bench and the field. Mr. Snellenburg will retain three puppies for next year's Derby which he also intends running at Robin's Island. These three will receive Mr. Short's sole attention.

N. A. K. C. STUD BOOK.—Columbia, Tenn., Feb. 7.—Editor Forest and Stream: The books of the National American Kennel Club have been sent me by the late secretary, Mr. Charles Du Bosque, and all those members of the club who owe dues may forward them to me. Persons wishing to make entries in volume second of the Stud Book, and entries in the second American Field Trial Derby, should communicate with me at once.

JOS. H. DEW, Secretary.

KENNEL NOTES.

*** Breeders and owners of sporting dogs are invited to send memoranda of names claimed, bred, whelps, sales, etc., for insertion in this column. We make no charge for the publication of such notes; but request that in each case the notice be made up in accordance with our form, that the name of both owner and dog be written legibly, or printed, and that the strain to which the animal belongs be distinctly stated.*

NAMES CLAIMED.

Porter—Mr. Geo. A. Schnasler, of Monmouth, Ill., claims the name of Porter for liver and white dog puppy out of Belle Topsey by Whittoni.

Georgia Dash—Mr. J. P. Cozart, of Washington, Ga., claims the name of Georgia Dash for lemon Belton Llewellin setter puppy out of Mr. F. H. Andrew's Vashta (Rake-Fanny) by Scout (Rock-Kirby).

Diana—Mr. Eugene Powers, of Cortland, N. Y., claims the name of Diana for his black and white cocker spaniel bitch puppy, whelped November 25, 1880, out of same owner's Mignon by Hollis' Wildair.

Dicke—Mr. John Howe, of Providence, R. I., claims the name of Duke for his pure black native setter dog out of Mr. Newton Earle's Stunt (Pride-Gipsy-Pride-Queen Bess) by Pratt's Trim (Adam's Duke-St. Kilda), whelped February 19, 1879.

Major—Mr. F. L. Cook, of Sherburne, N. Y., claims the name of Major for liver and white cocker spaniel dog, whelped August 22, 1879, out of Ruth by Holabird's Charlie.

Bruno—Mr. Frank Culbertson, Worcester, Ohio, claims the name of Monterey for white dog puppy with liver spot around left eye, whelped November 4, 1880, by Mack (formerly the property of Mr. J. T. Oliver, Council Bluffs, Iowa,) out of Mr. John Bolus' Waddy (Sealford-Lady).

Buck—Mr. W. Elting Harp, of New Paltz, N. Y., claims the name of Buck for his lemon and white English setter puppy, whelped July 15, 1880, out of Lady by Oakley's Frank.

Pyke—Mr. C. A. Holmes, of Somerville, Mass., claims the name of Pyke for lemon and white pointer bitch, not Fyke, as published in last issue.

Shadow—Dr. Ed. S. Carr, of Gallatin, Tenn., claims the name of Shadow for white, black and tan setter bitch out Daisy Dean, by Lincoln, bred by Montview Kennel.

Abe Lincoln—Dr. Ed. S. Carr, of Gallatin, Tenn., claims the name of Abe Lincoln for white and orange setter dog puppy out of Blaze by Lincoln, bred by Montview Kennel.

Bessie—Mr. H. Herz, of Philadelphia, claims the name of Bessie for black and tan English setter bitch puppy, whelped Nov. 6, 1880, out of Mr. S. Barr's Fannie by Duke de Lucois.

Flight—Mr. Fred. A. Tait, of Dedham, Mass., claims the name of Flight for black and tan Gordon bitch puppy by Mr. E. Flagg's Jerry (imported Ben—Lady) out of Nellie (imported by Mess. Kennel Club).

Rex—Mr. L. C. Twitty, of Macon, N. C., claims the name of Rex for Gordon setter bitch presented to him by Mr. Fred. A. Tait, of Dedham, Mass. She is by imported Kent (Allison's Reuben-T. H. Scott's Nellie) out of Rhen Dorr's Phe (imported Don-Lady).

Phyllis—Mr. J. W. Sickels, of Buckland, Conn., claims the name of Buff Belton for his setter bitch puppy, three months old, out of his blue Belton bitch Jennie by Mr. A. Goodwin's Gordon setter Bang.

Lady Bath—Mr. D. H. Sager claims the name of Lady Bath for liver and white cocker bitch by Wildair out of Sara Bernhardt, whelped Oct. 17, 1880, bought of J. Otis Fellows, Hornellsville, N. Y.

Rex—Mr. C. M. Short, of New Albany, Ind., claims the name of Rex for his black, white and tan setter dog puppy purchased from Mr. J. H. Kraft, of same place; whelped Feb. 2, 1881, now a year old. He is by Druid II. out of Bessie Lee (Rake-Fanny).

Pem—Mr. D. G. Empie, of Wilmington, N. C., claims the name of Pem for dark liver and white cocker spaniel dog puppy by Bob out of Duna, from the Nursery Kennel, Franklin, Pa.

Mozart II.—Mr. M. A. Magner, of Boston, Mass., claims the name of Mozart II. for his recently-imported Yorkshire blue and tan terrier, weight 5¼ lbs., coat touches the floor, is a uniform blue, very wrought, the head of half a rich golden tan. Date of birth, winter of 1878.

BRED.

Nell-Dan—Mr. C. M. Munhall's (Cleveland, Ohio,) setter bitch Nell (Sam-Flora) to Sheffield's Dan (Don-Dimple) on February 7, 1881.

Bell—Mr. Dr. J. J. Jennelle's (Kankakee, Ill.,) red Irish setter bitch Bell (Bob-Duck) to same owner's Elcho II.

Dance-Elcho II.—Mr. W. P. Graham's (Madison, Ind.,) red Irish setter bitch Dance to Dr. J. Jennelle's Elcho II. Dance is a litter sister to Dr. Jennelle's Bell.

Maid Croxteth—Mr. Washington A. Coster's orange and white pointer bitch Maid to Mr. Godefroy's Croxteth.

Lady Rake—Mr. Gus Fuller's setter bitch Lady to Mr. D. O. Bergundthoe's Rake.

Skip-King Bang—Mr. J.R. Henrick's (Pittsburgh, Pa.,) English setter bitch Skip to King Bash.

Young Flora-Boots—Mr. Robert Blackwood's (Montreal, Canada,) imported black and tan setter bitch Young Flora (Ranger-Flora) to imported black and tan setter dog Boots, the property of Mr. W. W. Hatfwell, Plattsburg, N. Y.

Maid-Croxteth—Mr. Washington A. Coster's orange and white pointer bitch Maid (McConnell's Joe-Maud, they by and out of Wm. Lancaster's Gipsy-Gibson's Lilly) to the Neversink Lodge Kennel's Croxteth (champion Bang-Macdona's Jane).

Dora-Don Royal—Mr. Washington A. Coster's orange and white pointer bitch Dora to same owner's pure Dilley pointer Don Royal (Walker's Snipe-Countess Royal) litter sister to champion Ranger.

Bertha-Donald—Mr. A. L. Moore's pointer bitch Bertha (Flake-Lily) to his champion Donald, on February 12, 1880.

Princess-Brag—The Hornell Cocker Kennel's black and white ticked cocker bitch Princess to the same kennel's black cocker Brag, on Jan. 30, 1881.

Beauty-Robin Adair—Mr. L. P. Meek's (Hornellsville, N. Y.,) liver and white cocker bitch Beauty to Hornell Cocker Kennel's liver and white cocker dog Robin Adair, on Feb. 9, 1881.

Norah-Rory O'More—Rory O'More Kennel's (Albany, N. Y.,) Norah (Berkley-Tilly) winner of first prize at New York, 1880, to same kennel's champion Rory O'More (Rufus-Friend), on Feb. 5, 1881.

Idol-Snipe—The Cummings' Cocker Spaniel Breeding Kennel's (South Acworth, N. H.,) cocker bitch Idol to same owner's Snipe, Feb. 6, 1881.

Flora-Snipe—The Cummings' Cocker Spaniel Breeding Kennel's (South Acworth, N. H.,) cocker bitch Flora to same owner's Snipe, Feb. 8, 1881.

Foxy Ponto—Messrs. C. B. Cummings & Son's (South Acworth, N. H.,) fox terrier bitch Foxey to Dr. Allen's Ponto.

Duchess-Lion—Mr. Thos. M. Williamson's imported English mastiff Duchess to his imported Lion. All of Grand Java, Ill.

WHELPS.

Valtine—Mr. Wm. Loeffler's (St. Louis, Mo.,) imported dachshund bitch (Waldine II.), first prize St. Louis, 1880, whelped January 28, 1881, three puppies, two bitches and one dog, by Dr. L. Henry Twaddell's (West Philadelphia) Unser Fritz, winner of Centennial medal and special prize, Philadelphia, 1876; first prize and special, Baltimore, 1877, and same at Philadelphia, 1879.

Phyllis-Jessie B.—Benjumbhoi's Llewellin setter Phyllis, whelped Feb. 7, 1881, six dogs and three bitches; color white, black and tan; sired by his imported Rake.

Chance—Messrs. L. and M. Rutherfurd's fox terrier bitch Chance whelped six puppies on Feb. 5, 1881, by Rowstring.

Anne Boleyn—Mr. F. H. Andrew's (Charlotte, N. C.,) black, white and tan Llewellin setter bitch Anne Boleyn (Leicester-Kirby) whelped Jan. 25, 1881, seven puppies, three dogs and four bitches, by Prince Boyal (Rob Roy-Juno).

SALES.

Georgia Dash—Mr. F. H. Andrews, of Charlotte, N. C., has sold to Mr. J. P. Cozart, Washington, Ga., the lemon Belton Llewellin setter puppy Georgia Dash, whelped October 26, 1880, out of Vashta by Scout.

Billy Star—Mr. Eugene Powers, of Cortland, N. Y., has sold to Mr. Wm. B. Stoppard the black and white cocker dog puppy Billy Star, whelped November 25, 1880, out of same owner's Mignon by Hollis' Wildair.

Gilroy—Mr. Eugene Powers, of Cortland, N. Y., has purchased of Mr. Burr Hollis the Burdette cocker spaniel dog puppy Gilroy, chestnut and tan, whelped October 29, 1880, out of Hollis' Belle by Hollis' Wildair.

Dick—Mr. L. H. Mayott, of Springfield, Mass., has purchased of Mr. Steele, of Ellington, Conn., the lemon and white Ethan Allen setter dog Dick.

Irish Ranger-Irish Countess Whelp—Dr. J. J. Jennelle, of Du Quoin, Ill., has purchased back the bitch puppy lately sold Mr. Kelly, of Princeton, Kansas.

Blanche Hubbell—Mr. George Wicks, of Grand Rapids, Mich., has bought of Mr. Burr Hollis, Hornellsville, N. Y., the black and tan Burdett cocker spaniel bitch Blanche Hubbell, three months old, out of his Belle by his Wildair.

Duke Alexis—Mr. James K. Boyd, of New York city, has sold his lemon setter pup Duke Alexis out of Gypsey by Hass' Ben to Mr. Frank Capron.

Blazelia-Blaze Whelp—The Montview Kennel, Columbia, Tenn., has sold to Dr. Ed. S. Carr one setter dog puppy, white and lemon, out of Blaze by Lincoln.

Lincoln-Blaze Whelp—The Montview Kennel, Columbia, Tenn., has sold to Mr. James Tyree one white, liver and tan setter dog puppy out of Blaze by Lincoln.

Snipe-Ruby II. Whelp—Mr. H. B. Richmond, of Lakeville, has sold to Mr. Charles H. Holmes, of Somerville, Mass., the liver and white pointer bitch, whelped August 25, 1880, out of Ruby II. (Snapshot-Ruby) by Snipe (Sensation-Coburn's Belle).

Hollis Wildair—Mr. Burr Hollis has sold to Mr. Charles F. Kent, Hamilton, Ont., the fine black cocker spaniel dog known as Hollis Wildair.

Lion, Duchess, Vixen—Mr. Eugene Heward, of Liverpool, Eng., has sold the English mastiffs Lion and Duchess and the all-white bull terrier bitch Vixen to Mr. Thos. M. Williamson, Grand Tower, Ills. These dogs won first prize winners at St. Louis, 1880, although they were just landed in time to enter.

Gilroy—Mr. Burr Hollis has sold to Mr. Eugene Powers, of Cortland, N. Y., his ches-tnut and tan Burdette cocker puppy Gilroy, whelped Oct. 29, 1880, out of Hollis' Belle by Wildair.

Belle Hollis Whelp—Mr. Burr Hollis, of Hornellsville, N. Y., has sold one black and tan toy terrier bitch puppy by Billy out of Toots to Mr. Pettibone, of same place, on Feb. 8, 1881.

Billy-Toots Whelp—Mr. J. Otis Fellows, of Hornellsville, N. Y., has sold one black and tan toy terrier bitch puppy by Billy out of Toots to Mr. Kimball, of same place, on Feb. 12, 1881.

Wildair-Josie Whelp—Mr. J. Otis Fellows, of Hornellsville, N. Y., has sold to Mr. J. P. Thomas, West Whiteland, Pa., one black cocker bitch, whelped Jan. 1, 1880, out of Josie by Wildair.

Robin Adair-Fannie—Mr. J. Otis Fellows, of Hornellsville, N. Y., has sold to Mr. J. P. Thomas, West Whiteland, Pa., one chestnut and tan cocker bitch, whelped Oct. 24, 1880, out of Fannie by Robin Adair.

PRESENTATION.

Nellie Brack—Mr. J. Stetson, of Buckland, Conn., has presented his black bitch puppy Nellie Brack to Mr. E. H. Banks, of Hartford, Conn.

Rex-Elcho Whelp—Mr. Walter G. Morgan, of New York, has presented Mr. James Browne, of Brooklyn, with a red and white Irish setter dog puppy by Ben out of his Elena.

NAMES CHANGED.

ALBANY, N. Y., Feb. 13—Editor Forest and Stream—I desire to change the name of Norah (Berkely-Tilly), winner of first prize at New York, 1880, to that of Norah O'More. Norah is a thoroughbred Irish setter bitch. The reason that this change of name is made is on account of there being quite a number of Irish bitches now in the country called by the name of Norah. W. N. CALLENDER.

DEATHS.

Delta—Mr. H. W. Livingston, of this city, has lost his black, white and ticked English setter bitch Delta (Belton-Floss). At time of death she was in whelp to same owner's Norah.

Beautiful May—Mr. H. W. Livingston, of this city, has lost his pure Llewellin setter bitch Beautiful May (Lelaps-Starlight).

Prince Lofty—Mr. J. R. Henrick's, of Pittsburgh, Pa., has lost by distemper his fine English setter puppy Prince Lofty (Lofty-Maud Muller).

Belle—Mr. J. R. Slayton, of Pittsburgh, Pa., has lost his beagle bitch puppy Belle (Rattler-Fan).

Sport in Forest, Dash of Donnerlicut, Frankie and Lilly White—Mr. Hermann Kellner, of Roxbury, Conn., has had the misfortune to lose the above named English setter puppies out of owner's Jessie by his Fred.

KENNEL MANAGEMENT.

63 T., Dedham, Mass—I have a spayed pointer bitch, two and a half years old, that for a year and a half has been shedding her coat out of the nape, making a very disagreeable, as she incessantly nibbles at every bite she touches. She has never been sick a day or had any skin disease; is not fat, and is apparently in perfect condition; has been fed from the table and has had plenty of exercise. She has a bath once a week. Can you suggest a remedy? Ans. Sometimes "ground gi" once a day will straighten the tools of the hair. After the washing, which should be once a week in tepid water, rinsing afterward in cold, in which has been dissolved a small quantity of alum, say one drachm to the gallon of water, give one of the following powders every morning, mixed in a little food: Recipe—Flour of sulphur, two drachms; bicarbonate of potash, one drachm, and mercury, with chalk, twenty-four grains, to be made into six powders. Write result.

64 J. E. K., Newport, R. I.—What is the matter with my cocker dog, two years old? His coat is very dry. He will eat dry grass from the lawn and then vomit it up. Ans. The grass which he eats is good for him; it is the *Triticum repens* or dog grass. Probably your dog is over fed. Feed no meat, and let his diet consist partly of green vegetables well boiled. Give plenty of exercise.

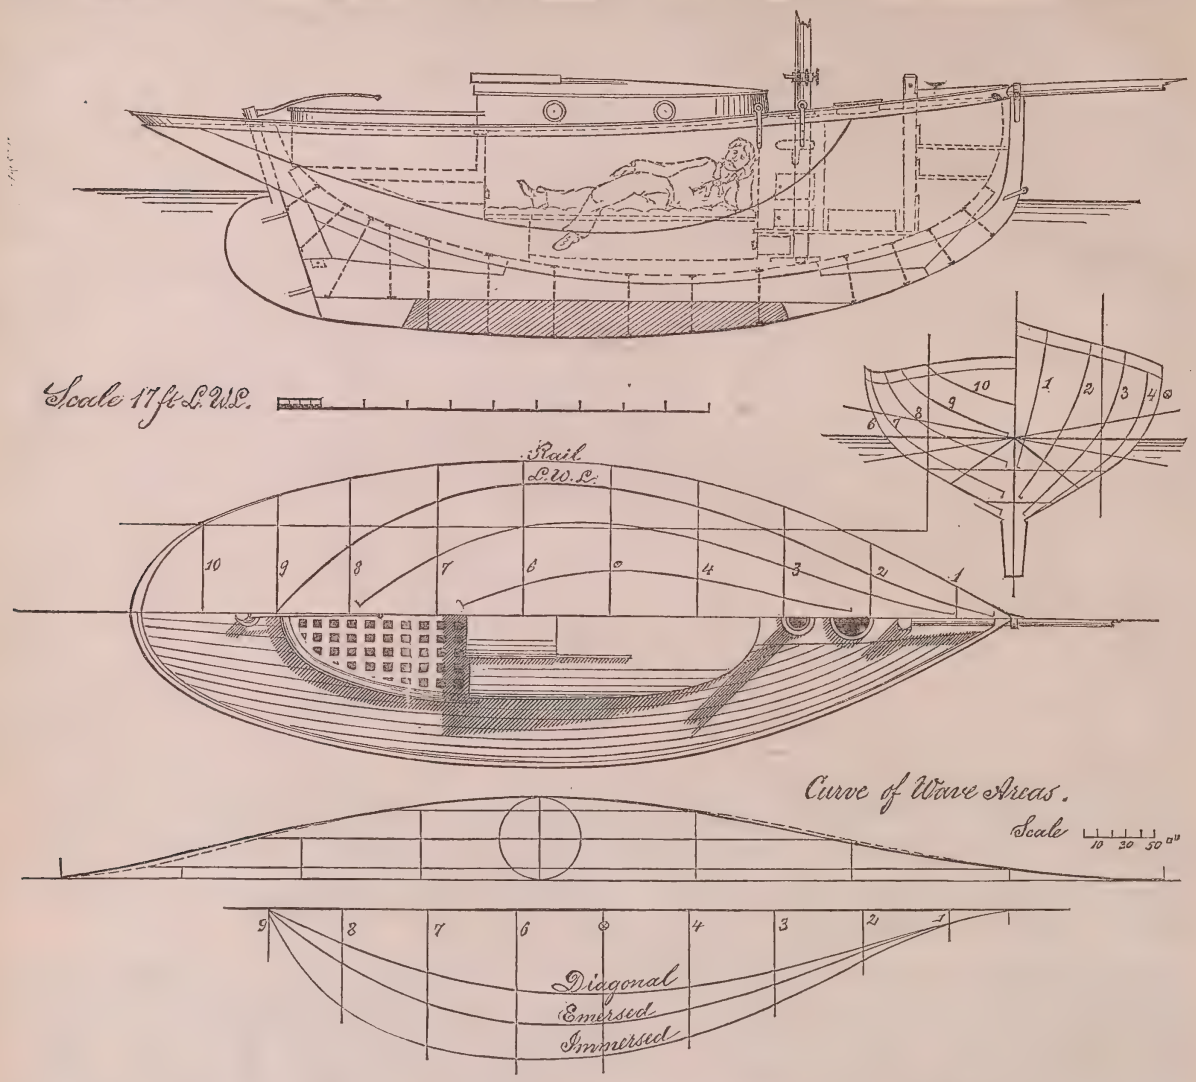
65 L. M., Brooklyn, N. Y.—I have a Scotch terrier bitch puppy seven months old which gets spells every now and then, and pulls all the hair out of her tail and back parts. She first commenced to do this three years ago. I thought it was the mange, but upon examination found it not to be so, as her skin is perfectly white and clean. What can I do for her? Ans. If from itchiness of the skin, wash with bicarbonate of soda and water. A teaspoonful of soda to one pint of water.

66 W. H. W., Maine.—What shall I give an Irish setter puppy, ten months old, who runs badly at the eyes, but whose other symptoms are as follows: Nose cold and moist; shows no signs of worms; eardes rather too much flesh; is fed on table scraps. Ans. Overfeeding is probably the trouble. Correct this and give a little sulphur once a day for four or five days.

67 J. V. S., New York City.—My setter dog has got a very bad eye; bloodshot, and looks at times as if it had been turned inside out. It has not got any hurt in any way to my knowledge. Could you inform me through your columns what to do for it? Ans. Wash with tepid water frequently. The nictitating membrane or third eyelid gives the appearance spoken of.

68 C. H. M., Boston.—See answer to T., Dedham, Mass., in this column.

PUBLISHER'S DEPARTMENT.



SOMETHING FOR THE CAMP.

HAVING had numerous inquiries for portable houses, easily packed up and transported; we refer our readers to the advertisement elsewhere of Mr. Karl Lee's patent houses for sportsmen, miners and campers out in general. There is not as much poetry in one of these houses as in a bark shanty, but there is a deal more comfort. We recommend these houses to the examination of prospective camping parties.

A BLESSING.—Sancho Panza blessed the man who invented sleep. So do our leading society belles bless the memory of the late Dr. T. F. Gouraud, who taught them how to be beautiful. Everyone should do all in his power to supplement nature in adorning the person, and a fine complexion is not given to all; and just here art aids nature, and all who use Dr. T. F. Gouraud's Oriental Cream, or Magical Beautifier, know its value, and how the skin that is freckled, tanned, pimpled, or moth patched can be made like the new born babe's. To those who will use toilet preparations it is recommended by physicians, as the Board of Health has declared it free from all injurious properties, and, as it is on sale at all druggists', and fancy goods stores, it is an easy matter to give it a trial, and thus win the approbation of men, as well as the envy of ladies.—*Evening Express, Jan. 7, 1881.—Adv.*

WE HAVE RECEIVED from T. B. Peterson & Bro., Philadelphia "The Black Venus," by Adolphe Belot. Price 75 cents.

Holabird Shooting Suits, Upthegrove & McLellan, Valparaiso, Ill.

Two-Ton Cruiser for Single Hand.

Yachting and Canoeing.

BOATS FOR SHALLOW WATERS.

Editor Forest and Stream:

Your correspondent, "R. B. R.," in F. and S., of Feb. 10, says that he lives on a bay a hundred miles long, four miles wide and two feet deep. The only Northern bays that I know of that approximately answer this description are Barnegat and the South Bay. In both the bottom is too near the top for comfortable sailing in boats drawing more than fifteen to eighteen inches. Is the sharpie the best boat for these waters? This is the question that he desires answered. Briefly, I don't belive it is. Four or five years ago I specially investigated the point, with a view to purchasing one, and finally decided not to, although for cheapness they leave nothing to be desired. The summer before last I spent a few days on Barnegat Bay and was so well pleased with the sneak-box pertaining to that region that I have procured one and have satisfied myself that it is the boat for shallow waters. My first experiment with it was on the South Shrewsbury River. Finding the boat remarkably stiff I had a sail made for it, somewhat larger than the one that came with it. Later I had a still larger one made, to which I finally added another cloth. This gave me too much after sail in proportion to the hoist and she would not come about. To remedy this difficulty I added a jib, using for the purpose the leg-of-mutton mainsail of a canoe. Under this rig she sailed beautifully, and quite fast for a 12½ foot boat. It was necessary, however, to handle the jib sheets carefully, or she would go to sleep in stays. Finding this a nuisance I discarded the jib and rigged the mainsail as a "balance lug," something like the one described on page 271 of Kemp's "Manual of Yacht and Boat Sailing." This rig I have not sought to improve, as after a summer's use I can find no fault with it. This boat with the centreboard up will sail on a heavy dew; with the board down it sails as close as a cat. On a triangular course it will hold its own with a cat of its size. It carries two persons in perfect comfort; three crowd it. It is practically unupsetable. One afternoon last August I sailed it through a heavy northwest squall close hauled, having on board, however, 150 pounds of live ballast. On another occasion I attended a cat race. Every cat sailing in the race was double-reefed. My own little box carried full sail. The sneak-box is pre eminently the boat for boys on account of its safety. Its usefulness for fishing and shooting will be vouched for by every frequenter of Barnegat. Ordinarily no ballast is required, in fact I have never taken any, except live ballast for company, and have never been obliged to stay at home because the wind blew, which is more than owners of more pretentious craft can say. This boat will live where a sharpie would drown. You don't have to part your hair in the middle and you don't have to sling bags every time you go about in an ordinary reefing breeze. If "R. B. R." desires to investigate the sharpie let him spend a week at New Haven; after that he should take a trip down to Barnegat. For pleasure sailing the Barnegaters do not rig their boats to the best advantage. They use an amount of canvas ridiculously small in comparison with what the boats can comfortably carry. The only sail they use is the ordinary sprit sail which is decidedly inferior to the balance-lug referred to above. This sail, by the by, ought to come into more general use for all small boats not belonging to the feline tribe. How it would answer for these latter I don't know, but doubt if it would be as convenient as the present rig.

SNARK.

SINGLE HANDERS.

AN impression very generally prevails that the safety of a cruising yacht depends to a great degree upon her size, and that in consequence small boats are always unfit for distant voyages or for open water. This is a mistake, and one which has done much to cool the ardor of would-be adventurous sailors the moment their thoughts reverted from some glowing cruise in imagination to the hard fact that their pocket-books were limited in weight, and their pet aim of skippering their own ship quite unattainable. They naturally base their conclusions upon the every-day experience with such boats as happen to be within easy reach. Built generally only for river use, and by men whose conceptions of the noble sport rise no higher than an afternoon's "outing" or a "spree," it is not to be wondered that experience in them disgusts the amateur who finds his dreams of a cruise rudely crushed by the inability of the usual run of "flat-iron" boats to respond to the cruiser's demands. He finds the "cat" and the "jib-and-mainsail," which are the topic of conversation in neighboring sailing circles, to be the flimsiest delusions, and to possess no more claims to the consideration of a sailor than a bycicle has to a follower of the turf. He finds the average "small boat" a lubberly affair at best, exceedingly dangerous, over-sparred, totally lacking in accommodation, and, worst of all, absolutely useless in any sea lumpy enough to lift her, for she "breaks all up" and has to run for shelter, unless driven through it by the aid of a numerous crew and a stack of sand bags, appurtenances altogether foreign to his purposes. He goes home disgusted and is on the point of concluding, with hundreds of others, that the small cruiser can have no actual entity, and that it is "tonnage that counts," for does not some friend go foreign every year in a big sloop, and she perhaps just as much of a flat iron as the racing machines he has tested in vain? Ergo, tonnage gives cruising qualities and safety just as plain as day. He pockets his disappointment, and keeps ashore in hopes of becoming rich some day, when he will take it out in a big one in his turn. It is to this large class of yachtsmen, temporarily on the shelf, that this article is more particularly addressed. We say, pluck up courage, steer clear of the superficialities which form the staple of so many men fulsely dubbing themselves "practical." The chances are that you have brains enough of your own without the prejudices of those who are slaves to custom, and that with a little effort you can solve the problem of "going to sea" in a small boat a great deal better than the persons who cannot even understand, much less appreciate, the motives by which you are actuated. Let the sand-baggers have it all to themselves as long as they like. Let them confound heaving ballast and taking a ducking every squall with the real article in the way of seamanship and romance on a cruise. Let them have all the "chromo yachting" they choose; sooner or later they will view your honest little ship in the proper light, and envy you your fortnight's cruising at a time, and the comfortable little floating home you have provided at a less cost perhaps than their own open make-shift affairs. You will take one of the deluded wretches along some time, and that little voyage will open his eyes to sport the existence of which he has never dreamed. He will start on a proselyting tour among his friends, and you will see them setting up the frames for little Corinthians and disposing of their machines to a class one step below them in the intelligent appreciation of the arts of sailing and navigation. Then comes your turn to smile, and "he who laughs last laughs best."

The safety of a boat depends upon strength, stability, buoyancy and handiness, neither of them having anything to do with size.

The comfort is obtained by proper attention to easy motion, perfect balances, disposition of space and accommodations (neither too long and narrow, nor too wide, short and shoal), so that the best average is attained to suit the varying requirements—completeness in outfit and exemption from petty annoyances, such as leakage, lack of ventilation or unsightliness. None of these essentials to comfort depend upon tonnage The only limit put upon comfort by small tonnage is the confinement inherent in any boat of modest dimensions; but with a little deliberation a pleasing variety of life can generally be secured on a cruise, nullifying even this presumed inconvenience, and a "spry young man" will very soon accommodate himself to his surroundings.

The cost of a cruiser will be no greater than that of a machine equivalent in size, for, though requiring more iron for ballast, a saving is made in rig, material and labor, and a builder making a specialty of the type can turn them out wholesale for stock at little more than half the figures asked for a shifting ballast racer.

As for a small boat's performances, they may not amount to much in a "flat iron," but with wholesome displacement or weight, an easy form, good draft, ample stability, with enough buoyancy to prevent drowning out if boarded in a capping sea or rip; lower spars and sails within reason, and kites for fair weather;—in short, in a good design throughout, we would like to know the weather the little shaver cannot live through in safety, while she will soak out to windward in a lop which would send the flat-iron ignominiously on to the nearest beach. For an all-round average they will be as speedy as the best. Your flat-iron machine may get away with her in smooth water and certain winds, but upon other occasions the record will be turned. As for the manly sport, the healthy acquisitions to mind and body to be got from the outlay, they show so much in favor of the "Corinthian cruiser" that comparison with the flat-irons would be decidedly superfluous.

Out of the small craft you may get all the *yachting*, and more, too, than the big, unwieldy fellow of hundreds of tons can offer, and at a

tithe of the expense. The little seagoing Corinthian abounds in English waters, and her merits are becoming more highly appreciated every day. It is no uncommon thing to find the owners of large schooners flying their colors with zest and pride at the mast-head of their skiffs, registered in Lloyds' at two or three tons, which they want to go sailing. We hope the old and mistaken notions unfavorable to small, safe craft will disappear and that the most *popular* phase of the sport will receive its due share of consideration in America, and by practical precept give the quietus to the silly cry of "dog and pony schooners," as though none but a millionaire could find room found within handy distance of any one caring enough for his hobby to go a few minutes out of his way to find it. In our next issue we will publish the sail-plan of the design for a two-tonner accompanying this article, and enter upon a detailed consideration of all her points, and how we came to the lines represented.

DETAILS OF A TWO-TON CRUISER.

Length over all	20	ft. 5 in.
Length on deck	20	ft.
Length on L. W. L.	17	ft.
Length extreme	7	ft.
Beam on L. W. L.	6	ft.
Beam moulded	5	ft. 10½ in.
Depth at side, amidships deck to rabbet	3	ft. 5 in.
Draft extreme	3	ft. 3 in.
Draft at L. W. L.	3	ft. 1 in.
Draft aft	9	ft. 11 in.
Depth keel amidships	1	ft. 3 in.
Rake of sternpost	18	deg.
Length of cockpit	4	ft. 8 in.
Width of cockpit	2	ft.
Depth of cockpit	1	ft. 4 in.
Length of cabin	7	ft.
Height in cabin	5	ft. 10 in.
Rise of trunk	5	in.
Least freeboard to deck	1	ft. 4 in.

YACHTING NEWS.

PENNSYLVANIA YACHT CLUB.—The second meeting of yacht owners of fourth class, 16 ft. boats, was recently held, and a yacht club under the above name organized. It is the intention to limit sails to a size that can be safely carried by each yacht, thereby doing away with the over-canvassing, which has been the chief object of Delaware yachting so far. The new club proposes 54 ft. 6 in. of boat rope as the limit of each boat's sail. The following are the officers for 1881: Commodore, Oscar Kern; Vice-Commodore, Enos L. Seeds; Secretary, Walter Gilbert; Treasurer, Geo. Bosler, and Measurers, Jesse Wandgriff and Chas. Meyner. The new club certainly has our best wishes for success. The one great hindrance to the development of healthy yachting on the Delaware in place of the mere machine jockeying as now prevalent, is the outrageous spread of canvas, bearing no relation whatever to boats' capabilities, but carried nevertheless by the device of "laying out" and "shifting ballast," two iniquities we judge it high time for Delaware yachtsmen to discard. We suggest to the new club a limit to shifting live and dead weight as certain to bring about their very laudable ends.

THE AMERICAN LAPTHORNS—Or perhaps it would be more in keeping with truth did we call Lapthorn the Wilson of England. Every one knows the wonderful success of the America created abroad and how, working on the lessons received from that famous schooner, the present firm of Lapthorns of Gosport, Eng., made for themselves a world-wide reputation. We are glad to find among our advertising patrons the same old established house which so many years ago taught our cousins across the sea such a valuable lesson. Messrs. F. M. & A. Wilson, whose loft is located at Port Jefferson, L. I., have won for themselves an enviable name as the leading makers of yachts' sails on the coast of the Atlantic. It was their fabrics that in all fair tests contributed so much to the victory of old George Steers' handiwork, and his successors in the business work on the same principles and attain the same perfection of fit. As Port Jefferson bids fair to become a leading yachting port for metropolitan yachters, owners will find the best work ever turned out with palm and needle within convenient reach of their "laying up" quarters.

LENGTH MEASUREMENT IN ENGLAND.—That measurement by length produces short, stumpy, dangerous and unsatisfactory boats is well understood by intelligent observers on this side of the Atlantic. We are happy to see by the following extract from the London *Field* that the best English authority is alive to the mischievous tendencies of such a rule, and that it is not likely to meet with favor abroad, the French having already discarded it. The *Field* says: It is therefore evident that if simple length were made the standard of value for cruising, yacht designers would at once turn their attention to the production of roomy, shallow craft (like the American sloops), just as they now build deep yachts, because beam is the standard of value under the Y. R. A. rule. To check the former tendency, of length be made the standard, a value must be put upon beam, and this can very readily be done by multiplying the square of the length by the beam."

THE NEW CUTTERS.—The three fine little ships now building in Boston are from designs by Mr. A. Cary Smith. He is also getting out lines for another to be 33 ft. over all, 14 ft. 3 in. beam, 7 ft. 10 in. draft, and to carry 12 to 13 tons, with rocker keel and raking post. It is likely she will be raced and, as she resembles Vesper in many respects, we expect her to turn out a fast one. Judging by the number of new cutters building and the inquiries for such craft with which we are fairly overrun, the worthy Bourbons who think keels and cutters have no place in America ought to hive out as mummies belonging to a bygone age.

EASTERN YACHT CLUB.—At the annual meeting the following officers were elected: Commodore, Chas. H. Joy, schooner Rebecca; Vice-Commodore, Henry S. Hovey, schooner Phantom; Rear Com., F. E. Peabody, cutter Enterprise; Secretary, Henry B. Jackson; Treasurer, A. Jackson; Measurer, Geo. A. Goddard; Regatta Committee—John Jeffries, R. S. Russell, G. A. Goddard, Daniel Appleton and F. W. Lawrence.

SIGNS OF THE TIMES.—Among the flag officers of the principal Eastern clubs, we note the owners of a cutter and yawl, two rigs, the mere mention of which a few years ago acted upon the sturdy patriot like a red rag upon a bull. But we soon get used to things which have utility as their recommendation. We may add that we have supplied the sail plans for two new yachts, whose owners are going to give the yawl a trial in preference to the schooner.

THE YACHTING RECORD.—Mr. Geo. Wilson's circular for February, just to hand from London, contains much reading of interest. This little publication shows a good deal of life and "spunk," and will, we hope, become a permanent literary institution. It fairly makes one's mouth water to read over the list of stable ships in the mari e, which form such a large component of the British fleet, and the absence of which in America we so much deplore.

BOSTON YACHT CLUB.—Officers for the year: Commodore, F. H. Peabody, steamer building; Vice-Commodore, W. B. Merrill, yawl Edith; Rear Commodore, J. Hall, schooner Adrienne; Secretary, Thos. Peary; Treasurer, Chas. Rouse; Measurers, J. J. Lawton and J. B. Smith; Regatta Committee—H. E. Hibbard, W. B. Gleason, N. Wales, E. Hardi g, W. F. Halsall.

WARWICK YACHT CLUB.—Commodore, Fred. P. Sands, Lizzie L., sloop, Newport; Vice-Commodore, W. C. David, Jr., Fall River; Rear Commodore, A. H. Nightingale, Warwick, Providence; Secretary, Geo. W. Rankin, Fall River; Treasurer, W. C. Rhoades, Providence; Measurer, James M. Hait, Newport. Regatta Committee—Dr. C. S. Powell, Newport, George W. Rankin and W. C. Rhoades.

LAKE FLEET.—W. W. Bates, of Chicago, has been doing a good deal in the way of yacht building lately. He has taken a fancy to "high speeds," and has built three for lake cruising. The Cleo, Mr. N. K. Fairbank; the Daisy, Mr. L. Z. Leiter, and recently another one 65 ft. long, 13 ft. beam and 4 ft. deep, expected to steam 15 miles, which is hardly likely in view of her great beam.

FROLIC.—Mr. Hugh L. Willoughby of Saratoga, has purchased this fast schooner, late of New York. Mr. A. J. Cassatt, the old boat from New York in the future. The Frolic is 56 ft. over all, 49 on w. l., 15 ft. 8 in. beam, 7 ft. 4 in. hold and 7 ft. 8 in. draft. Built by Alonzo Smith, of Islip, in 1859. Her spars are, foremast, 46 ft., mainmast, 48 ft., main boom, 38 ft., gaff, 30 ft., fore boom, 15 ft., gaff, 14 ft., bowsprit outboard, 15 ft., flying jib boom, 12 ft., topmasts, 24 and 25 ft.

PLATTSBURGH ICE YACHT CLUB.—At a large meeting of citizens on the 16th of February the Plattsburgh Ice Yacht Club was organized and the following officers unanimously elected: Commodore, Ross W. Nichols; Vice-Commodore, A. M. Warren; Secretary and Treasurer, A. R. Gilmore; Measurer, Scotland McNeil.

PACIFIC FLEET.—Jack Purvis, of Oakland, has a job in hand which will add another schooner to the fleet. She is 40 ft. long and is now in frame, but he is making slow progress with her. Jack is known as the builder of Marcia, ex-Thistle.

SIZE THE STANDARD.—A well-known yachtsman puts it this way in *Land and Water*: "I am quite of opinion that the sooner yachts sail at their actual size the better, but I fear the time has not come yet."

FOR ABROAD.—Mr. Rushton, of Canton, is building a small cutter for Jamaica gentlemen. She is 22 ft. over all, 5 ft. 3 in. beam.

BOATS FOR SALE.—We call attention to boats offered for sale in another column.

The weakest woman, smallest child, and sickest invalid, can use Hop Bitters with safety and great good.

Rifle and Trap Shooting.

RANGE AND GALLERY.

BOSON, Mass., Feb. 12.—The weather this morning opened with all the conditions for one of the best days for good shooting—an overcast sky, with good light and steady wind from the East. Soon after the match was called the rain washed the targets, and the bullseye ran in all directions and spoiled its shape. Repainting the targets time and changes were in order. The wind at the opening of the match was reliable, but as the match progressed it became hard to control. The smoke also became a drawback to the marksmen. Good work, however, was done, Mr. C. E. Gridley taking the first place in the record match for 47, Mr. J. S. Bennett, the muscular rifleman, dropping for a "magpie" on his last shot, which he claimed for a bull, and no doubt was entitled to. But the rain obliterated the marks of the bullet quickly and the gentleman took second position. Lyman, a new man, made his first appearance on the range and took third position. In the record match (Massachussetts target), the worthy ex-president, Mr. J. N. Frye, made the elegant score of 47. Mr. Tyler scored 71, a splendid achievement with a short rifle. Mr. Law, who has not been at the hill since last May, scored 68. In the Badge match Mr. H. Gray made 47—the best score of the day—leading all competitors. He did the same work in the Amateur match. The shooting was brought abruptly to an end by the signals being thrown up on the targets and the wet markers in the gallery, the executive claim that they could no longer remain in the pits as the water was up to their knees. Flags were placed in positions for the match to end, with the following results:

Record Match (Creedmoor).

C R Gridley	5	4	5	4	5	5	5	4	—46
J N Bennett	5	5	4	5	5	5	5	4	—43

H L Lee (mil)	4	5	5	4	4	5	5	4	—43
G P Gridley	3	4	4	4	4	5	4	3	—40

Amateur Match.

H Gray	4	4	5	5	5	4	5	5	5—47

The second week of the All-comers's Match at the Magnolia gallery has shown good shooting, and there has also been an improvement in the entries for the FOREST AND STREAM match for the elegant trophy. Mr. H. Gray, it will be noted, is the leading man in his match for a total of 237, Mr. Arthur following for 236. In the pistol match, J. Ames 232 is an elegant record, the possible being 500.

All-comers' Match.

J Merrill	48	48	48	49	48	—241	E C Arthur	46	46	45	46	45	—230
C Gomez	46	47	46	47	48	—254	A Lawrence	44	45	45	46	46	—226
E Harris	47	47	46	47	46	—233							

Pistol Match (Ring Target).

FOREST AND STREAM Match.

E Harris	47	47	47	47	49	—237	C Gilman	47	45	45	44	47	—229
E C Arthur	47	48	46	47	48	—236	C Wright	48	46	46	43	47	—282
C Cumings	45	46	47	47	48	—233							

GARDNER, *Mass.*, *Feb. 11*.—The Gardner Rifle Club have had another meeting at Hoemetack range, distance 200 yds, off-hand, with inch ring and Creedmoor target combined. The work of each is told by the following score:

	R.	C.	R.	C.	Totals.		R.	C.	R.	C.	Totals.
Ellsworth	44	43	46	47	—180	Austin	46	44	33	45	—168—88
Newton	37	43	39	40	—159—91	Matthews	34	44	33	44	—155—88
Hinds	40	45	43	44	—163—89	Goodale	43	43	46	43	—139—86
Dodge	37	44	31	45	—158—89	Merritt	43	43	46	43	—131—83
Howe	37	41	44	45	—89	Howard	44	42	39	44	—111—83
Nichols	42	42	39	46	—151—88	Shumway	42	45	42	46	—97—81

Mr. Ellsworth again has the lead, two scores of 43 Creedmoor out of a possible 50 has never been made by the same party in one day at this range.

MEDFORD, MASS., Feb. 9.—The attendance at Bellevue Range this afternoon was unusually large, the winter shed being crowded. There were 93 entries and 86 finished. The light was bad owing to the dazzling sunshine and for this cause six well on the fact that it be smoothered round the firing point prevented what would otherwise have been accomplished, namely, the making of one or more clean scores of 50.

R Abbott	5	5	5	5	5	5	5	4	—49
E F Richarson	4	5	5	4	5	5	5	5	—48

C R Gridley	4	4	4	5	4	5	3	4	—41

CLUB MEETINGS—The Pennsylvania State Rifle Association met on the 28th ult., and the following officers were nominated for election at the March meeting: President, W. Y. Price, Pennsylvania Club; W. C. Cramer, Keystone Club. Vice-presidents, John Hogan, Quaker City Club. Secretary, C. W. Zieber, Quaker City Club. Treasurer, A. B. Parker, Norristown Club.

The bronze medal of the National Rifle Association, presented to the Pennsylvania Association as an affiliating body, will be presented as the prize at an initial long range match early in the season.

The Newton Rifle Association have elected the following officers for the ensuing year: F. W. Stevens, president; E. B. Hitchcock, secretary; F. L. Claflin, treasurer. The club numbers thirty-one members.

CONEY'S SHOOTING GALLERY, 1,222 Broadway, New York.—The competition between the leading contestants for the championship in the pistol tournament continues to be very close and exciting. The shooting last week was excellent, and the large number of people who visited the gallery and witnessed it each day indicates the fact that the interest in the matches, as well as the ardor in the trigger, is taking an active interest in the match. The championship of shooting at swinging objects was won last week by Dr. E. T. Marsh, who hit fourteen consecutive swinging one and a quarter inch balls with pistol at ten yards. Henry Copeland, Jr., hit eleven consecutive balls, winning second place and an expert's badge. This is the second championship which Dr. Marsh has won, he having secured, a few weeks ago, the championship of word shooting. To hit a half dollar silver piece with pistol at ten paces fourteen times consecutively is wonderful shooting, but to do likewise at a mark of about the same diameter, swinging, throws the former feat far in the shade. Next week the championship of bullet shooting (an old battle field) will be shot for. The competitor hitting the most bullets in twenty shots with pistol at ten yards to be declared the winner. A very close contest is anticipated.

ALBANY, N. Y., Feb. 10.—This afternoon the riflemen repaired to Rensselaerville to shoot the second of the seven matches in the fours' match and, should the weather permit, a match at 200 yards for a twenty-pound turkey. When the first squad arrived the mist was so dense that objects a hundred yards away could not be distinguished. At the two and three hundred yards firing points the targets could not be seen. The riflemen were in a quandary, and it was finally decided to shoot a volley up the ravine to see whether it would induce a current of air which would disperl the mist. The experiment proved successful, as the mist began to break, and in ten minutes the targets were visible from the 200-yard firing point. The 400 contest match was postponed and the competitors repaired to the 200-yard firing point. The Black Creek, which runs down the ravine, had burst the icy fetters which have covered it during the winter, and its overflowing volume was rushing madly to the river, the water backed up the drain to the butt, and there was nearly two feet of water in the butt; but the marker started in, and with the icy cold water up to his knees, recorded the shots with the accuracy and promptness with which he does his work on a bright summer's day. The targets did not present a good appearance, the dampness giving them a dirty appearance, while the bullseye was hardly distinguishable. On the original carries Captain Fitch led with twenty-two out of the possible twenty-five, which was not excelled until the re-entry scores had been completed, when Colonel James I. Miles had the best twenty-two. On the third round Captain Fitch put up a good twenty-three, which eventually proved to be the winning score. Towards the latter part of the afternoon the light was very poor, though the scores made were very good and were often beaten when all the conditions are favorable. The following were the scores in detail:

Wm E Fitch, Bat S..	4	5	4	5	5	—23	A Carpenter, S M R..	4	3	4	3	5	—20
J I Miles, Bat S..	5	4	4	5	—22		T Mosher, S M..	3	4	4	4	3	—18
C H Charles, Bat S..	4	4	5	5	4	—22	P Muldoon, Bat S..	4	3	4	4	3	—17
W T Miles, S C..	5	4	4	4	3	—22							

Thirty-two duplicate scores were made.

NEW YORK RIFLE GALLERY.—Feb. 7.—The first week of the February match has been a very busy one, and has developed some fine holding. Mr. P. G. Fenning leads with a total of 189 out of a possible 200, and came within two points of winning the $25 for a full score, making eight consecutive bulls. Mr. N. Nolio follows close behind. Following are the leading competitors with their scores to date in the February match, 35 yards, rounds 10, possible 50, four scores to win or possible 200:

P G Fenning	47	48	46	48	—189	C E Overbaugh	45	43	44	44	—176
N Otto	47	47	46	46	—186	W Holton	43	43	41	46	—173
M Dorrier	44	45	45	45	—179	J W Todd	41	41	42	43	—167
Col Riggs	43	44	45	46	—178	M Herrington	41	42	41	41	—165
T P White	43	44	43	46	—176	J N Mergenthaler	41	41	41	41	—164

NEW YORK RIFLE GALLERY.—The second week has been more lively than the first, and brought out some very fine holding. Mr. P. G. Fenning still holds the lead, with Mr. G. Joiner one point behind him. Following are the leading competitors with their four highest scores to date in the February match; 35 yds.; rounds 10; possible 50; four scores to win, or possible 200:

P G Fenning	47	48	48	48	—191	T P White	43	43	44	46	—176
G Joiner	47	47	48	48	—190	F N Nolio	44	43	44	46	—177
N Otto	47	47	47	47	—188	C E Overbaugh	43	44	45	44	—176
M W Farrow	47	47	47	48	—189	J N Mergenthaler	42	42	42	43	—168
Col. Riggs	46	46	46	48	—184	M Herrington	41	42	41	41	—165
M Dorrier	44	45	45	45	—179						

NEWARK, N. J.—The tournament of the Newark Rifle Association, which commenced on Monday evening, Feb. 7, at the Essex Club Range, was terminated on Wednesday evening, Feb. 9, and the result marks the eighth consecutive meetings of the organization. The members of all the clubs appear to have been in fine form, as is attested by the following hand some scores: Newark Amateurs, 464; Frelinghuysen, 448; Essex, 446; Washington, 412; Barnard, 412; Plymouth, 398, in a possible 500. A great excellence of the shooting is in a measure attributable to the construction of Mr. John Huegels's range, it being peculiarly adapted to the form of sights used by the clubs. Mr. W. T. McLeod made 49 points, the best score of this bout, but one less than his score in the last tournament. The high average in the match is very encouraging to the members of the various clubs and stimulates them to practice for the next meeting, which will take place in March.

BROOKLYN—Brooklyn Long Range Gallery. The rifle match, 300 yds. reduced; prize, a Ballard rifle, has been finished. Mr. A. H. Anderson making the best score (49, 49, 50), Mr. P. Ronaldson next (49, 48, 49). Mr. Anderson has won the rifle twice in succession in this place; target 300 yds reduced, 10 shots; entrance fee 25c.; four highest scores to be counted; four prizes $10, $7, $5, $3, full score $2 extra. This match will run for one month.

WASHINGTON BIRTHDAY MATCH—The New York Rifle Club will hold an All-comers' Match, at 200 yds., on Feb. 22, at Harting's Park, Morrisania: 7 shots each score; entries unlimited; 50c. for original and 25c. for each additional; highest aggregate of 50 to take gold badge.

LOUISVILLE SPORTSMEN'S ASSOCIATION—Louisville, Ky., Feb. 9.—The State Team match to be shot on the third day of our tournament will be open to every State in the Union. Only one team from each State will be allowed to enter. Entries solicited at once and forfeit money must accompany the application. Conditions are as follows: Teams to consist of five members, each man to shoot at nine single clays at twenty-six yards, and four pair of birds at eighteen yards. Team entrance, $100; $10 forfeit. Prizes: 50 per cent. to first, 30 per cent. to second, and 20 per cent. to third. Three best team scores to win the three prizes. We propose giving several prize (guns, etc.), in addition to the sweepstake. One to the best score in the winning team and one to the best score in the match, whether shooter is in the winning team or not. We bar no one. The programmes for our tournament will be out soon, when one will be mailed you. Asking your co operation and correspondence in the interest of lovers of trap shooting, we are,

T. C. and J. O. BARBOUR, Secretaries, 34 Third street, Louisville.

THE TRAP.

NEW YORK GUN CLUB—*Feb. 12*—Match for the Challenge Cup, value $100; $25 entry; 25 birds, 80 yards rise. The winner will hold the cup subject to challenge to shoot for the cup on each Saturday following at half-past ten o'clock. On January 1, 1882, the cup to be awarded to the one who has won it the largest number of times. Should there be a tie it will be shot at 25 birds, 30 yards rise, as follows:

Colonel Butler	1	1	1	1	1	1	1	0	1	0	1	1	1	1	1	1	1	1	1	1	1	—22
Edmunds	1	1	1	1	1	0	1	0	1	1	1	1	1	1	1	1	0	1	1	1	0	—22

Mr. Dando was referee.

Sweepstakes, three birds each:

Col. Butler, 29 yds	1 1 1	Edmunds, 28 yds	—0
Dando, 25 yds	1 1 1	Arnold, 29 yds	—0

Sweepstakes, three birds each:

Edmunds, 28 yds	1 1 1	Arnold, 29 yds	—0
Butler, 29 yds	1 1 1	Dando, 28 yds	—0

Sweepstakes, three birds each:

Edmunds*, 28 yds	1 1 1	Col. Butler, 29 yds	1 1 0—2
Arnold, 29 yds	1 1 1	Dando, 28 yds	1 0 —1

*Edmunds killed his bird out of bounds.

Sweepstakes, three birds each:

Edmunds, 28 yds	1 1 1	Arnold, 29 yds	1 1 1
Butler, 29 yds	1 1 1	0—3	

Sweepstakes, ten birds each:

Edmunds, 28 yds	1 1 1 1 1 1 1 1 1 1	—10	
Colonel Armstrong, 28 yds	1 1 0 1 1 1 1 1 1 1	—9

FOUNTAIN GUN CLUB.—Tenth monthly shoot for the Diamond Badge at seven birds each, handicap rise; to be awarded to the winner the greatest number of times in twelve shoots, with a prize in silver or bronze to be given the winner of each contest, such prize to be the winner's property, the value being from $10 to $20. The Diamond Badge has been won four times by Mr. Eddy, once by Mr. Delrahe, once by Mr. Jopert and yesterday by Mr. Cherry. The badge has to be shot for twice more, but Mr. Williams' chances are the best, for no one can beat him, and only Mr. Madison can make a tie with him, should the latter be fortunate enough to win it in the March and April contests. Mr. Williams had a chance to win it outright, but he would not shoot off, thereby giving one of the others a chance to win the silver cup and make a score for the Diamond Badge. Eighteen of the members faced the traps.

The Kennel.

DRAFT FROM

THE LAVERACK KENNEL FOR SALE.

A KENNEL OF CRACK FIELD AND BENCH SHOW DOGS.

The Laverack Kennel offers all its aged dogs for sale and will only retain a few young dogs for next year's Derby. Mr Snellenburg will visit Europe about May 1, hence is desirous selling ere he leaves. These dogs have run in public and first-class reference will be given as to their bench and field trial qualities.

1. THUNDER, pure Laverack Setter, color, blue Belton; whelped May 7, 1877; weight, 53 lbs.; winner of seven bench show prizes and one field trial; sire of Daisy, Lady, Dick and Mack Laverack.
2. PEERESS, pure Laverack; color, lemon Belton; whelped August, 1875; sister to the celebrated Princess, Puzzle, Phanton, Petrel, by Prince out of Lill II., in whelp to Thunder. She is a grand bitch, being the dam of Daisy, Lady, Dick and Mack Laverack; broken by Smith, of Canada, and a merry worker.
3. DAISY LAVERACK, pure Laverack; color, lemon Belton; whelped June 19, 1879; winner of second prize in the Nat. A. K. C. Derby, Vincennes, 1880. Daisy, I consider, a first-class field dog; has a remarkably keen nose and is very fast.
4. MAY LAVERACK, black and white; whelped May 11, 1879; winner in two field trials; is the fastest puppy I ever shot over. She is by Thunder out of Spot, a native bitch by Glass out of Pink. She will breed well to a large, well-made native or Llewellin dog.
5. DICK LAVERACK, blue Belton, pure Laverack; a handsome-bodied dog and much like his sire, Thunder; second in a large class at the late Pittsburgh dog show; beaten by his brother Mack. I consider him as good in the field as Daisy or May; whelped June 19, 1879; weight, about 48 lbs.
6. MAZEPPA, liver and white Pointer bitch; 8 mos. old, Button-Topsy.

Price of No. 1, $600; No. 2, $250; No. 3, $300; No. 4, $200; No. 5, $250; No. 6, $30.

Sportsmen can rely that the dogs are as represented.

I refer, with permission, to the FOREST AND STREAM, or to any gentleman present at the late field trials. Dick, Daisy and May are two season dogs; broken in Missouri by H. M. Short and have had a great deal of game killed over them. There are no better bred dogs in the world, as gentlemen posted in canine matters will admit.

I intend importing a pure Laverack dog that I think will nick well with Daisy and May, and should I keep Peeress would breed her to no other dog than Thunder.

Address, until April 1,
JOS. J. SNELLENBURG,
New Brighton, Pa.
After that, to
W. L. McCONNELL,
Newcastle, Pa.
Feb17,1t

SUPERIOR FACILITIES

afforded by their lines for reaching most of the TROUTING PARKS and RACE COURSES in the Middle States. These lines being CONTINUOUS FROM ALL IMPORTANT POINTS, avoid the difficulties and dangers of reshipment, while the excellent cars which run over the smooth steel tracks enable STOCK TO BE TRANSPORTED without failure or injury.

THE LINES OF

Pennsylvania Railroad Company

also reach the best localities for

GUNNING AND FISHING

in Pennsylvania and New Jersey. EXCURSION TICKETS are sold at the offices of the Company in all the principle cities to KANE, RENOVA, BEDFORD, CRESSON, ALTOONA, MINNEQUA, and other well-known centers for

Trout Fishing, Wing Shooting, and Still Hunting.

Also, to

TUCKERTON, BEACH HAVEN, CAPE MAY, SQUAN, and points on the NEW JERSEY COAST renowned for SALT WATER SPORT AFTER FIN AND FEATHER.

L. P. FARMER, Gen'l Pass. Agent.
FRANK THOMSON, Gen'l Manager. feb17-tf

"THE FISHING LINE."

TAKE THE

Grand Rapids & Indiana R.R.

Mackinaw, Grand Rapids and Cincinnati Short Line FOR THE

Trout, Grayling, and Black Bass Fisheries, AND THE

FAMOU SUMMER RESORTS AND LAKES OF

NORTHERN MICHIGAN.

The waters of the

Grand Traverse Region

and the Michigan North Woods are unsurpassed, if equaled, in the abundance and great variety of fish contained.

BROOK TROUT abound in the streams, and the famous AMERICAN GRAYLING is found only in those waters.

The TROUT season begins May 1 and ends Sept. 1.

The GRAYLING Season opens June 1 and ends Nov. 1.

BLACK BASS, PIKE, PICKEREL and MUSCALONGE, also abound in large numbers in the many lakes and lakelets of this territory.

The sportsman can readily send trophies of his skill to his friends or "club" at home, ...ace for packing fish can be had at many points.

TAKE YOUR FAMILY WITH YOU. The scenery of the North Woods and Lakes is very beautiful; the air is pure, dry and bracing. The climate is peculiarly beneficial to those suffering with

Hay Fever and Asthma Affections.

The hotel accommodations are good, far surpassing the average in countries new enough to afford the finest of fishing.

During the season Round Trip Excursion Tickets will be sold at low rates, and attractive train facilities offered to Tourists and Sportsmen.

Dogs, Guns and Fishing Tackle Carried Free at owner's risk.

It is our aim to make sportsmen feel "at home" on this route. For Tourist's Guide (an attractive illustrated book of 80 pages), containing full information and accurate maps of the Fishing Grounds and Time Cards, address A. A. SHEET, ... Agent, Grand Rapids, Mich.

To Hunting and Fishing Parties.

The Pullman Car Company

IS PREPARED TO CHARTER THE new cars "Davy Crocket" and "Izaak Walton," which are fitted up with dining room and kitchen, sleeping apartments, lavatories, etc., also provided with racks and closets for guns and fishing tackle, and kennels for dogs.

Diagrams, rates and other desired information furnished on application to Gen'l Supt. P. P. C. Co., Chicago. je26 3mos.

Old Judge Smoking Tobacco.

The Only Tobacco Ever Manufactured that does not Bite the Tongue.

Something Important for Cigarette Smokers to Know.

THE MAJORITY OF SMOKERS are perhaps not aware, that in smoking Cigarettes made of the ordinary pure rice paper, they have been inhaling THE MOST DEADLY OF POISONS, thrown off by all burning paper, namely: The Oil of Creosote. CHARLES G. EMERY, of the firm of GOODWIN & CO., manufacturers of "OLD JUDGE" Cigarettes and Smoking Tobacco invented and patented a process, March 5th, 1878, by which the Rice Paper used as wrappers for "OLD JUDGE" Cigarettes has been so prepared that the unpleasant ODOR and the injurious effects of the Oil of Creosote are completely neutralized or destroyed, and the paper made saliva proof to prevent its breaking or melting in the mouth. The unprecedented popularity of "OLD JUDGE" Cigarettes is owing to the fact that this process has been used exclusively in their manufacture, no one else having the right to use it. The great advantage and importance of this invention will at once be recognized by all smokers, and its truth demonstrated by the first "OLD JUDGE" Cigarette they smoke.

Try them and you will use no others.

Sold by all leading dealers.

Manufactured by GOODWIN & CO., 207 and 209 Water st., NEW YORK

Philadelphia Fishing Tackle House

GUNPOWDER!

Dupont's Rifle, Sporting and Blasting Powder.

THE MOST POPULAR POWDER IN USE!

DUPONT'S GUNPOWDER MILLS, established in 1802, have maintained their great reputation for seventy-eight years. Manufacture the following celebrated brands of powder:

Dupont's Diamond Grain.—Nos. 1 (coarse) to 4 (fine) unequalled in strength, quickness and cleanliness; adapted for glass ball and pigeon shooting. Packed in 1lb canisters.

Dupont's Eagle Ducking.—Nos. 1 (coarse) to 3 (fine); burns slowly, strong and very clean; great penetration, with a close pattern; adapted for glass ball, pigeon, duck and other shooting, with either muzzle or breech-loaders. Packed in 1lb and 5lb canisters and 6¼ and 12½lb. kegs.

Dupont's Choke Bore.—Specially adapted for "Choke Bore" Guns, and particularly for prairie and upland shooting. Burns slowly, strong and moist; does not cake or burn on the barrels, gives both a good penetration and a close pattern, will be found well adapted for glass ball and pigeon shooting. Made of two sizes, only No. 7 and No. 5, No. 7 being the coarsest. Packed in 6¼lb kegs and 1lb canisters.

Dupont's Eagle Rifle.—A quick, strong and clean powder, of very fine grain for pistol shooting. Packed in 1lb canisters and 6¼ lb kegs.

Dupont's Rifle Fg. "Sea Shooting."—FFg. and FFFg. The Fg. for long-range rifle shooting, the FFg. and FFFg. for general use, burning strong and moist. Packed in ⅛lb, 1lb and 5lb canisters, 6¼, 12½ and 25lb kegs. Fg coarse, FFFg. fine.

Dupont's Sporting, Mining, Shipping and Blasting Powders of all sizes and descriptions. **Special Grades for Export.** Also Rifle, Cartridge, Musket, Cannon, Mortar, Mammoth, Hexagonal, Cubical and Pellet Powder, U. S. Government Standard.

Powder manufactured to order of any required grain or proof.

Agencies in all the cities and principal towns throughout the United States. Represented by

F. L. KNEELAND, 70 Wall Street, N. Y.

N. B.—Use none but DUPONT'S Fg. or FFg. for long-range rifle shooting.

The Hazard Powder Co.,

MANUFACTURERS OF

GUNPOWDER.

Hazard's "Electric Powder."

Nos. 1 (fine) to 6 (coarse). Unsurpassed in point of strength and cleanliness. Packed in square canisters of one pound *only*.

Hazard's "American Sporting."

Nos. 1 (fine) to 6 (coarse). In 1 lb. canisters and 6¼ lb. kegs. A fine grain, quick and clean, for upland prairie shooting. Well adapted to shot guns.

Hazard's "Duck Shooting."

Nos. 1 (fine) to 5 (coarse). In 1 and 5 lb. canisters and 6¼ and 12½ lb. kegs. Burns *slowly* and very clean, shooting remarkably close and with *great penetration*. For field, forest, or water shooting, it ranks any other brand, and it is equally serviceable for muzzle or breech-loaders.

Hazard's "Kentucky Rifle."

FFFG FFG, and "Sea Shooting" FG in kegs of 25, 12½, and 6¼ lbs. and cans of 5 lbs. FFFG is also packed in 1 and ½ lb. canisters. Burns strong and moist. The FFFG and FFG are favorite brands for ordinary sporting, and the "Sea Shooting" FG is the standard *Rifle* Powder of the country.

Superior Mining And Blasting Powder.

GOVERNMENT CANNON and MUSKET POWDER; also, SPECIAL GRADES FOR EXPORT, OF ANY REQUIRED GRAIN OR PROOF, MANUFACTURED TO ORDER.

ANSWERS TO CORRESPONDENTS 78

TO CORRESPONDENTS.

The FOREST AND STREAM is the recognized medium of entertainment, instruction and information between american sportsmen.

Communications upon the subjects to which its pages are devoted are invited from every part of the country.

Anonymous communications will not be regarded. No correspondent's name will be published except with his consent.

The Editors cannot be held responsible for the views of correspondents.

All communications of whatever nature should be addressed to the Forest and Stream Publishing Company, Nos. 39 and 40 Park Row, New York.

FOREST AND STREAM.

Thursday, February 24.

THE LAST OF THE AQUARIUM.

THE New York Aquarium is approaching its dissolution. With the expiration of its lease, in May next, it will be no more. The proprietor claims that the American people do not appreciate an aquarium; but if he had said that they do not appreciate his aquarium it would be nearer the truth.

When it was opened in 1876 it was thronged for months, and had a brilliant and valuable collection of fishes. It paid for itself in a year, notwithstanding the fact that it was run at an enormously extravagant expense. The first management erred in this, and in exaggerated advertisements of "sea serpents" when a "muray," a specics of sea eel, was caught, etc. At the same time, the collection was kept up to replace the frequent deaths caused by bad management in placing fish in the show tanks before they became acclimated to the temperature and the light.

The Aquarium was not constructed on the best models, as at that time no one in America knew much about aquaria; and it cost more than twice what it should have cost. The second management has catered to a class who do not care for the legitimate features of an aquarium, and there have been all sorts of shows introduced, from Punch and Judy to circus and opera. That an aquarium built by a stock company, which would be content with a fair interest on their investment will pay in New York, if properly built and managed, we do not for a moment doubt; but it should be placed where the ground rent would not eat it up, and it should not attempt to do the sensational and to draw crowds, rather contenting itself with a steady moderate patronage all the year round.

At first, the attendance of children in charge of nurses was an important factor in the morning receipts, and it was a favorite resort for scientists and the clergy, who latterly have eyed it askance; and its patrons have been drawn from rural visitors mainly. An aquarium will pay in New York if the right persons are at the head of it, who have brains enough to employ competent managers and who will not let it degenerate into a variety show. The public started in right and received the Aquarium as the correct place of resort for themselves and their children for the firstyear; then it changed its character and the public changed also. Of late its attractions have been a few carp and perch in the fresh-water tanks and about fifty salty-water fish of four species; two hippopotami, two monkeys, one bird (toucan) and a circus.

SPECIAL PRIZES FOR BEAGLES.

IN our kennel columns last week we very briefly announced our intention of offering at the coming bench show of the Westminster Kennel Club two special prizes for Beagles, one to be offered in the bench-legged and the other in the straight-legged class. The attention of sportsmen at bench shows in this country has been given in such a great degree to setters and pointers that other and excellent strains of dogs have been passed over. Recently the admirers of the spaniel have spoken for him in no uncertain tones and it is high time that something be done for the interest of the useful little beagle.

We believe that the announcement of these prizes will induce keen competition among breeders and will encourage the improvement of the strain. We were especially desirous that the entries for these specials might be free. In order that no one entering a dog at the show should be debarred from entering for them, we therefore sent to the Secretary of the W. K. C. the following letter:

OFFICE OF FOREST AND STREAM,
39 PARK ROW, NEW YORK, February 16.

R. C. CORNELL, ESQ., Secretary Westminster Kennel Club, 206 Broadway:

Dear Sir—The FOREST AND STREAM desires to offer to the Westminster Kennel Club, at its bench show to be held this spring, two handsome, silver-mounted hunting-horns as special prizes for Beagles. One of the horns to go to the best bench-legged beagle of any age or sex in the show, the other to the best straight-legged beagle.

The FOREST AND STREAM is especially anxious that the entries for these special prizes shall be free, but is of course unable to announce the conditions under which the prizes will be competed for without first consulting the W. K. C.

Can you inform us at an early day whether it will be possible for us, in announcing the conditions for these prizes in our next week's issue, to say that the entries will be free?

The same individual who judged the open class could act as judge for the specials.

The beagle has not, to our mind, received in the past its fair share of attention, and we feel anxious to do what we can to encourage the improvement of the breed.

THE EDITORS FOREST AND STREAM.

To this Mr. Cornell replied that the only conditions that the club had to make in the matter were that the dogs competing should be regularly entered in the regular classes. We are therefore enabled to announce the conditions under which the FOREST AND STREAM trophies will be competed for, in our kennel columns this week.

The entries will be free, but those desiring to compete must forward their names and entries to the FOREST AND STREAM, and such entries will be published from time to time as received. As it is probable that the number of entries will be large, the earlier these are sent in the better.

The value of the beagle is slowly coming to be appreciated. As the birds on which we have been accustomed to rely for sport become, owing to hard winters, excessive shooting and the unfortunate passion which seems to possess our legislators for continually tinkering with the game laws, more and more scarce, lovers of the gun must seek some other diversion than that in which setters and pointers are employed. Hare hunting will in many localities take the place of bird shooting, and the merry little beagle with his tuneful voice will, before long, surely come into deserved prominence as a sportsman's assistant. We hope that the offer of these special prizes may have a good effect in inducing beagle owners to exhibit their favorites and in bringing to the front the best types of dogs of this strain.

We should be pleased to hear from all beagle owners on this subject.

HOUNDING AND STILL-HUNTING.

MORE than a year ago, with considerable trouble, we gathered a large amount of correspondence respecting the merits of the two methods of hunting deer—still-hunting and hounding. By a most unfortunate mischance the correspondence, when prepared for publication, was destroyed, and our own efforts and those of our friends who had proffered the result of their experience, went for naught. This subject is one deserving full discussion. Only by a comprehensive exhibit of the facts, as detailed by different observers in different parts of the country, can a sufficient basis of facts be established for proper legislation on the subject, and it is believed that the importance of the question is such as will induce all who are concerned to put forward their own individual information.

It will be conceded that the two methods, as practiced in different localities, are attended with widely different results; it is therefore often the case that a writer will adduce rules from a limited experience, which, while being entirely right for one section of the country, cannot be made to apply to other localities. The best way to get at the merits of the question is first to have the facts. We therefore invite concise statements respecting the following points, and we urge all who can supply any such information as is here called for to add it to the common fund:

1st. What is the character of the country referred to?
2d. What is the prevailing method of hunting deer?
3d. Describe hounding deer, as practiced in the section referred to, and its effects. Does it drive deer out of the country?
4th. Describe in like manner still-hunting and its effects.
5th. What class of men kill the most deer?—market hunters or parties of sportsmen?—residents or non-residents?
6th. Would resident sportsmen approve of a law prohibiting hounding deer? Would the residents assist in enforcing it?
7th. Would they approve of a law permitting hounding, but prohibiting the killing or capturing of the deer after it has been run into the water? Would such a law be practicable?
8th. What is the open season for deer?
9th. What are the winter habits of deer, so far as you have personally observed them?

THE INTERNATIONAL MATCH.—The new Board of Directors of the National Rifle Association seems to have been smitten with the lethargy which made the old Board little better than a display of figure heads. It does not seem that any progress is making toward the bringing on of an International match with the riflemen of Great Britain during the coming summer. The match rests with the Board, despite the shuffling motion made at the annual meeting that in the opinion of some of the members it was "inexpedient" to have a match. Gen. Hancock, who was chosen President with such a great hubbub, has not been near the rooms of the Association—does not appear to have lifted a finger in any way on behalf of the Association. The only sign of activity in the matter of an international match is the mass of "private" correspondence which is now going on between this side and the other. What this can be about we are at a loss to comprehend. It has been due to these gossipy, busybody letters that so much trouble and misunderstanding was brought about in previous matches between the two countries, and if they do not result in a final rupture at the present time it will be a result to be wondered at. The Board of Directors have the letter of President Stanhope, of the British Rifle Association, before them. It is an official communication and it has not as yet received a courteous official answer. Until that is done the private wire-pulling of the inside busybodies may be properly dispensed with.

BECAUSE "THE REFRIGERATOR AMENDMENT" has been modified, in consequence of the indignation of sportsmen everywhere through the State, the fact must not be overlooked that as it now stands it calls for earnest and continued opposition. The marketmen, who are at the bottom of it all, and those who are seeking to aid them, now say that the obnoxious "all-the-year-round" plan has been given up and so they would have it understood that in its present shape the bill is harmless. We pointed out last week the most patent objections to the proposed law. These objections should not be lost sight of. We are in receipt of communications from the interior of the State which show that the true character and object of the bill is understood.

The Sportsman Tourist.

HUNTING THE MOUNTAIN GOAT IN BRITISH COLUMBIA.

ALTHOUGH residing for the last dozen years within sight and almost at the foot of a range of mountains upon the summits of which these animals are to be found in greater or lesser numbers, I had never until within a short time availed myself of the opportunity of a day's sport. But having received a request from a friend in the East to procure, if possible, a few skins of this animal suitable for mounting, and knowing the difficulty of obtaining such skins, properly made, through the agency of Indians, I resolved to combine business with pleasure, buckle on my armor, and interview the white-coated denizens of the mountains in their lofty retreats.

To make the success of the trip more certain I procured, as guide and general assistant, a sub-chief of the Squamish tribe of Indians, whose fame as a mighty goat hunter had "gone abroad in the land." In negotiating for his services I thought to impress upon him the dignity of the expedition by telling him that a great white chief, whose wigwam was in a land toward the rising sun, had expressed a wish to obtain some information respecting the animal of which he (the Indian) was such a mighty hunter.

But the sordid love of filthy lucre was deeply rooted in his savage breast, and the pursuit of scientific knowledge, unremunerated by a stipulated number of American half-dollars, had about as much interest for him as the chir-r-ring notes of the kingfisher just passing us; for with a shuffle of his moccasined toe in the sand, and an expression of face which left no doubt as to the meaning of his words, he replied, or rather asked: "*Konsick mica pottatch?*" (How much will you pay?) So, after considerable financial sparring, the bargain was settled for one dollar per day.

On the morning of May 26 I gathered up my traps, consisting of blankets, implements of taxidermy, light breech-loading shotgun, and my trusty Winchester rifle, and bundled into the canoe, and, long before the drowsy inhabitants of Hastings were astir, was gliding northward over the blue waters of Burrard Inlet.

It was a beautiful morning, even for this "beautiful month of the year," and at this time, to a lover of mountain scenery, there are few places on this Northwest coast more enjoyable than the north arm of Burrard Inlet. All along the tangled network of undergrowth which fringes the shore Nature is busy with palette and brush touching up her carpet and drapery with the wondrous hues of approaching summer.

Here and there garlands of crimson and blue dabble with the ebb and flow of the tide. Yonder the bright foliage of maple and birch appear and disappear amid the darker shades of hemlock and fir, while far above the dark line of waving pines, serrated and dome-shaped peaks, frosted and white with the lingering snows, stand out clear cut against the sky beyond.

Cataracts, coming from heights where their noise is hushed and their foaming lines dwindle to mere silver threads in the distance, tumble and leap and hurl themselves into the silent waters of the inlet, whose ceaseless ebb and flow go on unchanged. The music of our bird world, too, just wakening from a night's repose, fills up the enjoyment of the surroundings. We hear the plaintive cry of the little auk as it dips and flirts like a phantom bubble just ahead of us, the noisy chatter of Steller's jay, the joyous greetings of little warblers, while from far up amid the foliage of sighing firs comes the "Whoo, whoo, whoo" of the dusky grouse.

I had yielded to the charm of my surroundings when my reverie was broken and my ideas called back to their normal state by the loud baying of a hound on the hill to our left, and as I turn and watch the shore in that direction a large buck (*Cervus columbianus*) glides noiselessly into the water, and, standing at knee-deep, throws his head high in the air, looking back in the direction from whence the sound of his pursuer comes. What a picture of life and fleetness! We might have shot him where he stood, but we have too much regard for Her Majesty's game laws in this part of the Dominion to do anything of the kind. Presently the great ears begin to move back and forth, a step or two further is taken, then as the notes of the approaching hound sound clearer, showing with what fearful certainty the trail is followed, the deer plunges into the water and strikes boldly for the opposite shore, a mile distant.

But a breeze had sprung up from the gulf, and as it freshens we hoist our sail, and our beautifully modeled Chinook canoe skims over the water like a bird, and after four hours' run we reach our destination and pitch our camp at the mouth of a little stream at the head of the inlet. On our way up the old hunter informed me that his brother Charley, feeling annoyed at not having received an invitation to join the hunt, and being also a little jealous of the old hunter's fame, had declared his intention to follow us, and I was strictly enjoined by the old fellow to pay no attention to his advice concerning the mountains, for although he was an average hand at spearing salmon, his opinions as regarded goat-hunting were not to be depended on. And sure enough, we had scarcely finished arranging camp, when Charley arrived, bringing with him his two sons, lads of probably ten and twelve years of age.

As it was then noon I decided not to try the mountains that day, but to occupy the time in securing some specimens of harlequin ducks and water-ouzels which the Indians informed me were to be met with a short distance up the creek.

So leaving the two lads in camp we started, and had proceeded about half a mile, and while I was engaged in watching the antics of a water-ouzel, which was diving from one side of a piece of drift and coming up on the other, a large black bear stepped out from a clump of bushes on the bank and stood within twenty feet of us. It was but for a moment though, for before I could reach my rifle, or before the Indians could raise their muskets, with a loud snort he was back under cover. In an instant Charley was out of the canoe, followed by myself, and as the place on which we had discovered Bruin was an island, we thought to overtake him before or while crossing the stream on the other side. We were, however, disappointed, for on reaching the other bank we found he had already crossed, as his trail on the opposite shore indicated. When we returned to the canoe we found the old hunter intently watching some object on the side of the mountain opposite, and as we approached he pointed with his paddle and uttered the word "Sheep."*

I had with me a splendid field glass, which I at once brought to bear on the spot pointed out by the Indian. It was an open grassy place on the side of the mountain, down the centre of which a mountain stream coursed its way, emptying itself into the creek nearly opposite where we were standing. Picking the long grass and weeds which grew among the disjointed rocks were three shaggy, white-coated animals. A council of war was thereupon held and an attack immediately decided upon. The ascent of the mountain was comparatively easy, being along the course of the stream, until nearing the grassy opening when we had to make a long circuit to the left in order to keep under cover of the timber. The traveling then became tiresome and annoying on account of the great number of fallen trees and immense growth of a species of umbrella plant locally known by the very appropriate name of "devil's walking stick;" and woe be to the hand which clutches one of those sticks for a friendly support! We at last reached the level on which the grassy spot was situated, toward which, still picking our footsteps and guarding against the slightest snap of a twig, we kept on. Fortune seemed to favor us, for right in front and shutting out the opening from view was a rocky, moss covered ridge, up the side of which we crept, and cautiously peeped over the top, and there within one hundred yards were three goats quietly feeding, apparently unconscious of our approach, while further on and about four hundred feet further up, perched on the pinnacle of a rock, stood a large buck-goat whose attention was apparently attracted by the prospect of fresh feeding grounds on the mountains across the valley. Or he might have been a sentinel watching over the safety of his three companions in the little opening below him. If so, he was a careless one, for his position commanded a clear view of the rock on which we lay and no warning of our approach had been given. Choosing our victims we fired, and the three dropped almost in their tracks. Hastily throwing a fresh cartridge into my rifle I turned to look for the sentinel, but he had disappeared. In an instant Charley was off, dropping powder and ball into his old muzzle-loader as he ran; and while I was engaged in taking measurements of the three we had killed the loud report of his musket sounded far up the mountain side, and presently he appeared in sight on the point of rock on which we had first discovered the sentinel and, shouting down the warning "*Klosh Nanitch*" (look out), before I could utter a word to prevent him he tumbled the carcass of the unfortunate goat over the cliff. Down it came, a limp, shaggy white mass, bounding from crag to crag till it reached the flat on which we stood, shattered and torn beyond use. Its horns were split into shreds, its jaws broken and great patches of hair cut clean from the skin, in fact, it was useless as a specimen. I felt annoyed and only waited the approach of Charley to give him a severe reprimand for his carelessness. But the old hunter, chafing under Charley's success, and indignant at his presumption in acting without orders, at once opened out upon him with a burst of eloquence that to any one conversant with the guttural oratory of the Indian must have been scathing in the extreme. He concluded by informing him that we were collecting the skins of animals and birds solely in the interests of science, and not killing as do the Indians who hunt merely to satisfy their hungry stomachs. But Charley took it all very good-naturedly, and when he got the old fellow's back turned he held up two of his fingers to show that he had killed two goats while the mighty hunter had only bagged one.

Our descent of the mountains to where we had left the canoe was not at all difficult, as the hard snow along the border of the creek allowed us to drag our specimens without injury to the skins. On reaching camp we found the two boys fortified behind a large rock, over the top of which they had mounted an old flint-lock musket. It appeared that shortly after our leaving the camp a black bear had taken up his position on the opposite side of the creek facing the camp, and had remained there till a short time before our return, and the boys, fearing an attack, very promptly placed themselves on the defensive. Had they found it necessary, though, to use the musket it would no doubt have done as much damage to the besieged as to the besieger, as it was found to be nearly half full of slugs and buck shot.

The next day's sport, though of somewhat an exciting character, did not redound much to my fame as a goat hunter. The ascent of the mountain had been difficult, and in many places dangerous, and more than once the assistance of my trusty guides had to make up for my lack of iron nerve. Creeping along the face of a cliff with a thousand feet between you and the first halting place should you happen to miss your footing is a feat which few amateurs in mountain travel may accomplish with ease. Muscle and endurance are valuable adjuncts to the composition of a sportsman, but in hunting the mountain goat, muscle and endurance will avail him nothing if he is lacking in that most necessary of all requisites, a steady head; and the enthusiastic hunter urged on by the excitement of the chase with the game keeping just beyond the reach of his rifle, may find himself at a point where to go on is impossible and to return requires the nerve and coolness of a Blondin.

We at length reached a shelf, from which to gain the top the old hunter had to mount on the shoulders of his brother; after which he lowered the butt of his musket for Charley to cling to, and with my assistance he also ascended. The old fellow then formed a loop on one end of his belt and fastening the other to the butt of his musket passed it down for my assistance. I, however, began to look at the thing from a purely scientific point of view. I had much to learn concerning the habits of the mountain goat; in fact, I had only just commenced the task. Now the belt, which was an old one, might possibly break, and a fall back to the narrow shelf on which I was standing might carry me over its edge, and that would be the end of it. So I told the Indians to go over the ridge, and if they found any goats to come back, that I would then make the attempt. They had scarcely left me ten minutes when they commenced firing, the sound of their muskets echoing and re-echoing along the mountain side. Shot after shot was fired, till the whole place appeared to resound with one continuous roar of musketry. I became very much excited, and ran along the shelf in hope of finding some more accessible place by which to reach the top; but the search was fruitless, so I came back, sat down, and, lighting my pipe to soothe my excitement, waited the return of the Indians.

THE MOUNTAIN GOAT—Aplocerus columbianus, Coues.

In the meantime the firing had ceased, and presently the old hunter, with a frown on his swarthy brow, appeared on the crest of the ridge, and sliding down on the shelf, seated himself beside me.

He was decidedly in a wrathy mood, and refused to have anything more to do with the hunt so long as Charley remained, and urged me strongly to send him home. It appeared that shortly after leaving me they came upon a band of seven goats, and as they had approached them from above, there was a good opportunity for rare sport had they returned to notify me, as I had instructed and as the old hunter wished. But the uncontrollable Charley at once opened fire, and the old hunter, fearful lest he should again be behind, followed suit; but whether from excitement or the inaccuracy of their flint-lock muskets, it is hard to say—out of all their shooting but one goat fell, and that at Charley's first fire. As the old man was in bad humor, I decided to return to camp, but on reaching the canoe an exclamation from Charley drew our attention to a mountain on the opposite side of the creek, where, in a small opening, we discovered a she goat with a young kid, the latter appearing like a mere speck of snow skipping about among the rocks.

Before starting out I had offered a fair reward for the capture of a kid, and this was the old man's opportunity. As he was stripping for the chase he turned to Charley and commanded him to remain below and occupy his time in catching trout, with which the stream abounded. He then disappeared in the dense growth of timber which intervened between the creek and the foot of the mountains; while I took up a favorable position with my glass to watch the success of the chase. The ascent must have been difficult, for two hours passed before the crouching form of the Indian appeared in the opening. A short time before this the old goat must have snuffed the danger, for she started up the mountain, and at the moment the Indian came in sight had reached a shelf to which the kid was unable to follow. All this time a large white-headed eagle soared in majestic circles directly over the scene. After several unsuccessful attempts to reach its dam, the kid started back toward the point from which the Indian was advancing, but before proceeding very far sprang down upon a narrow shelf and stood concealed beneath an overhanging bush.

* Among all the tribes of Indians in this country the mountain goat is invariably known by the name of sheep. Indeed many of the whites appear to fall into the same error, although it would be about as consistent to call a marten a mink or a goose a turkey.

The Indian in the meantime working his way upward, stopped within a few feet of the place, but from his actions I was satisfied he was ignorant of the kid's position, and, fearing the prize would escape, in my excitement I shouted at the top of my voice; but the sound must have died away before reaching him, for he took no notice. Presently he raised his musket and leveled at the old one, which still remained in the same position on the shelf above, but lowering it again he commenced a search among the rocks for the lost kid. His stupidity annoyed me, for had he kept his position he commanded, so far as I could see, the only way by which the kid could escape; for below was a perpendicular cliff of a thousand feet against the side of which no possible foothold for anything without wings could be seen. But in this I was mistaken, for a rock, loosened by the Indian's foot, rolling over the cliff started the little animal from its hiding place, and with a bound it sprang outward and down. The thought of its fate sent a cold shudder through me. A thousand feet, sheer down, to be ground to atoms on the rocks below! But no—down it went fifteen or twenty feet, alighting on a rocky cone which stood out at a slight angle from the main cliff, on the top of which there was scarcely room for its feet huddled together. Had it started from that point and soared away over the tops of the trees which studded the valley it would not have surprised me in the least, and I waited breathlessly for its next move.

For a moment it rested like a speck of snow upon the dark gray granite cone, then with a downward spring of perhaps ten feet it reached a narrow shelf which had before escaped my notice and which ran along the face of the cliff to the wooded mountains on the right. But a sadder fate awaited the unfortunate animal than if it had fallen into the hands of the Indian. The terrible bird which in narrowing circles had kept above the scene, and whose piercing eye had taken in the vantage of the position—the kid separated from the protection of its dam—stopped suddenly in its course, then swooped downward swift as the lightning's flash, its great wings cleaving the air, and seizing the poor kid, just when life and liberty seemed so near, bore it clear of the cliff, fluttered a moment in mid air, then drifted downward along the mountain side, disappearing below the tops of the swaying firs.

The chase was over, and with a sigh of disappointment I shut up my glass and waited the return of the Indian. It was nearly dark when we reached camp, and after partaking of some of the delicious trout which Charley had hooked from the creek, I lit my pipe, and being somewhat tired with my exertions, rolled myself in my blankets, and with a beautiful clear sky for a roof and the "babble, babble" of the creek for a lullaby, I lay dozing, cogitating over the events of the day. Finally the forms of the two Indians, dimly outlined through the smoke of the camp fire, faded entirely away and I glided into dreamland, and all through the night re-enacted the scenes of the chase. The kid's terrible leap, my frantic exertions to reach the top of a cliff where goats were being killed by the two Indians, till at last a large white-headed bird lifted me from the rocks and dropped me over a precipice—then, with a start, I awoke and found it was daylight. My dusky companions were already astir, and after the morning's meal I announced my intention of starting for home as I had procured what specimens I required for the present. But the old hurter, feeling no doubt disappointed at his want of success during the last two days, and anxious to satisfy me that he was worthy of the name he bore, induced me, by representing that we would almost be sure to secure a kid, to accompany him to a high table land which he had pointed out the day previous, lying between two snowy peaks. I was satisfied this trip would occupy the greater part of the day, but the hope of obtaining a kid decided me in making it.

After leaving the valley of the creek, which is about one-fourth of a mile wide, the ascent lay over a succession of benches thickly timbered with giant firs, gloomy and silent as the tomb, save when the weird notes of the dusky grouse, coming from beyond the spectral trunks, broke in upon the ghostlike stillness; and it was with a feeling of relief that we poked our heads above the last line of sighing firs, and scrambling up a rather steep incline reached the open table land above. What a prospect awaited us! Nearly surrounding the little plateau and back as far as the eye could reach, dark granite and snow-covered peaks reflected the bright rays of the sun from a thousand different angles. The little plateau was composed of low grassy ridges with miniature valleys between, dotted here and there with clumps of juniper and stunted pines, while heaps of crumbling rocks, resembling the ruins of ancient castles, filled up the foreground. This was the home of the hoary marmot, whose sharp, prolonged whistle sounded so strangely human. Here, too, was to be found that strange little animal the little chief hare or rock rabbit; while in graceful circles above the opening soared that terrible scourge of mountain and plain, the white-headed eagle, seeking, no doubt, a morning meal in the shape of a fat kid. Although the emblem of a great people, I have a sort of supernatural antipathy to this bird, and this dislike was created under the following distressing circumstances:

In the early days of the Province—in the days of the gold excitement—I had, in company with an old mining partner, decided upon prospecting the head waters of a river far to the north of this; and for this purpose had in early fall cached a large quantity of provisions in a cabin situated some eighty miles up the river. It was on our journey toward this cabin that the incidents I am about to relate transpired. We left the mouth of the river on December 20, with the snow at least four feet deep; but being supplied with first-class Indian snowshoes, and having a light load to haul on our sleds, we calculated on making the trip in six days, and took with us only provisions to last about that time. But on the second day a blinding snowstorm came on, in the midst of which we missed our way and followed up a large tributary instead of the main river; nor did we discover our mistake until the morning of the tenth day, when the storm cleared up and showed us our position. There was nothing left for us but to retrace our steps.

Our provisions, which were nearly exhausted, were dealt out a mouthful a day until they were finished. Our sleds, which then became too much for us to haul, were abandoned, together with our blankets, and for five days, with nothing to eat, we dragged ourselves along over the desert waste of snow, and for five nights we built our camp-fire and walked around it, not daring to lie down lest sleep, that chilly sleep that often knows no waking, should overpower us. During all those days a large white-headed eagle kept us company, either soaring in regular circles behind, or ahead, perched on some naked limb, awaiting our approach. At night his place would be near our camp, and the first streaks of dawn would reveal the "Sexton," as we christened him, pluming his feathers to resume the journey. Night nor day did he leave us, and to our distorted imagination, with death as it were closing in upon upon us, each day he appeared to grow larger. Finally, when weak and exhausted and with bodies worn to mere skeletons, we dragged ourselves through the door of the home cabin, he uttered a piercing shriek, and soared back toward the mountains. And it was well for him that he did, for my companion, though scarcely able to hold his rifle, fished it out from among the things we had cached, and with eyes wild and glaring as the eagle's, waited for his approach; but he never returned. Since that time I never get a specimen of this bird, but it is with a feeling of revengeful satisfaction that I strip him of his skin. But to return to the present. The old hunter, who had been prospecting the neighborhood for goats, returned, his greasy face glowing with satisfaction, and announced the result as follows: "Hiyou sheep!" "Hi you tenass!" (Plenty of sheep, plenty of young ones); and following him a short distance over a grassy ridge we came upon small bands, either feeding or lying beneath the shelter of some bush or overhanging rock. There were also a number of kids skipping and frolicking about, much in the manner of those of our domestic flocks. But although we used every artifice, the capture of a kid proved a failure. At one time we felt sure of success. We had come upon four goats with two kids lying upon a narrow shelf, one side of which ascended almost perpendicularly over one hundred feet into a wooded ravine, the ascent on the other side being almost as abrupt: We were satisfied the goats would go up the face of the rock, and that the kids might be unable to follow them, or if they did, as a last resort, we would shoot the old ones. We approached within a hundred feet, when they suddenly turned and faced us. With foot advanced and every nerve strung to its highest tension, we waited the first move upward. But they surprised us by using widely different tactics from what we expected.

Suddenly wheeling to the left, and with limbs as rigid as if they had been jointless, they slid down the smooth face of the incline and disappeared in the ravine below. I cannot say that I was much surprised, for after witnessing the astonishing leap made by the kid on the day previous I had come to the conclusion that, unless by mere accident, there is but one animal a match for these little mountain acrobats, and that animal, *Haliatus leucocephalus*.

These grassy openings, the old hunter informed me, occur in many places in the mountains, and used to be, in the early days of blanket making, a great resort for the Indians. Here they would bring their families and camp for weeks at a time, slaughtering great numbers of goats and drying the skins before packing them in their canoes.

The following extracts from an article contributed by my valued friend, Mr. J. C. Hughes, to the columns of FOREST AND STREAM show the value of this animal to the Indians before the advent of the whites. He says:

The coat is of two qualities, namely; a fine white wool next the skin, of a fine grade, and a long, white hair, straight and stiff, coarse in texture, never curly, as is the wool in the domestic sheep. Sometimes the coat assumes a dingy white or yellowish cast, but white is the normal color.

The skins are shorn by the Indians of all, or nearly all, of the different tribes on this coast. The wool is spun in the most primitive kind of manner by the squaws, who twist it on the bare knees with the palm of the hand. This yarn is woven into blankets on a very rude kind of loom, by passing the weft over and under the warp with the hand, without the use of a shuttle or other appliance. These blankets, although occupying a long time in their manufacture, are still very common among the Indians, and at one time constituted their principal covering, especially among the tribes living on the coast. The manufacture of these blankets is yearly decreasing, however, owing to the importation of American and English ones, and other causes; and it is safe to conjecture that this species of goat is on the increase, instead of decrease, as the fleece, not the flesh, was the object sought for by the Indians. Not that the flesh is unpalatable and inferior, but that other pursuits are less arduous and more profitable; and among our Indians hunting is not so much practiced as when it was a necessity. The old adepts are fast dying off and the young fry pay more attention to working for the whites as servants, mill hands, salmon fishers, cattle herders, etc., than to hunting, the last twenty years having made a great change in their mode of obtaining a livelihood.

The flesh of this species resembles, in some degree, mutton. That of the kids is exceedingly delicate, has a slight gamey flavor, is eaten by both Indians and whites, and by some of the latter is preferred to venison.

Among the Indians of early times, to be a successful goat-hunter was to be a man of note in the tribe, a husband to be sought after by the dusky damsels looking for a helpmeet, as he was able to procure at the same time food and clothing—two very desirable things in domestic economy. And after his death this qualification insured him a sarcophagus, which was placed on posts in "the village of the dead," and emblazoned with representations in relief of the animal in question, as a memento of his prowess in this particular line during his lifetime.

It was nearly dusk when we reached camp, but wind and tide being in our favor, I decided upon starting at once for home. So carefully stowing my skins in the canoe and wrapping myself in my blanket, I nestled down comfortably in the bow, while the grim old savage, his steady hand guiding us over the rippling waters, sang out, in strange notes, the songs of his tribe; and Charley and the two boys, who followed behind, catching up the refrain, sent it back echoing among the mountains. They were happy—and why not? for surely this is the Indian's paradise. Here is to be found every enjoyment which the Great Ruler of the universe constituted him to inherit. The waters teem with fish that kings might covet. The mountains and valleys are alive with animals which furnish him both food and raiment; and, satisfied with the fruits which the earth affords him, he wanders through the forest, or, in his cedar canoe, wrapped in blanket and mat, he glides over the waters, unheeding the flight of time, whither wind and tide choose to take him. Truly "he soweth not, neither does he reap." But the picture sketched by these meditations is marred by the reflection that in a short time this state of things—this happiness of savage life—shall pass away. Already the "tramp, tramp" of the approaching East sounds faintly in our ears.

"I hear the tread of pioneers
Of nations yet to be—
The first low wash of waves, where soon
Shall roll a human sea."

Already a "shining iron track" is being laid, over which civilization, in all its complex character, with all its attending follies, its crimes and its varieties, its crowding and wrangling for wealth and position, its happiness and distress—shall move forward, and the unpretending savage and his food-and-raiment-giving animal, the mountain goat, shall be forced back beyond our ken and only live in the works of the persevering and self-sacrificing naturalist.

JOHN FANNIN.

THE CENTRAL FISHCULTURAL SOCIETY.—Our report in this week's issue closes the proceedings of this most interesting meeting, which we have given in full and more correctly than was attempted by local papers. It has all been stereotyped and will soon be printed in pamphlet form.

"A TRIP THROUGH THE PROVINCES."

Editor Forest and Stream:

The author of "A Trip Through the Provinces," which appeared in your issue of the 10th inst., so evidently not only has a keen appreciation of a sporting trip, having what he would probably call a "first-rate time," but has taken so much pleasure in talking and thinking over his experiences and writing out his very pleasant (because natural and unaffected) record of the same, and moreover is withal so palpably a good fellow, that it seems almost too bad to "go for him." And this is more especially the case from the fact that he writes over his own name, whereas I, for reasons which to me seem sufficient, object to appearing in *propria personæ* in a controversy of this kind. If he contented himself with giving an account of his experiences there would be no great harm, even if in his enthusiasm he did see everything rather rose colored; but when he goes on to give advice to others as to following in his footsteps, the thing is a very different one. The number of hard-worked young clerks in shops, railroads, insurance offices, banks, etc., who yearn after a little outdoor life combined with sport, is enormous, and is increasing every day, and any statement of the possibility of getting good salmon and trout fishing, with moose, caribou and deer shooting, in the space of two or three weeks, at a very moderate cost, would be almost sure to start off some parties, perhaps at a great deal of sacrifice of time and hard-earned savings, who, if they found that the hopes held out had been entirely illusory, would very naturally return with a feeling that they had been swindled out of their short annual holiday.

I remember perfectly being very much impressed by the exaggerated (though evidently unintentionally so) account of the chances for salmon fishing, which the same correspondent gave in an article some time ago, on the strength of a very lucky experience he had happened to have at Fraser's; and I have no doubt that had not "Manhattan" taken the trouble to state the real condition of things in that respect, many would have gone down, prepared for great sport, only to find that the only free fishing grounds showed more rods than fish per diem. However, it is not with regard to the fishing that I want to protest, as "Manhattan" did that most thoroughly, as is shown by your correspondent's own experience last season, although he is perfectly right in claiming that it was an exceptionally bad year. I would say, however, that it is not to be wondered at that a person's enthusiasm should cause him to mislead others, when it is so great as to start him off himself with two friends, without having taken any steps to find out whether there had been any change in the Restigouche during the past three years.

To anybody who knows the circumstances of the transaction there is something almost ludicrous in the idea of Fraser's speaking, "almost with tears," of the thirty odd thousand dollars that the New York Club paid him for his house and rights. But as I said before, it is not with regard to fishing that I want to take the liberty of making a few corrections to the "Tour Through the Provinces."

As the ground that I take is that one should not give advice and make statements with regard to the capacities of a certain locality for sport, without having accurate and personal knowledge thereof, it may not be out of place for me to present my credentials, so to speak, for the assumption of the authority to criticise. They simply consist in the fact of having with a friend passed during the last three autumns five, six and seven weeks in the country spoken of, most of which time was either in tents or in canoes, or excursions into the interior, with the best guides in the way of canoemen that the Provinces afford. We devoted each year the first part of our vacation, *i. e.*, from six days to a fortnight, to salmon fishing, and the rest to shooting. Having been pretty well over the Province of New Brunswick and that part of the Province of Quebec which is about Gaspe Basin, I feel that I have the right to state certain points, which I know to be facts. The remarks and advice which your correspondent makes with regard to shooting in the Provinces are evidently his honest impressions, but are derived just as evidently from hearsay, as by his own statement he has only been there in the spring or early summer.

First and foremost, in the way of misleading those who might be induced by his delightful account of the facilities for sport to take a trip to the Provinces, he makes no mention of the fact that unless they went to break the law and run the risk of being arrested and fined they must before firing a shot pay $20 for a license in New Brunswick and $50 for one in Nova Scotia! One would think that this was a pretty important fact for anybody who proposed going there to know, and one that would make considerable difference in the expenses of the trip, to say nothing of the unpleasantness of being hauled up as a poacher or law-breaker.

He speaks of moose and caribou being very plenty; deer not so much. There was a deer shot in Gloucester County, New Brunswick, some years ago, and the tradition is kept by the Indians as an extraordinary occurrence. There may be some few that cross the St. John River from Maine, but certainly east of the Tobique and in all the parts of New Brunswick visited by the author of the "Tour Through the Provinces," a deer would be looked upon as a great curiosity, and as for Nova Scotia, although I cannot speak from personal experience, I believe fully that no deer, *i. e. Cervus virginianus*, ever browsed. There moose and caribou are quite plenty, but what the chances of a party's going down on a few days' vacation, with al imited exchequer, would be of getting one is a different question.

In winter, with deep snow, anybody who went to the right place and got hold of the right sort of guide, could be sure of killing a caribou or two, and very likely a moose. But in order to do so he would have to put on his snow shoes, start off with a few biscuit or hard tack, and a little tea and sugar in his pocket, and follow his Indian or French guide a route through the woods, camping under a bough shelter at night, and generally leading a life of physical strain and endurance that few men not bred in the woods could stand. I do not mean to say that moose and caribou may not be shot in the autumn, because I know that they are. Last season, when I was at Bathurst, an English gentleman brought down the river one of the finest caribou heads that I ever saw, and the year before a gentleman on the Geological Survey shot two on the very same canoe route that my friend and myself went over a week or so later. But after all, it is a matter of chance, and implies of necessity having good hunters for guides, starting into the interior in birch canoes, two men to each sportsman, and an extra canoe with its two canoe men for supplies, if any lengthened trip was to be made; all of which is not of course compatible with the quickness and cheapness which is held out as an inducement. I can only say that a young gentleman, a wonderful shot, of my acquaint-

ance has for certain for four—and I think for—five years spent from five to seven weeks in the interior of New Brunswick, starting in with a crew composed of the best Indian hunter and French canoeman, a camp-keeper or cook, and an extra canoe to take up his supplies, the bill of which item alone (*i. e.*, the supplies) exceeded the amount laid down as sufficient to cover all expenses of your correspondent; and that although he has had a great deal of sport, got many bears, beaver, mink, otter, etc., it was last year only that he got his first moose, and that was shot on the head waters of the Restigouche, up to which he had to be towed by horses wading up the stream. It is well known that, in the rutting season, when moose are at all plenty, they can be got by "calling." But although there are some good callers in Nova Scotia, I doubt if there is one in New Brunswick. There are plenty of Indians, half breeds and French habitants, who are hanging about the hotels all through the Province, who will claim to be experts at calling, but from what my men have told me I doubt if they are justified in so doing. There is one old Indian, "Gabe" by name, who is reputed to be a caller, who went out with Lord Dufferin, when he was Governor-General, but I believe even for his Excellency no moose could be persuaded to come to bag.

With regard to the list of small game given, I would say that there is not and never has been a quail in either New Brunswick or Nova Scotia, and that such a mistake is utterly inexcusable for one who writes as an authority on matters of sport. Anybody who has looked into the subject at all knows that the quail cannot winter even in Maine. Partridges of both kind, that is to say the ruffed grouse and the Canada grouse, are quite abundant, or rather they were so before the pretty general establishment of freezers made them worth from ten to fifteen cents apiece. But anybody who follows your correspondent's advice and takes up a well-broken setter or pointer, will be doomed to great disappointment, and will find that the first little cur dog that he comes across will be infinitely more useful than his blue-blooded pet.

And here I want to say that I have been watching with much interest the discussion that has being going on in FOREST AND STREAM as to whether partridges could be "treed" or not, and was wondering how long it would be protracted before somebody would hit the true explanation. It was only in your last issue that the same "Manhattan" states, what is a self-evident truth, that it is a matter of locality. The discussion reminded one of the old story of the two knights meeting at the pedestal of a statue that held aloft a shield, and after having fought almost unto death on the question as to whether the shield was of gold or of silver, found out that it was golden on one side and silver on the other, so that they both were right from their own point of view. In the same way Jean Baptist would be much amused if any one should tell him that partridges could not be made to fly into a tree, and sit there until shot off, for time and again he has done it with his old king's arm, altered by the village blacksmith from a flint-lock to a percussion gun; and knows full well that all he need do is to walk along any wood in September a little after sunrise, and when he hears his little yellow cur yelping in the bush he is sure, on going in, to find one or more partridges roosting on the branches of a tree and craning their necks out to see what all this noise is about. On the other hand, if our friend Jean Baptist should bring his little cur to Massachusetts and walk through the woods, he undoubtedly would have the pleasure of seeing him put up some partridges, if the undergrowth was not too thick, but that would be all he would see of them, unless he followed them up to repeat the same unsatisfactory performance. This would of course strike my friend Hammond, of Springfield, as an absurd way of hunting partridges, and with Sensation and one of his own dogs that are, I am told, especially well broken on ruffed grouse, he could show Jean Baptist such sport as the latter never conceived as possible. But let Mr. Hammond take his best dog to New Brunswick, or even to the northern part of Maine, and the laugh would be on the other side, for unless he could so ee his way through the undergrowth quicker than a partridge can run, and thus put them up himself, he would simply see his dog drawing carefully after a flock that would keep walking away from him and might lead him for miles before they took to wing. In short, it is a question of different habits of birds in different localities. "Manhattan" struck the keynote of the truth, but he does not, I think, tell the whole story, as were it merely that the birds in more thickly settled districts get wild from being hunted, we should find on the opening of the season the young broods just as likely to jump up into trees as those hatched in more wild regions, which is not the case. The fact is that we have here one of the many proofs of the truth of the law of hereditary influence, of which all scientific breeders are taking more and more heed. The grouse that live in a region where much shooting is done not only become wild and chary, but they transmit this tendency to their offspring, so that in time the instinctive habits of the birds will be entirely differ nt from those of the same family who have for years bred and multiplied comparatively undisturbed by man. This is of course a digression, but it will serve to show that it will be useless for the sportsman to take well broken setters and pointers to the wilder parts of the Provinces. In spring and autumn it is true that the marshes teem with the English snipe, and of course a good, well broken dog is a great advantage, but for wood shooting any cur that can be borrowed on the spot would do better, and you will not run the risk of spoiling a good dog. What is needed is a good recriever, and that should always be taken if duck and goose shooting is proposed Both ducks and geese are very abundant, and early and late there is, along the coast, a great flight of brant. To be at all successful, however, requires having as guides men who know the country and the habits of the birds, as one might be camped on a point with millions of fowl flying over head just out of shot regularly twice a day and never see a single feather. Again, where only a few days are at one's disposal, it seems almost a fatality that the season should be just too early or too late; this of course is not confined to sporting tours in the Provinces.

I have spun this out so long that I will not refer to what seem to be inaccuracies or carelessness in the account of the expenses of the trip given, merely saying that one is rather in doubt as to whether it is meant to be implied that the expenses of the whole party were under $100, or that it cost them $100 apiece. The first supposition is absolutely impossible, as the fares alone of three merely to Bathurst and return would be about $60, and on the second supposition I must say that $15 a day for a party of three does not seem to me to be so very cheap. In conclusion I want to say that I trust what I have written will be taken in the spirit in which it was done, which was not in the way of fault-finding or unkindness, but merely to correct what, I am sure, were unintentional inaccuracies and misleading statements; for I am convinced that nobody would regret more than the author of the article criticised having been the means of sending some poor devil down on a wild goose chase.

Boston, Feb. 15. MIC-MAC.

JAMES F. WILLIAMS.

DANSVILLE, N. Y., Feb. 21, 1881.

Editor Forest and Stream:

It is a sad duty that devolves upon me to-day to record the death of Mr. James F. Williams, which occurred last night at his father's residence in this place.

To say that he was a thorough sportsman, and a gentleman whom to know was to love and respect, but feebly describes his status as a man. Modest and unassuming, saying but little, when he gave an opinion it was sure to be listened to and carefully weighed.

Mr. Williams had always shown a great interest in field sports, and whatever of good may have been accomplished by the sportsmen's association of this place is largely due to his efforts. The attendants upon the annual meeting of the New York State Association for the Protection of Fish and Game will miss his genial smile and hand shake; in his death the committee on revision of the game law have lost a member whose knowledge of the subject in question would have been of great value.

It has been the writer's good fortune to be a personal friend of the deceased from the time we were boys together up to the last, and during all that time he has been the same true hearted gentleman, making hosts of friends and losing none. No death has occurred in our quiet community for years that has been so universally regretted. Surrounded by everthing to makes life enjoyable in the way of pleasant home associations and comforts, young in years, with a kind father, brother and five young lady sisters it seems doubly sad that he should be snatched from these dear ones who were so proud of him, and loved him so well.

Mr. Williams was taken with inflammation of the lungs but a few days ago, and nothing serious was apprehended until within three days of his death. Everything was done that medical skill and loving hands could suggest, but in vain, and now the community mourns as one man, and a gap is left in society that cannot easily be filled. H. W. D. L.

Natural History.

NESTING HABITS OF THE RUFFED GROUSE.

I NOTICE that in a recent number of FOREST AND STREAM a question has been started as to the manner in which the ruffed grouse leaves her nest when disturbed. In the numerous instances which have come under my own observation the bird has always, with a single exception, taken wing, sometimes "booming off" till lost to view among the trees; again flying noiselessly to a distance of only a few yards, then alighting and continuing the retreat on foot. The exception referred to was in the case of a bird that had not commenced setting, she having laid only half a dozen eggs. She started suddenly from the nest as I approached, and ran swiftly, but did not take wing. The grouse nests, hereabouts, sometimes beneath a brush-pile, which affords excellent protection from prying eyes, but as frequently she scratches a little hollow in the ground at the base of some large tree, lines it with a few dead leaves and deposits therein her eggs, which are only protected by the tree trunk itself. Once I found a nest that had not even this protection. It was in the woods of young oaks, at some distance from any tree or other object. As to the locality chosen, it is sometimes in the densest, darkest portion of the woods, again in open and much-frequented spots. Before she has deposited the full complement of eggs the grouse usually keeps her nest covered with dead leaves. After she has commenced to set, however, when at intervals she goes in quest of food, which she generally does toward evening, she does not always take pains to hide her eggs from view.

After the first egg is laid the bird is generally found lurking near her nest. The bird dog scents her now as well as at any other season Later, however, when she has commenced incubating, no effluvium emanates from her motionless body, and the keenest nosed dog may pass close to the spot where she crouches without detecting her presence. This curious habit is, I believe, common to all game birds; but, strangely enough, all ground-nesting birds are not possessed of like ability. I have frequently seen my setter come to a dead "stand" upon a towhee bunting, the nest of which I would not otherwise have discovered.

To return to the grouse. Her usual complement of eggs is about a dozen, but I have seen as many as twenty-two in one nest. In this case, however, two hens may have laid together, as the quails sometimes do. Generally the grouse will not bear having her eggs molested; sometimes the mere discovery of her nest will cause her to desert. Yet one of the most persistent setters that I ever saw was a bird of this species. She was, I think, a young and inexperienced bird, one upon whom the maternal cares had never previously devolved, else, it seems to me, she would never have set cted such a situation for a building-spot as that in which I found her. The nest was in the very open woods of basswood and large oaks, near a small dry creek. On one side, at a distance of about one hundred yards, was a traveled highway; on the other, only a few yards away, a dense growth of young poplars. Not the slightest attempt at concealment had been made, except that the nest was placed at the foot of a tree. On three sides it could be seen at a distance of several rods. Why she had come out of the poplars to build I cannot imagine. Being a few yards nearer to a road could not possibly afford her much additional security from prowling "vermin," while the exposed situation certainly rendered her much more liable to be discovered by other enemies than if in the thicker growth.

Be this as it may, there she was, and there a friend of mine discovered her one May afternoon. She had not then finished laying and, as several of the eggs were taken, I had little doubt she would desert. Considerably to my surprise, however, on visiting the spot some days later I found the bird upon her nest. I walked directly toward her and she flew when I came within about fifteen yards.

As the locality was one that I frequently passed through during my rambles, I determined to experiment with the bird. Accordingly, the next time I visited the spot I appeared not to notice the grouse, approaching her indirectly and whistling carelessly. The ruse was successful. I passed and, turning, re-passed again and again, so close to her that I might easily have touched her with my foot, yet she did not move. Finally, satisfied, I paused and stood within two or three yards of the grouse, watching her closely from the corners of my eyes, though apparently gazing at some distant object. Motionless as a statue, her head drawn close upon her breast, she crouched, her bright, brown eye watching me with a look that betokened mingled hope and fear. Presently I turned my eyes full upon her Her "instinct" told her that she was discovered. Quick as a flash she left the nest and went humming off into the poplar thicket. I visited her several times after this, sometimes viewing at a distance, without molesting her, sometimes repeating my experiments, always with the same result. So long as I appeared not to have discovered her, so long she remained quietly upon the nest. Even though my dog followed close behind me as I passed within two feet of the mottled beauty, she did not move, and so well did her colors harmonize with those of the surrounding leaves that the setter never suspected her presence.

Nearly four weeks had elapsed since the grouse began to incubate. I knew that the young birds must be almost ready to burst the shell, and it occurred to me that I might not soon have a better opportunity to try domesticating the grouse. Here was a bird in whom the maternal instinct was very strong, and I doubted not that, should I succeed in hatching the eggs under a hen, the mother grouse would care for her offspring. Even if I failed in this, I should at least have the old bird herself.

Accordingly, as I came close by the unsuspecting creature, I stooped suddenly and she was mine. But my triumph was only for one moment, the next my prize had slipped through my fingers, leaving only a handful of feathers in my grasp. Immediately I regretted the step I had taken and was glad that the bird had escaped. But would she, I wondered, after three long weeks and more of weary watching, relinquish her task, now that it was almost done? I sincerely hoped not. A few days later the nest contained naught but broken shells; and as I looked at them I breathed a wish that the young birds might ever pass as safely through all perils as they had through that which threatened them before their eyes first saw the light. H. S. W.

A TRUE SNAKE STORY.—Morristown, N. J, Jan. 30—*Editor Forest and Stream:* I have been greatly interested by the stories of snakes in your paper, as I have been giving a good deal of my time to wandering around the woods this last summer, and I have had the chance of seeing a good deal of snakes. One day while out walking I came to a small pond, and it being very warm I sat down on the bank of the dam which leads off the water of this pond. While I was sitting there my attention was attracted by a small water snake swimming around in the water. I had not been long watching him when he came near some old boards which were sunk in the bank. All at once a very large frog jumped out of the pile of boards, and caught the snake and swallowed him all but the end of his tail. I could see by the way the snake was moving in him that the frog was in a great state of pain, so I want d to get him before he went under the water, in order to cut him open and see the damage done by the snake. Not thinking that the frog would sink, I shot him through the head with a small revolver, and of course he went under, and I could not get him that day. I came the next morning, and while looking for him I saw a very large blake snake, which I shot in the back, and after a long while captured. I noticed he was very much swollen in one place, and I cut him open and out came a frog, the same one that I had shot the day before, for the bullet mark was on his head. On cutting him open, in the frog's belly was the small snake of the day before. The large snake had swallowed the frog, not knowing what the frog had dined on before him.

When I cut the snake open he had digested the frog's legs; all had disappeared but the bone. The small snake was eleven inches long; the frog, as near as I could tell, was nine; the large snake four feet eleven and a half inches. I think this was something that few people have had the chance to see. I hope I have not taken too much of your time with this story, but it is a fact. I have seen a snake catch a trout, and have had a bass taken away by a large snake while it was left in the water, for we were camping at the time, and had left some in the water to clean. H. W. M.

HABITS OF SNAKES—Vermillionville, La., Feb. 7.—*Editor Forest and Stream:* I have noticed with interest several articles in your columns concerning the "Habits of Snakes," and can substantiate all that has been said in reference to the common garter snake swallowing its young on approach of danger. When but a boy on my father's plantation near Columbia, Tenn., I was one day engaged in a hay-field hauling the haycocks to be stacked. In moving one of the cocks from its place a garter snake was frightened from its den underneath and killed. Upon close examination the belly of the creature appeared to be somewhat distended. An investigation was immediately made, and no less than a half dozen small snakes alive and wriggling were brought to light.

I have also had opportunities of observing the habit that the small water or moccasin snakes have of preying upon fish. This species of snake is quite common upon the low prairies of Texas and Louisiana, and it was in the former State that I one day found a small water snake lying dead upon the margin of a small pool, with a good-sized perch partly swallowed. The snake had very evidently failed in the effort to swallow its prey, and in attempting to disgorge it the fins became fixed in its throat and protruded through the skin. This species of snake is very destructive to small fry. P.

As already stated in these columns, the common garter snake is viviparous, and the mere fact of finding young alive within the mother has no bearing on the question as to whether snakes swallow their young or not. We refer our correspondent to Mr. Arthur Erwin Brown's very interesting and conclusive note on this point in a recent issue of FOREST AND STREAM.

DO CROWS REASON?—Somersville, Conn., Jan. 29,—Last Wednesday one of our boys came into the mill and told me that there was a crow on the ice eating shiners, and wished me to shoot it. About fifteen rods from the mill there had been a hole cut in the ice on the pond for the purpose of catching shiners for pickerel bait. The mode of taking them was to make a large hole and let a net down strung on a large hoop, sprinkle in meal and very soon a pailfull can be caught. Those too small for use had been thrown upon the ice, and

knowing there was a good supply, and remembering my earlier experience in shooting crows from a bait through a hole in the old barn, I decided to wait and see if the number would not increase.

The next day my attention was again called to the crows, and this time five were feeding, and one acting as guard on a tree not far away. When I returned from dinner I carried over my gun, and about four o'clock there was one crow taking a meal all alone. Thinking I had best commence business before the others came for supper I went for Mr. Crow with a charge of No. 3 which tumbled him over very quickly, but he was no sooner down than up, and off as fast as possible up the pond. He was surely carrying a load, for he was up and then down and flew very low. He made for the first fence, and when he struck it tumbled off on to the snow. When I fired not another crow was to be seen, but before he reached the fence three others were following, and soon after two more were there. They seemed to be very unea y, and evidently they realized there was trouble in camp for all, but one kept at a proper distance and soon departed. When I last saw them the crow shot at had gained the corner of the fence, and was on a low rail with the one which had been most familiar near by on the top rail. Not a crow ventured near the bait again that day or the following. Friday one was seen at a distance and to-day one has ventured nearer. Now, if crows do not reason and have some way of telling their experience in dangers and good luck how did the five know the sixth had found a feast and accompany him the following day or how did they so soon learn it would be best for them to avoid visiting that place again?

If we had been placed in similar circumstances we could not have acted more wisely. I have loaded some shells with No. 6 shot and powder sufficient to carry them, and expected to clean out some of the crows which are very plenty here, but the game seems to be up. K. R. C.

ALBINO RAIL (?).—Feb. 18.—I was lately shown an albino rail bird captured by my friend, Mr. F. Franklin, near Tamaqua, Pa. Mr. Franklin, although a sportsman, was visiting the mountains on business in January. Locomotion was almost impossible on account of the heavy snow and intense cold, yet he could not deny himself the pleasure of a day or two's tramp, resulting, I am sorry to say, in frosted feet and a severe cold that may result seriously. The bird was taken alive, and although able to flutter only a short distance seemed otherwise full of vitality. It died in about an hour after being placed in the coat pocket, presumedly from the too sudden transition from the extremes of cold to heat. It is almost as large as a king rail, and unusually heavy feathered. Not being up in natural history, I cannot reconcile the bird with its surroundings. Its very helplessness seems to preclude the possibility of its being able to exist in a region so adverse to its habits and no remote from its natural haunts. Yet there is no doubt of its identity. Will you do me the favor to explain. R. G. W.

Philadelphia, Pa.

We should be very glad to receive further particulars of this alleged capture, and especially to know whether the bird was preserved. As told, our correspondent's story is a remarkable one. Will he advise us further in the matter?

AN INTELLIGENT CRANE.—An exchange tells a remarkable story of the patience and intelligence of a crane. We have often seen these birds in confinement, and can testify that they are expert mousers, but we must confess that the statement that the bird connected the trap and the mouse staggers us a little. Listen to the tale:

A large and handsome whooping stork can be seen daily strutting around the yard at the residence of Prof. Paige, in Council Bluffs, Ia. The bird was purchased by the professor during a visit to Mexico some months since, and has become quite tame. Among other food that the stork relishes is a good fat mouse. Mrs. Paige has a small wire trap in the house and whenever a mouse happens to wander therein he becomes a sweet morsel for his storkship. The other day Mrs. Paige noticed the bird standing near the barn watching intently at a small hole leading beneath the building. The stork remained in an attitude of watchfulness for nearly half an hour, and Mrs. Paige, becoming curious, concluded to watch and see what followed. Finally she saw a mouse creep into sight from under the barn, and the same instant the intelligent stork pounced down upon the mouse and "took him in," killing it first then eating it. After performing this intelligent feat the stork resumed his vigilance at the mousehole and after watching sharply for over an hour he seemed to grow weary of his work or get out of patience, and marching to the house entered the kitchen, and picking up the mouse-trap from which he had so often been fed he returned to the barn and set the trap down near the hole, evidently appreciating the use of the trap and believing that it would catch a mouse for him.

A LARGE PANTHER.—The following account of the capture of a large panther was contributed to a new Westminster (B. C.) paper by our talented correspondent, Mowitch, whose interesting articles on the game and fish of that distant land have so often given pleasure to the readers of the FOREST AND STREAM. The extract is as follows:

A very large panther was killed near Burnaby Lake, in the vicinity of this city, and brought to town on Wednesday. Perhaps no quadruped of America of this size has so wide a range as this. It is found on both sides of the continent of North America and is distributed from the 56th parallel of North latitude to Patagonia, although it is not so abundant in the tropics as in temperate zones. The circumstance of its being an inhabitant of so many countries accounts for its many names, which are Panther, Painter, Puma, Congar, California Lion, Catamount, Carajou. Its technical or scientific name, as classed by Linnæus, the great Swedish naturalist, is *Felis concolor*. By others it is classed as *Leopardus concolor*. Its chief food in sparsely settled countries is deer; but when these become scarce it waxes bold, and in some places is a perfect scourge to the stock raiser. It is very bloodthirsty and is not content with killing sufficient to satisfy its hunger. In some cases fifty sheep have been killed in a night by a single panther. It is by no means abundant on the mainland of B. C. The one in question was an adult male, considerably over the average size, which will appear from the following measurements: Total length from tip of nose to tail, 86in.; length of tail from insertion to tip, 30in.; girth of body, back of fore-shoulder, 32in.; height at fore shoulder, 33in.; weight 132 pounds. Animal in poor condition, not at all fat. This splendid feline specimen has been secured by the managers of the Mechanics' Institute, and Mr. John Fannin, with his accustomed magnanimity and liberality, has undertaken the duties of taxidermist for that institution.

ON THE STUDY OF NATURAL HISTORY.—A collection of John Ruskin's letters, extending over the period between 1840 and 1880, has been published in a volume entitled "Arrows of the Chace." These letters cover a wide variety of subjects, having originally been printed in the daily papers. On page 204 of the American edition (published by John Wiley & Sons, Astor Place, New York) we find the following terse letter on the study of natural history:

"It would be pleasing alike to my personal vanity and to the instinct of making myself serviceable, which I will fearlessly say is as strong in me as vanity, if I could think that any letter of mine could be helpful to you in the recommendation of the study of natural history as one of the best elements of early as of late education. I believe there is no child so dull or so indolent but it may be roused to wholesome exertion by putting some practical and personal work on natural history within its range of daily occupation; and once aroused, few pleasures are so innocent and none so constant. I have often been unable, through sickness or anxiety, to follow my own art work, but I have never found natural history fail me, either as a delight or a medicine. But for children it must be curtly and wisely taught. We must *show* them things, not tell them names. A deal chest of drawers is worth many books to them, and a well-guided country walk worth a hundred lectures."

OFFICERS OF THE AMERICAN MICROSCOPICAL SOCIETY.—At the annual election of the American Microscopical Society of the City of New York, held February 9, the following named board of officers was elected for the year 1881: President, John B. Rich, M. D., 12 East 22d street, N. Y.; Vice-President, John Frey, Bellevue Hospital, N. Y.; Secretary, O. G. Mason, Bellevue Hospital, N. Y.; Treasurer, T. d'Oremieulx, 7 Winthrop Place, N.Y.; Curator, George Wale, Paterson, N. J. Communications and packages for the society should be plainly addressed to the American Microscopical Society of the City of New York, care of the Secretary. The time of the meetings, eight o'clock P. M., the second and fourth Wednesday of the month, at No. 12 East 22d street, New York City.

EXPORTATION OF AN OTTER—Westfield, Mass., Feb. 4.—Messrs. Pember & Douglass recently shipped a fine female otter to Charles Reiche, of New York, and it is now on the way to Germany, where it is to be used for breeding purposes. The otter was caught last winter with seven or eight others, and has since been kept in Mr. Pember's place of business, with a pair of playful coons, a twelve-pound silver eel, and an aquarium of fine trout, which have attracted numerous visitors. The number of live fish the otter will eat in one day is astonishing, and we fishermen owe thanks to the above gentleman for thinning out the stock in this locality. What is the weight of the largest silver eel caught?

G. A. S

The largest eel we ever saw weighed only twelve pounds. The one you speak of is a giant.

PINE GROSBEAKS IN NEW ENGLAND—Boston, Feb. 8.—Since my letter to you of the January 17th of pine grosbeaks being shot in Massachusetts, my friend J. says they have been very common in the woods of Brookline; in fact being almost the only birds to be seen. Last Saturday I went out to where they had generally been seen and I could not find one; but after hunting through the woods nearly all day long, I came across one all by himself, which I secured for my collection. The weather has become milder and I suppose they have gone back North. FRED LEWIS.

SPRING NOTES—Flatbush, L. I., Feb. 18.—The robins and blackbirds have been with us for a week. W. A. C.

Game Bag and Gun.

THE FIRST EDITION of the FOREST AND STREAM's pamphlet on the "Dittmar Sporting Powder" having been exhausted, a second is now ready. Copies will be mailed free upon application. The articles contained in the pamphlet were published in this journal as follows:

Sept. 23, 1880—The "Dittmar Sporting Powder."

Sept. 30, 1880—Evading Detonation.

Oct. 7, 1880—The Detonation of "Dittmar Sporting Powder."

Dec. 9, 1880—The Dittmars' Abracadabra.

WHAT TO DO WHEN LOST.

I HAVE both read and heard of individuals, hunters and trappers, who in fair weather or foul, by day or by night, could find their way with unerring directness through the trackless wilderness to any desired point, and who were never known to get bewildered and lose their bearings. I have heard men declare that it was simply absurd to suppose that there was the least danger of their ever getting lost; that the woods were full of "guide boards" giving such plain and explicit directions that "a wayfaring man, though a fool," need not go astray.

Unfortunately, I have never come in personal contact with such highly-gifted mortals, though a great many localities have heard the crack of my rifle, and no inconsiderable portion of my life has been spent "far from the madding crowd." Frankly, I do not believe the man lives who is not liable to become uncertain about the right course to pursue, bewildered, demoralized and lost, when in the woods or on the prairie, and that, too, when on even comparatively familiar ground.

Once when in the Adirondacks with a friend our guide, one of the very best, got lost between Long Pond and the lower end of the "Sixteen-Mile Level," and he had been over the ground, he said, at least a hundred times.

A year ago last fall I camped with two noted hunters. It was their tenth annual hunt over the same range of country. At 3 o'clock one afternoon we separated, they to follow one direction to camp and I another. I got in before sunset; they were out nearly all night wandering about, and when they finally reached the house of a settler found that they had traveled six miles directly away from camp.

Within the past two years I have seen quite a large number of persons cripples for life from sufferings endured when lost; have heard of many others who, utterly bewildered, have wandered round and round in a circle until exhausted with hunger, cold and fatigue they have fallen down to die.

From conversations with persons who have been lost, as well as from an unpleasant personal experience of my own, I am of the opinion that almost invariably when one realizes that he is lost and in danger he loses control of his mental faculties and becomes actually insane.

I have recently heard of a young man, of at least average intelligence, who lost his way when within two miles of home. He wandered round in a circle for four days; when found he seemed to be suffering most from cold, and one of the two men who found him said: "We will build a fire the first thing."

"Yes, do," said the sufferer; "I've got some matches," and he took them from his pocket. When asked why he had not built a fire he declared he had never thought of it, though his feet were badly frozen.

He also told how many deer and how much other game he had seen and, though carrying a loaded rifle all the time, he had not thought to shoot anything for food, though he had killed his dog with his hunting-hatchet and eaten the liver.

This man's actions were no more at variance with intelligence than your actions might have been, my friend, under similar circumstances.

The main danger when lost is in losing one's self-control; the right thing to do is to prevent that mental demoralization, which is, as I have said, actual insanity.

My method is this: If I find that I am "out of my reckoning," don't know where I am and begin to feel a bit nervous, instead of rushing about and so becoming more and more bewildred, I lie down flat upon my back and close my eyes, or only look upward, and endeavor to fix my thoughts upon something beside my situation. For instance, I commence to quote poetry, Scripture, something I have committed to memory and which always interests and pleases me to repeat; or I imagine an interested audience and talk away like a candidate for Alderman.

At the end of fifteen or twenty minutes I can get up with a perfectly "level" head, examine trees to see on which side the moss grows, or on which side the branches are longest and most plentiful, decide upon a course and go directly where I wish to go. This plan has helped me out so nicely that I give it to my brother sportsmen, asking them to remember it and give it a trial if they ever get seriously uncertain of their whereabouts.

One never should start off for a tramp in the woods without matches in a waterproof safe and, if lost, it is an excellent idea to kindle a fire, then if you travel in a circle you will know it. And always, if night is coming on and you cannot decide with reasonable certainty upon your course, build a fire and stay by it until morning, or some one comes in search of you.

Lost or found, shooting or fishing, a sportsman's motto should be "Keep cool." J. FRANK LOCKE.

QUAIL SHOOTING IN TENNESSEE.

THE close season has begun in most places, and as this is an "off time" in shooting matters, perhaps the readers of FOREST AND STREAM may wish to know something of the manner in which we shoot *Ortyx virginianus* in this section. In this part of the State quail shooting is done almost exclusively upon the uplands; for although the birds are plentiful in the bottoms, the rough nature of the fields, cut up by sloughs, encumbered along their edges with weeds, cane and dense undergrowth of all kinds, renders shooting impracticable. The majority of the upland farms, thanks to reckless methods of cultivation, are worn out, and the rising grounds, hillsides and higher levels are abandoned to the broom sedge and blackberry briars, which are sure crops at all seasons. In most of the fields there are low places, basins or "hollows," in which the evil from the hills has been caught, rendering them moderately fertile. Here are planted cotton, corn, oats, sorghum, etc., and here also are the feeding grounds of the quail. It is lost labor to beat over the sedge, for in the shooting season, unless disturbed by some vagrant cur or marauding hawk, the birds are always, when "at home," to be found feeding somewhere in the small portions of the field under cultivation.

All sportsmen and the great majority of their four-footed companions also know this; and as a consequence, if they fail to find in these places usually try another field, losing no valuable time in quartering the sedge-encumbered hill sides. Contiguous to and bordering on almost all these patches of cultivated ground are thickets more or less dense grown up in locust, scrub oak, briars, coarse grass, sedge, weeds, etc., and into these, in most cases, the covey pitches, and where it is difficult to follow them.

The dog most in favor here for this sport is the native pointer. Owing to the prevalence of burrs, which, wherever they can find a foothold, grow and flourish with a perseverence worthy of a better cause, a long-haired dog is at a great disadvantage. What one needs here is a hardy, close ranging, industrious dog of medium size, one that will face briars and endure fatigue, and show himself a painstaking and close rather than a rapid and wide ranger. A good nose is an imperative want. In the thick sedge, where the birds lie so close that the sportsman may almost tread upon without flushing them, and where, when pointed, one has literally to kick them up, nothing but a careful dog and one endowed with scenting powers of the first class can insure sport. A field trial winner, despite his high speed and perfect style, would be at as great a disadvantage here as the best of our quail dogs if put down on a Minnesota or Kansas prairie to hunt for grouse. We require here not so much what is known as a good covey dog, but rather what is denominated a single bird dog. We endeavor to obtain a dog that will hunt carefully through the tangled thicket and bush-encumbered wood, where the startled birds have taken refuge, will point staunchly and truly indicate the position of the bird. As the largest part of my shooting has been done in covers, I have learned a few items about this style of shooting which may, I trust, prove of interest to others beside myself.

It is a matter of the utmost consequence to determine, as nearly as possible, the exact spot on which the bird is lying. When this is known and your point of approach determined upon, the line of flight to be be taken by the flushed bird can be closely approximated, and cover shooting may be brought within the bounds of reasonable expectation, instead of lying without the pale of even moderate conjecture. The method I adopt is the following: when my dog finds the bird I approach cautiously and, after satisfying myself as to the position of the bird and his probable course of flight, I fix my eye upon some opening along that line and flush the bird myself or make my dog flush it. If the bird crosses this opening it is apt to come to grief, otherwise it will stand a show to afford me a chance of a shot on another day. If

however, one adopts the tactics of ordinary field shooting he will find that in the majority of cases some unoffending sapling will receive the charge intended for the bird and his efforts at sport will result in an aimless expenditure of time, temper and ammunition. One might suppose from what I have written that quail shooting here hardly repays one for his time and trouble, yet occasionally there comes a red-letter day, when, by dint of good luck or well-considered strategy, one succeeds in driving a large covey away from the thicket into the open field and, as his good dog points firmly and the birds one by one rise, reluctant to leave the protecting sedge and direct their swift flight again toward their place of refuge, he may then and there revenge himself to the full for the many cruel disappointments he has suffered from their loud-whirring, close-dodging relatives. Besides, I know that there are men to whom the weight of their bag is but a minor part of the sport and who find more true pleasure in bagging a dozen birds secured by the exercise of judgment and patience, combined with a quick aim and steady hand, than they could derive from shooting thrice that number in the open stubble. Although this section is rather a dark land in regard to sporting matters, still the FOREST AND STREAM pours its radiant light upon many portions and exerts here, as elsewhere, a healthful influence.

I have been reading with great interest accounts of and comments upon the recent field trials.

From all I can learn, they appear to me, unless changes are made, likely to exert a pernicious, rather than a wholesome, influence upon dog-breeding. It seems to me that too much importance is given to pace and style and too little stress laid upon nose and staunchness. However well such trials may suit the needs of our "kin across the sea," with whom, I believe, the dog, except the retriever, is not used but for grouse-shooting on the Scotch moors, I cannot say, but I feel that if I am right in my estimation of the tendency of these trials they will result in the production of a strain of dogs in which style and pace will be cultivated at the expense of every other quality. I am sure that there are many dogs which not even a lunatic would expect to see placed in a "field trial," over which more shots could be had in a day's hunt than over many of the prize-winners.

But I must close this already too-long letter by saying that I, in company, as I believe, with many other lovers of the dog, am utterly and uncompromisingly opposed to any and everything that can result in placing the companion of my leisure hours in the same category as the fast trotter and the racehorse. WILL.

Savannah, Tenn.

HOUNDS VS. STILL HUNTING.

HAVING waited long and patiently for some one more capable than myself to take up the matter of hunting deer with hounds, place it in a clear light before the public and defend the lovers of such sport from the foul stigmas so frequently bestowed and sought to be placed upon such persons, and failing to see any one "come to the fore" to stand up in defence of a branch of hunting alike sportsmanlike and legitimate, that has been practiced from time immemorial and will likely be continued as long as sportsmen, dogs and deer exist, I venture to express my sentiments upon the subject. I am aware that I am treading upon dangerous ground, and that perhaps the ire of some will be aroused, as there are many who, judged by their writings, look upon us who practice this method as Pariahs, to whom a burial at the cross-roads without the benefit of clergy would be a fitting punishment for our misdeeds in the flesh. Now, what does all this mean? The fact of the matter is this, one-half of those who seek to be critics or advisers on such matters know little of what they are talking or writing about; they consequently fall into errors and draw false deductions.

Viewed in the proper light, what is a hound to the hunter? Simply an auxiliary and an assistance to insure what every hunter deserves and seeks to attain, viz., success. "But if you use dogs you have too great an advantage over the deer." (Granted, for sake of argument only.) What is a rifle? Merely an auxiliary to the strength, activity and reason that God has endowed man with to make him a ruler over the beasts of the field and birds of the air. Why not taboo the rifle as being too deadly, and resort to the old flint-lock musket; finding it also too deadly, go back to the bow and arrow, until you ultimately retrograde to the appliances used by our primitive fathers?

Its cruelty is frequently spoken of. I contend that not one-half of the cruelty or suffering is caused by hunting with hounds as is caused by still hunting. In the former case you either kill your deer outright or, if wounded, your dogs very soon catch it, and you can then finish it and thus put an end to its suffering. On the other hand, fully one-half of the deer shot while still hunting are never obtained and are left to linger and die a miserable death, and their carcasses, which otherwise would be of benefit to mankind, are left for no better purpose than perhaps enriching the soil. Why this senseless tirade should be made against hounds I am at a loss to account. Why are not setters, pointers, cockers, spaniels, retrievers, etc., to which the attention of the whole sporting world is directed, and for which such a large amount of money is annually expended, included in the same category and classed in like manner. These last-named dogs only assist in the capture of other game and render important service to the sportsman. Still not a single word is said against them or an objection raised against their use. "But," says the wiseacre—who perhaps never saw deer or of his own knowledge could state whether he carried his horns on his head or on his tail—"if you use hounds you will drive all the deer out of the country." This is an erroneous idea. My experience in this respect extends over twenty years with chances for observation not accorded to many, and my experience is that when a deer has escaped the hounds by taking water or otherwise, he cares as little for dogs as if he had never heard one, and each subsequent time he happens to be hunted by them he is only the more cunning and capable of eluding his pursuers; he goes back to his haunts and pays no more attention to the matter. Hounds running deer never make them forsake their accustomed haunts, and they pay no attention to hounds when after other deer. I knew of forty-four deer having been killed on one runway in two seasons; and notwithstanding this fact, you then could and can still start a deer within a mile of that runway any day in the year.

"But it is unsportsmanlike to take advantage of the deer in this way," says some one. Is it any more so or so much so as to call moose, to take advantage of their passions, over which they at certain seasons of the year have little or no control? Or to wait on a deer trail in the rutting season, when if a dog passes you she is sure to be followed in the course of the next ten or fifteen minutes by from one to a half dozen of bucks with no eyes, ears or nose for anything other than the doe? Or to sit perched in a tree close to a deer-lick and wait until a deer comes within fifteen or twenty feet of you? Or to float at night, when the mosquitoes drive the deer almost frantic and compel them to seek the water to escape the pests, and then to shoot such unfortunates under circumstances which preclude any discrimination between bucks and does, the death of the latter generally resulting in the death by starvation of her helpless offspring? Or to crawl upon a deer asleep at midday and blow his head to pieces with a double charge of buckshot at ten or twenty paces? Yet all the above are recognized by the opponents of deer-driving as legitimate sport against the practice of which nothing is heard nor any objection urged.

Then, again, to suppose that the advantage over the still-hunter is so great is a mistake. A good still-hunter, where deer are plenty, can kill more deer than can a man with hounds, take it week in and week out. The still-hunter is always ready, while the other has frequent mishaps, such as lost dogs, footsore dogs, etc., making many breaks in a hunting trip. Again, but few people can successfully run dogs. To do so with any degree of success requires, in addition to having good dogs, an intimate knowledge of the habits of both deer and dogs, which can be gained only in the school of experience, after years of patient study and observation, coupled with personal endurance and patience to a greater extent than is usually combined in the generality of persons; and the pleasure to be derived is not afforded by the mere killing of the deer, but the consequent circumstances attendant upon the find, start, run and finish of the hunt, as the accompaniments of the fox-hunt are the objects of pleasure associated with the sport, not the mere worrying of unfortunate Reynard at the close; as in upland shooting, the quartering, pointing, setting, backing and retrieving of your dogs afford gratification to the true sportsman, immeasurably beyond the bagging of your ten or fifteen brace of birds. I would be willing to wager that a novice might take six as good dogs as ever ran a trail and he would not, except by mere chance, kill a deer in a week, while at the end of that time the dogs, from want of proper management and lack of success on the part of the hunter, would be as worthless as would be so many coyotes.

To those who do not care for hunting with hounds I say, with all respect, that it would be easy for me to attack and throw more or less discredit upon their choice method, be it still-hunting, fire-hunting or otherwise. There is no wish on my part to do so. Let them pursue their favorite sport, doing it always in a legitimate, sportsmanlike and gentlemanly manner, always and only at proper seasons, never killing more than they want and can make good use of.

New Westminster, British Columbia. J. C. HUGHES.

REYNARD'S HABITS AND STRATAGEMS.

THE most persecuted among wild animals is the red fox. He seems to have been sought after, since time immemorial, by all classes of hunters, either for sport or for profit, or both. If he escapes the hounds, he is often dug from his burrow and kept (Sampson-like) to make sport for the Philistines. By the way, I never heard any conjectures relative to the manner in which Sampson caught those 300. If such another man as Sampson cou'd be found in these days, he might procure enough to supply an army of foxhunters the whole year round.

I have had some acquaintance with the nature and habits of foxes, and I never believed the fox to be that objectionable, thievish, pestiferous animal which he is represented to be. He is called a robber of hencoops and poultry pards, but I had rather have a horde of foxes in my hencoop than one little nasty weasel. I have always lived where foxes were plenty, and have always kept poultry, and I have never lost the value of a superannuated old rooster by his depredations.

He is wary and sagacious, having a wonderful faculty of self preservation, without which the race would soon become extinct. He is decidedly a still hunter, and follows his legitimate calling, seldom killing more than to supply his immediate wants. If a surplus is obtained, he carefully deposits it in some sly place, and returns for it as his wants require, being in this respect unlike the wolf, whose destructive proclivities seem to know no bound when opportunity presents.

The fox is a light and easy traveler, and his natural gait is what may be properly termed "foxy." He frequently burrows before or during a heavy snowstorm, where he remains many days, or until the snow settles or packs sufficient for easy traveling; when he will sally forth and perhaps remain out for weeks, unless driven in by hounds, and then only as a last resort; traveling to and fro during the night and lying by during the day on some secluded and elevated ground, where he lies bedded in snow, in such a position that he can see any object which may be approaching, and especially where he can see for some distance on his back track. Here he lies apparently asleep, but before you have caught a fox napping you will have caught the weasel asleep.

Several years ago, while hunting in Western New York, I had the curiosity to ascertain the average weight of the red fox. Of twenty-three which I caught one winter the weight varied from seven to nine pounds, the average being about 7¾ pounds each. ANTLER.

Piney Falls, Tenn.

BOTH the red fox and the gray are common here, and the music of the hounds and the sound of the horn are heard almost daily on the hills. From remote antiquity the fox has been celebrated in song and story for his cleverness and cunning, but I do not remember to have seen an account of one of his most successful strategems. It is a common practice with Reynard when hard pressed to run to the lair of another fox, and rout him up before the hounds, retiring himself unobserved to some convenient thicket to seek the needed repose. I have frequently when chasing the fox observed him, after a long run, almost exhausted; and when urging my horse to the front to be in at the death I have heard the pack going away over the hills after another fox. This one will run until sorely pressed in his turn, when he routs the now rested one that he had before relieved, or another if he chance to come in his way. Thus in a day's hunt the hounds will frequently chase two or more foxes, each relieving the other when sorely pressed. I once saw a half-grown cub enter a laurel thicket only a short distance in advance of the hounds, when a very large fox sprang out from under the shelter of a rock and ran directly over the other's tracks toward the pack, thus relieving his little friend from no imminent peril. It is said that the pregnant fox is scentless, and cannot be followed by the hounds. I read an anecdote of a fox sometime since, which, if true, is simply marvelous. He was being hotly pressed by the hounds and escape seemed impossible, but he entered an inclosure where a farmer was plowing, and running directly in the furrow before the horses for the entire length of the field, the plowshare effectually covered up and obliterated all trace of his scent. No general in all the annals of war ever conceived a more brilliant strategem than this. Sir Walter Scott said that he could believe anything concerning the intelligence of the dog; and certainly Reynard is quite the equal of his educated cousin in cleverness and cunning. The fox has the eye of the cat; the pupil is not round but linear and vertical and evidently designed for nocturnal vision. When escape appears to be impossible, it is said the fox will feign death. My own experience is, however, quite the contrary. He is game, frequently turning in his desperation on the hounds, and always dying hard. XIL YORRIS.

Bridgeport, W. Va.

GAME AND FISH IN INDIANA.

A WORKING SOCIETY NEEDED.

INDIANOPLIS, Ind., Jan. 10.

Editor Forest and Stream:

I see in your issue of Jan. 6 a communication signed "C. W. W.," who, writing from Fairland, Ind., complains of poor quail shooting in that vicinity.

It is true as he states. The weather has been unfavorable, but I would like to ask him if the season did not open with a scarcity of birds, and was he not partially responsible for it? Does he not know that during the months of January and February, 1880, as many quail were killed in his neighhood as during December and November preceding, which months constituted the lawful season?

Does he not know that quail were killed daily during October, 1880, by his personal friends and acquaintances?

Did he ever make any effort to have the game laws respected, or prosecute the known violators thereof?

Is he doing anything toward protecting the birds that now remain?

Although these questions are propounded directly to "C. W. W.," a stranger to me, I intend them for every man in Indiana, who, claiming to have at heart the cause of the sportsman, does nothing for it but sit and idly complain of poor shooting and fishing.

Something must be done and immediately too, for while this past season afforded but few days when men shooting over dogs enjoyed the sport, our markets have been glutted with quail—the ruling price for weeks being sixty cents per dozen

The ground throughout the State is still covered with snow, and probably will be for weeks to come. During that time thousands of our noble little friends, weak with cold and hunger, will fall before the proud pot-hunter, who boasts of killing an entire covey with one barrel, and many more will find their way to the never failing traps and nets. I think it has been fully proven that the ordinary machinery of the law will do but little toward the enforcement of statutes for the protection of game and fish. Therefore if the sportsmen of Indiana do not shake off the lethargy so long upon them we will soon have a law prohibiting the shooting of quail for a term of years. That is what the trapper wants, and sportsmen should endeavor to show their desire to enforce the present law and avoid the passage of such a one as I have named.

Indiana ranks fifth among the States in point of wealth and population, and has a larger common school fund than New York; but she is behind nearly all the States and many of the Territories in game and fish protection. I do not know of a protective association in the State. If there are any they do but little locally and nothing generally, because there is no concerted action, and there being no State Association their efforts are not well sustained.

Our game laws are all that could be desired, except that the woodcock season opens July 1 instead of Sept 1 as it should. As much cannot be said in favor of the fish law, since it does not provide for the appointment of State Commissioners or the maintenance of fishways in the many dams; it does not even protect bass during the spawning season. I have know parties to steal one hundred bass off nests in one trip on White River from Broad Ripple to the city limits, a distance of seven or eight miles. No wonder "M. W. R." took a vow to never again wet a line in Indiana.

We have within a few minutes' walk of the city three streams that are the natural home of the bass, and should afford a day's sport when whipped; but a man may angle faithfully for days and weeks and not take home a mess of fish. At the same time seines are owned openly, and but little secrecy practiced in the use of them. Every man who thus violates the law is known, and had we an association through which to work they could be watched and soon brought to justice. An effort was made in that direction a few years ago, but the county treasurer, sheriff, prosecutor and judge of the Criminal Court were careful to see the Grand Jury returned no indictments against those who made it a point to supply them with fish. In fact, those officers were not guiltless themselves, one of them being the most persistent fish thief in this county, while the other had on one or more occasions assisted in hauling a seine. A disgraceful acknowledgment certainly, but truth compels me to make it.

The question of game and fish protection has become an important subject for the consideration not only of sportsmen, but hotel keepers, merchants, railway companies and the public generally. Regardless of the question of food supply involved—and that is by no means insignificant—the people of Indiana should remember that by making their own State attractive to sportsmen they would draw annually from less favored States a large revenue, and the company of many excellent citizens, some of whom would be led to locate permanently with us. In addition to that they would keep at home the vast sum expended yearly by Indianians in search of pleasure in other States.

In these few hastily written lines I have tried to be reasonable, and have repressed the caustic words that suggested themselves when thinking of the rapidly departing joys of the sportsman in Indiana.

If some who read this are disposed to be indignant and deny its truthfulness I trust a large number will, like myself, feel humiliated and determine to correct the abuses named, and recover something of that which has been lost through idleness and negligence. HOOSIER.

WE ARE IN RECEIPT of the constitution and by-laws of the Alabama State Sportsmen's Association, which was organized last May, with headquarters at Montgomery.

WAS IT A WITCH?

AS a boy no stories fascinated me so much as those that told of witches and fairies roaming through the green forest under the form of deer, and long after the illusion of fairy-land had been dispelled I listened in wonder to the hunters who told me of invulnerable deer supposed by them to be witches. Few game localities indeed are without such traditions. Now I am not going to emulate Munchausen, but I crave a short space to record a very singular case of impregnable buckskin.

Last summer I was enjoying the amenities of a mountain resort in a neighborhood frequented by deer.

Through the kindness of friends living near by I was enabled to indulge my fondness for the chase. To be brief in detail, one rainy day found me stationed at a runway on top of a long ridge. The deer were to be driven by dogs. Let no arrogant still-hunter sneer, for I must tell him that if he hits a deer flying through the red brush in September he will have to do better work than ever he learned at still-hunting in open woods. At my side stood Jim B. Jim is a little deaf, and only watched to see me shoot, so he said at least.

Nevertheless Jim carried across his shoulder his well-beloved "Aunt Hannah." "Aunt Hannah" was a remarkable specimen; she was about six feet tall, and in her capacious double-stomach she carried an immense quantity of powder and buckshot. Jim said she was perfectly safe, but death to deer.

A few minutes brought the welcome cry of the pack, and in an instant I heard the brush cracking as I had never heard it before. A five-prong buck rushed heedlessly toward us. It seemed to me another bound would bring about a collision, but before I could raise my gun "Aunt Hannah" burst forth with a roar like the bolts of Jove.

The buck turned at right angles, and I fired twice. "Did we kill him?" said Jim. "Yes;" I said, "he dropped in that brush." Could I but paint the painful disgust depicted on Jim's face when we discovered that the buck had not dropped. "If I had only waited a second," said he, "he would have jumped right into old Hannah's mouth." One of my shots was too low, the other should have hit. No trace of Jim's buckshot could be found, and I think they are still traveling through illimitable space. Jim, however, expects to recover them when the deer is killed.

Not more than a week later I stood upon the same spot. Being alone I was sure of game. Imagine my surprise when I saw the same identical buck rushing through the brush again. I ran up the path to head him, but back he came and almost jumped on the spot where I had been standing. Getting in range as quickly as possible I fired twice with all the deliberation of which I was master. What a pang I felt when I saw him go off unharmed. This strange beast then proceeded to exhibit himself to three other watchers, all old hunters.

He ran back and forth through the stands like a frolicsome boy at play, and wound up his fun by driving off the dogs. I almost swore never to shoot at another deer, and nursing my chagrin I fled from the mountains. Now the denouement. A resident sportsman informs me by letter (and greatly to my consolation) that five different hunters have stood in my tracks and missed that old buck (undoubtedly the same). Moreover, he continues to offer all watchers a shot, and winds up the sport by driving off the dogs. I need scarcely add that this strange animal is now fully credited with being a witch. In my experience as well as that of all the local hunters nothing has ever been seen so nearly approaching the antics of a witch. SYCAMORE.

A SOUTH CAROLINA RESORT.

THE birds south of Chester, S. C., have not suffered much during this cold winter. We found them quite plenty about there, and also at Summerville, 22 miles north of Charleston on the South Carolina Railroad. If any of our friends are near this point they can be sure of good sport, and if fortunate enough to obtain board with Dr. White, near the depot, will have the best of fare and a comfortable home at reasonable prices. Woodcock, snipe and quail in season can be found within two miles of his house, and deer and wild turkey within five miles. Never shall I forget the drives through the pine woods in the deep, worn road filled with water, under the drooping branches that shut out the sunlight and made a welcome shade. We went six miles to Goose Creek, one of the branches of the Ashley River. Here the Major, who had come all the way from Chester, had promised to show us most magnificent snipe and woodcock ground. True to his word he did so, and the welcome "Mark!" and report of the gun greeted our ears in less than ten minutes after disposing of our lunch under a big live oak. On our way back he told us to look out for deer and turkey, and presently a large buck started in front of our most enthusiastic sportsman, who had prepared himself for just such game by loading several shells with buckshot. When his attention was called to the buck, he says, he attempted to change his shell, but from his description of the animal afterward we all doubted him, but believe he had a bad attack of buck fever. He was willing to bet or swear that it was all white, weighed three hundred pounds and had a tail as long as his arm. The next day we returned to the same vicinity and engaged some drivers to "jump" deer for us, and in less than one hour after the dogs were let loose the same gentleman shot his first deer, weighing about 120 lbs., of a dun brown color and with a tail about eight inches long. As the darkies express it, you can most always find them here, especially if your dogs roll over in going into the woods—"Deer, shuah." You cannot always, however, depend on the game by the name the natives give it. We inquired if there were any woodcock about and were told that there were "oodles" of them. "Where did you see them?" "In the woods, mostly up in the trees." They know the tufted woodpecker here as the woodcock, and you must get up soon to find them. W.

INDIANS STEAL DUCKS' EGGS—Carson, Nev., Feb. 8.—Game has been very scarce for months, in fact there has been seen but a straggling flock of ducks (our principal shooting) all winter. Now we have plenty, indeed too much, of water, and all the feeding resorts are overflowing. However, by the 1st of March the spring flight will be along, when we anticipate some good bags. Were it not for the miserable and destructive brutes of Indians this would be a fine field for duck shooting in the early fall, but the Indians—bucks, squaws and papooses—seek the nests of the birds and rob them of all the eggs they contain, thus destroying what would otherwise eventually be thousands of young ducks. And we are unable to prevent this slaughter, for the Indian in this country is a privileged character as far as game is concerned. SIVAD.

A TEST GAME LAW DECISION.

"THE PEOPLE VS. MAGNER."

ACTION was brought against one Magner, a Chicago game dealer, in January, 1880, for selling quail out of season, and judgment obtained in the Justice's Court and in the Criminal Court of Cook County. Upon appeal the case was taken to to the Supreme Court of Illinois, last March, and the decision of that court has just been handed down sustaining the decisions of the lower courts.

The Magner case was an important one because it had purposely been made a test of the constitutionality of the Illinois game law. The published report of the case states that by an agreed statement of facts the following points were covered:

"In case No. 1, the defendant bought and sold quail, during the prohibited season. The entire transaction taking place within the State, and confined to citizens of Illinois. In case No. 2, defendant bought one box of quail in the State of Kansas during the open season, had said case shipped to Chicago, and sold the same during the prohibited season to a citizen of Illinois. Case No. 6, same as No 2, except that defendant sold the package to a citizen of the State of New York. Case No. 10. Defendant sold quail at Chicago during prohibited season to citizen of New York, said quail having been killed in Kansas, and shipped to defendant in Chicago. These three cases were so framed to test the authority of the State to pass the law. Cases No. 3, 4, 7 and 9 contained the same statement of facts, except that the game was purchased in Kansas during the close or prohibited season by the laws of that State, and raised the question of the right of a citizen to deal in goods, when the law of the place of contract has forbidden such dealings. Cases No. 5, 8 and 9 represented similar facts, except that goods were sold in smaller parcels than original shipment, thereby raising the question, that as the original packages had been broken, the quail had become "merged in the mass of property of the State," and the State could then regulate its sale; even if it could not regulate Inter-State commerce.

"The argument upon the part of the State was briefed to evidence the following propositions, viz.: First. That game of all kinds is the property of the State, and that the State has full power to protect its property by statute even to the affecting of commercial relations between the various States, and that such law will not be unconstitutional, unless the opposition between it and the constitution be clear and plain. Second. Showing that the highest courts in the States of New York and Missouri have decided a similar law to be constitutional. Third. That the power of Congress, under the Constitution, to regulate commerce among the several States, is not exclusive. Fourth. That Congress having for over a century failed to pass a game law, it may reasonably be inferred that a "national rule" is not required, and in such a case the State may act. Fifth. That the States having always protected fish and game, the acquiescence of the Federal Government admits their rights so to do. Sixth. That the States can better control this question than Congress. Seventh. That Congress has no power over the subject. Eighth. That this law can be upheld under the police power of the State. Ninth. That goods contraband *lex loci contractu* cannot be the subject of a legal contract elsewhere. Tenth. That the comity of States requires each to assist the other in preserving its game. Eleventh. That game and fish are of great importance to the country. Twelfth. That the quail were bought in Kansas when such purchase was then and there prohibited, should not be received as a defense in the courts of this State. Thirteenth. That the practice has become general by which courts of justice examine into and enforce contracts made in other States, and carry them into effect, according to the laws of the place where the transaction took its rise; subject only to the exception that such contract should not either in itself, or in the means used to give it effect, work an injury to the inhabitants of the country where it is attempted to be enforced. Fourteenth. That even if another State was bound to permit the sale of the subject of contract in the hands of the importer, it is not bound to furnish a market for it, nor abstain from the passage of any law which it may deem necessary to guard the health or property of its citizens, although the effects of such legislation might discourage importation."

The opinion rendered by the Supreme Court sustains these arguments. It is so comprehensive and so important that we publish it entire as printed in a Chicago paper:

STATE OF ILLINOIS,
Supreme Court,
Northern Grand Division.

At a Supreme Court, begun and held at Ottawa, on Tuesday, the seventh day of September, in the year of our Lord one thousand eight hundred and eighty, within and for the Northern Grand Division of the State of Illinois.

Present: Hon. T. Lyle Dickey, chief-justice; Pinkney H. Walker, justice; Benj. R. Sheldon, justice; Alfred M. Craig, justice; John Scholfield, justice; John M. Scott, justice; John H. Mulkey, justice; James K. Edsall, attorney general; Rufus C. Stevens, sheriff; Everell F. Dutton, clerk.

Be it remembered, that afterward, to wit: On the third day of February, A. D. 1881, the opinion of the Court was filed in the clerk's office of said court in words and figures following, to wit:

James Magner, vs. The People of the State of Illinois.) Appeal from Criminal Court of Cook County.

Opinion by SCHOLFIELD, J.:

The grounds upon which it is argued the judgment below should be reversed, are:

1st. Because the statute does not condemn the possession or sale of quail taken and killed beyond the limits of the State, which is subsequently shipped into the State for sale.

2d. Because, if the statute shall be held to condemn such possession and sale, then in its enactment, so much of § 13, Art. 4, of the State Constitution as requires that the subject of every act shall be expressed in its title, was disregarded, and hence it is not law.

3d. Because, if the statute is free of all other objections, but shall be held to condemn the possession and sale of quail taken and killed beyond the limits of the State, it is void, and not law, for the reason that it is in contravention of the 3d clause of § 8, of Art. 1 of the Constitution of the United States, which confers upon Congress power to regulate commerce with the foreign nations and among the several States.

They will be examined in the order stated:

1st. The first section of the statute under consideration makes it unlawful for any person to hunt, pursue, kill or trap, net or ensnare, or otherwise destroy any quail or ruffed grouse between the 1st day of January and the 1st day of October of each and every year.

The second section makes it unlawful for any person to buy, sell, or have in possession, any of the wild fowls, birds, etc., mentioned in section one, at any time when the trapping, netting or ensnaring of such wild fowls, birds, etc., shall be unlawful, which shall have been entrapped, netted or ensnared contrary to the provisions of the Act. This is manifestly but equivalent to saying that it shall be unlawful to buy, sell or have in possession, between the 1st day of January and the 1st day of October, in each and every year, any of the wild fowls, birds, etc., specified in section one, which shall have been entrapped, netted or ensnared contrary to the provisions of that section. Very clearly this section has reference only to wild fowls, birds, etc., within this State.

But section six is more comprehensive in its language than either section one or section two. It is: "No person or persons shall sell or expose for sale, or have in his or their possession, for the purpose of selling or exposing for sale, any of the animals, wild fowls or birds mentioned in section one of this act, after the expiration of five days next succeeding the first day of the period in which it shall be unlawful to kill, trap or ensnare such animals, wild fowls or birds," etc. No exception whatever is made with reference to the time when or the place where such "animals, wild fowls or birds" shall have been killed, trapped or ensnared; but the language, as plainly as language can, includes *all* animals, wild fowls and birds.

That this was intended, is further manifest from the language of the seventh section, which declares: "The provisions of this act shall not be construed as applicable to any express company, or common carrier, in whose possession any of the animals, wild fowls or birds herein mentioned shall come in the regular course of their business for transportation while they are in transit through this State from any place without this State where the killing of said animals, wild fowls or birds shall be lawful," thus, in effect, declaring that but for this qualification the provisions of the act would be applicable to such express companies and common carriers.

But, it is argued, this cannot be the correct construction, because such a prohibition does not tend to protect the game of this State. To this there seems to be two answers. First, the language is clear and free of ambiguity, and in such case there is no room for construction. The language must be held to mean just what it says. Second, it cannot be said to be within judicial cognizance that such a prohibition does not tend to protect the game of this State. It being conceded, as it tacitly is, by the argument, that preventing the entrapping, netting, ensnaring, etc., of wild fowls, birds, etc., during certain seasons of the year tends to the protection of wild fowls, birds, etc., we think it obvious that the prohibition of *all* possession and sales of such wild fowls or birds, during the prohibited seasons, would tend to their protection in excluding the opportunity for the evasion of such law, by clandestinely taking them beyond the State and afterward bringing them into the State for sale, or by other subterfuges and evasions.

It is quite true that the mere act of allowing a quail netted in Kansas to be sold here does not injure or in anywise affect the game here, but a law which renders all sales and all possession unlawful will more certainly prevent any possession or any sale of the game within the State than will a law allowing possession and sales here of the game taken in other States. This is but one of many instances to be found in the law, where acts, which in and of themselves alone are harmless enough, are condemned because of the facility they otherwise offer for a cover or disguise for the doing of that which is harmful.

A similar objection to the construction of the Act, it seems, was raised in Whitehead vs. Smithers (2d C. P. D. 553), 21st Moak 458; but Lord Coleridge, C. J., said: "I am of opinion that that argument is not well founded. It is said, it would be a wrong thing for the legislature of the United Kingdom to interfere with the rights of foreigners to kill birds. But it may well be that the true and only mode of protecting British wild fowl from indiscriminate slaughter, as well as of protecting other British interests, is by interfering indirectly with the proceedings of foreign persons. The object is to prevent British wild fowl from being improperly killed and sold under pretense of their being imported from abroad." In that case, the wild fowl was shown to have been of a consignment of dead plovers, received by a poulterer from Holland, and it was held that its sale was prohibited by general language, like that of the section under consideration, prohibiting all sales of such fowls.

In Phelps vs. Racey, 60 N. Y. 10, the language of the statute was substantially the same as that of the 6th section. The defense there was that the bird—a quail—had been killed in the proper season, but had been kept, by a process for preserving game, until after the season expired, and then offered for sale. The Court said: "The penalty is denounced against the selling or possession after that time, irrespective of the time or place of killing. The additional fact alleged that the defendant had invented a process of keeping game from one lawful period to another, is not provided for in the Act, and is immaterial."

2d. The title of the Act is "An Act to revise and consolidate the several acts relating to the protection of game, and for the protection of deer, wild fowl, and birds." We think this fully expresses the subject of the Act. From the views expressed under the first point, it follows that we are of opinion that the prevention of the possession and sale of *all* game during the periods designed to protect the same in this State from being taken or killed, may reasonably be regarded as a means necessary to the effectual protection of the game of this State. It was unnecessary to state the mode by which the game was to be protected, or the reasons which influenced the legislature in making the enactment.

Fuller vs. The People, 92 Ills. 182. People *ex. rel.* vs. Lowenthal et. al., 93d Ill. 191. Johnson vs. The People, 83d Ill. 431.

3d. No one has a property in the animals and fowls denominated "game" until they are reduced to possession. 2d Kent's Com's (8th Ed.) 416 *et. seq.* Cooley on Torts, 485. While they are untamed and at large, the ownership is said to be in the Sovereign authority—in Great Britain, the King 2d Blackstone's Com's (Sharswood's Ed.) 409-10; but with us in the people of the State. The policy of the common law was to regulate and control the hunting and killing of game, for its better preservation; and such regulation and control, according to Blackstone, belong to the police powers of the government. 4th Com's (Sharswood's (Ed.) 174.

So far as we are aware, it has never been judicially denied,

that the government, under its police powers, may make regulations for the preservation of game and fish, restricting their taking and molestation to certain seasons of the year, although laws to this effect, it is believed, have been in force in many of the older States since the organization of the Federal Government. On the contrary, the constitutional right to enact such laws has been expressly affirmed in regard to fish by Massachusettss, in Burnham vs. Webster, 5 Mass. 266, Nickerson vs. Brackett, 10 Id. 212, and by Indiana in Gentile vs. The State, 29 Ind. 409; and in regard to game by New York, in Phelps vs. Racey, *supra;* and by Vermont in State vs. Norton, 45 Vermont, 258; and upon principle the right is clear.

The ownership being in the people of the State—the repository of the sovereign authority—and no individual having any property rights to be affected it necessarily results that the Legislature, as the representative of the people of the State, may withhold or grant to individuals the right to hunt and kill game, or qualify and restrict it, as in the opinion of its members will best subserve the public welfare. Stated in other language, to hunt and kill game is a boon or privilege granted, either expressly or impliedly by the sovereign authority—not a right inhering in each individual; and consequently nothing is taken away from the individual when he is denied the privilege, at stated seasons, of hunting and killing game. It is, perhaps, accurate to say that the ownership of the sovereign authority is in trust for all the people of the State, and hence, by implication, it is the duty of the Legislature to enact such laws as will best preserve the subject of the trust, and secure its beneficial use in the future to the people of the State. But in any view, the question of individual enjoyment is one of public policy and not of private right.

Our attention has been called to no law of Congress, and we are aware of none, in regard to the transportation of game; still, if this law may be regarded as a restriction upon inter-State commerce, that is of no importance, for it was held in Welton vs. The State of Missouri, 91 U. S. (1st Otto) 275, that the non-exercise by Congress of its power to regulate commerce among the several States is equivalent to a declaration by that body that such commerce shall be free from any restriction. The inquiry then arises, Is the prohibition of the possession and sale of game as enacted in this State a restriction of inter-State commerce?

In Gibbons vs. Ogden, 9 Wheaton, at page 203, Chief-Justice Marshall classifies as belonging to and forming a portion of that "immense mass of legislation, which embraces everything within the territory of a State, not surrendered to a general government; all which can be most advantageously exercised by the States themselves," "inspection laws, quarantine laws, health laws of every description, as well as laws for regulating the internal commerce of a State, and those which respect turnpike roads, ferries," etc. And he adds: "No direct general power over these objects is granted to Congress, and consequently they remain subject to State legislation." So in The Daniel Ball, 10 Wallace 564, the Court said: "There is undoubtedly an internal commerce which is subject to the control of the States. The power delegated to Congress is limited to commerce 'among the several States,' with foreign nations, and with the Indian tribes. This limitation necessarily excludes from Federal control all commerce not thus designated, and of course that commerce which is carried on entirely within the limits of a State, and does not extend to or affect other States." And upon this principle, in the United States vs. Dewitt, 9 Wallace 41, it was held that a statute of the United States, making it a penal offence to mix naphtha and illuminating oils, was beyond the legislative authority vested in Congress, and it was said: "But this express grant or power to regulate commerce among the States has always been understood as limited by its terms; and as a virtual denial of any power to interfere with the internal trade and business of the separate States."

In the celebrated license cases, 5 Howard 504, laws prohibiting sales of liquors except in large quantities and under stringent regulations were sustained as within the police power, notwithstanding they interfered indirectly with inter-State commerce. Ch. J. Taney said: "These State laws act altogether upon the retail or domestic traffic within their respective borders. They act upon the article after it has passed the line of foreign commerce, and become a part of the general mass of property in the State. These laws may, indeed, discourage imports and diminish the price which ardent spirits would otherwise bring. But although a State is bound to receive and permit the sale by the importers of any article of merchandise which Congress authorizes to be imported, it is not bound to furnish a market for it, nor to abstain from the passage of any law which it may deem necessary or advisable to guard the health or morals of its citizens, although such a law may discourage importations or diminish the profits of the importers, or lessen the revenue of the General Government."

So, upon like principle, it has since been held that as a measure of police regulation, looking to the preservation of public morals, a State law entirely prohibiting the manufacture and sale of intoxicating liquors is not repugnant to any clause of the Constitution of the United States. Bootmeyer vs. Iowa, 18 Wall. 129. Beer Co. vs. Massachusetts (97 U. S.) 7 Otto 25.

Very clearly this law relates only to the internal commerce of the State in the article of game. As in the license cases, it acts altogether upon the retail or domestic traffic within the State, and as there said so it may be said here: "The State is not bound to furnish a market" for game; and by parity of reasoning is not bound to furnish game for a market.

And it would seem to be a legal truism, if a State may constitutionally prohibit the killing and possession of game during certain seasons, the prohibition of the transportation of game killed and possessed in violation of such prohibition cannot be unconstitutional. There cannot be a constitutional right to transport property which cannot legally be brought into existence.

The principle finds sanction in Munn vs. Illinois, 94 U. S. (4 Otto) 113. Slaughter-house cases, 16 Wallace 36. Fertilizing Co. vs. Hyde Park, 97 U. S. (7 Otto) 659.

The birds which are here admitted to have been brought from Kansas, as appears by the laws admitted in evidence by the agreement of the parties, were there killed and possessed in violation of a law of that State, and hence never legitimately became an article of commerce.

There is no question here of discrimination in favor of the game of this State as against that of another State, so as to apply the doctrine of Welton vs. The State of Missouri, *supra*, and kindred cases. Nor is there in R. R. Co. vs. Husen, 95 U. S. (5 Otto) 465, and other like cases, any question of the right to transport commerce from one State to another. For the 7th section of the statute expressly provides that: "The provisions of this act shall not be construed as applicable to any express company or common carrier into whose possession any of the animals, wild fowls or birds herein mentioned shall come in the regular course of their business for transportation while they are in transit through this State from any place without this State, where the killing of said animals, wild fowls or birds shall be lawful."

And herein our statute is directly the opposite of the 6th section of the Kansas act, which was held unconstitutional in The State vs. Saunders, 19 Kansas 127. There the prairie chickens were lawfully killed and lawfully became an article of commerce, and their transportation was prohibited. Here the quail were unlawfully taken and killed, and their possession and sale in this State were unlawful. But had they been lawfully taken and killed their transportation to a place where they might be lawfully sold could not be interfered with by the statute.

The questions we have been considering were all raised in Phelps vs. Racey, *supra*. The opinion in that case, by the late Chief Justice of the Court of Appeals, is well considered and reaches the same conclusion at which we have arrived.

The judgment is affirmed.

EXPERIENCE WITH A SWAB—Rockingham, N. C.—While in Arkansas a few weeks since an incident was related to me by a friend and confirmed by two other gentlemen who were present, which, as I have never heard of the "like before," may be something new to perhaps many of your readers. My friend, while in Colorado last summer on a hunting excursion, was attempting one day to wipe out his Sharps rifle with an ordinary buckskin swab. The swab became detached from the rod and remained in the barrel about five inches from the end of the chamber. Ineffectual attempts were made to drive it out with an iron rod, alternating first from the breech and then from the muzzle. Not succeeding in this, about 20 grs. of powder, Eagle ducking No. 4, was put in a shell, the shell inserted, and with string tied to the trigger and gun placed at a short distance, the string was pulled and gun fired. A little noise was heard; the gun was taken up and unbreeched, a little smoke was seen to come out of the muzzle, but the swab was not moved. Thinking it probably best to fill up the space between the end of the chamber and the swab, in order to succeed in driving it out, they did so with paper driven in tightly. Twenty grains of powder were put in shell and gun again placed off and string pulled. This time no noise was heard. The gun was unbreeched and with a considerable report the shell passed out at the breech to the distance of 100 yards. Not at all daunted they determined to blow it open at all hazards, so they filled the shell with about seventy grains of powder and placed the gun a little farther off, again pulling the string. As before, no noise was heard, but in very cautiously unbreeching the gun a very loud report was heard, and the shell was sent kiting to a very great distance. The swab still remained in its former position. The barrel was then put in a stove, where it remained several hours, was taken out, being red-hot, and the swab having been burned to a crisp, it was removed. TECERLL.

PINNATED GROUSE PROPAGATION—Philadelphia.—You will be pleased to make known to your readers interested in the stocking of our Eastern grounds with the pinnated grouse that our mutual friend, Mr. John S. Davis, of Philadelphia, "put one up" late this fall, five miles from Hammonton, N. J., while quail shooting. I had the pleasure of questioning Mr. Davis regarding what he had gathered relative to other birds of the kind while on this trip, and learned that one or two had been seen and I think one killed in the same neighborhood by a native. This is the section of the country where the West Jersey Game Society liberated their grouse several years ago, the region being covered with scrubby oaks and dwarf pine trees. This report coming from so reliable and well-known a gentleman as Mr. J. A. Davis, who with the writer has killed many "a chicken," and knows the bird as well as he does the quail, should cause it to be recorded that the experiment of the West Jersey Game Society has proved a success.

Capt. A. H. Clay, who was present when your correspondent and Mr. Davis were conversing, stated, relative to the "Purnell grouse" in Maryland, that while duck-shooting on the Sinnepuxent Sound he killed a prairie chicken on his way from Taylor's Creek to the town, not knowing what it was when it jumped. This was three or four years after the birds were planted; furthermore, he stated that he saw a brood rise some distance from him and make a flight of nearly half a mile as far as he could judge, and that the oystermen had killed not a few at different times and did not observe the mutual agreement of the inhabitants of that section not to molest them. HOMO.

TRAPPING HAWKS—Mt. Sterling, Ky.—*Editor Forest and Stream:* I am glad the hawk question is so thoroughly handled by you, as I have long observed the terrible decimation of partridges where they are. Our club (Sterling Shooting and Fishing Club) and others made up a sum of money to reward the killing of them, paying twenty-five cents per head, and it is astonishing how many the country boys find. One of my sportsman friends in one week killed five large hawks, another has trapped eleven this winter. We take an old weather-beaten pole about twenty feet long, six inches diameter; saw one end square, mud it to make it look old, set a small steel trap on top with three or four fence rails driven so the heads will hold the trap secure, then we hoist it in a convenient place for the birds to alight upon in their accustomed haunts, and have not long to wait for a catch. I have caught two in the town suburbs this winter. The partridge have not suffered in this locality as much as was feared, owing in a great measure to the large amount of corn left in fields ungathered, as winter came in much earlier than usual. It has been very severe; one farmer informed me three coveys in all about seventy came to his stock feeding grounds daily to get their rations, and became so tame that he could shell corn and throw to them without their flying away. ANTWERP.

NEW BRUNSWICK.—This winter has been a peculiarly good one in New Brunswick and Nova Scotia for hunting, and for a number of years there have not been as many hunting and trapping parties through the Provinces as there were this year. Moose have been quite plentiful; caribou very numerous, and numbers of animals that are scarcely ever seen so far South as Nova Scotia have fallen before the huntsman's gun this season. Mr. John Connell, of Bartibogue, in two days last week killed eleven caribou, which weighed from 18 to 40 lbs. each. The meat was sold in Mirimachi markets at eight cents per lb. A good many moose have been got, and the game protectors have had to put forth strenuous efforts to prevent moose-snaring. There seems to be an unusual abundance of black foxes about the north of the Province, and several have been captured about Newcastle, and a number in different parts of Nova Scotia. Eight skins were sold to a Halifax furrier the other day at $1.25 each. A good many sportsmen have gone out from St. John, and if they didn't all first get black foxes and moose they all came back with unusual large supplies of the smaller and more common game. *St John, N. B.*

ROBIN ROOST.—A Glasgow, Kentucky, paper, has this report of a robin roost in that vicinity, which is very like the one reported in this journal last week: "A cedar thicket of about sixty acres furnishes the birds a lodging place. About sundown every evening constant streams from every direction pour into the grove and almost obscure the heavens in their flight. Night finds almost every bush in the thicket bending with its red-breasted load. For the past few weeks lovers of sport for miles around have visited the place and every night the thicket is illuminated with the torches of men with clubs and sacks gathering the feathery harvest. Mr. Smith has killed over two thousand, and hundreds are carried away every night, but they don't seem to decrease. There are millions of them. Large quantities of them have been sold in town. They are very fat and make, when well cooked, a dish good enough for anybody."

NO MORE LIVE QUAIL—Shelbyville, Tenn., Feb. 12.—I have been informed by some forty or fifty persons all over the United States (or rather Northern and Western States), and parts of Canada, that a notice appeared in FOREST AND STREAM on Feb. 5 that I could furnish live quail to parties wanting them. I am fully convinced of the wide circulation of your paper. I am doing all I can to fill orders received, but owing to the season being so far advanced, will not be able to supply one-twentieth part of birds wanted. If I had heard from them earlier with a little effort could have furnished all parties, as I have, without any exception, handled some 5,000 birds. H. C. RYALL.

Live quail can be procured of Mr. W. W. Titus, Monticello, Florida, at a cost of ten cents per bird.

THE PROVIDENCE BRANT CLUB organized February 4 and elected A. B. Gardiner, Esq., President and J. H. Palmer Treasurer and Secretary. The club at present consists of the following gentlemen: C. H. Perkins, A. B. Gardiner, H. R. Barker, J. E. Allen, J. H. Palmer, R. H. Purrington, F. J. Rabbeth, Peleg Lippitt, Francis Colwell, L. Vaughn, Jesse Howard, John Howe and D. H. Smith. The club-house, which is on a small island near Chatham, Mass., has just been put in complete order and newly-furnished and the season will soon open. A. D. COY.

OHIO—West Liberty, O., Jan. 15.—We have plenty of quail and rabbits, some few snipe and pheasants and an occasional woodcock. Squirrels by the thousands abound in the forests during the summer season. Geese and ducks fly in great numbers in the spring and fall, feeding in the large stalk fields. The winter here has been very hard on the game. In Ross County, O., the winter has been very severe also for game. While walking over some of the high hills I found a great number of dead quail. H.

EMSWORTH ASSOCIATION—Emsworth, Pa.—At the second annual election of officers for the Emsworth Sportsman Association held last night the following persons were elected: President, W. C. Berringer; Vice-President, W. D. Courtney; Secretary and Treasurer, Jno. S. Robb, Jr.; Executive Committee, D. D. Arthurs, W. M. Newbold, Chas. Crawford.

MONTREAL GUN CLUB—Montreal, Feb. 17.—At the annual meeting of the "Montreal Gun Club," held on the 11th inst., the following officers were elected for the year 1881: President, Colonel Frank Bond; 1st Vice-President, F. X. Orchambault; 2d Vice-President, Alf. T. Rudolf; Secretary and Treasurer, R. Blackwood; Committee—Chas. S. Ritchie, P. E. Nonnandeau, R. A. Allan. SEC.

GLASSES FOR SHOOTING.—If "Anon" will select a lens to suit him and have it put in a Lyman peep sight with an extra large peep hole, and have it attached to his gun, he will always find it in the proper position to see. S. J. S.

SPRINGFIELD, MASS., SPORTSMEN propose to bring from the West several varieties of live game birds, such as pinnated and sharp-tailed grouse, mountain and valley quail, and to free them, with a view of establishing one or more new varieties of birds there.

RHODE ISLAND—Newport, Feb. 15.—The mild weather last week brought the ducks within gun shot, and one hundred were shot by Peleg Card and Herbert Rice, of East Greenwich.

KENTUCKY—Quincy, Jan. 31.—We sometimes have as good duck and quail shooting here as that afforded by some of the famous shooting grounds of the West. D.

ILLINOIS—Aurora, Feb. 6.—Our prairie chickens seem to get along all right. Rabbits are very abundant. I don't see any quail; am afraid the weather has been too cold for them.

TEXAS—Huntsville, Jan. 24.—Ducks and geese have been very scarce in this part of the State this winter; partridges are plentiful. R

KANSAS SHEEP FARMERS are calling for a stringent dog law to restrain the raiding of dogs on their flocks at night. It is claimed that the sheep-raising industry is undeveloped because land-owners are deterred from engaging in it by fear of losing their stock in this way. Dogs which destroy sheep should be killed. That a community should suffer such an abomination at the expense of a profitable industry is outrageous. There are many counties in the different States whose hills should be covered by feeding flocks and would be were the regions not infested by hordes of cur dogs. The first step to develop the agricultural resources of many of these sections must be to kill off the dogs.

GARFIELD is said to have been a good deal of a sportsman in his younger days. When a student at Hiram College he used to spend his Saturdays hunting, discussing politics in the evening and preaching the next day. In the field he was generally successful and usually laid out the rest of the party in his tramps after game.

That indigestion or stomach gas at night preventing rest and sleep will disappear by using Hop Bitters.

Sea and River Fishing.

FISH IN SEASON IN FEBRUARY.

FRESH WATER.

Pickerel, *Esox reticulatus.*	White Bass, *Roccus chrysops.*
Pike or Pickerel, *Esox lucius.*	Rock Bass, *Ambloplites.* (Two
Pike-perch (wall-eyed pike)	species).

Striped Bass, *Roccus lineatus.*	Pollock, *Pollachius carbonarius.*
White Perch, *Morone americana.*	

THE GAMY RAINBOW TROUT.

THAT the latest importation from California, the beautiful *Salmo iridea*, is a thrifty growing fish for the fish-culturists has long been known, but little has been said of its gamesome ways and its grit. The *Sun* sent a reporter down to Fulton Market to interview Mr. Blackford on this subject, and this is what Mr. Blackford said:

"We expect to display some large trout of this kind on our stand on April 1, some that will weigh five pounds apiece As they run in the California streams they average about four pounds in weight. Ours will come from the United States hatching works on the McCloud River. Some trout will come, too, from Mr. F. N. Clark's fish hatching works at Northville, Mich Of course they are native in California, and those in Mr. Clark's hatching works were produced from spawn brought from Californ a.

"It is only two years since fishculturists in the East have received the eggs of the trout. This is to be the first year in which the United States Fish Commission is to turn loose small California trout in our streams. The culture of these fish has hitherto been carried on by private enterprise.

"The California mountain trout takes its name, rainbow trout, from the beautiful band of colors that runs along the side of the fish, and is ab ut a fourth as wide as the fish. There are no red spots on the body, as in our brook trout, but there are a few black dots near the head. When the fish is first taken from the water this band has all of the hues of a rainbow. After it is dead it becomes a uniform red color, but shading to a lighter color underneath. We had a rainbow trout about a year ago, sent by B. B. Redding, Commissioner of Fisheries in California, that was a male, over two and a half feet long, and that weighed five and three-quarter pounds. It was well-shaped and plump, with large black dots thickly sprinkled on the shoulders and tail. The operculum was decorated with a bright, red tint, blending into a greenish brown, or olive toward the eye. A broad, red dash or strip of color stretched from the tip of the tail to the cheek. It was a gaudy-looking fish.

"They are more gamy, and they fight far more than the common brook trout. At the fish hatching ponds in Caledonia N. Y., last spring, I caught with a fly several rainbow trout weighing from a quarter to half a pound. Each time that the trout struck my hook I thought that I had a pound trout on my line. Why, they strike a hook like that." Mr. Blackford, to illustrate, brought the palms of his hands together with vigor. "Then they are off in a flash, with the line running off so rapidly that the reel fairly smokes with the friction Although the average weight when full grown is about four pounds, yet they have been taken as large as six pounds, while in a lake near Bellingham Bay, on the Pacific slope, the trout are said to grow to be ten or twelve pounds in weight.

"As to their reproduction in New York State waters, the New York State Fish Commission in 1875 obtained 500 eggs from the McCloud River, from which in 1880 there were 16,000 trout two years old, and 34,000 one year old. They can be raised from the egg much more easily than the common brook trout, and experience shows that the rainbow t out is the hardiest fish in every way. Not half so many rainbow trout die in artificial life as their cousins in the East. They grow rapidly, too. In 1878, in the Caledonia Spring Creek, 2,000 young rainbow trout were set free, and last year a fishermen had no difficulty in landing a dozen with a fly inside of an hour. They remain in good condition for the table much longer than the brook trout, which spawn in the late fall or beginning of winter, and are lean, slabsided and tasteless from September to February, while the California trout begins to spawn about two months later than the Eastern brook trout. The female produces about 1,500 eggs. The males are ferocious. They fight with one another all the time. It is this aggressiveness that makes them take the hook so savagely."

"Are they as handsome as the Eastern brook trout?"

"No," the Commissioner replied; "no fish is handsomer than a Long Island brook trout, unless it is the 'Dolly Varden' trout. They are also a California trout, and are frequently found in the same stream with the rainbow trout, and are of about the same shape, plump, round and full. They differ from the rainbow trout in having all over their sides brilliant vermilion spots from one-eighth to three sixteenths of an inch in diameter. The spots on the Eastern brook trout are only one-sixteenth of an inch in diameter. This season, I think, there will be distributed in New York streams from 75,000 to 100,000 small rainbow trout. They mingle amicably with the Eastern brook trout, but they will not be put in streams where these run in great numbers, because we want to keep the species distinct from each other.

"As to their habits, they are, unlike our trout fond of moderate currents of water or still places with the surface of the water shaded. The Eastern trout, on the other hand, love to hover under a waterfall or to skip from ripple to ripple in the most dashing rapids. Fishermen who have killed them on the Pacific coast say that the rainbow trout is most plentiful along the Western coast of California and northward. All of the true brook trout West of the Mississippi River have black spots. Fishing is very fine in nearly all of the rapid streams of the Coast mountains and the Cascade mountains in Oregon. At Fort Dallas trout fishing is good in April, May, June and July. The rapid snow water streams that flow from Mt. Hood abound in these trout, but the innumerable rattlesnakes interfere with, and in places prevent, angling. The fisherman has also another foe in the cottonwoods, willows and squaw bushes that make fly casting always impossible. When a fly does touch the water, though, it is snapped up greedily. The fish is delicious eating. In that section most of the fishing is done with bait. The fish takes common raw meat, the tougher the better. Crow meat is generally used, and crows are shot for bait. This flesh combines a vivid redness with a rank smell and a powerful toughness. All of these qualities are desirable for bait that is most taking. Like their Eastern relations, the California trout are sometimes capricious, and then a piece of a red fin from a dead fish will often lure them to destruction."

THE FLY CASTING TOURNAMENT.—Since the announcement in our last issue of the arrangements made for the coming tournament in connection with the meeting of the New York State Association for the Protection of Fish and Game in June, many letters have been received.

Loomis & Plumb, Syracuse, N. Y., have offered one of their newly-invented "automatic" reels to be made with a hard rubber shell or disks, gold mounted and appropriately inscribed and decorated, worth fifty dollars.

B. F. Nichols & Co., 36 Beach street, Boston, Mass., offer several of their "hexagonal" split bamboo fishing rods as prizes.

The Syracuse *Journal* says: "President Crook and the officers of the State Sportsmen's Association associated with with him have done themselves much credit in their selection of Mr. Fred Mather to have the sole superintendence of all matters at the next meeting relating to the rod and reel. Mr. Mather is an assistant to the United States Fish Commission and editor of the angling department of FOREST AND STREAM, and is thoroughly skilled in all that relates to his profession. For many years past fly casting at the conventions of the association has been a burlesque, and as a consequence gentleman who are true descendants of Isaak Walton have declined to participate in the contests Such men do not care so much for the prizes as for the credit of having honorably won distinction in an art for which they have so much fancy. Under Mr. Mather's direction the contests will be honorably, honestly and intelligently conducted, and it is fair to presume that there will be a large attendance of fly casters, many of whom will for the first time attend a convention of the association. The thanks of every expert and amateur in the State are due to President Crook and his associates for the admirable choice they have made, showing at once that the strictest fidelity is to be one of the guiding principles of the next meeting."

MAINE NOTES.—We learn from the Belfast *Journal* that the Maine House has passed to be engrossed an act for the protection of trout and landlocked salmon in Kennebago and Rangeley chain of lakes and streams; an act for the protection of fishing in Hosmer's pond in the town of Camden; and an act to incorporate the Piscataquis Game and Fish Protective Society.....Mr. C. G. Atkins has forwarded to New York State Fish Commissioner Blackford 25,000 salmon eggs, collected at Grand Lake Stream.....Smelts are scarce at Warren. .....The petitions to the Legislature from the shore towns prohibiting the seining of mackerel off the Maine coast will be confronted by remonstrances from the seiners of Portland and other fishing places, claiming that the fish are not diminished in numbers or the fishing interest impaired by seining. The Portland *Press* says that the mackerel fisheries of Portland are valued at half a million dollars a year, and that as the treaty with Canada allows seining within three miles of the shore, the only result of not allowing our vessels to seine mackerel would be to drive them under the English flag, sailing under which they would continue the business, and thus Anglicize more of our commerce.....The Waterville *Mail* says a petition for shortening the close time for perch has received many signatures from sportsmen in that place, who argue that the spawning season is over before the first of June, which is one of the nicest months in all the year for fishing.....Tom cods are plentiful in Bangor and sell for 50 cents a bushel. Some of the down river fishermen select and dress the finest fish and ship them to New York city, where $3 per bbl. is paid for them.

FISH HATCHING BY AN AMATEUR.—The readers of the FOREST AND STREAM interested in fish culture will remember perhaps an article stating the success of John N. Bennett, of Stamford, Delaware County, New York, in hatching over 10,000 brook trout in his cellar last winter. Those trout are now over four inches long, doing well in one of his five trout ponds, situated on his beautiful estate adjoining the Delaware and Ulster Railroad in Stamford. In one of these ponds he has breeding trout that range from a pound to two pounds in size. The other ponds are well stocked with smaller ones.

This past summer Mr. Bennett built a large and fine hatching house just below two large and running springs, and is now hatching out (a part are already out) nearly 50,000 of the *Salmo fontinalis* for the free stocking of the west branch of the Delaware River here and adjacent supplying brooks. I have the promise of 15,000 eggs of the California mountain trout which Mr. Bennett is to hatch for the same purpose. We hope to have a law passed this winter protecting our streams for two years, and if we do, with over 200,000 fish stocked therein during the past and present year, this part of Delaware County will again hold its old prestige of good trouting waters in the season

Mr. Bennett deserves great credit for his taste, energy and perseverance, for impure water from a creamery once emptied his ponds of the finest stock I ever saw—one, 3,000 of his trout being of large size. Mr. Bennett takes the FOREST AND STREAM and enjoys your fish department vastly.

NED BUNTLINE.

HOW LARGE IS A QUARTER-POUND TROUT?—New York, Feb. 10.—Will you ask your correspondent, "Manhattan," whose communication appeared in to-day's issue, what are the dimensions of a trout which weighs one-quarter of a pound? I highly approve of "Manhattan's" indignation at fingerlings being caught by boys or by would-be sportsmen, and it recalls to me that a few summers ago, at Pol Smith's I one morning caught from one locality, and put back alive, nineteen baby trout, and then went farther. On my return to the hotel at evening I found a "sportsman" displaying his great catch of about fifty "trout" the size of your little finger, caught that afternoon at the spot I had left, and among them, I do believe, those I had put back—they were the same size anyway—and the whole fifty could easily have been eaten by one man at a meal, and not much of a meal, either; they did not weigh two pounds. But if there is to be a penalty for a trout under a quarter of a pound in weight, what is its size? and what is the girth of a trout eight inches long and what will it weigh? No guess work, now.

GEO. W. VAN SICLEN.

SPORT AT FONDA, N. Y.—If I were a journalist I would tell you of the fun we had last fall catching pike from four to six pounds in weight, and how in hooking a three-pound bass we were compelled to send the boy we had to row for us in about five feet of water to retrieve him for us after he (the bass) had taken two or three turns of the line around a snag that was imbedded on the bottom, and also of the exciting times we have had running Reynard and how one of our Nimrods has the brush of eighteen hanging in his wigwam—the result of our fall running. But, as I say, we are not journalists; notwithstanding all that, we are as tickled as a child with a new toy when, on Thursday of each week, we march down from the news office with a copy of the current No. of the FOREST AND STREAM. A. B. J.

RANGE OF THE CATFISH—Cleveland, O., Feb. 2.—"Lex.," of St. Pauls, Minn.; W. L. Carpenter, U. S. A., Fort Omaha; and Lieut. Asa Wall, of Winchester, Va., have given interesting and valuable information regarding the northern range and value of catfish in those localities. It would be of interest to hear from some of the many readers of FOREST AND STREAM in the Southern States giving their knowledge of the habits of this fish, its size, and reputation as an article of food and how they cook it. We often hear of its enormous size in those waters, but it is usually spoken of as coarse and rather inferior food. The yellow and blue-cats are of the same species, merely differing in color and size, the yellow rarely attaining the weight of fifteen pounds, while the blue variety, full grown, weighs from forty to one hundred pounds and over, according to the waters most favorable to its development. This fish pairs in the spawning season, and on several occasions I have reason to know that the two varieties breed with one another.

DR. E. STERLING.

WE HAVE RECEIVED from Mr. R. H. Kilby, of Montreal, Canada, the handsomely illustrated catalogue of his cricket and fishing goods. Mr. Kilby's stock is extensive and comprehensive, and his establishment is well known throughout the Provinces. Mr. Kilby is well known as one of the active officers of the Fish and Game Protective Club of the Province of Quebec.

SMALL STRONG HOOKS.—A London correspondent writes that Florida fishermen can get small hooks which are strong enough, and says that small ones are to be had in London which are as strong as cod hooks, and are known as "Mahseer" hooks. They are used for fishing in Hindostan and prepared to resist the crushing power of a 60-lb. mahseer, while small enough to be used for smaller fish.

SENDING FISH BY MAIL.—A halibut of one and a half pounds was recently sent from Gloucester, Mass., to Mr. Blackford, in Fulton Market, by mail. It was then the smallest on record, but one of three-quarters of a pound has since been taken.

THE Saturday *Review*, speaking of fishing, says that the Scandinavian rivers, like the Scotch streams, have passed into the hands of millionaires.

Fish Culture.

THE CENTRAL FISHCULTURAL SOCIETY.

[CONCLUDED.]

MR. FAIRBANK: There is no doubt about the evil influence of the pound net, and Mr. Green is right in his views on it.

MR. CLARK: How can the pound nets be abandoned and yet leave the herring fisheries profitable?

MR. BOOTH: No trouble about it in most places, for there are but few localities where the herring are caught.

MR. BARTLETT moved that the thanks of the Society be tendered to the railroads which have done so much in affording facilities for the transportation of fish and fry, and also carried them free of charge. Carried.

THE SECRETARY then announced that a paper had been received from Dr. Nahum E. Ballou, of Sandwich, Ill., a gentleman who had the cause of fish culture at heart, but who was prevented from attending the meeting. It was read as follows:

FISH CULTURE IN THE PAST AND FUTURE.

Mr. President and Gentlemen of the Central Fishcultural Society:

I regret exceedingly that I cannot be in attendance at the meeting of your Society which convenes to-day at the Grand Pacific Hotel, owing to sickness in my family and professional engagements, which entirely preclude absence from home

But if I were to say a few kindly words in connection with my regrets on the great and important topic of fish culture, it is possible it would be better than absence and silence, twin aids to masterly inactivity and most obvious hindrances to progress in this busy world of ours. In reference to the world-wide interest which now attaches to fish culture, I have read that it was the opinion of Pliny "that nature's great and wonderful power was more strikingly manifest in the sea than on land." If the "Harvests of the Sea" constitute a large portion of human sustenance, and the sea is viewed as a vast reservoir of human food, the writer fairly estimates its wonderful power as a food resource. It was also a remark full of meaning imputed to Capt. John Smith (the original Smith of our country), which may now be quoted as prophetic language: "Therefore, honorable and worthy countrymen, let not the meanness of the word fish distaste you, for it will afford as good gold as the mines of Guiana or Potozi, with less hazard and change and more certainty and facility." Although these words were spoken or written more than two hundred years ago, they are strikingly significant, and seem to have been tinged with more than a shadow of truth, as current events of to-day, in connection with fish culture, justify. The mines of Guiana or Potozi may become exhausted by man's eagerness and avarice for gold and gems, but when exhausted they cannot be replenished, cannot again be charged with golden sands, or golden ore, or planted with diamonds, but the exhausted rivers, lakes and oceans may be recharged by artificial production, and impoverished though they may be, teem again with abundance of the choicest of human food.

In 1853 Dr. Theodatus Garlick and Prof. H. A. Ackley, of Cleveland, Ohio, first demonstrated in our country, by careful and successful experiments, the validity of Messrs. Gehin and Remy's discoveries in the streams of the Vosges mountains of France. Messrs Garlick and Ackley were the fathers of fish culture in the United States. About sixteen years since New Englanders began to experiment, for they had become convinced that the artificial propagation of fishes by extraneous vitalizing of their ova was founded upon an embryological fact, which seemed to be in imitation of a natural law, and hence began the work of stocking streams and fish farms. Closely following these successful experiments State commissions were organized under special statutes, and one State after another, affected by the contagion of success, has adopted fish culture, until more than one-half the States of the Union have enlightened commissions engaged in restocking thousands of lakes, rivers and crystal streams. Meantime Mr. Green discovers that by using boxes that are susceptible of undulatory motion shad-hatching is made a success, and Mr. Fred. Mather, assistant to the U. S. Fish Commission, has invented the "Conical System of Shad-Hatching," which now very much facilitates the production of young fry. The latter method is largely in use on account of its efficiency.

Very soon after many of the States had inaugurated State Commissions, far-seeing men taking a look forward, the United States Fish Commission is organized, with Prof. Spencer F. Baird as its head. In the selection of Prof. Baird for the head of the National Board, no more valuable person could have been selected, for all of his labors are subjected to the scrutiny and close examination of science. His reports are the best repertories of natural history in connection with fish culture to be found in the language, and will do more for the advancement of the study of natural history in this department than any work written. Mr. Livingston Stone, one of Prof. Baird's assistants, is also an eminent fish culturist, and through him the country is familiar with the embryonized ova of the *Salmo quinnat* of the Pacific coast, together with European nations and the distant islands of the ocean. Not the least among the developments of our scientists is the discovery of Dr. Brooks, of the John Hopkins University, of Maryland, how the oyster may be increased by artificial propagation.

Prof. Baird has also brought the codfish into the domain of fisheulture, and is now producing the fry in millions to supply the immense falling off of our cod fisheries. Major T. B. Ferguson, of the Maryland Commission, has also subjected the herring to the artificial process, and his experiments attest that they can be largely increased by this method. The U. S. Commission has also succeeded in propagating the mackerel by this process.

I can only say that hybridizing is also going on, and it looks as if it could be practiced *ad infinitum*. Now, gentlemen of the society, we are only learning the alphabet of fish culture, for as we have already "builded better than we knew," wonderful developments are yet to come. The benign results of fish culture are yet to cheapen very largely the poor man's food. We have such rich fields for pasturage upon the vast plateaus of the ocean, that in the near future we are to be furnished with food-fishes of right royal flavor, almost without money and without price. NAHUM E. BALLOU.

Sandwich, Ill., Dec. 15, 1880.

MR. CLARK: If there is no discussion following the paper just read I would like to call the attention of the society to the subject of retarding fish eggs. It is something on which I have worked for the past five years. All who have been interested in the culture of whitefish know that there have been long and warm discussions on the propriety of hatching the fish in spring water and so bringing the fry out in midwinter, when some people claim there is no food for them in the lakes. I have now eggs of the whitefish on flannel trays, in a refrigerator, which have been there since December with no water on them and will not be placed in water until spring. Neither is there any fungus or dead eggs, nor has there been any picking of dead eggs. I do not expect to pick out any until April. The box maintains an even temperature of about 30½ degrees Fahr.; the highest has been 31 degrees. I have kept the eggs in former years until April and have no doubt they can be kept a month longer. After the first lot of bad eggs are picked out there is no further trouble than to keep the ice chambers charged. The eggs appear as if frozen, but only the moisture on the egg is turned to ice, the embryo being able to resist freezing at that temperature. In fact they will survive down to 25 degrees, but below that will freeze and die.

MR. BOOTH: It is strange that the eggs do not freeze.

MR. LYTLE: At Green Bay I took five trays and left them in the fish-house. The eggs upon them were frozen in solid in the ice and were shipped to Mr. Douseman, who wrote that they were his best eggs.

MR. CLARK: The record of my clerk shows that 25 deg. is the lowest that they will stand.

MR. MILLER: Our water at the Detroit hatchery was colder than at the Pokagon house. It is lake water, and many have said it contained no food in winter. Mr. Chase experimented with a very fine screen placed at the inlet to the troughs, and in the coldest weather there was plenty of animal life of minute forms. We held the young whitefish in the house, and they found food and grew finely on it.

MR. CLARK: I don't want to be too positive, but incline to think as Mr. Miller does that there is always minute life in the lake water.

MR. MATHER: The minute insects commonly known as gnats which are seen early in the spring spend their winter as larva in the water. Their eggs must be very small, and so must the worm which hatches from them. These eggs must be laid the year previous at least to the appearance of the insect, which lives and grows through the winter.

MR. FAIRBANK: Spring water does not contain this life when it emerges from the ground.

MR. CLARK: No, but we can very well hatch in spring water and plant in the lakes.

THE PRESIDENT: If there is no further business before the meeting, I will call for the report of the Treasurer.

The Treasurer reported as follows:

CHICAGO, Dec. 30, 1880.

The Central Fishcultural Society in account with A. Booth, Treasurer.

1879.	Cr.	
Oct. 3	By cash	$81 00
Nov. 17	By subscr. S. A. Forbes, Normal, Ills	3 00
		$84 00

1879.	Dr.	
Oct. 3	To cash F. Mather	$16 20
Nov. 17	R. O. Sweeney, cash paid by Prof. Forbes, used for postage and stationery	3 00
		$19 20
	Balance on hand	$64 80

The report was accepted.

MR. BARTLETT moved that the thanks of the Society be tendered to the proprietors of the Grand Central Pacific Hotel for courtesies extended to the Society and the use of its club room. Carried.

On motion the meeting adjourned, subject to the call of the Executive Committee.

REPORT OF THE MASSACHUSETTS COMMISSION.

THE fifteenth annual report of the Commissioners of Inland Fisheries of the Commonwealth of Massachusetts is before us. In addition to their previous duties they have been charged with obtaining statistics of the shore and river net fisheries. The owners of about 1,000 weirs, seines, gill-nets, etc., have made returns, and these show a falling off in number which is not ascribed to a falling off in the fisheries, but from the fact that many of the men have given up the trade and their successors have failed to apply for papers. The leasing of ponds by the State is practiced, and thirty-five have been so leased within the past five years, and one has been reserved for fishcultural experiments. In the same period there have been distributed of eggs or of young fish: Salmon, 339,000; California salmon, 727,500 (these two kinds were placed chiefly in the Merrimac and its tributaries in connection with New Hampshire); Land-locked salmon, 988,763 in 131 localities; trout, 39,500 in 11 localities; carp, 900 in 40 localities.

The building of fishways has been encouraged, new ones erected and antiquated forms replaced by new models. The restocking of the Saugus River with alewives is thus announced in a letter to Commissioner Brackett:

WAKEFIELD, May 3.

MR. E. A. BRACKETT—*Dear Sir:* I have the pleasure of informing you that the reopening and stocking of the Saugus River is a success. Yesterday thousands of alewives were seen in the river in Wakefield above all the fishways, and no doubt they are in the pond before this. The first alewives were planted in the pond three years ago this month, and those seen yesterday are the first that have been in Wakefield of their own accord for about thirty years. Very respectfully, OSCAR STOWELL.

A large run of salmon in the Merrimac is recorded, but owing to drouths and depredations of men, but few reached the spawning-grounds, being kept back by low water. They congregated near North Andover and at the mouths of brooks between there and Haverhill and became a prey to the poacher in the night. This was not known until too late to remedy the evil. Massachusetts has its fish-hatching done jointly with New Hampshire, and Mr. A. H. Powers, of the latter State, gives an account of his work. From nine salmon he obtained 60,000 eggs. The 100,000 eggs mentioned in his last report hatched with a loss of four and a quarter per cent. The Superintendent of the Lawrence fishway reports more fish in the way the first part of the season than ever before, and that in June the river was full of salmon, but the low water of August, September and October prevented a full run of fish. The Commissioners believe that the land-locked salmon is being successfully established in many of their ponds, as individuals have been taken weighing from one to three pounds; 174,000 of them were hatched and distributed the year previous. This year (1880) Mr. Chas. G. Atkins writes them that he will probably have 300,000 for them.

Nothing has been done in the Connecticut River on account of the differences between the fishermen of Massachusetts and Connecticut—differences which, we are sorry to say, extends to the Fish Commissioners of these States. The carp has been extensively introduced, and in the appendix an account of its culture by Mr. Hessel, extracted from the report of the U. S. Commissioners, Part IV., is introduced.

FISH CULTURE IN ILLINOIS.

THE Quincy *Whig* recently published an account of the work and prospects of the Fish Commission of that State from which we extract the following:

The rivers, as a rule, overflow their banks every spring, and out into the shallow lakes, ponds and low places created by the overflow the fish go to deposit their spawn; and as the water recedes the fish find their way back to deeper water, the spawn in due time is hatched, and when the water has fallen within its banks and these shallow places are cut off from the river and lakes, they commence to dry up, so that unless rescued countless thousands of young native fish contained in these would perish. To save these fish, selecting the game fish, such as bass, croppy, wall-eyed pike, etc., and putting the rest, such as catfish, buffalo and sunfish into the nearest deep water, has been largely the work of the commission.

The game fish were put into ponds and live boxes until they could be distributed to other portions of the State.

All applications for fish for private ponds were supplied free of charge, as the ponds, and hundreds availed themselves of the opportunity of procuring a stock of fish.

During the month of September of this year the commissioners were tendered the use of the steamer Daisy and crew by the owner, Capt. Henry R. Corley, a generous sportsman. The boat was used to work the Mississippi River and sloughs from the northern part of Hancock County to the mouth of the Illinois River, and up the Illinois River to Peoria, and was under the immediate control of Mr. Bartlett, the member of the commission from Quincy, who carried great quantities of these valuable fish to the streams and lakes, and proved himself most efficient and successful in the work. The extent of his labors will be appreciated from the statement that the commission have saved, distributed and put into deep water, from July 1, 1879, to Oct. 31, 1880, nearly 6,000,000 young native fish, every one of which would have perished, either from drying up of water or freezing out in winter, had they not have been taken from the ponds and holes where they were found; and yet but a small portion of the work that ought to have been done has been accomplished. Millions of fish perish and will perish this winter that ought to have been cared for, but with only $1,000 to work with, and the other fish interests of the State to look after, the commissioners have been unable to do more.

In November of this year the commissioners secured 800 German carp direct from the United States ponds at Washington, which, with the exception of those delivered to parties holding requisitions for them from Prof. Baird, have been placed in the State ponds at Fall creek, built for their use. The greater portion of the State is admirably adapted for their successful propagation.

The State ponds are situated two miles west of Fall creek station, on the C. B. & Q. R. R., a few miles below Quincy, inside of the Shy levee embankment, and consist of a series of ponds supplied with living water. The carp ponds are natural ponds or lakes, supplied by deep water from the river, well protected by artificial lines and fences. The larger ponds will be so constructed as to admit of the natural propagation of bass, croppy etc., being a continuous flow of water for one and three-quarter miles, varying from one to twenty feet in depth.

The commission have on hand in their ponds and live boxes in the river, for distribution, 30,000 young bass and croppy, which will be sent to inland streams as soon as possible. When it is taken into consideration the large territory over which the commission are expected to work, and the limited amount of money they have to do with, the amount of work done by them seems incredible. The management of affairs has certainly been excellent, and while the commission as a whole is entitled to credit, the active services of Mr. Bartlett have been especially apparent to all interested in the subject of fish culture.

The commissioners have under consideration a plan of work for next year by which it is expected that every stream in the State will receive its share of young native fish. The railroads will be asked to co-operate with them, and if an appropriation is secured large enough to successfully carry out all branches of the work, plenty of fish in all our streams and lakes will only be a question of a few years.

An effort will be made by the commissioners to secure such legislation the coming season as will make it possible to enforce existing laws, or have such laws amended, making them stringent enough to protect the fish. It is a fact not generally known that the decrease in the supply of native fish has been over one-half in the past ten years, and that a marked decrease can be noticed every year, which decrease is to a great extent due to the unlawful use of the seine and net.

GROWTH OF CARP—Schenectady, N. Y., Feb. 1.—Seeing the report from various sections of our country in FOREST AND STREAM in regard to the growth of the German carp, I thought I would let you know how they grow up here in our cold climate.

Last may, about the 25th, our enterprising jeweler, Mr. J. T. Welton, obtained from the New York Commission eleven young carp, the largest of which did not exceed two inches. They were put into a pond of running spring water, about forty by seventy feet, and perhaps three feet deep, with a mud bottom. These fish never have been fed, only for a few days after they were first introduced into their new home.

October 1 some of them exceeded a foot in length, but none of them have ever been weighed and we do not think that any of them spawned last season.

Thank you very much for the exposure of the Dittmar powder.

Also, I think it the duty of every citizen to lift his voice against the "refrigerator act." D. CHAMBERLAIN.

DAMAGE TO THE U. S. SALMON-BREEDING RANCH.—Advices from California say that all of the low lands of the Sacramento Valley are under water from the floods. There has been no mail from the northern part of California for more than a week and only one telegraph line in operation. On the 8th a telegram was received that the Pit, McCloud and Sacramento rivers were very high, ferry-boats washed away and all communication interrupted. The report is that all the Government fish-hatching works on the McCloud River, including all the buildings, have been washed away by the extraordinary flood.

Our informant says: "I have no exact means of knowing, but estimate the loss there will not be less than $25,000. This is based on the statement that all the buildings have been washed away. If the attendants had had notice probably some of the property might have been saved, but until the mails get through we cannot get the particulars."

Later advices say: With the exception of the Post-office, all the buildings of the U. S. Hatching Station, eight in number, were carried away by the flood. The loss will amount to about $15,000."

TRANSPORTATION OF CARP.—That carp can be sent long distances without an attendant is demonstrated by the following: On the 21st of January, N. T. State Fish Commissioner E. G. Blackford sent to Mr. E. Ulrich, Sanford, Orange Co., Fla., two ten gallon cans, each containing ten carp six inches long, and they arrived without loss. They were sent from New York by steamer, and were nine days on the way. There was no change of water, the cover of the cans being perforated to admit air. Mr. Blackford has also sent carp to Cincinnati and Chicago without an attendant.

THE NATIONAL CARP PONDS.—The damage reported by the floods was much exagerated. Advices from Washington say that the ponds are not seriously injured. How many of the carp have been lost it is impossible to say until the ice melts and the water can be drawn off. It is believed that there are enough left for immediate practical service. Their habit of bedding in the mud in winter has probably saved the most of them.

The Kennel.

April 1, at Columbia, Tenn.—Close of entries, National American Kennel Club's second American Field Trial Derby. Joseph H. Dew, Secretary.

April 26, 27, 28 and 29, at New York City.—Westminster Kennel Club Fifth Annual Bench Show, American Institute Building, Third avenue and Sixty-third street. Entries close April 11. Charles Lincoln, Superintendent, No. 138 Fulton street, or P. O. Box 1,700, New York City.

HAVE DOGS AN EXTRA SENSE?

THERE is something about that which is commonly called the scent of the dog, more particularly the hunting dog, which from an observing point of view is not only interesting but, perhaps, a little mysterious.

We are accustomed to accept the theory that a dog follows birds and other game by the aid of the sense of smell very much as we accept a great many other—notably theological—notions and for the same reason—namely, that our fathers did so before us.

In calling this the sense of smell we are forced to wonder at the exceeding fineness and delicacy of a sense which can distinguish the track of a bird long after it has passed along, when even the bird itself held to our own nostrils gives out no perceptible odor.

Not only is this sense in the dog so fine that he distinguishes by it the track of a bird some time after it has passed by, but it is very much finer than simply that, for, of a very short series of such tracks, the dog will tell which was made last and thus follow the trail *toward*, instead of away from, the bird.

If it be the sense of smell which enables our canine friends to do all this, it is evidently a so much finer sense than a man possesses, the difference in degree is so great, that it practically amounts to a difference in kind.

Is it the same even in kind?

If it be by the sense of smell that a dog thus pursues the track of a bird, it follows that the canine sense of smell is so keen and delicate that odors which are so faint as not to be perceptible to the human sense are quite tangible to the sense of the dog.

Now odors which are pungent enough to be perceptible to the human sense, but faint to that sense, disappear in the presence of stronger odors; a faint odor of cologne is neutralized and destroyed in the presence of a strong odor of musk; this fact is a well-known one and needs no further illustration.

The sense of smell in the dog, if it be the same *in kind* with that of man, however much it may differ *in degree*, must need be, it would seem, obedient to the same law.

On applying this test to the case where the dog follows the track of a bird his sense does not seem to be obedient to the law.

Almost every hunter who owns a bird dog has seen this test applied, but has not been specially observant of it. It is not an uncommon occurrence, in hunting, for the dog to come upon, lie down and roll in carrion till he is offensive to the dullest olfacto-

ries, and till he gives off an aroma in the presence of which no other ordinary odor is perceptible to the human sense of smell. If this odor of carrion can thus drown, neutralize and destroy other odors powerful enough to affect the sense of smell in man, how much more overpowering and destructive it must be to those odors which are so faint and fine that the human sense cannot detect them!

Reasoning from analogy there seems to be no escape from the conclusion that the mere *odor* of a bird track can have no practical existence in the presence of an overpowering smell of carrion, and that no more sense of smell could enable its possessor to follow such a track.

The fact in such a case is that the offensive envelope of the effluvium of carrion that the dog carries with him does not, so far as appearance indicates, at all interfere with the dog's ability to pursue the evanescent trail; leading to the conclusion, seemingly at least, that the dog follows the feathered game through the possession of some other sense than smell, some sense that man does not possess and does not know the name and character of.

It is quite conceivable that things tangible and things intangible possess properties and attributes that we do not perceive, simply because we are not equipped with the sense necessary to such perception. For myself I little doubt that there are many senses which we have not, but which we might have possessed had the Creative Power so ruled.

If this proposition is a little mystical, perhaps I can make it clear by an illustration from daily life:

A bell struck near a deaf man fills the air with sound vibrations, but these are as though they did not exist to the deaf man, for he does not possess the sense requisite to their perception—for him there is no such sense as that of sound. A beautiful picture in front of a blind man sends forth outline and color, but they do not exist for the sightless man, for he has not the sense which would enable him to perceive them—for him there is no sense of sight.

In certain mental conditions, which are probably abnormal, we all develop a sense which might not unreasonably be called the sense of *presence*, which tells us that some one whom we know is near, a fact pleasantly put in the saying, "Speak of angels and you will hear their wings." In some persons this sense is almost present, in others rarely.

Since the sense of smell, pure and simple, does not seem to adequately account for the canine power of tracking birds and other game, it does not seem unreasonable to at least ask the question, "Have dogs an extra sense?"

WM. EDGAR SHIONDS.

HYDROPHOBIA.

ON the occasion of a very interesting report of a case of hydrophobia, by Prof. Haverly to the *Acad. de Medicine*, M. Bouley, inspector general of the veterinary schools of France, formulated this great truth:

"*The best way to prevent attacks of this redoubtable malady is to understand it.*"

This knowledge, the readers of *Hygiene for All* will have the good fortune to owe to M. Bouley himself, who has kindly authorized our editor-in-chief to reproduce the *resume* of his work on *Hydrophobia, the means of avoiding its dangers, and of preventing its propagation.*

Here is the tableau of the characters of hydrophobia, as the eminent professor of the museum has so ably indicated them.

I. The madness of the dog is not characterized by fits of fury in the earlier days of his manifestation. On the contrary, it is a disease of benign appearance at first; *but from its beginning, the saliva is virulent, that is, it contains the inoculable germ, and the dog is then much more dangerous from the caresses of its tongue than it may be from its bites, for it has as yet no tendency to bite.*

II. At the beginning of its madness, the dog changes its temper; it becomes sad, sober and taciturn, seeks solitude and retires into the most obscure corners. But it cannot remain long in one place; it is unquiet and agitated, comes and goes, lies down and gets up, roams around, smells, hunts about, scratches with its fore feet. Its movements, its attitudes and its gestures seem to indicate that, for the moment, it sees phantoms, for it bites the air, springs forward and howls as if it were attacking real enemies.

III. Its look is changed; it expresses a sombre sadness and something of the ferocious.

IV. But in this state the dog is not at all aggressive toward man; its character is what it was before. It is docile and submissive to its master, whose voice it obeys, showing some signs of gaiety which bring back, for an instant, the usual expression to its physiognomy.

V. Instead of aggressive tendencies, they are often the contrary, which are manifested in the first stage of madness. Affectionate sentiments toward its masters and familiars about the house are exaggerated in the mad dog, and it expresses them by repeated movements with its tongue, with which it is eager to lick the hands or faces of those it can reach.

VI. This sentiment, very highly developed and very tenacious in the dog, dominates it so much, that in many cases it respects its masters, even in a paroxysm of rage, and so much that they, moreover, preserve great control over it, even when its ferocious instincts commence to manifest themselves and the dog abandons itself to them.

VII The mad dog has not a dread of water; on the contrary, it is eager for it. As long as it can drink, it satisfies its thirst which is always great; and when spasm of its fauces prevents its swallowing, it plunges its nose into the water and bites, so to say, the liquid which it is unable to swallow. The mad dog then is not *hydrophobic; hydrophobia* is not then a sign of madness in the dog.

VIII. The mad dog does not refuse food in the first period of its malady; often even it eats more voraciously than usual.

IX. When the desire to bite, which is one of the essential characteristics of the disease at a certain stage of the development, begins to manifest itself, the animal satisfies it at first upon inert bodies. It gnaws the wood of doors and of furniture, tears clothes, carpets, shoes, grinds straw, hay, hair, wool, between its teeth, eats the ground, and the dung of animals, even its own etc., and accumulates in its stomach the debris of anything with which it's teeth have come in contact.

X. The abundance of the saliva is not a constant sign in the mad dog. Sometimes the mouth is moist, sometimes dry. Before the period of fits, the secretion of saliva is normal; it is exaggerated during this period and dries up at the end of the disease.

XI. The mad dog often expresses the painful sensation it feels from spasm of the fauces, by making with its forefeet on each side of its cheeks the peculiar gestures which a dog does in whose throat a bone is lodged.

XII. In a peculiar variety of canine madness which is called dumb madness, the paralyzed lower jaw is separated from the upper one, and the mouth remains open and dry with a brownish, red color of the mucous membrane which covers it.

XIII. In some cases the rabid dog vomits blood, which comes, in all probability, from wounds of the stomach, caused by the sharp bodies which it has swallowed.

XIV. The voice of the rabid dog always changes in *timbre* and its bark is always completely different from its usual manner. It is rough, husky and is transformed into a jerky howl. In the variety called dumb madness this important symptom is lacking. The disease receives its name from the absolute dumbness of the patients; *dumb or mute madness.*

XV. The sensibility is very much diminished in the mad dog. When struck, or burnt, or wounded, it utters no complaints nor cries by which animals of his species express their sufferings or even their fears simply. There are cases where the rabid dog makes deep wounds upon itself with its teeth and assuages its rage upon its own body, without seeking to injure the persons with whom it is familiar.

XVI The mad dog is always very violently impressed and irritated by the sight of an animal of its own species. When it finds itself in the presence of one or hears it barking, its rabid fury is manifested, if it was still latent, or develops and increases if it was already declared, and it springs toward it to tear it with its teeth. The presence of the dog produces the same impression on animals of other species when they are under the influence of rabies; so that it is correct to say that the dog fills the office of a ferocious agent, by the aid of which one may nearly always, with very great surety, bring out the madness still concealed in an animal which has it.

XVII. The rabid dog often leaves its home at the moment when, in the progress of its malady, ferocious instincts develop in it and begin to dominate over it; and after one, two or three days of wandering, during which it has sought to satisfy its rage upon all living beings which it has encountered, it frequently returns home to die with its master.

XVIII. When the madness has arrived at its period of fury, it is characterized by the impression of ferocity which it gives to the physiognomy of the affected animal and by the desire to bite which it satisfies every time an occasion for it is presented; but it is always against one of its species that it directs its attacks by preference to any other animal.

XIX. The rabid fury is manifested by fits, in the intervals between which the animal, exhausted, falls into a state of relative calm which may cause a doubt as to the nature of its malady.

XX. Healthy dogs seem to be endowed with the faculty of divining the rabid state of an animal of their species, and, instead of quarreling with it, they seek to escape its attacks by flight.

XXI. The rabid dog, when free, attacks first, and with great energy, all living beings it may meet with, but always by preference a dog rather than other animals, and these rather than man. Then, when it has exhausted its fury by its attacks, it goes forward with a vacillating gait, with tail pendant, head inclined toward the ground, its eyes looking wild and mouth open, from which escapes the bluish tongue covered with dust. In this state it does not have very aggressive tendencies, but it still bites everything, man or beast, that comes in its way.

XXII. The mad dog which dies naturally succumbs to paralysis and asphyxia. Up to the last moment the instinct to bite controls it, and it should be feared even when exhaustion seems to have transformed it into an inert body.

XXIII. At the autopsy of a rabid dog there is nearly always seen in the stomach a conglomeration of incongruous bodies, such as hay, straw, hairs, wool, shreds of cloth, pieces of leather, remnants of twine, tow, excrements, earth, leaves, grass, stones, everything which, by their presence together, have a great probative value of the existence of rabies in the animal in whom found.

XXIV. The surest means of preventing the effects of rabic inoculation is immediate cauterization, preferably with the red-hot iron, or lacking this, gunpowder or caustic agents. The sooner this cauterization is made the more one can count on its efficacy.

XXV. If the cauterization cannot be made immediately after the bite, one should, while waiting, wash out the wound, press very energetically to squeeze out the blood, sucking the wound, ejecting very quickly the fluid drawn by the mouth; compress very tightly its edges continually and apply, if possible, a circular ligature to arrest the circulation of the blood.—*Chicago Medical Journal and Examiner.*

BREEDING, TRAINING AND CARE OF BEAGLE HOUNDS.

IN the year 1851, I became possessor of a pair of beagle hounds. Since then, I have owned and bred them continually; for my own use mostly, occasionally parting with some, presenting them to my friends, and of late years selling my surplus.

A that period in this locality I had no trouble in getting good specimens of this breed of either class, I shall hereafter mention in detail. But as my shooting grew in favor, this strain of dogs with but comparatively few exceptions was superceded by pointers at that time, but more recently by the setter. The growing desire for this kind of sport, and the rapid extinction of all winged game has led sporting men to look to other fields for sport, and the hare and rabbit comes in. In almost all sections they may be found in suitable localities for this prolific little creature; and, with proper care, the rabbits cannot become much less in number. I find that if trapping and ferret hunting are allowed, it will soon clear them out. In keeping a record as to sex killed by the gun, two thirds or more are males, while those secured by ferrets are nearly all females; going to show that the females are, in the day time, either in holes or some secure place. I should like very much if others would give their views on this very important matter. As this little hound is rapidly coming in favor again, and as sportsmen are looking in this direction, let us keep alive the rabbit and not neglect to care for him, and begin in time.

As to this coming little beagle, I fail to find but two classes; first, the true English beagle. He should be not less than twelve inches at shoulder, nor more than fifteen inches. He should have a good, round ear, lying close to cheek, with a spread of from fourteen to eighteen inches from tip to tip of ear. The most suitable color is white, black and tan or ticked. Then he will be more readily seen on green or snow. He should have straight, clean forelegs. This dog seems to fill the bill: and I am glad to say, has given entire satisfaction wherever he has been introduced, and I might here mention some kennels of such dogs that I know well and favorably. Those of J. N. Dodge, Detroit, Mc., N. Elmore, Granby, Conn., and General Honeitt, are second to none.

Then comes the little basket or toy beagle, never exceeding twelve inches at the shoulder. I have had them as low as eight inches. They are nice little pets, but too small and delicate for practical purposes; but I should be sorry to see this strain lost.

I see that the bench show managers at Pittsburgh have let in a new class. I think it would have been much better to have made two classes in the dachshounds, for most assuredly he belongs to that strain.

As to breeding, select those that are without doubt pure in blood and well trained, as this feature is vastly important. There seems to be no doubt that it will be imparted to the offspring in a large degree. Such has been the experience of breeders. In color white black and tan seems to be the most fashionable. I am breeding some now that are ticked all over. They are beautiful and as readily seen on ground or snow as the white black and tan. I select for breeding those with a good, clear note, as this is the music for the chase. It is well to have it well developed, and without this very important feature, the sport would be monotonous. I accustom my puppies to follow me at an early age, commencing their training at about three or four months old, taking all the puppies out together. In that way they learn to run together. A dog trained by himself seldom runs well in a pack. The very best thing to train a young dog on is an English rabbit, and they are very easily obtained, and the scent is the same as a wild rabbit or hare. I am now breeding the genuine English hare, for the training of beagles. They are very fleet, and can keep out of the way of the pack. The proper way is to take the rabbit or hare some distance from their burrow, then let the puppies at first run by sight, which they will do readily. The introduction of an old, slow beagle will help them amazingly at the start. The hare will make its way back to the burrow and escape, and can be carried out at any time for another chase. After they are well up to their mode of hunting and tongue has been well developed, take them to good rabbit ground, in some thick cover, as the open country does not afford any sport for this kind of hunting, as a rabbit in nine cases out of ten, after being started, would go straight to hole. I always take my position in the edge of the thicket, and let the dogs do the finding. In the early part of the evening is the best time, for the rabbits will then be on the move and they would be sure to strike a fresh trail and start the rabbit at once. I never follow my dogs, but take a position near where the rabbit has been started, for if not killed or taken to hole it will be sure to return near to starting point. They run in circles generally, making shorter circles every time. You can encourage your dogs as they pass you by in their rounds, but never call them from the track. Should they make a loss and you see where the rabbit has gone, do not be in a hurry to assist them in taking up the track again, but if they should fail to do so, then you may assist them in finding it. I generally do this by calling them to me and waving my hand smartly along where the rabbit has gone. They will soon learn to take up scent in this way readily. In running them frequently in this way, I have had dogs run well and true at less than a year old, when it left to hunting only at the proper season for shooting rabbits it might take you two or three years to train them properly.

The best article on food for dogs was written by Everet Von Culin in FOREST AND STREAM, Vol. 15, No. 15 (Nov. 11, 1880).

GEO. POWNALL.

NEW YORK DOG SHOW.

IT has been decided to hold the fifth annual bench show of the Westminster Kennel Club, as already stated in last week's issue, at the American Institute Building, the dates set apart being April 26, 27, 28 and 29. Mr. Charles Lincoln, who has efficiently superintended these shows from the beginning, arrived in town on Thursday last, and at once opened an office at No. 138 Fulton street. There is no man in the country who has had as great experience in these matters, and the happy possession of a faculty to systematize the classification of the dogs and the management of all detail renders his services indispensable for the success of such enterprises. The arrangements will be on a much larger scale than heretofore. This year there will be 93 classes, against 75 last year, 92 in 1879, 91 in 1878 and 71 in 1877. Champion classes have been provided for mastiffs, St. Bernards, collies, fox-terriers (both dogs and bitches), pugs and Yorkshire terriers. There will be one class for field spaniels over 28 lbs. in weight, one for cocker dogs under 28 lbs., and one for cocker bitches under 28 lbs. Two for bull terriers above and under 25 lbs. in weight respectively, and an extra class for Irish terriers, of which there are now a number in the country.

The building where the show is to be held is much larger than the Madison Square Garden, where the shows before this have taken place; the ventilation is much better arranged, and there will be a large portion of the building set aside for the exercising of the dogs. It has been decided to select American judges for the sporting classes, and the single-handed system will take the place of the old way of having three judges. Not until to-morrow will the selection be made and the number of judges chosen, and the pooling of the different classes together, which each judge is to be allotted, decided upon. Different plans have been suggested, one that there be a separate judge for each of the following classes: English setters, Gordons, Irish and pointers; one judge for the hound classes and spaniels, and one for the non-sporting classes, making six in all. Another plan under discussion is to make four divisions and to place together (1) the English setters and pointers, (2) the Gordons and Irish, (3) the hounds and spaniels, and (4) the non-sporting. This will need but four judges, and although there will be room to have three rings going at once, yet we would prefer to see the more expeditious and less laborious method of having six judges adopted.

STERLING DOG SHOW.

STERLING, ILL., Feb. 14.

Editor Forest and Stream:

I send you the premium list of the first exhibition of the Rock River Valley Poultry and Kennel Club, C. B. Whitford, of St. Louis, Judge. The weather was fearful all the week, it could not have been worse:

English Setter Bitches—1st, T. Donoghue's (La Salle, Ill.) Daisy.
Irish Setter Dogs—1st, T. Donoghue's Irish Fritz; h c, J. E. Currier's George.
Irish Setter Dog Puppies—1st, A. Fulton's (Rock Falls, Ill.) Darby; v h c, H. J. Pease's (Rock Falls, Ill.) Terue; h c, W. H. Miller's (Sterling, Ill.) Raw II.
Irish Setter Bitch Pups—1st, W. H. Wheeler's Lady Wheeler.
Gordon Setter Pups—1st, J. F. Covey's Don.
Pointer Bitches—1st: F. May's Jessie; v h c, A William's Nell.
Pointer Puppies—1st, T. Donoghue's Princess Nell.
Irish Water Spaniels—1st, T. Donoghue's Count Bendigo.
English Bull Dogs—1st, R. B. Commerford's Jack.
Bull Terriers—1st, J. E. Kelley's Joe; v h c, A. Adair's Jack.
Skye Terrier Dogs—1st, E. H. Galt's Jack.
Skye Terrier Bitches—1st, C. A Keefer's Flossy.
Black and Tan Dog—1st, W. P. Ross's Tip.
Black and Tan Bitches—C. A. Keefer's Duffie.
Black and Tan Puppies—1st, C. A. Keefer's Buster; v h c, C. A. Keeefer's Cute.
Special Prizes—A Fulton. (Rock Falls, Ill.) takes one of your specials, the FOREST AND STREAM prize, for best Irish setter pup dog.
T. Donoghue (La Salle, Ill.) takes the other for best Irish setter dog.

The other was not taken as there was not a Llewellin shown. T. Donoghue's Irish water spaniel secured the highest of any dog on exhibition. Their was a large number of exhibitors with their dogs that could not get here on account of the storm, as most all the trains were snowed in along the road. We hope to have a large show next year. Allow me to thank your paper for what you have done for the society in advertising the show, also for your specials of the FOREST AND STREAM. R. B. CHAMBERLAIN, Secretary.

Although the above communication is dated the 14th the post mark on the envelope shows that it was not mailed until the 18th thus accounting for its non appearance in last week's issue.

CORRESPONDENTS' COMMENTS.

JOCKEYING AT FIELD TRIALS.

WE publish below some of the many responses which have come to us since the publication in this journal, February 3, of the article "Jockeying at Field Trials." Numerous private letters from prominent sportsmen, breeders and owners of dogs are of the same tenor.

A Philadelphia correspondent says: "I am very glad to see your article on jockeying at field trials. Unless field trials are run in the interest of all, and not for breeders only, it will soon be found gentlemen will not support them.—G. E."

A Hudson, N. Y., letter says: "Am glad that the cold snap did not prevent you from showing up the jockey. He deserves it all and more.—G. H"

PIEDMONT, N. Y., Feb. 10.—Your answer to Whitford gives general satisfaction, and the opinion is that it will block that little game of circling a dog ahead of another at field trials. I am glad there has been some one who dared to show up the trickery of the thing.—W. P. STEEL.

BALTIMORE, Md.—Allow me to express to you my hearty thanks for your masterly article on jockeying at field trials. In doing this I believe you have the thanks of all well-wishers of the dog. We are able to see now why so many dogs that have been hunted in the field by gentlemen in a sportsmanlike manner and are known to be good are often beaten at field trials. We see now that it is not necessarily because they have met a superior dog, but that the defeat is in many cases caused by these dog jockeys. Why is this jockeying allowed by the judges? Don't you think the field trials would be more largely attended by lovers of the dog and with many more entries if owners would hunt their own animals? I have heard many say they would like to enter, but decline doing so on account of meeting, not a finer dog, but a dog-jockeying shark. I see that this Whitford is to play the *role* of dog judge at the Sterling dog show.—THIRTY-TWO.

Philapelphia, Pa., Feb. 8.—I have carefully read your able reply to the Whitford article, and can say that you may safely rest your case as stated before the sportsmen of this country. The onus of the matter is squarely placed where it belongs, *i. e.*, on the judges, and they should define the difference between hunting the dogs in a sportsmanlike and a gentlemanlike manner.

"THE GREEN-EYED MONSTER"—Havana, Cuba, Feb. 12.—The following is a strange case of a mother being jealous of her puppies. She was a black and tan terrier and was a great pet of a young friend of mine, but after she had pups, three in number

the boy gave his whole attention to the pups, and when they were about ten days old the mother kept whining one day so much that it attracted the attention of the family. She went and lapped them well and shook them to death and buried them in a row, and for more than a week she wasn't known to eat anything, but went where she had buried the puppies and whined constantly. The only way I can account for it is the affect of the climate, for all of her sex are jealous. This country. J. W.

[All animals dislike to have their newly-born offspring petted. We have heard of similar cases with dogs and cats.]

GUSSIE.

OUR illustration this week is of the red Irish setter bitch Gussie, owned by W. H. Pierce, Peekskill, N. Y., and formerly property of H. P. Dortch, of North Carolina. Gussie was awarded first prize at the recent Pittsburgh Bench Show, and is a large, handsome bitch, standing fully twenty-five and one-half inches high at shoulder. She is of good color—all red, with white frill—is an own sister to Champion Arlington, first at Boston and St Louis, 1879, being out of Hobart's Ruby, by Judge Pratt's Dan, he by Scott Rodman's celebrated old Dash.

Gussie is thoroughly broken, very particular and very obedient and has an excellent reputation as a remarkably good field dog; has great speed, with a remarkably keen nose to back it, which she uses to perfection, and is perfectly staunch and very steady. She is also the dam of some excellent field dogs.

THE COCKER CLUB COMMITTEE.—In the election of the Club Committee Messrs. Cummings and Kirk received precisely the same number of votes, and this number less than any one else elected. As it was impossible to decide which should belong to the committee, the names of both were announced as having been chosen. We have received a letter from Mr. Cummings, in which he states that owing to failing health he is unable to accept the position. This, while it will be a matter of regret to many cocker men, will leave the committee seven in number, as originally determined.

READ THIS NOTICE.—The Columbia Veterinary College, No. 217 East 34th street, this city, has kindly offered to make *post mortem* examinations of any specimens sent them, and to report on the same through our columns. The animal must be boxed and sent to the college by express, charges prepaid. This arrangement will admit of our treating diseases of an epidemic character in the most direct way, which may lead to the saving of many valuable animals of the same kennel.

MASSACHUSETTS KENNEL CLUB.—Vice Presidents for 1881, Edward E. Hardy, Edward P. Brown. At the annual meeting the President and Secretary were appointed a committee to represent the club in any movement which in their opinion would aid in procuring a better law for the protection of our game birds.

THE BLUE STAR KENNEL.—Mr. M. P. McKoon, the proprietor of the well-known cocker spaniel breeding kennel, unfurls his flag in another column. Long may it wave!

KENNEL MANAGEMENT.

69 J. H. M., Poughkeepsie, N. Y.—1. I had a cocker spaniel bitch, seven months old, taken five weeks ago with a kind of gagging. A little slimy mucus would sometimes be vomited. Diarhœa set in, and her breath was very offensive. Her nose began to run a little, and was at times hot and very dry. There was considerable fever for two weeks and she drank water freely. She became very weak and her eyes began to run somewhat. Then she began to make a noise in breathing and a sort of groaning and rattling. She would not eat without compulsion. After doing everything for her she died. 2. I have now two of her sisters very low with the same complaint, only they are free from diarrhœa and do not make as yet noise in breathing. One has vomited a worm about five inches long. They seem to waste away. What shall I do for them? Ans. 1. The puppy that died was suffering from gastric irritation. Treatment in such cases: Five drops of laudanum, two drops of fluid extract of ergot, mixed in table-spoonful of water; given four to six times a day until diarrhœa is stopped, keeping up the strength in the meanwhile with nux vomica or any tonic in increased doses. Food: beef tea thickened with oat meal. Good fresh air, pure water and a clean kennel. 2. First try for worms. Give in milk the following vermifuge after twelve hours' fasting: Powdered areca nut (fresh), sixteen grains, and two grains of santonine. Follow with a purge six hours later: olive and castor oil mixed. To strengthen, begin to give five drops of tincture of nux vomica in half an ounce of water three times a day. Add one drop a day to each dose until the doses are increased to ten drops. Write result.

70 J. T. W., Pittsburgh, Pa.—The following is a good cure for mange: Powdered bi-carbonate of potash, one ounce; powdered white vitriol, one-quarter ounce; sub-sulphur, two ounces; lard, eight ounces; mix and rub well into the skin. Feed no meat and administer five drops of Fowler's solution of arsenic twice a day in food. This is the proper dose for a full-grown setter or pointer.

71 J. A. W., Fargo, Dakota.—I have an Irish setter bitch, eight months old, that is troubled with a nervous affection of some kind, and, as I think a great deal of her, and what I have done seems to be of no avail, she gives me some concern. When either standing or lying down her body jerks. This has been the way for four months. If you can tell me what is the matter with her from my diagnosis, and what will cure her, you will confer a favor. Ans. As you omit to state the treatment which has failed, we are not as well informed on the subject as we would wish. Your bitch is probably afflicted slightly with chorea, one of the many evils resulting from distemper. Feed her well on good, sound and stimulating food, and give moderate exercise. The following preparation may assist her until we can hear more definitely from you. Quinine, one drachm; sub-nitrate of bismuth, two drachms; make into twenty pills and give two a day.

72 A. P. S., Boston, Mass.—My Gordon setter, almost three years old, has had the rheumatism, for which I gave him the prescription suggested in Stonehenge. He now seems to be nearly free of the trouble, but is in very poor condition and twitches his left hind leg and hip frequently. Ans. Keep your dog dry and warm, giving moderate but gentle exercise. Feed with laxative food, such as oat meal, vegetables, greens and beef tea. A good tonic may be of use; break an egg in an ounce of sherry, and beat until thoroughly mixed; give half in morning and remainder in the evening. Later on a tablespoonful of the best cod-liver oil will improve condition, but at present have the following prescription prepared by a chemist: Sulphate of quinine, two drachms; nux vomica, pulverized, one scruple; muriate of ammonia, two drachms; made into twenty pills, three of which to be given every day, one morning, noon and evening. Write result.

73 HAYWARD.—From your description the dog probably has chorea, otherwise called St. Vitus' dance. Feed well on light food, and especially see that the bowels are in a properly regulated state. Avoid, however, any resort to physic, but rather accomplish the object by a careful regulation of diet. Where the attack is but slight the dog may live for years a useful animal. Dogs severely afflicted with chorea seldom get completely cured. Proper exercise and good kenneling are necessary. Try the effect of one-eighth to one-quarter grain of nux vomica extract, given in pill three times a day. Also give two tablespoonsfuls of cod-liver oil twice a day, and feed liberally.

74 F. G., Saranac Lake, N. Y.—What can I do for my four-year-old hound who has been sick for three days? He seems stiff in the joints connecting head and neck, and holds his head forward in an unnatural position, resisting all efforts to press the head downward, which apparently gives him much pain. His pulse is rather slow and erratic. He shows a disinclination to move, lying most of the time extended either on side or stomach. His eyes, from which there is a slight discharge, are sunken and expressive of pain. Nose dry, but I have once noticed a very little discharge. Appetite fair; tongue whitish. He was found in this condition in his kennel one morning, though he had seemed well the night before. He has had some diarrhœa for two or three weeks, during which time he lost in flesh, but seems to have gotten entirely over it. Appears to urinate with some difficulty. Ans. The only probable cause rheumatism of the muscles of the neck, or inflammation of some of the glands about the neck; if the latter, they will be swollen and easily discovered. Give him some bi-carbonate of soda and sulphate of magnesia, half teaspoonful of each, every day until well. A light diet and a dry warm bed is advisable.

75 M. O. S., Owen Sound, Ont.—1. Two of my foxhounds are continually shaking their ears; when they scratch them or are touched the hand they howl. Is it not canker? In every other respect they are in first-rate order and hunt two or three times a week. I feed corn meal, scraps, and when meat always well cooked with potatoes or oatmeal mixed. I have used a syringe with warm water and castile soap, then well dried the parts and applied olive oil, but so far without success. 2. I am using an injection of strong salt water for my young dogs as a remedy for worms; it is far ahead of internal medicine. Ans. 1. Yes, your dogs are afflicted with canker, but from your description it is impossible to know whether it is internal or external. Canker is a term of very general application to many diseases, accompanied by a fetid humors; it is equally applied to a disease of the foot of the horse, to that disease of the feet of cattle sometimes called "foul" and also to the disease more generally known as "foot rot" in sheep, but, as far as we are aware, the term is not applied to any disease of the foot of the dog. Internal canker consists of inflammation of the lining membrane of the passage to the ear, which runs on to ulceration and suppuration, and when of long standing a blackish offensive discharge takes place and accumulates in the passage and frequently matting the interior of the ear will be found to be red and inflamed. The dog thus suffering may be observed frequently scratching his ear with his paw, holding his head on one side and giving it a violent shake as though to empty something out of the ear. We believe external canker never exists except as a consequent and concomitant of inflammation, ulceration, or suppuration of the internal passage. We have seen cases where the whole of the external ear has become swollen and tender and the flap thickened and filled with fluid between the skin and the cartilage or gristle. In such cases the best plan is, after bathing the ears well, to open them with a lancet, press out the bloody matter and, having again well washed and softly dried the ears, touch them with the following liniment: Goulard's extract of lead 1 oz., glycerine and carbolic acid ¼ oz., finest olive oil 4½ ozs. The bottle must be well shaken before the liniment is used. For internal canker syringe the ear with lukewarm water and with a camel's hair brush paint the inside of the ear with the following lotion: Sulphate of zinc 12 grains, wine of opium 1 dr., water sufficient to make ½ oz. In treating canker of the ear give the dog a purgative such as Epsom salts ½ oz. in water once a week. The diet must be light and consist partly of boiled green vegetables. No meat should be given. 2. Injections of salt and water are good to rid animals of pin worms, but for round and tape worms medicine must be administered internally.

76 T. A. A., Tarrytown, N. Y.—We must refer you to articles on dog breaking published in this paper last spring, in March, April and May.

77 F. H. H., Lynn, Mass.—Mange: Feed no meat and rub the parts afflicted with Glover's Imperial Mange Cure, which you can procure of Messrs. John P. Lovell & Sons, Dock Square, Boston, Mass. Price, per bottle, 50 cents. The description of Wildair's cocker, given by his owner, is correct. There are a number of nostrums advertised for the destruction of lice, some of which are quite as likely to kill the dog as the parasite. A safe and effective remedy is the sulphuret of calcium (lime and sulphur dutch) which is made as follows: Take flowers of sulphur, 2 lbs.; unslacked lime, 1 lb.; water, 2 gallons. Slake the lime in water, stir in the sulphur, and boil down to one gal on; let it stand till cold, pour off the clear liquid, and make the quantity up to five quarts with cold water. Saturate the coat and skin thoroughly, and, if left so for ten minutes or a quarter of an hour, all that will be left of the vermin will be shrivelled carcasses. Wash the dog then with soap and warm water, and brush and comb until dry. For dogs with tender skins reduce the lotion. Perhaps it may be well to try a weaker solution first and watch its effects.

W. H. PIERCE'S GUSSIE.

78 A. S., York, Pa.—I had a liver-colored setter dog three years old. Last Saturday morning he took sick, vomiting about a pint of blood and slime. At the recommendation of a physician (and not knowing myself what to do) I gave no medicine, but made a good bed for him and tried to keep him quiet. About noon he again vomited up blood and slime, and all this time kept his mouth open with a little slime running out and breathing very hard, but would occasionally walk about a little, but was very weak on his legs. Sunday he kept more quiet, but twice during the day stood up and vomited blood and slime, and appeared to have great pain about the middle of his body, and occasionally moaned very pitifully. Sunday night he seemed to be better, not suffering so much pain, and looked better out of his eyes, but all this time kept his mouth open, breathing very hard. On Monday he lay quietly till noon, when he commenced kicking and trying to get up, crying pitifully, till in the evening when he died. I had him opened and found his intestines black, and could discover nothing else wrong. The man who opened him said he had several dogs the same way and they had been fed pounded glass, but we could find none here. Now, I should like to have your opinion. Ans. Your post-mortem was entirely too lax for us to form a positive conclusion. Moaning and whining denote pain. The vomiting of mucus (slime) and blood indicates a stomach trouble. For both there is treatment; to prescribe nothing relents no credit on the physician. When the domesticated animal is ill a veterinarian is the proper person to give advice. Had you looked at the internal aspect of the stomach you would doubtless have found it similar to the intestines; but, as you passed this organ over in silence, an absolute diagnosis is impossible. We suppose, however, your animal suffered from gastritis (inflammation of the stomach), of which we will give you the causes, symptoms and post-mortem appearance. So will then be able to judge for yourself whether the supposition is correct or not. Causes—Anything that will irritate the stomach, whether it be a poison, indigestible food (especially sharp pieces of bone) or other substances, wood, glass, etc., we have seen it caused in two instances from swallowing small pieces of whalebone), external violence (blows, kicks, etc.). Symptoms—Vomiting; bowels either relaxed or constipated; considerable fever; nose hot and dry; breathing accelerated; pulse small and quick; mucous membranes injected; tongue furred, with intense thirst. The animal lies flat on his side, or stretches himself full length on belly, on the coolest spot he can find, moaning and whining at intervals; expression of countenance indicates pain. As the disease progresses to a fatal termination, the moaning becomes more frequent, the search for relief continuous. Sensorial rigors, cold extremities, sunken eyes, a rapid, almost imperceptible pulse, sudden cessation of pain, denote that gangrene has set in, and the animal dies gradually and quietly or in delirium. Post-mortem appearance—Intense redness of mucous membrane of stomach, either in patches or diffused. When any length of time is allowed to pass between the animal's death and the examination of the parts, this deep red becomes a dark purple. If the disease was caused by a poison the stomach may be perforated. Treatment—Time water gruel, given in small and repeated doses; opium, 3 to 10 grains; enemas of soap or oil and water, with bland drinks, such as linseed tea, barley water, weak beef tea; give cold water, like everything else, in small but often-repeated doses. It is not necessary to have all the above symptoms to have the disease they describe. We give you a typical case: you can judge for yourself. We may add two things here, which few, if any, canine authorities mention: That *enteritis*, inflammation of mucous lining of the intestine (it was his disease which caused the dark appearance of intestine described), is often the result of gastritis; that when gastritis is caused by a poison the bowels, as a rule, are relaxed.

79 B. F. P., Louisville, Ky.—Your four-year-old setter dog is probably suffering from rheumatism, a common disease in dogs. The bowels should be freely acted on, and for this purpose use the following pills: Take podophyllin 6 grs., compound extract of colocynth 36 grs., powdered rhubarb 48 grs., extract of henbane 36 grs., mix and make into twenty four pills. The dose is from three to five pills, according to age and size; a little warm broth given afterward will assist action. Administer internally a large half teaspoonful of bi-carbonate of soda dissolved in water three times a day. A light diet is advisable.

80 J. H. B., Philadelphia.—Having removed the worms in your dog by freshly-powdered areca nut and santonine, we would advise you to give him two grains of quinine twice a day and in addition a dessertspoonful of cod-liver oil once each day.

81 M. D. G., Boston.—See answer to M. O. S., Owen Sound, in this column.

KENNEL NOTES.

**** *Breeders and owners of sporting dogs are invited to send memoranda of names claimed, brel, whelps, sales, etc., for insertion in this column. We make no charge for the publication of such notes; but request in each case the notice be made up in accordance with our form, that the name of both owner and dog be written legibly, or printed, and that the strain to which the animal belongs be distinctly stated.*

NAMES CLAIMED.

Wilbur—Mr. J. B. Rohrman, of Philadelphia, Pa., claims the name of Wilbur for red Irish setter puppy, whelped July 5, 1880, by Rory O'More out of Mr. W. H. Pierce's Gussie. Purchased from Mr. W. A. Callender, Albany, N. Y.

Tag—Mr. James S. Brown, of Brooklyn, L. I., claims the name of Tag for liver and white setter dog puppy out of Mr. Walter G. Murphy's Elena by his Ben.

Jupiter—Mr. Peter M. Moscrip, Hamden, Delaware County, N. Y., claims the name of Jupiter for his liver-colored cocker spaniel dog, three years old, out of Fannie by Curly.

Daisy Me—Mr. Mack W. Miner, Waukegan, Ills., claims the name of Daisy Me for black setter bitch puppy by Mr. D. W. Johnson's Gordon setter Bob out of Col. Griffith's Belle.

Ted. W. P. Davison, Lockport, N. Y., claims the name of Ted for his red setter dog, whelped Nov. 1, 1879, out of Mr. T. P. Montgomery's (Harrisburg, Pa.,) Elsie by same owner's Nix.

Dante—The Mohawk Kennel, Chatham, Ont., claims the name of Dante for white, black and tan puppy, six months old, by Dash III. out of Mina, purchased of Mr. Walter H. Beebe, of New York city.

Noisy—Mr. J. J. Donovan, of Boston, Mass., claims the name of Noisy for his red Irish setter bitch puppy, whelped Dec. 9, 1880, out of Mag by Elcho.

Bye Bye and Long Taw—Mr. M. W. Miner, of Waukegan, Ills., claims the names of Bye Bye and Long Taw for the two Scotch deerhound puppies, dog and bitch, out of Jessie by Bruce, purchased of Mr. J. H. Whitman, Chicago, Ill.

Ray—Mr. Edward S. Bradford, of Holyoke, Mass., claims the name of Ray for pointer dog formerly the property of Mr. T. M. Aldrich, of Providence, R. I., out of Lincoln & Hellyar's Daisy by Whiting's Duke.

Frolick—Mr. J. P. Thomas, of West Whiteland, Pa., claims the name of Frolick for liver and white cocker bitch, four months old, out of Nellie by Rex, purchased of Mr. Robert Walker.

Squaw—Mr. J. P. Tomas, West Whiteland, Pa., claims the name of Squaw for black cocker bitch puppy out of Jo-ie by Wildair.

Flos—Mr. J. P. Thomas, West Whiteland, Pa., claims the name of Flos for chestnut and tan cocker bitch puppy out of Fannie by Robin Adair.

Nell. Mr. John Fawcett, of McKeesport, Pa., claims the name of Nell for imported lemon and white pointer bitch, by Rain's Mager out of Paget's Fly, February, G. s., Humlets G. D. Nina.

Joe—Mr. John Fawcett, of McKeesport, Pa., claims the name of Joe for liver and white pointer dog by Shorthose's Sam out of Flash.

Duke—Mr. John Fawcett, of McKeesport, Pa., claims the name of Duke for lemon and white pointer dog by owner's Joe out of his Nell.

Duke II—Mr. John Fawcett, of McKeesport, Pa., claims the name of Duke II. for lemon and white pointer dog by owner's Joe out of his Nell.

Garfield—Mr. John Fawcett, of McKeesport, Pa., claims the name of Garfield for lemon and white pointer puppy by owner's Joe out of Rose.

Hancock—Mr. John Fawcett, of McKeesport, Pa., claims the name of Hancock for lemon and white pointer puppy by owner's Duke out of his Rose.

Juno—Mr. John Fawcett, of McKeesport, Pa., claims the name of Juno for red Irish setter bitch by Stewart Robison's St. Patrick II. out of Paget's Fly.

Jim—Mr. John Fawcett, of McKeesport, Pa., claims the name of Jim for imported dachshund out of Gaine by Drummer.

Rover—Mr. John Fawcett, of McKeesport, Pa., claims the name of Rover for his dachshund dog out of Huntercup by Ben. Rover arrived from Germany on Feb. 12.

Queen—Mr. John Fawcett, of McKeesport, Pa., claims the name of Queen for his dachshund bitch by Edward Saxe's Wehner out of same owner's Gip. Queen arrived from Germany on Feb. 12.

Dick—Mr. John Fawcett, of McKeesport, Pa., claims the name of Dick for red Irish setter dog by Stewart Robison's St. Patrick II. out of his May.

Pan I.—Mr. John Fawcett, of McKeesport, Pa., claims the name of Pan I. for English setter bitch by owner's Duke out of his Pan.

Dubie—Mr. John Fawcett, of McKeesport, Pa., claims the name of Dubie for imported lemon Belton setter dog by Grouse out of Fly.

Oak and Leaf—Mr. H. Malcolm, of Baltimore, Md., claims the names of Oak for dog puppy and Leaf for bitch puppy out of his Dreamless (Toledo Kennel Club's Grouse-Dream II.) by owner's Malcolm (Munn's Duke-Tilly's Dream).

Ruby II.—Mr. Gard. G. Hammond, of Walnut Grove, New London, Conn., claims the name of Ruby II. for his Chesapeake Bay bitch puppy, whelped June 4, 1880, out of his Rose by his Rake.

Ida—Mr. J. N. Dodge, 81 Pine st., Detroit, claims the name of Ida for a white, black and tan beagle bitch puppy by Rattler out of Sill, sold to Mr. W. H. Todd, of Vermillion, O.

Sound. J. N. Dodge, 81 Pine st., Detroit, claims the name of Sound for a white, black and tan beagle dog puppy by Rattler out of Sill, sold Mr. D. B. Young, of Hamilton, Ont.

Nona—Mr. J. N. Dodge, 81 Pine st., Detroit, claims the name of Nona for a white, black and tan beagle bitch puppy by Rattler out

of Fan, sold W. P. Percival, Palo, Mich.

Fret—Mr. J. N. Dodge, 81 Pine st., Detroit, claims the name of Fred for the white, black and tan beagle dog puppy by Rattler out of Sill, sold to Mr. W. P. Percival, of Palo, Mich.

Trump—Mr. J. N. Dodge, 81 Pine st., Detroit, claims the name of Trump for the white, black and tan beagle dog puppy by Rattler out of Sill, sold Mr. W. R. Shedd, of Waltham, Mass.

Top Snap, Pistol Grip, Double Bolt, Choke and Bird—Mr. J. N. Dodge, 81 Pine st., Detroit, claims the names Top-Snap, Pistol Grip, Double Bolt, and Choke for four dog puppies, and Bird for the bitch puppy sold Mr. N. Elmore, Granby, Conn. Puppies all by Ringwood II. out of Flora.

BRED.

May-Rover—Mr. A. Bailey's orange and white setter bitch May to Mr. T. Denmead's (Baltimore, Md.,) imported red Irish setter dog Rover, on Feb. 3, 1881.

Nancy-Rover—Mr. R. Gill's setter bitch Nancy (Hutchinson's imported Rob-Belle) to Mr. T. Denmead's (Baltimore, Md.,) imported red Irish setter dog Rover, on Feb. 9, 1881.

Queen-Elcho II.—Centralia (Ills.) Kennel Club's black and tan Gordon setter bitch Queen to Dr. J. J. Jeuuelle's Elcho II.

Queen-Baron—Mr. J. F. Kirk's (Toronto, Ont.,) imported black cocker bitch Queen to same owner's imported liver dog Baron, on Feb. 14, 1881.

Judy-Sandy—Mr. M. H. Clark's (Clarksville, Tenn.,) imported Judy to Sandy, Feb. 15, 1881.

Turk-Dick—Mr. Tom Warwood (Ludlow, Ky.,) has bred his red Irish setter bitch Pert to his white, black and tan Gordon setter Dick.

Fly-Rex—Mr. O. Francis Caldwell's (N. J.,) Scotch collie bitch Fly to Lindsay's Rose, Feb. 9, 1881.

Shepherdess-Rex—Mr. Wm. Lindsay's (Elizabeth, N. J.,) imported Scotch collie bitch Shepherdess to Lindsay's Rex, Feb. 11.

Fairy-Rex—Mr. A. Galloway's (Linden, N. J.,) collie bitch Fairy to Lindsay's Rex, first prize, New York, 1880.

Flora Bell-Dash II.—H. B. Stoll's native red and white setter bitch Flora Bell to Dash II., Feb. 16, 1881.

Luce-Leicester—Dr. Emlin Physick's (Cape May City, N. J.) Luce (formerly Psyche) to A. H. Moore's champion Leicester.

Belle Rattler—J. N. Dodge's champion beagle Rattler to N. Elmore's Belle, Feb. 16, 1881.

Music-Ringwood II.—J. N. Dodge's foot beagle Ringwood II. to Wm. Smith's Music, Feb. 14, 1881.

Ringwood II.-Fan—J. N. Dodge's foot beagle Ringwood II. to R. M. Baker's Fan, Feb. 16, 1881.

WHELPS.

Prairie Rose—Mr. F. L. Sheldon's (Rahway, N. J.,) setter bitch Prairie Rose, whelped Feb. 4, 1881, eleven puppies, eight dogs and three bitches, black and white, and black, white and tan, by St. Elmo.

Nell—John Fawcett's pointer bitch Nell whelped on Feb. 1, 1881, nine puppies, seven dogs and two bitches, all lemon and white, by owner's Joe.

Juno—John Fawcett's red Irish Juno whelped on Feb. 8, 1881, nine puppies, six dogs and three bitches, by owner's Tilden.

SALES.

Elcho-Man Whelp—Mr. J. J. Donovan, of Boston, Mass., has purchased from Mr. Geo. A. Kimball, of Chelsea, Mass., a red Irish setter bitch puppy, out of Kimball's Mag by champion Elcho.

Lady Byron—Mr. Emory P. Robinson, of Sidney, O., has sold to Mr. J. M. Haynes, of Wilmington, O., the four-year-old Laverack and Llewellin setter bitch Lady Byron (Carlowitz-Dodge's Rose).

Bruce-Jessie Whelps—Mr. M. W. Miner, of Waukegan, Ills., has purchased of Mr. J. H. Whitman, Chicago, Ills., two Scotch deerhound puppies, whelped May 12, 1880, out of Jessie by Bruce.

Rob-Belle Whelp—Mr. Mack W. Miner has bought of Mr. A. McArthur, Waukegan, Ills., a black setter bitch puppy, sired by Mr. D. W. Johnson's (Richmond, Ind.,) Gordon setter Bob out of Col. Griffith's (Waukegan, Ills.,) Belle.

Pet Laverack—Mr. J. J. Snellenburg, of New Brighton, Pa., has bought back from Mr. J. B. Reno the pure Laverack bitch Pet Laverack, out of Peeress by Thunder. She is litter sister to Lu and Mack Laverack.

Sport—Mr. Jas. K. Boyd, of New York city, has sold his English setter dog Sport to Mr. W. A. Jenkins, of Natchez, Miss.

Rattler-Sill Whelp—Mr. J. N. Dodge 81 Pine st., Detroit, sold Mr. D. D. Young, of Hamilton, Ont., a white, black and tan beagle dog puppy, 5 months old, by Rattler (imported Warrior-Gen. Rowett's Rosy) out of Mr. J. N. Dodge's Sill.

Rattler-Sill Whelp—Mr. J. N. Dodge, 81 Pine st., Detroit, sold Mr. Hill, of Randolph st., Detroit, a white, black and tan beagle dog puppy, 5 months old, by Rattler (imported Warrior-Gen. Rowett's Rosey) out of Mr. J. N. Dodge's Sill.

Rattler-Sill Whelp—Mr. J. N. Dodge, 81 Pine st., Detroit, sold Mr. W. E. Shedd, of Waltham, Mass., a white, black and tan beagle dog puppy, 5 months old, by Rattler (imported Warrior-Gen. Rowett's Rosey) out of Mr. J. N. Dodge's Sill.

Rattler Sill Whelp—Mr. J. N. Dodge, 81 Pine st., Detroit, sold Mr. W. H. Todd, of Vermillion, O., a white, black and tan beagle bitch puppy, 5 months old, by Rattler (imported Warrior-Gen. Rowett's Rosey) out of Mr J. N. Dodge's Sill.

Ringwood II.-Flora Whelp—Mr. J. N. Dodge, 81 Pine st., Detroit, has sold to Mr. N. Elmore, Granby, Conn., a mottled white, black and tan beagle dog puppy, two months old, by Ringwood II. (imported Ringwood-Roxy) out of Mr. J. N. Dodge's Flora.

Ringwood II.-Flora Whelp—Mr. J. N. Dodge, 81 Pine st., Detroit, has sold to Mr. N. Elmore, Granby, Conn., a white, black and tan beagle dog puppy, two months old, by Ringwood II. (imported Ringwood-Roxy) out of Mr. J. N. Dodge's Flora.

Rattler-Fan Whelp—Mr. J. N. Dodge, 81 Pine st., Detroit, has sold to W. J. Percival, Palo, Mich., a white, black and tan beagle bitch puppy, six months old, litter sister to Belle, who took first in puppy class, Pittsburgh, 1881, by Rattler (imported Warrior-Gen. Rowett's Rosey) out of R. M. Baker's Fan.

Rattler-Sill Whelp—J. N. Dodge, 81 Pine st., Detroit, has sold to W. J. Percival, of Palo, Mich., a white, black and tan beagle dog puppy, five months old, by Rattler (imported Warrior-Gen. Rowett's Rosey) out of J. N. Dodge's Sill.

Ringwood II.-Flora Whelp—J. N. Dodge, 81 Pine st., Detroit, sold to N. Elmore, of Granby, Conn., a mottled white, black and tan beagle bitch puppy, two months old, by Ringwood II. (imported Ringwood-Rosey) out of J. N. Dodge's Flora.

Ringwood II.-Flora Whelp—J. N. Dodge, 81 Pine st., Detroit, sold to N. Elmore, of Granby, Conn., a mottled white, black and tan dog puppy, two months old, by Ringwood II. (imported Ringwood-Roxy) out of J. N. Dodge's Flora.

Ringwood II.-Flora Whelp—J. N. Dodge, 81 Pine st., Detroit, sold N. Elmore, Granby, Conn., a mottled white, black and tan dog puppy, two months old, by Ringwood II. (imported Ringwood-Roxy) out of J. N. Dodge's Flora.

Dash II.—H. B. Stoll, of Geneva, N. Y., has purchased of Dr. H. A. Rosenthal, Brooklyn, the orange and white English setter dog Dash II. (port-Flora).

Duke of Beaufort—A. H. Moore, of Philadelphia, has sold to J. H. Goodsell, of Orange, N. J., the black, white and tan ticked imported English setter dog Duke of Beaufort, out of Fairy II. by Pride of the Border.

Nantawara—J. Otis Fellows, of Hornellsville, N. Y., has sold to Fred. Bill, of Burns, Allegany Co., N. Y., the black, white and tan ticked foxhound bitch Nantoura, whelped Oct. 29, 1880, by Drum out of Smoke.

Robin Adair Fannie Whelp—J. Otis Fellows, of Hornellsville, N. Y., has sold to A. R. Wallace a liver and white cocker bitch puppy, out of Fannie by Robin Adair.

PRESENTATION.

Mr. M. W. Miner, of Waukegan, Ills., has presented the black setter bitch puppy Daisy Me, by Bob out of Belle, to Mr. W. L. Parks, Port Royal, Tenn.

IMPORTATION.

Mozart II.—Mr. M. A. Magner, of Boston, Mass., has imported another Yorkshire terrier, Mozart III. He is about three years old, has a beautiful blue and uniform and straight coat; the golden tan markings are rich; weight 6½ lbs.

THE ENGLISH POINTER.

[CONTINUED FROM PAGE 14.]

FOR years Devonshire has been the great home of the pointer in England, and Mr. Francis, of Exeter, and Mr. S. Price, of Bow, Devon, have done much for gaining this southern county the reputation it bears so justly for the production of first-rate specimens of the breed. The latter has certainly gained immortality by breeding Wagg, a dog who in his day knew no rival, but who at the time of writing is beginning to show traces of that great destroyer—Time. Mr. E. C. Norrish, too, of Crediton, is rapidly making himself a name as an exhibitor of pointers, and is in possession of a remarkably handsome brace of liver-and-whites in the persons of Digby and Revel, who began to win prizes in first-rate company when only a few months old. The credit of breeding these dogs, however, is due to Mr. R. Andrews, from whom Mr. Norrish obtained them.

Among older breeders the names of Mr. T. Statter, Mr. C. H. Mason, Lord Sefton, Lord Downe, and Mr. Garth, Q. C., appear most prominently, and their blood is eagerly treasured by breeders.

The dog we have chosen as the subject of illustration in our colored plate is Wagg, who is the property of Mr. Richard J. Lloyd Price, of Rhiwlas. As remarked before, he was not bred by his present owner, but by Mr. Samuel Price, of Devonshire. Wagg was born March, 1871, and is by Champion Sancho out of Sappho, is liver and white in color, weighs sixty-five pounds, and measures as follows: Length of head, ten inches; girth of muzzle, ten inches; height at shoulder, twenty-four inches; girth of chest, thirty inches; girth of loin, twenty-three inches; girth of skull, eighteen inches; girth of forearm, seven and three-quarter inches.

The following list of his triumphs speak for his quality, and need no further comment—Field Trials: Field Trials divided Clinton Stakes at Devon, 1874. Shows:—1st Birmingham, 1874; 1st Crystal Palace; 1st and cup Exeter; 1st Truro; 1st and cup Nottingham; 1st and cup for best pointer in the whole show, Birmingham, 1875; 1st Crystal Palace; 1st Brighton; 2d Exeter; and 1st and cup for best pointer in the whole show, Birmingham, 1876; champion prize, Birmingham; champion prize, Kennel Club Show, Alexandra Palace, 1877; 1st Kendal; 1st Oxford Show; champion, Crystal Palace; 1st Cleckheaton; 1st and cup for best pointer in show, Blaydon-on-Tyne; 1st Darlington; 1st Brighouse; 1st Great Horton; 1st Whitby; 1st Thornton; 1st Queensbury; 1st Bingley; 1st Skipton; 1st Todmorden, and cup for best sporting dog; 1st Wakefield; 1st Farnworth; champion Birmingham; champion kennel club show, Alexandra Palace; and champion Kendal, 1878; 1st and cup for best sporting dog in the show, Wolverhampton; 1st and cup for best sporting dog, Stockport, 1879; champion cup Irish Kennel Club show, Dublin, April, 1879; 1st Spennymoor, 1879; 1st and special cup, Great International Dog Show, Hanover, Germany, 1879; 1st and special cup for the best dog in all classes of the show, Ripon, June 10, 1879; champion prize, Kennel Club summer show, Alexandra Palace, July, 1879, and cup for best pointer in the whole show; 1st and extra cup for best dog in the whole show, Heckmondwike, 1879; 1st and cup for best sporting dog, Cleckheaton, 1879; 1st Darlington, 1879, 1st and extra cup, Brighouse, 1879; Hayley Hill, 1879; special cup for best sporting dog, a handsome clock presented by Spratt's patent; 1st Whitby; 1st Thornton, Bradford, Yorks; 1st Blackpool; 1st Keighley; 1st and cup Woodsome, Huddersfield; 1st Halifax; 1st Armley; 1st variety class and cup for best dog in the field, Wortley; 1st and cup, Todmorden; champion Bishop Auckland; 1st Farnworth; 1st and cup for best pointer, K. C. Show, Brighton; champion Birmingham, 1879; 1st and cup Bradford 1880; 1st (Ehrenpreis) and Emperor's cup for best sporting dog, Berlin, 1880; champion Crystal Palace, 1880; 1st Thorne, 1880.

Belle, the subject of the engraving which accompanies this article, is also the property of Mr. Richard J. Lloyd Price. She was bred by Lord Henry Bentinck in 1870, and is by his Ranger out of Grouse. Belle weighs fifty-five pounds, and measures as follows: Length of head, nine inches; girth of muzzle, eight and a half inches; girth of skull, eighteen inches; height at shoulder, twenty-four inches; girth of chest, twenty-eight inches, girth of loin, twenty-one inches; girth of forearm, nine inches.

The following are among her performances, from which it will be seen that she, the course of her illustrious career, has succeeded in lowering the colors of Mr. Purcell Llewellyn's Countess and Mr. Macdona's champion Ranger:—County stakes for all-aged bitches at Vaynol Field Trials, 1872, and of Judy of the Bangor stakes for pointer braces at the same meeting. Won also the County stakes for aged pointer bitches, at the National Pointer and Setter Field Trials, held at Combermere, Shrewsbury, April 29, 1873, and with her daughter Grecian Bend, won the Acton Reynald stakes for pointer braces, at the same meeting; also at the Ground Field Trials 1873, second with Mohammed Ball, her son, in the Penllyn stakes for braces, August 13, 1873, and 1st in the Rhiwlas stakes for all-aged pointers and setters, August 16, beating Mr. Macdona's Ranger, Mr. Llewellyn's Countess and Flax, Mr. Statter's Rob Roy, and other celebrated animals, after which performance she was withdrawn from public competition and put to breeding purposes only. Appended are the points she made in the Rhiwlas stakes, 1873, and County stakes, Vaynol, 1872:

RHIWLAS STAKES.

VALUE OF POINTS WHEN PERFECT.

	30	20	20	15	10	5	100
	Nose.	Pace and style of hunting.	Breaking.	Pointing (style and steadiness).	Backing.	Drawing on game or coming to.	Total.
Belle.	27½	20	20	15	10	5	97½

COUNTY STAKES, VAYNOL, 1872.

Belle.	30	20	20	15	10	5	100

Full marks, a feat only once accomplished, except by Belle.

MEASUREMENTS OF BELLE, TAKEN MARCH 13, 1874.*

Round chest	2ft.	1½in.
Nose to root of tail	3	2¾
Height at shoulder	2	0
Head, skull-bone to nose	0	8
Round face, under eyes	1	3
Round thigh	1	8
Round loin	1	8
Round skull	1	3
Skull-bone to shoulder-blade	0	10

While alluding to famous pointers, and Drake especially, the pedigree of this great dog should not be omitted. We therefore give it, and also a short history of the crack, as they appear in Mr. R. J. Lloyd Price's Kennel List.

Drake was purchased at Sir R. Garth's sale, July 14, 1874, for 150 guineas. Died April 22, 1877.

DRAKE.

Doll. | Rap.

Jilt. | Mr. Combepatch's Don.

Mice. | Mr. Newton's Ranger.* | Lord Lichfield's Juno. | Lord Lichfield's Jasper. | Lord Lichfield's Nonsk. | Owen Hills Joker. | Mr. Marriott's Moll. | Mr. Cornwall Leigh's Rap. | Mr. Corbett's Kate. Mr. Cornwall Leigh's Peg.

Lord Derby's Belle. | Mr. Bentinck's Tell. Mr. Estes' (of Okeneithe) Juno. Mr. Odin's Dido. Dog of Mr. Stanhope's, name unknown. | Lord Sefton's Major. | Capt. Whittes' Monarch. Lord Tilt's Jill.

Daisy (from Lord Derby's Kennels). | Sir T. Whichcote's Ranger.* Mr. Foster's (of Nottingham) Ruth. | Mr. Bonnor's Nell. Mr. Newton's Nell.

*These are taken from the Rhiwlas List, Kennel forwarded us by Mr. R. J. Lloyd Price.

PEDIGREE OF MR. NEWTON'S RANGER.

Sire, Sir T. Whichcote's Ranger.—Dam, Mr. Foster's Ruth.
Dog of Mr. Stanhope's.—Mr. Odin's Dido.—Mr. Newbatt's George.—Mr. Newbatt's Nell.
Lord H. Bentinck's Jovial.—Lord Craven's Venus.
Mr. Ellis's Rake.—Lord Villiers' Maymus.—Lord Craven's Bess.
Sir H. Goodrich's Jewel.—Mr. Twibet's Jewel (Laxten Kennels).

MEASUREMENTS OF DRAKE, TAKEN OCTOBER 25, 1874.

Round chest	2ft.	5in.
Nose to root of tail	3	0
Height at shoulder	2	1
Head, skull-bone to nose	0	8
Round face, under eyes	0	11
Round thigh	1	2
Round loin	1	10½
Round skull	1	4½
Skull-bone to shoulder-blade	0	8½

Drake's performances were:—1st prize Puppy Stakes, Stafford Trials, 1868; 1st prize: All Aged Stakes, ditto, ditto; 1st prize, Braces (with Mars), ditto, ditto; 1st prize, Champion Cup, ditto, 1869; 1st prize, Champion Cup, Shrewsbury Trials, 1870.—Drake was sire of the winners of the 1st, 2d and 3d prizes, Puppy Stakes, Shrewsbury, 1874; also of the winner, Dandy Drake, and grandsire of second and third in 1878; also of Beau, Mallard, Romp, Lucky Sixpence, and Gypsy and Yellow Drakes, of Lord of Kendall (winner of the Field Trial, Derby, 1879), and of Tick, in the Rhiwlas Kennels, as well as Lord Downe's Bang, Drake II., Mars, Grace, Jill and Bounce; Lord Derby's Drake and Dutchess; Lord Litchfield's Daisy; Mr. Barclay Field's Biot, and Mr. Price's Rose; Sir R. Garth's Mitè II.; and many other Field Trial and Show Bench winners. Is also grandsire to Mr. Pilkington's Garnet and Faust; Mr. Barclay Field's Drake and Pride, and many others. We may here state that Faust was sold to America last year for the large sum of £450.

Considerable judgment is required in selecting a pointer, for to no breed of dog is the axiom of "handsome is as handsome does" more applicable. Many of the very best Field Trial dogs of modern days, having been singularly lacking in quality, additional importance has been given to the belief already in existence that in the matter of a pointer good looks go for very little. Such is, however, by no means the case, and if the institution of dog shows has done nothing else, it has had the effect of improving the appearance of the modern pointer very considerably. Until owners were in a position to be able to compare their dogs with those of their neighbors, naturally enough the sportsman was to a certain extent indifferent about his dog's appearance. When, however, it came to be a matter of winning credit for his kennel, a new aspect of affairs appeared, and pointer men seemed to be particularly affected by the craze for improving the appearance of the breed, as before said. In selecting a pointer a very great deal depends upon the nature of the circumstances under which he is to be worked, and the strength of the sportsman who wishes to use the dog. The small, active dog is all very well if he is only intended to be shot over in a country where there is not much hard work to be gone through, and the big lumbering dog is also very serviceable under similar circumstances, or if the sportsman who proposes to work him is unable to undergo a vast amount of work or hardship. Judging, therefore, from the above remarks, it can be safely taken as a general maxim in pointer judging that a good middle-size dog is the best to select for general purposes of sport, yet it is by no means a wise proceeding to select an indifferent specimen of the middle-weight in preference to superior large or small-sized pointers. There are exceptions to every rule, but it is generally safer to trust in the undeveloped excellence of a good-looking dog than to rely upon coming across a diamond in the rough; so we will at once proceed to lay before our readers a description of what a pointer should be like.

*Mr. Newton's Ranger, "Champion Pointer of England," awarded Prize at Leeds, July 16; Birmingham, December 2, 1861; Preston, September 2, 1862; Asburnham Hall, Chelsea, March 23; and Paris, May 4, 1863.

[Reprinted from advance sheets of Vero Shaw's "Book of the Dog," furnished to the FOREST AND STREAM by the author, through Cassell, Petter, Galpin & Co., publishers, No. 596 Broadway, New York.]

EASTERN FIELD TRIAL WINNERS.

We have had struck off upon finely-tinted paper the portraits which appeared in recent numbers of the winning dogs at the late field trials at Robin's Island. The pictures are very neatly executed, and as the originals were drawn from sittings, by the eminent artists Mr. E. Forbes, of this city, and Mr. J. M. Tracy, of St. Louis, Mo., we do not hesitate to recommend them to our readers. See notice in another column.

Rheumatism comes from inactive kidneys. Hop Bitters never fails to cure it. Read advertisement.

Yachting and Canoeing.

THE TWO-TONNER.

Editor Forest and Stream:

You have hit it exactly. The only change I might suggest is a trifle less flare to the midship frame near deck. However, I propose to build from your lines and expect to begin work soon. X.

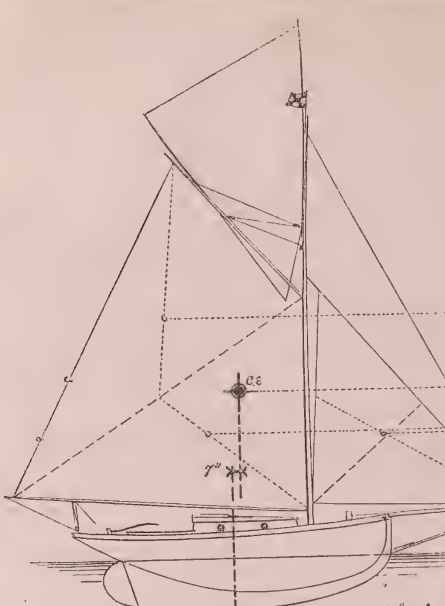
[It must be borne in mind that a yacht in actual relief will give to the eye a different impression from the projections on paper. The flare in the design will not appear half as much in relief, and her topsides will look almost plumb. The same applies to the sheer. In the drawing it is rather too much for good looks, but in relief it will appear a great deal less. Apart from this there were good grounds for carrying out the midship frame above water as shown. Less flare would have produced a "straight of breadth" in the inclined line, which would not have belonged to the ends, and the work of the latter would in part have been thrown away. The flare also gives more gangway, wider house, and more floor to cabin in consequence. —ED.]

Editor Forest and Stream:

Last FOREST AND STREAM just to hand. I want to compliment you on the design of the small boat. I like her much, and trust that she will be the forerunner of many more. I like the after body very much, and know that that shape of frame is about the thing. I agree with you that we must seek a compromise between the narrow English cutter and our own flat bottoms, and think your design meets the question fully. CRUISER.

Editor Forest and Stream:

I was glad last night to see your small craft. She would make a dry and lively little craft and will likely be built from. J. H.



Editor Forest and Stream:

I shall continue to buy the FOREST AND STREAM, which I have taken for six or seven years, and I regard its articles on all subjects as the best to be found. I have waited a long time for the little cutter, which I pronounce a perfect gem. E. C. W.

Editor Forest and Stream:

In your plans of Feb. 17, how would it do to add ten feet to extreme length, locate meta-centre and centre of gravity on load-water line and ballast with lead on the keel? CORINTHIAN.

[The centre of gravity can readily be brought down to the water-line by lighter scantling and more ballast. The meta-centre should always be kept above the former, even at initial angles, or the boat would be decidedly too crank when near the plumb, a slight shift of crew, etc., sending her down to find bearings. If not, is

added to length give about 9ft. beam on waterline and 4½ to 5ft. hold. Increasing length only would make a narrow boat of small displacement, good down the wind but not weatherly—not the most satisfactory arrangements of size and heavily handicapped in sailing on length. Lead is good, but iron is cheaper, and all that is necessary with fair beam, in a cruiser—ED.]

Editor Forest and Stream:

We all like your model very much and can find no fault with her. There is a good deal of interest taken in yachting here in Saco and, thanks to the teachings of the FOREST AND STREAM, they all go in for keels and iron thereon. F. R. A.

MEASURMENT.

(C. P. KUNHARDT IN HAMERSLY'S NAVAL ENCYCLOPEDIA.)

THE sole object of measurement and allowing time is to enable yachts of various sizes to compete upon terms of equality. A fair and logical rule must, therefore, be based upon size. Any rule which places a tax upon model is erroneous in foundation and misleading in its workings. Rules based upon any one or two dimensions, however much they may be the custom, are manifestly not equitable, because they do not tax differences in size, but differences of model in the one or two particular directions measured. They do not tax size, because any one or two dimensions added or multiplied are in no wise an expression of size, nor does such measurement necessarily represent the ratio of size between the vessels gauged. Yachts will shrink in the direction measured, as witness the short, dumpy American sloop seeking to escape the penalty of length, and the English cutter squeezed into untaxed depth, the designer being restricted to their production against his will. A measurement of actual magnitude is the only mode which satisfies the fundamental proposition from which the reasoning takes its start. A rule taxing the actual size of a vessel does not in the slightest degree tax shape or model; it taxes quantity only, and not its location. Under such a system the designer is left absolutely free to mold a given quantity into any shape he deems most desirable; he may proportion length, beam and depth to his taste, and a rival will not be compelled to pay unjustly because he may prefer some other shape, involving an excess in one or two directions without any excess in size. Computing size has one objection. It does not admit of quick and ready gauging, nor can a yacht's size be easily verified upon the spot by an owner or regatta committee. A simplification of the method of arriving at the same results, with sufficient accuracy for practice, is desirable. To this end, a multiplication of all three chief dimensions—length, breadth and depth—has been adopted with success by some clubs as a shortcut leading to like results. The correctness of this plan is based upon the assumption that the true size of fast yachts bears so nearly a like proportion to their circumscribed solids that the products of the three extreme dimensions will express the ratio of their sizes to one another with sufficient accuracy for racing purposes. The only danger to be apprehended from a general and permanent adhesion to this rule arises from the probability of cutting down freeboard, and thereby decreasing the depth and with it the racing size of yachts, whose owners would sail them only in fair weather. A long string of prizes won in midsummer breezes would be a strong inducement for others to follow suit, and one of the most desirable qualities of a cruising boat—ample freeboard—would be sacrificed to the greed for prizes. Should this fear turn out to be well founded, the tendency can be counteracted by including in the rule of measurement a standard amount of freeboard, which would at once remove the inducement to cripple cruising efficiency in the manner indicated.

"HAMERSLY'S NAVAL ENCYCLOPEDIA."

Editor Forest and Stream:

Not long ago there appeared in one of the minor publications what purports to be a "review" of an article of mine, written for "Hamersly's Naval Encyclopedia." At first I did not deem such a tipsy burlesque at reviewing worthy of any notice, the jealous animus and amateur character of its seedy origin being too self-evident; but, out of regard for the publishers, let me ask you to print these few lines.

Stripped of impotent bar-shop personalities—which sufficiently indicate the source of inspiration—the driveling rubbish termed a "review" contains the following charges:

First, that I ignorantly misapplied the word "range" in speaking of stability. I used the word in its good Anglo-Saxon meaning. Every one who has followed my writings will, I think, give me credit for knowing what the technical term "range of stability" signifies, without wasting any more words over the matter.

Second, that there are errors in the tables accompanying my article. This is possible. I did not travel all over Europe and America measuring boats, but necessarily accepted data collected from a variety of sources, and errors are to be charged to the original source rather than to myself. They will be rectified as fast as discovered, and do not vitiate the purposes of the tables.

Third, that raking masts, and therefore sails at an angle to the vertical, can have no lifting power. This is a fair sample of my amateur reviewer's mechanical conceptions, and is on a par with a previous assertion of his that a long counter, bringing the mainsheet further aft, decreases the leverage on the main boom. My clumsy critic is the same verdant incapable whose crooked eyes discovered undue fineness in the rather full bow of the schooner Intrepid, so located her ambitious centre of gravity about her quarters, and whose pointless "descriptions" of yachts—few and far between—form a standing butt of ridicule to the half dozen who chance to see them. His incubrations, by the way, are admitted only to the columns of petty starveling sheets, flourishing on the outskirts of a respectable profession, as weeds do about a bed of flowers.

Fourth, my reviewer, foaming at the mouth, launches out into the measurement question with an amount of childlike inanimity with which I will not burden your readers. It is enough to say that he only goes over stale ground, discussed in your columns *ad nauseam*, and takes good care to shed no light of his own on the matter.

Fifth, that my article is a plagiarism. This is a charge easily made, and any one who knows what has preceded my article may judge for himself.

Beyond this the swashbucklerism calls for no attention. For the advertising it has given me I would have been grateful had it appeared in a reputable journal circulating more than a few hundred copies. C. P. KUNHARDT.

NONPAREILS AND SHARPIES.

Editor Forest and Stream:

It gives me pleasure to thank "R. B. R.," not only for his quasi-indorsement of my boat, but I am also grateful to him, as a boating brother, for giving us one of the most sensible and readable letters that has appeared in your columns. But he has made a mistake in saying that I have ever claimed for the sharpie—pure and simple—any such qualities as being able to "beat all creation," "sailing like lightning," etc. That is the way they talk about these boats at New Haven. Yet, while a well-designed sharpie is, in my opinion, as fine a sea boat and as fast as a cutter, ton for ton, she has her faults, which I have from time to time spoken of in FOREST AND STREAM, and she cannot beat all creation, though very fast when modelled for speed.

"R. B. R." has shown that the sharpies of Great South Bay are tubs, and "paddled round with an oar." This speaks badly for the Southside builders, but no more condemns the sharpie than does the fact that some people have modelled sloop tubs condemn the sloop. But, in short, we do not build the New Haven sharpie at Roslyn. We have taken her in the block, so to speak, and have "whittled out" something better. We call it the "Nonpareil" model, which in future, I think, will have to speak for herself, her designer being too busy building boats and models to admit of his taking further part in the discussion of their merits or demerits; so, as the barber said, "Next!"

And now, at the request of many subscribers to FOREST AND STREAM, I will give a brief description of, and some specifications for, a Nonpareil cruising yacht: Length over all, 35 ft.; beam, 11 ft. 6 in.; depth, not open about 5 ft.; depth amidships, 4 ft.; stem, apron and stern of oak; keel and keelson, solid oak, 6x10 in.; timbers, 2x2 in., of oak, and 15 in. apart; side and bottom plank of best clear white and yellow pine, 1¼ in. thick; plank rail of oak; deck of clear white pine laid narrow, and carving with dares' fastenings of best galvanized iron; centreboard of hickory or oak, 15 ft. long; cockpit finished in hardwood, oiled; cabin the same; house, 9 ft. by 15 ft., with headroom of 5 ft. 6 in.; masts and spars of best spruce; sails of extra quality, by Sawyer or Wilson; all rigging complete and of best quality; rig, the regular sharpie schooner style; balance rudder, with wrought-iron stock and tiller; all iron work attached to rigging galvanized; four berths in cabin, with ample space for two more forward. Cost of all complete, as above, $800 to $900, according to amount of extra finish, etc. Such a boat will draw, with board up, 12 to 15 in. of water, and, as regards her safety and seagoing qualities, I will again refer you to the bold keel tars who did not circumnavigate Long Island. THOMAS CLAPHAM.

Roslyn, L. I., Feb. 17.

SHARPIES AND KEELS.

Editor Forest and Stream:

YOUR correspondent R. B. R., in his amusing letter on "Sharpies and Keels," is hardly fair to the latter type, or to their advocate to whom he refers as having insisted upon length measurement for their prospective match. If does seem as if a forty-foot sharpie was rather larger for racing purposes than a twenty-five-foot cutter, and in the elaborate calculation, Carpenter's measurement, R. B. R. is somewhat in error in regard to the data. Nevertheless, I think such a match could be arranged, and if Mr. R. B. R. desires an allowance he shall not be disappointed, provided the race is not to be sailed in his favorite bay, which, as he suggests, is better adapted for the pursuit of fish, flesh and fowl than cutter sailing. If my memory is not at fault his authority on sharpies, Mr. Clapham, was much more enthusiastic in their behalf, as he wished to race with his sharpie a cutter of equal length around Long Island. The match fortunately fell through. If R. B. R. gives the question a moment's thought he will see that the cutter men, from interested motives, would be the very last to advocate a length measurement, as it would operate very unfavorably for the narrow boats. I think, too, that all cutter men will agree with the FOREST AND STREAM in considering such a measurement an abomination in the more important matter of its influence on the shape of boats to be built where it is made the basis for time allowances. *V.*

We may add that offers have reached us to sail against sharpies, and others are holding back simply because they deemed the whole matter not worth the powder.

CHALLENGE TO FLAT BOTTOMS.

Editor Forest and Stream:

I will sail my little sloop against any flat bottom or sailing machine, any day or any weather, for the merits of a keel boat of moderate draft and good record. In his letter "R. B. R." says that he wants to get at the merits or demerits of both kinds, and here is a chance on the following conditions: 1. There shall be no man-boards or shifting ballast used. 2. Any sail can be carried that is desired, and only six men to each boat. 3. No means but sails shall be used for propelling. 4. No money shall be staked. Or I will sail a race, man and man (myself against the other), over the Dorchester or South Boston Yacht Club course, under jib and mainsail, any kind of weather. If this last offer cannot be accepted I will sail under conditions 1, 2, 3 and 4, from Gloucester, Boston Light or Provincetown.

Sloop Sunbeam, Dorchester, Feb. 12. W. S. NICKERSON.

YACHTING NEWS.

WALNUT FRAMES.—Mr. Clapham, of Roslyn, is building two boats with walnut frames, costing 14 cents per sqr. ft. or 70 cts. per foot.

NEW CUTTER.—Dr. Dawson, whose flag was hoisted abroad the Corsair sloop last year, is to have a cutter this season.

FOR ABROAD.—The Herreshoffs are building a fleet of picket launches for the British Admiralty, under the superintendence of Capt. Wm. Arthur, of the British Legation. The launches are 48 ft. long.

MINNEAPOLIS CANOE CLUB.—Minneapolis, Minn., talks of forming a canoe club. Minnesota affords unequalled facilities for the sport, and in time should become one of the foremost States, counting her double blades by the thousand.

KIRK'S HIGH SPEEDS.—Mr. Kirk, of Chester, Pa., has favored us with an examination of the model for the Yale coaching launch. It is a beauty indeed, and faultless in conception and fairness. The speed of 15 miles is guaranteed by a heavy money forfeiture.

QUAKER CITY YACHT CLUB.—At the annual dinner it was proposed to form a cruising squadron for the summer months, when the fleet will sail in company to Cape May, an idea we trust will be carried out, as it will serve to promote seamanship of the real sort, and a better appreciation of cruising qualities in yachts.

LONG GAFFS.—The Gracie proposes to make closer sailing with Mischief this year, and has sensibly concluded to follow the preaching of "theorists," at least in one respect. She is to cut off 5 ft. of "bigger part" and ship a longer gaff, and at the same time take her mast. We had supposed that rake had gone out of date long ago.

DOUBLE HEAD SAIL.—We have the opinions of one of the best sail makers in America in favor of double head sail or the cutter rig, and those who contemplate recanvassing should give the rig a fair trial. The angles of the two jib stays make the sails more effective. We are glad so that our preferences receive the endorsement of men who are really practical and not merely claimants to the appellation.

NEW STEAMER.—Cuthbert, of Trenton, Ont., has the frames up for a steam yacht to the order of Bowmanville gentlemen. She is to be 70 ft. on keel, 14 ft. beam and 5 ft. draft, with a speed of twelve miles. Built of oak throughout, with planking 2 in. thick, and to take highest class. He will also have a sloop underway before long, 60 ft. keel and 17½ ft. beam. E. S. B.

THE TWO TONNER.—We print a few out of the bushel of endorsements of our design for a small cruiser. So far, four gentlemen propose to build on the lines this spring, and others yet to be heard from. For the many encomiums our thanks are due to numerous friends. We publish this week the sail plan for the yacht, but for want of space must delay further description till next week. It may be added that we are now getting out large scale drawings to meet the demand for working plans which are crowding in upon us. In the table given last week the height the Meta-Centre above the Centre of Gravity should read 1 ft., and the tonnage by three dimensions is 1⅞ tons.

CRUISING CLUB.—A special club for the promotion of cruising in small yachts has been established in England. There is good material "Down East" for the formation of a similar club which would certainly be popular. We hear of a large number of small cabin keels now in course of construction, and several gentlemen also propose to build on the lines this spring, and others yet to be heard from. For the many encomiums our thanks are due to numerous friends. We publish this week the sail plan for the yacht, but for want of space must delay further description till next week. It may be added that we are now getting out large scale drawings to meet the demand for working plans which are crowding in upon us. In the table given last week the height the Meta-Centre above the Centre of Gravity should read 1 ft., and the tonnage by three dimensions is 1⅞ tons.

In the table given last week the height the Meta-Centre above the Centre of Gravity should read 1 ft., and the tonnage by three dimensions is 1⅞ tons.

TORONTO CANOE CLUB.—At the last meeting it was resolved that voting should be restricted to canoe owners, and that members owning both a canoe and other boat should be entitled to accommodation for both in the club house. The constitution adopted is based upon that of the N. Y. C. C. The knotty question as to what constitutes a canoe was thus settled: Length not over 20 ft.; the following definition settled upon: A canoe is a craft sharp at both ends, not more than 36 inches wide, and capable of being efficiently propelled by a double-bladed paddle. The Executive Committee consists of Messrs. Bridgman, Nicholson, Nelson, Tyson and Barret. An opening cruise is to take place in May.

Rifle and Trap Shooting.

THE DOMINION RIFLE ASSOCIATION.

OTTAWA, FEB. 16th.

THE annual meeting of the Dominion Rifle Association was held this morning in the Public Accounts Committee-Room, House of Commons. The chair was occupied by Lieutenant-Colonel the Hon. A. E. Botsford, one of the vice-presidents, and almost every part of the Dominion was represented in the large attendance of military men.

The chairman, in opening the meeting, expressed his regret at the absence of the able president, Col Gzowski, to whose advice and assistance the society is largely indebted for its success.

Hon. G. Macdonald, Halifax, moved, seconded by Lieut.-Col. MacNachtan, Cobourg, that the thirteenth annual report be accepted as read.

The report of the Council was a favorable one. The Wimbledon team for 1880 sailed from Quebec on the 19th of June, under the command of Lt.-Col. A. H. Williams, M. P., with Major Macpherson, G. G. Foot Guards, as second officer. At Altcar the team made excellent shooting, and in the usual matches with the 15th Lancashire, the 1st Cheshire Rifle Volunteers, and the Liverpool Rifle Brigade, they came off victorious. At Wimbledon, the number of prizes which fell to the team was about the same as in former years, but the unfavorable state of the weather when the Canadians were shooting at the 600 yards range in the "Queen's" destroyed the prospects of several members who had gone back to that range with scores which fully entitled them to hope that they might gain the honor of a place in the 2nd stage. Want of success in the Kolapore Cup match has again to be recorded.

In response to representations made by the Governor-General, the directors of all the leading banks have generously contributed a fund for prizes to be given at the next meeting, thus showing the Council that they have the sympathy of the monetary and commercial leaders of the country in their efforts to foster the efficiency of the militia force of the Dominion.

The total receipts from all sources from 29th January, 1880, to 13th January, 1881, have been $12,697,69; balance brought forward from last year's statement, $1,435.70; total amount, $14,133.39; the expenditure amounted to $14,120.82, leaving a balance of $12.57 to the credit of the association.

The report of Lieutenant-Colonel Williams, M. P., regarding the Wimbledon team of 1880 says among other things: that when the team went to Wimbledon an order was issued that the team would pursue the usual course as to going into camp, but if any member of the team felt that he would be "physically weakened" by camp life, a personal application to remain out should be made to the officer commanding. It has been claimed that the supposed exposure in camp had the effect of impairing the powers of marksmen, and, as the point had been agitated, I deemed it my duty in the interest of the association to add to the comfort of the team in every way, and was forced to an additional expenditure in flooring the tents, which certainly added greatly to the comfort of the occupants of the camp.

As the few that had permission to remain out of camp, although good marksmen, fell far behind what was expected of them in the matches, I infer that camp-life at Wimbledon has the reverse effect of what they anticipated, and I would suggest that for the future it should be an established rule of the association that those who go to Wimbledon as marksmen and representatives of the active militia of Canada should reside in camp. The Canadian camp has always been a centre of attraction to visitors, and the personal representation of the Canadian militia upon Wimbledon Common is most important from a public or national point of view; if the team as a body were allowed to remain out of camp under the plea of physical weakness, it would reflect seriously upon the physique of

Canadians generally, as well as on that of the defensive force of the country.

Lieutenant-Colonel Kirkpatrick, M. P. in seconding the adoption of the annual report said in regard to team shooting:

The combination of team shooting and individual shooting is not desirable so long as coaching is allowed at the firing point, and I think it would be well to do away with the system of coaching altogether, and to distribute the teams so that they will not shoot with each other. If that is done, team shooting and individual shooting may be combined, and the firing in the teams may be counted in respect of individual scores.

The Governor-General, in an address, said of the Canadian militia, "Our militia may be only an army organized for defence. We desire to be friends with all the world, but I believe we all know there is no friendship so lasting and so wholesome as that which is founded on thorough mutual respect. We are prepared in Canada to defend the institutions which your free country has adopted, and you know well that those institutions can never be changed by any foreign will so long as you prove to all that any attempt to change them would mean a long and very costly war. (Cheers.) I believe that although the Government may do very much in the way of providing and extending training schools for officers and in seeing to the proper organization of the force, yet that individual efforts are those which in the long run will best support such an association as ours. (Applause.) And in the way of individual efforts nothing can be more successfully attempted than the encouragement of local and central rifle associations. We know by experience from the days of Lexington until these last unfortunate days when the British forces have encountered the Boers, how very difficult it is to beat an enemy who are individually good rifle shots. I believe that there has been a certain amount of feeling that most of the prizes are taken by gentlemen who are too good shots to be beaten, and perhaps it might be desirable, to spread over a greater number of contestants the rewards of their perseverance in coming here, to have a greater number of so-called nursery prizes—in short, that we may make our rifle contests somewhat of the nature of the ladies' tennis tournament which has been proceeding during the last two or three weeks, and in which I believe almost all the contestants will receive at all events some prize. (Applause and "hear, hear," and a laugh.) At the last association meeting in September I thought one target was of a peculiar value, and that was the display made by Sergeant-Major Oliver of his equipment, which enables men to carry nearly double the number of rounds of ammunition that their present equipment enables them to do, and which also provides them with a spade. It might be a question also for the consideration of the Council whether it would not be possible to arrange for a prize in connection with which a team should in a given time, with light entrenching tools, entrench themselves and fire subsequently at targets, for, after all, one great branch now of the science of war seems to be the art of rapid entrenchment. Indeed success in war seems sometimes little less than a prize, which can be won by those who can attack fastest and fire the most rapidly and at the same time with the greatest precision." (Cheers.)

The Executive Committee was authorized to make the necessary arrangements for assembling the Wimbledon team and to fix the time when they shall embark for England, and to incur the necessary expenses for sending the team to Wimbledon. Competitors shall notify the Secretary whether they can go before the 1st of April next, and in the failure of sending notice the committee shall be authorized to fill any vacant place; also to frame the necessary instructions for the government and guidance of the officers and men of the team.

The prize meeting will take place at Ottawa, commencing on the 5th of September next. Captain Costin was appointed executive officer.

RANGE AND GALLERY.

BOSTON, Mass., *Feb.* 19.—Another stormy Saturday greeted the Walnut Hill riflemen to-day at their regular meet. The slight rain which prevailed early in the day with a perpetual gray light indicated that good scores would be recorded by the participants. Hardly had the flags been lowered when the wind changed several points to the North, and came strong and unreliable, requiring constant changes, while a severe snow storm set in, and the atmosphere became thick and the targets could hardly be discerned from the firing points. In the afternoon the sun shone brightly, the wind became stronger and exceedingly unreliable. Mr. C. Richards took first position on the Creedmoor target against all comers, and did so at a long array of good shots present. Mr. H. Gray took first honors in the league match for 45, while Dodge and Eutebrouck followed for same amounts. In the record match Mr. Adams heads the list for 46, and J. N. Frye, ex-President of the Massachusetts Rifle Association, on the ring target made the magnificent score of 98—six consecutive bullseyes, the wind catching him on his last shot for a 9. The amateur match closed yesterday. In it brilliant shooting has been done. Mr. A. C. Gould has made three elegant scores of 47 each, or a total of 141, and wins the beautiful gold medal of the association. Mr. H. G. Bixby wins the silver medal on the fine score of 45, 46, 47; total, 138. Of the large number of entries made we give only the following:

Amateur Match.

C Richards	5 5 4 5 5 5 5 4 5 4—47	G C Rogers	5 4 4 4 4 5 4 4 5—43
H Gray	4 4 4 5 4 5 5 5 4 5—45	R Curtis	4 5 4 5 4 4 4 4 5 4—43
G Hudson	4 4 5 4 4 5 5 5 4 4—44		

Badge Match.

H Gray	4 4 4 5 4 5 5 5 4 5—45	G Henry	4 4 5 4 4 5 5 5 4 4—41
E L Dodge	5 4 5 5 5 4 4 5 4 4—45	J N Frye	4 5 4 5 4 5 4 5 4 4—44
Eutebrouck	5 4 5 4 4 5 5 5 3 4—43	H E Clare	4 4 5 4 5 4 5 4 4 4—43

Record Match (Creedmoor Target).

A C Adams	5 4 5 4 5 4 5 4 4 4—46	G White	4 4 4 4 4 4 5 4 5—42
E S Bennett	5 4 4 4 4 5 5 4 5—44	E Benson	4 3 4 4 4 4 4 4 5—40
G Warren	4 4 4 5 4 5 4 4 5—43		

Record Match (Massachusetts Target).

J N Frye	12 12 11 11 11 12 9—78	H Edgar	10 10 12 10 9 10 7—68
G Warren	10 9 11 10 10 10 11—71	W Gunson	12 9 10 8 9 10 10 11—67
E Bennett	11 9 10 7 10 11 11—69		

Washington's birthday proved a gala one at Walnut Hill. All the matches now on the programme were shot.

MAGNOLIA GALLERY.—There has been a good attendance during the week in the all-comers' match. Mr. L. Merrill holds first position with a total of 241, and Mr. J. Wyman is second with 240. Mr. Wyman succeeded in making 18 consecutive bullseyes. In the pistol match Mr. Wyman takes first place for the week with 266. In the FOREST AND STREAM match Mr. E. G. Arthur leads all competitors for the trophy with 242, he making during his shooting twelve consecutive bullseyes on a ring target. Below are given the best scores in all matches during the week:

All-comers' Match.

J Merrill	48 48 48 49 48—241	A Lawrence	45 45 46 45 46—227
J Wyman	48 50 48 47 47—240	B Thomas	46 44 46 46 44—226
E Harris	47 47 47 47 48—236	W M Merrill	43 45 45 46 45—224
C Jones	47 47 48 47 47—236	F Wiss	43 44 44 43 41—215
E C Arthur	46 46 46 46 46—230		

Pistol Match (Ring Target).

J. Wyman	6	5	11	11	12	9	9	9	10	7—89	
	6	6	9	11	7	7	10	11	11	12—80

O A Gross	11	12	8	9	9	8	2	2	7	4—72	
	0	11	9	8	7	5	4	7	5	8—56	
	2	6	7	7	8	4	12	9	9	6—77—198	

FOREST AND STREAM Match.

E C Arthur	48 48 49 48 49—242	C Gilman	47 45 47 47 46—232
H Harris	47 47 47 47 49—237	C Wright	48 46 46 45 47—232
C Cumings	46 47 47 48 47—234		

MAMMOTH GALLERY, *Boston, Feb.* 19.—The following are the leading scores to date in the everybody's match; rounds 8, possible 40; 5 scores to win, possible 200:

Richardson	39 39 39 38 38—193	Williams	37 37 37 37 37—185
Merrill	38 39 39 38 38—192	Ames	36 37 36 37 37—183
Arnold	37 37 38 37 37—186		

In match 2, called the Silverware Match, which is for those who have never won a prize in the Gallery. The scores stand:

G Warren	37 35 36 38 37—182	N W Norcross	35 36 35 36 36—178
E Brown	37 33 36 37 36—181		

Pistol Match; rounds 6, possible 40; 3 scores to win, possible 120, range 50ft.:

F J Rabbeth	37 37 36—110	G Warren	34 34 34—102

In the FOREST AND STREAM match for the Merschaum Pipe, the following scores have been made:

D N Sherburne	4 4 4 5 5 5 5 5—37 4 5 4 5 5 5 5 5—38 5 5 5 4 5 5 5 5—38 5 5 5 4 5 5 5 5—38 5 5 5 4 4 5 5 5—33—159	
J J Ross	5 5 4 4 5 5 4 5—37	
S Nagg	4 4 4 4 5 5 5 5—36	
N W Arnold	5 5 4 4 4 5 5 5—37	
Geo D Edson	4 4 5 5 5 4 4 5—36	

WAKEFIELD, Mass., *Feb.* 18—The Wakefield Amateur Rifle Association had its range open this afternoon for practice in the February series of competitions. The following were the best scores made:

D W Walker	4 5 5 5 3 5 4 4 5 5—45	R Howard	4 5 4 4 4 5 4 4 4 5—43
W Daniels	5 4 5 4 4 4 5 5 4 4—43		

The association will have its range open Washington's birthday for practice in the February series.

FALL RIVER, Mass., Feb. 15.—Regular semi-monthly shoot for gold badge; Card rotary range, secured, 18 yards rise, 15 balls each:

Braley	11111 11111 11111—15	Farwell	11111 00011 11011—11
Cornell	11110 10111 11111—13	Valentine	10000 11111 11111—11
Hall	01110 11111 11111—13	J Borden, Jr.	11001 10001 10111—10
Buffinton, 2d	11110 11101 11110—12	Allen	10011 01110 11110—10
Wood	11010 11111 10111—12	Butler	10111 01011 01001—9
Borden	11111 00111 11011—12	Nichols	01110 11001 01100—8

Wm J Braley wins badge.

Special Match—10 balls each:

Buffinton	11111 11111—10	Braley	11111 11111—10
Allen	11111 11111—10	Valentine	11111 11111—10
Hall	01111 11111—9	Hathaway	11111 10111—9
Farwell	01111 01111—8	J Borden, Jr.	11001 11100—7
Nichols	01111 01111—8	F S Borden	10111 01001—7
Dubois	10110 11111—8	Wood	10111 01001—6
Butler	10011 00110—5—58	Cornell	11101 11000—6—55

T. S. H.

WORCESTER, Mass., *Feb.* 19—The following scores were made to-day at the Pine Grove Range; distance 200 yards, off-hand:

Steadman Clark	5 4 4 5 4 4 4 5 5—45	4 5 5 3 4 4 4 5 4 4—42—87	
Dr. Arnold	5 4 4 5 4 5 4 4 5—45	4 4 4 4 4 3 4 4 4—39—84	
A L Rise	4 4 4 4 4 5 4 4 4—41	5 5 3 4 4 4 5 4 4 5—42—83	
Moses Carter	4 5 4 4 4 4 4 4 4—40	4 4 4 4 3 4 5 4 4—41—81	
Jesse Olmstead	4 4 4 5 4 4 5 4 4—40	4 4 4 4 4 3 4 5 5—41—81	
John Norman		5 4 4 4 3 4 4 4 4—40	
C Jenkins		4 4 3 4 3 4 4 4 4—38	

The same day and place, at 800 yards, any position without artificial rests; cartons counting 6, with a possible 60. The following was the score made:

C Jenkins	5 5 6 6 5 5 5 5—54	A L Rise	4 4 6 6 6 4 5 5 6—51
Moses Carter	5 5 5 4 5 5 6 5 6—52		

ALBANY—N. Y., Feb. 17.—The pleasant weather this afternoon called out quite a goodly company of riflemen to Rensselaerwyck. Besides the local experts, Troy and Hudson were represented once more. The first match called was the All Comers', in which four only succeeded in getting an average of inners or over. This match was won by Capt. Fitch with 41 out of a possible 50. At the conclusion of the match a subscription match at 200 yards was called; this was also won by Capt. Fitch with 21 points out of 25. Two more subscription matches were called at 300, the first of which was won by G. L. Charles, with 24 out of 25, and the second by L. Geiger, with 22 out of 25. The conditions were favorable for all the competitions except the 200 yard match, the wind being extremely troublesome and hard to gauge. The two scores made in the subscription matches, at 300 yards, by G. A. Charles, were equal to anything ever done at that range, he having a total of 46 out of 50. The following were the scores in detail:

All-Comers' Match—300 Yards.

Wm. E. Fitch, Bal. S	4 3 5 4 4 5 4 5 4 3—41		
A Carpenter, S. M	3 5 4 4 5 3 4 4 4 3—38		
G H Charles, Bal. S	4 4 4 4 4 4 4 4 4 3—39		
O Dexter, S. S	4 3 5 3 4 4 4 4 4 4—39		

Subscription Match—200 Yards.

Wm E Fitch, Bal. S	5 4 4 4—21	O Dexter, S. S	3 4 3 3 5—20
A Carpenter, S M	4 4 4 4—20	A Thorne, S M	3 4 4 4—19
L Geiger, R S	3 4 4 5—20	James I Miles, Bal. S	4 3 4 5—19
G H Charles, Bal S	4 4 3 5—20		

Subscription Match—300 Yards.

G H Charles, Bal S	5 5 5 4 5—24	A Carpenter, S M	4 3 4 4 4—19
Wm E Fitch, Bal. S	4 4 4 5 4—21	L Geiger, R S	4 4 4 3 4—19
James I Miles, Bal. S	5 4 5 4 4—22	A Thorne, S M	3 4 4 4 3—18
O Dexter, S. S	4 4 4 4 4—20		

Subscription Match—300 Yards.

L Geiger, R S	3 5 4 5 5—22	A Carpenter, S M	4 4 4 4—20
G H Charles, Bal S	5 4 5 3 5—22	James I Miles, Bal. S	3 4 4 4—19
Wm E Fitch, Bal S	4 4 4 5—21	A Thorne, S M	4 3 3 4—16

On Thursday the eighth competion in the All Comers' will be called, and should the weather prove favorable, a match of 200 yards also. On Washington's birthday a number of riflemen will visit the range for practice.

CONLIN'S SHOOTING GALLERY, 1,222 Broadway.—As was anticipated, the competition for the championship of short-range pistol-shooting at bullets was the most closely-contested match yet of the tournament. Mr. D. A. Divis, champion of all ranges bullet-shooting, and Dr. E. T. Marsh, champion of cord-shooting and swinging objects, each made a score of twelve bullets out of twenty shots; distance, ten yards. According to the conditions the tie must be shot off and the competitor hitting the largest number of bullets in twenty shots to be declared the winner. The shoot-off will take place at whatever time agreed on by the parties, probably during this week. The gentlemen are very evenly matched in skill and great interest is manifested as to who will win. Mr. Wm. C. Southwick won the great's badge, with the score of eleven bullets, followed by Col. J. Dunn and D. D. Davis, also tieing the score—nine bullets each. The bullets shot at are three-quarters of an inch in diameter, suspended by a string, with a white background, form a very distinct mark. Mr. Conlin first introduced bullet-shooting in 1871; since then it has always been one of the favored marks for both rifle and pistol practice. Foreigners and visitors from all sections of the country, while at his various galleries, have been successful in hitting a bullet, or else, seeing some of the experts perform the feat, have taken the mark away, as either a proof of their skill or a memento of the occasion. In this way at least a ton of the bullets have found their way to all parts of the civilized world. During the week ending February 26 the championship of tack-shooting will be contested for.

NEW YORK, Feb. 22.—Washington's Birthday was profitably and pleasantly spent by the New York shooters in an all-comers rifle match, at Harting's Park, Morrisania, under the auspices of the New York Rifle Club, the conditions being 200 yards, off hand, seven shots; highest aggregate of any two scores to count for prizes; entries unlimited; prizes, three gold medals or bandges and two silver ditto, valued at $20, $12, $7.50, $6, $4.50; all other conditions in accordance with the rules of N. R. A. Shooting began at 10:30 A. M. and stopped at 4:30 P. M. Ring targets, with eight-inch bullseyes were used. Following are the leading scores, the highest attainable number being 350 points: A. J. Howlett, 291; C. J. Faleo, 287; A. H. Anderson, 284; M. B. Hull, 284; A. J. McInnis, 283; F. H. Holton, 282; F. J. Donaldson, 280; N. O'Donnell, 279; Frederick Alder, 278; J. S. Case, 274; T. Fitz, 274; Walter V. Overbaugh, 272; P. Ronaldson, 265; Dr. J. W. Wright, 263; T. P. White, 259; G. J. Seabury, 251; J. W. Mangam, 243; G. Butler, 240; J. B. Blydenburgh, 232; J. H. Fricken, 234; C. E. Overbaugh, 218; W. A. Robinson, 203; H. Holges, 203; Col. Josiah Porter, 178; R. Troutman, 172.

THE NEW YORK RIFLE GALLERY.—The third week's practice in the Feb. match at this gallery has been most worthy of note. As the month is short the shooting has been very spirited from the first, and will increase to the end of the month. Mr. W. M. Farrow, with his extremely fine holding, stops to the front with 192.

The following are the leading scores to date on the 35 yard-range, 10 rounds, 4 scores to win or possible 200:

W M Farrow	48 48 47 49—192	T P White	46 46 46 46—184
P G Fenning	48 45 47 48—191	M Dorrier	47 45 45 45—182
G Joiner	47 47 48 48—190	F N Nolton	43 44 46 46—181
N Obel	47 47 47 47—188	J W Todd	44 45 44 48—181
Col. Riggs	46 46 46 48—184	D F Davids	44 45 46 46—181

A Champion Team match will be shot at this gallery soon as arrangements can be made; teams to be composed of seven men each from any rifle club or military organization, the conditions of the match to be as follows:

Entrance fee, $10 per team, ten shots per man, Creedmoor target and Creedmoor rules to govern; no practice on the night of the match. Prizes to be as follows: First prize, fifty per cent. of entrance fee; Second, 30 per cent.; Third, 20 per cent. A meeting of the captains of each team to meet at the gallery, 699 Broadway, cor. West Fourth st., March 8, at 8 o'clock P. M., to make final arrangements. Two teams can shoot each evening with ample room for friends and guests, the proprietors will donate the use of gallery rifles, ammunition and targets free, or teams can furnish their own. Letters from captains, or teams will be considered if not convenient to be present at the meeting.

ZETTLER GALLERY, Feb'ruary.—All Comers' match, Creedmoor target, 10 shots:

M B Engel	186	Henry Gunther	168
J H Brown	186	Wm Klein	165
P Fenning	184	Hugo Siebeneichen	163
W M Farrow	183	Aug Siebeneichen	145
F Levy	177	Jacob Leubeck	144
H Holger	170		

CAMDEN, N. J.—The Stockton Rifle Range Association Directors are preparing for a grand celebration of the third spring opening of their range, about April 1, and to afford additional encouragement to participants, they will offer for competition a number of prizes. The officers of the association are General E. Burd Grubb, President; T. B. Baldwin, Vice-President; Major Wm. M. Palmer, Treasurer; John S. Lee, Secretary.

THE TRAP.

MICHIGAN STATE MEDAL ASSOCIATION.

THE Michigan State Medal Association had another meet to-day at Hamtramck Park. The weather was against the contestants, but birds were unexpectedly lively and no very brilliant scores were made. The ridiculous handicapping rule was enforced, with the following result:

Goff Stenton, 30 yards						0	1	0	1	1	0—3
F St Aubin, 21 yards						0	0	0	1	1	0—2
J V D Eldridge, 30 yards	1	0	1	0	1	1	1	1	1	0	1—8
J Metzger, 30 yards											0 0—0
Ed H Gillman, 30 yards		0	1	0	1	1	1	1	1	1	1—8
Edward S Barbour, 21 yards		1	0	1	1	0	1	1	1	1	0—7
Charles A Mack, 23 yards		1	1	0	1	0	1	1	1	1	1—9

As the reader will note, Mr. C. A. Mack was the winner of the medal, which is a championship affair, and therefore quite beyond the pale of handicapping from any recognized sportsmanlike point by view. I had an interview to-day with two members of the committee who are responsible for this handicapping business. One of them is Mr. W. J. Mason, Secretary of the association, who frankly told me that he had seen enough of its unjust workings to convince him that it ought to be abolished. Said he: "Either cease calling it a championship medal, and christen it a handicap medal, or do away with the rule altogether. Mr. John E. Long, who is really the father of the plan, was the other committeeman whom I interviewed. He said: "When this matter first came up it was urged very strenously that the only way to get out the young shooters was that would not be expected to successfully compete with some of our experts, of whom the association has many—was to offer them some even-up inducement. As an experiment partly, and partly as a compromise, I suggested handicapping as the remedy. Of course I am aware that this is a little irregular for a championship medal. Personally (and it is for my interest, too), I prefer the straight way. Let every tub stand on its own bottom. I have learned that handicapping is not altogether just to experts who are set back, but when it was adopted the idea, as I said before, was to bring young shooters to the score. The experiment has been tried; it has developed some good men. If it has served even that purpose it has not been altogether barren. I am ready to support a movement to abolish the rule, and it is my opinion that we shall take the bull by the horns at our next meeting. At the same time we shall probably change our rules, substituting English rules for the plunge-trap and twenty-six yards for tame birds and adopting the ground trap, with English rules, for wild birds."

In the course of my talk with Secretary Mason he showed me the original subscription list of the association and told me something of its origin. One night in 1873 a party of gentlemen were sitting in that old, familiar back room of John E. Long & Co., on the corner of Woodward avenue and Congress street, discussing various matters, when the subject of a Medal Association was introduced. It met with very general—even enthusiastic—approval and in three days, at odd hours, there were obtained sixty-four signatures and the magnificent medal which, has been the bone of so much friendly contention, was ordered.

At the end of the list I found the names of several who have since gone to the happy hunting grounds. First on the solemn roll is poor Elam Fisher, gentleman, enthusiast, sportsman. His death was the only tragic event the association has known. At one of the shoots of the association he was accompanied by his little son. Standing near the score, leaning on his gun, awaiting his turn to come on deck, he took his last look of earth, for at that instant his son, in a playful mood, ran up to him and clasped him around the legs. Fatal playfulness. The gun went down on the hammer of the gun without knowing it; there was a loud report, and Elam Fisher dropped instantly dead in his tracks, the charge of one barrel having entered his side and riddled him all to pieces. He never knew what hurt him. Other dead of the association are Samuel J. Geddey, Charles L. Pignette, *bon vivant*, gentle, genuine aristocrat and whole-souled man. He died in Paris, the "gay, gind, gorgeous city, where life is a pasture, and the only reality is death." He knew how to enjoy life with reason, and he was the man to die unflinchingly. Peace to his memory!

The backing-and-filling business methods of the association during its earlier history were not favorable to the preservation to data, and there is much in connection with its growth that cannot be set down with very near approach to accuracy. From recollection, however, I am able to name a considerable number of the medal winners. "Lon" Hascall was the first man who bore it off the field in triumph. I well remember what a mark of distinction for him that day's achievement was, and how the wassailers made merry for long, long hours with Lon as the host. Then follow John E. Long, Ed. Gillman, J. V. D. Eldredge, Goff, Stenton, E. S. Barbour, Charley Jewett, Frank Wherry, Henry Penney, Jim Caniff, Wm. C. Colburn, M. K. Christy and Cook Cousins, not to mention our own and latest champion, Charley Mack. The only man who has ever won it three consecutive times is Ed. Gillman, but the third winning was declared off by the Executive Committee under the rule that no shoot by a *non quorum* should count. There was a tremendous kick about that decision, but the committee were inflexible, and inasmuch as there was no going behind the returns, the inevitable was accepted as graciously as the circumstances would permit. Had that shoot been counted in instead of out, Gillman would now be the sole and individual owner of the trophy. A like decision was rendered in the case of Frank Wherry, of Plymouth. He was not morally equal to the occasion, and instead of accepting judgment he wrote a savage letter to the association. The result of that single epistollary experiment was the incontinent bouncing of the experimentalist by the association.

Detroit, Feb. 18. PASSE-PARTOUT.

CARVER DEFEATS SCOTT.—The following details of the Carver-Scott match shot near London, Feb. 7, are given by the London *Sportsman* of 8th inst.:

The day was very unpropitious. During the morning a bitterly cold wind prevailed, and this by noon had increased to a perfect gale, bringing with it an assortment of snow, hail and sleet, which drove across the grounds at the rate of about forty miles an hour. Each competitor had to supply 110 blue rocks, the two lots of birds being placed in one hamper and from that hamper trapped. Dr. Carver failed at his third bird and Mr. Scott killing took the lead. The latter, however, broke down in his fourth attempt, and as in this round the Doctor had grassed with a very fine second they were on level terms. The shooting continued to be very even, but a "zero" scored to Mr. Scott in his tenth essay left him one behind his adversary, whose total was 9 to 8. Although the "Spirit of the West" hit his eleventh very hard it managed to evade him, while the Londoner downed a good rock in neat time, and consequently drew level. A too great frequency of misses just about this time gave Mr. Scott a powerful lead, he being four birds ahead at the eighth-teenth round Between this and the twenty-ith round a change came, and a few of Mr. Scott's birds crossing the pailings gradually pulled him back to the Doctor, who had in the meanwhile settled down to a good series, and in this way they were once more on terms of equality, each having felled 18. Dr. Carver's twenty-sixth bird, a very snipy little customer, fairly beat him, and as Mr. Scott was more fortunate he again went to the fore. This advantage, however, was only momentary, as in his succeeding effort Mr. Scott pulled both barrels simultaneously and the bird escaped. Another failure in the twenty-eighth trial by Mr. Scott gave the Doctor the lead, and this for a time he held, but without arguimenting it to any great extent. The American's forthieth pigeon was a real flyer, and leaving the middle trap like a rocket was out of bounds in an instant Mr. Scott killed and, therefore, they were again even, with totals of 29 each. During the next ten rounds they remained in close company, while it was evident that the excitement in the contest was gradually rising to a high pitch At the conclusion of the fiftieth round—half the journey—Mr. Scott had the lead by one bird, his figures showing 36 to 35. An interval of ten minutes here occurred, and on resuming the wather had slightly improved, the snow fall being less heavy and the light clearer, though at the best it was bad enough. Both sportsmen soon after beginning the second half of their match shot very badly, especially Mr. Scott, who during tho next fourteen rounds, secured but four birds. Dr. Carver, too, missed six out of seven, but a run of eight on the right side gave him a decided lead, and at the sixty-fifth round he was three to the fore. Between this and the seventieth Mr. Scott pulled up wonderfully, reaching the latter point only one in the rear. Unfortunately now Mr. Scott lost three in succession, so that again did the American forge well to the front; there being at the seventy-sixth round of five between them. Mr. Scott never recovered this, though he strove most manfully, and at the ninety-sixth round Dr. Carver was proclaimed the winner by five birds, his total being 65 to Mr. Scott's 60. They, however, shot at their remaining four birds each, and when the hundredth round was finished the total stood—Dr Carver 66, Mr. Scott 62. As regards the shooting, there can be no doubt that the average was a very poor one, but to account for this the wretched state of the weather must be taken into consideration. At the best shooting in a snow storm is a difficult matter, but under yesterday's circumstances, and with such clipping birds, a tall total was almost out of the question. Dr. Carver, it may be mentioned, shot with a central-fire breech-loader built by Greener, while Mr. Scott had two weapons, and changed about—one manufactured by Greener and the other by Baker. The duties of referee were discharged by Mr. Henry Holt. Score :—

MATCH, for $2,000, at 100 birds, 30 yards rise, 5 traps, 5 yards apart

DR. CARVER—11011, 11111, 00100, 01011, 11111, 01111, 11110, 110 10, 10110, 01011, 11000, 10001, 11111, 11000, 11110, 11110, 11010, 00011, 11111, 10001,. Total, 66 out of 100.

MR. SCOTT—11101, 11110, 11110, 11110, 01001, 10011, 11010, 11111, 11011, 11100, 10101, 00010, 00001, 11110, 00010, 01111, 11011, 01110, 10110, 01010. Total, 62 out of 100,

CONEY ISLAND CLUB.—First monthly meet on new shooting ground adjoining Theodore Alston's Hotel at Coney Island. The first contest was for the badge, and the contestants for this were Messrs. Steers, James, Furey, Shevlin, Massey, Grace, Fogart, Fate, McLaughlin, Miller, Alston, Maxfield and Schimmell. The distance was handicap from 30 yards to 21, Mr. James shooting at 30 yards rise and Mr Alston at 21, Mr. Furey standing at 27, Mr. Massey at 26, and the majority of the others at 21 Theodore Alston was the only competitor who had a clear record, he killing all of his seven birds, and thereby winning the badge for February. Messrs. Furey and Shevlin killed six each, and Messrs. Grace, James, Massey, Maxfield and Schimmell, five each, all but Messrs. Grace and Fate killing a majority of their seven birds. After the badge shoot there was a contest for a gold pencil, for which there were sixteen competitors, each shooting at five birds, at handicap rise. Out of these Messrs. Graves, Wilson and W. R. Hunter killed all their birds, and on the ties being shot off Mr. Graves killed two of the three extra birds, as did Wilson, the second tie, giving the prize to Mr. Graves. A match was shot between Captain Steers and Mr. James at double birds, 21 yards : C. James, 11 01 10 11—6 ; Captain Steers, 00 00 11 10—3.

NEW YORK GUN CLUB—Bergen Point, N. J., Feb. 18.—Match, at five birds, handicap rise :

A Reblin....25 yards.	1 1 1 1 1—5	G Morris....26 yards.	1 0 1 0 1—3

Same conditions as first match :

G Morris, 28 yards.	1 1 1 1 1—5	A Reblin....29 yards.	1 0 1 0 w—2

Same conditions as first match :

G Morris, 30 yards	0 1 1 1 1—4	A Reblin....30 yards.	0 1 1 0 w—1

The Club Fund Cup, value $100, ten birds each :

T Van Buren	29 yards	1 1 1 1 1 1 1 1 1 1—10
G Morris	25	1 1 1 1 1 0 1 1 1 0—9
E White	29	0 1 1 1 1 1 1 1 0 1—8
C G Howard	25	0 0 1 1 1 1 1 1 1 1—8
H Dunleavy	25	1 1 1 1 0 0 1 1 w— 7
Colonel Butler	29	0 1 0 1 1 1 0 1 0 1—6
L Hunter	22	1 1 1 1 1 0 0 w — 6
A Reblin	29	1 0 1 0 0 1 1 1 w — 5
E Murphy	29	0 0 1 1 1 0 w — 4

Optional sweepstakes, 7 birds each, ties miss and go out:

Colonel Butler	29	0 1 1 1 1 1 1—1 1 1— 9
H Dunleavy	27	1 1 0 1 1 1 1 1—1 0— 8
E White	29	1 0 0 1 1 1 1 — 5
G Morris	26	0 1 0 1 1 2 w — 4
A Reblin	28	1 1 0 0 1 1 w — 4
C G Howard	26	0 0 1 1 0 1 w — 3

Optional sweepstakes, 7 birds each, ties miss and go out:

T Van Buren	29 yards	1 1 1 1 1 1 1—1 1 1—10
E White	29	1 1 1 1 1 1 1—1 1 0— 9
A Reblin	29	1 1 1 1 1 1 0— 6
Colonel Butler	30	0 1 1 1 1 1 1— 6
E Salmon	28	1 0 1 1 1 1 1— 6
E Murphy	30	1 1 0 1 1 w — 4
H Dunleavy	27	1 1 0 1 w — 4
L Hunter	25	1 0 1 0 0 1— 3

FALCON GUN CLUB.—*Dexter Park, L. I., Feb.* 17.—State rules; plunge traps, and Falcon Gun Club handicap rise; 10 birds each :

Van Staden	23 yards	1 1 1 1 1 1 1 0 1 1—9
Lencken	23 "	1 1 0 1 1 1 1 1 1 1—9
Doscher	21 "	0 1 0 1 1 1 1 1 1 1—8
Offerman	25 "	0 1 1 1 1 1 1 1 1 0—8
Miller	25 "	1 1 1 0 1 0 0 0 0 1—5
Lager	23 "	1 1 1 0 1 1 1 1 1 1—9
Boiling	25 "	1 0 1 1 1 0 1 0 1 0—6
Palmer	23 "	0 0 1 0 1 1 1 1 0 1—6
Kelly	21 "	1 0 1 1 1 1 1 1 0 1—8
Rothmann	21 "	0 1 1 1 0 1 0 0 0 1—5

The shot off at 3 birds each ; 23 yards.: Van Staden, 2; Lencken, 2; Lager, 1. Club badge and Wesley Richards B. L. gun won by Lencken. This is the last contest under the old rules, which are that the winner has to win these prizes 3 successive times before becoming his property. They are now changed to commence with March shoot as follows: that the member winning the club prize the most number of times during the year it shall become his property.

CARSON, NEB., Feb. 8.—Considering that this is the only ball breaking they have indulged in for more than two years past, I consider the scores made quite creditable. The club will have frequent shoots hereafter. Score: 18 yards rise, 20 balls each, Huber traps :

C D Meder	1 0 0 1 1 1 1 1 1 1 1 1 1 0 1 1 1—17
H G Parker	0 0 0 1 1 1 0 1 0 1 1 0 1 1 1 1 1 1—14
G H Davis	1 0 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 0—16
H H Bonnell	1 1 0 0 1 0 1 0 1 1 1 0 1 1 1 1 1 1—14
E Harris	1 1 1 1 1 0 1 1 1 0 1 1 1 1 1 1 0 1—17
G W Richard	1 1 1 1 0 1 0 1 1 1 1 0 1 0 1 0 1 1—15
Jas Crawford	1 1 1 0 1 1 1 1 0 0 1 0 0 1 0 1 0 1—11
C G Bryson	1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1—20
E M Hunt	1 1 1 0 1 0 1 1 0 1 0 1 0 0 1 0 1 0—12
J R King	1 1 1 0 1 0 1 1 1 1 1 1 1 1 1 1 0 1—16

GULF CITY GUN CLUB—Mobile, Ala.—We had our monthly medal shoot on the 8th. The weather was windy and bad. The shooting was worse. It was one of those unaccountable days when the shooters suspicion are not to him. I only send you some of the best scores.

Master Willie Vass	1 1 1 1 1 0 1 0 1 1 1 1 1 1 0 0 0 0—13
E Carre	0 0 1 0 0 1 0 1 0 1 0 1 1 1 0 1 0 0 0—8
H P Vass	1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1—20
Jas Alexander	1 1 1 0 1 1 0 0 0 0 1 0 1 w
J Bush	1 1 1 1 1 1 1 0 w

Sweepstake Match, 21 yards, 10 balls.

H P Vass	1 0 0 0 1 0 1 1—6	Alexander	1 0 0 1 0 0 0 1 0 0—3
Carre	1 1 1 1 1 1 0 1—8	T S Scales	1 1 0 0 1 0 0 1 0 0—4
Bush	1 0 0 1 1 0 0 1 0—6	Tunstall	1 1 1 1 1 1 1 1 1—10

Tunstall, 1st; Carre, 2d

NEWTOWN, L. I., February 10.—The fifth monthly contest of the Audubon Gun Club was held to-day. In spite of the inclemency of the weather, the day being very foggy, the shooting was well up to the average monthly contests. The club shot at 30 balls each, spring from a nrds Rotary Trap, at 21 yards rise. Ties were shot off at 3 balls each. Appended is the score:

E H Blackwell	1 0 1 1 0 1 1 0 0 1—6	R Allen	1 0 0 1 0 1 1 0 0 0—5
A Andrews	1 0 0 0 1 1 1 1 1 0—7	L B Field	1 0 0 1 1 0 1 1 1 0—6
P Post	1 0 0 1 1 0 1 0 1 1—6	Henry Eger	0 1 0 0 1 1 0 1 1 1—6
J H Benning	1 1 0 1 0 1 1 1 0—7	C W Field	1 0 0 1 1 1 1 1 1 0—7
P K Fehrling	0 1 0 0 0 1 0 0 1 0—3	K Sabin	1 0 1 1 0 1 1 0 1—7

In shooting off the ties R T Sabin won the club badge.

H. HUNTER.

THE W. K. C. CUP.—At the shoot for the Westminster Kennel Club cup, at the grounds of the club, at Babylon, L. I., on Washington's birthday, Mr. F. O. de Luze won the trophy, killing 14 out of his 15 birds.

BREWER DEFEATS TALBOT.—In a match at Deerfoot Park, Feb. 22, Jno. H. Brewer, of Philadelphia, defeated B. Talbot, of New York, (100 birds each, L. L rules, 21 yards, one trap, one barrel allowed) by a score of 96 to 71.

PUBLISHERS' DEPARTMENT.

Holabird Shooting Suits. Upthegrove & McLellan, Valparaiso, Ind.

A fretful mother and cross child indicates ill health, requiring only Hop Bitters to remove.

COOK'S TOURS.—Those who contemplate traveling in Europe or any part of the Globe, either alone or with excursion parties, will find it to their advantage to investigate the numerous facilities offered by Thos. Cook & son, the renowned Excursion Managers of 261 Broadway, New York

A large pamphlet, giving full particulars of their tours, will be mailed free, on application, to any address.

H. W. T., Columbus, O.—Newfoundland puppies are dangerous and unsatisfactory things to judge and criticise, as they alter very much. We do not know at this time where you can purchase a first-class one. Perhaps some of our readers can inform us.

RIFLE CLUB.—In the game of casino can a player have more than one build of different denominations at the same time? Ans. A player may make another build, or may pair or combine other cards previous to taking in his first build.

J. L. C.—1. Read the article on "The Flight of a Rifle Ball" in our issue of Feb. 3, page 7, and see also "How to Aim the Hunting Rifle" in next issue. 2. By writing to the manufacturers of your rifle you may procure pamphlet or circular giving full directions for its use.

F. W. J., Sullivan, Me.—What species of trout are the fish called in this State "togue?" Ans. They are the lake trout of the rest of the country, called in parts "Mackinaw trout" and "salmon trout," the *Cristivomer namaycush*. The Maine name, "togue," may possibly be derived from the Indian name of the fish. In some parts of the Eastern states they are also called "lunge," "Winnipesaukie trout," etc.

T., Duxbury.—The sail draft tent is moderate, about right for cruising, though we should prefer 1 or 1½ ft. more head to mainsail, making it more effective. The head sags to leeward most and its inefficiency should be made good by ample area. All our sails are cut too narrow in the head and a reaction in favor of more gaff is setting in. Prefer housing topmast of greater length.

J. C. Pittsburgh, Pa.—Would you kindly oblige a reader of your journal by answering in your correspondent's columns when the season commences for perch and sucker fishing? Ans. Perch and sucker are not included in your State game laws. Perch will bite in April, according to weather. Suckers run in March and April, do not bite freely and are usually scooped up with a net, or snared.

A., Saco.—The most economical plan would be to add the small jib outside, although we would prefer a more equal division of the canvas. Rather than have a new single jib, rig the boat with a new double headsail. The large jib as mainsail and under. Carry stay of outer jib half way up masthead. Staysail sheet can work itself in narrow water. If you order sing le jib, use old one set flying with after canvas reefed.

POINTER, Norfolk, Va.—Can you give me any information concerning a pointer named Old Rock. Ans. Old Rock was owned by W. S. Barnum, of Syracuse, N. Y., and was entered by his owner at the State Bench Show at Syracuse, June 19, 1877. His sire's name was Don, dam's June, a very fine looking bitch owned by Mr. George Dalkain, of Syracuse. Mr. Barnum bought Rock, when a puppy, of a Mr. Bell, of Onida Valley, N. Y. Rock did not win a prize at Syracuse, but his half-sister Betsey took first in her class.

J. S. H., Mo.—For full history of dashchunds and fox terriers see The Dogs of the British Islands, by Stonehenge, on parts 14 and 15 of Illustrated Book of the Dog by Vero Shaw, published by Cassell, Potter, Galpin & Co., this city. We can furnish them. St. Bernard and Leonburg puppies can be procured by advertising in our columns. The fee for mating varies. The length of a good beagle's ears from tip to tip is about 17 inches, the dog measuring about 15 inches at shoulder. See our kennel advertising columns for prices of beagle puppies.

W. G., Ithaca.—The London *Field* publishes the lines of English yachts from time to time. Lines of Vanduara have not been published. Send P. O. order to *Field* for selection. About 12c. per number, or see Kemp's Yacht Designing. You can order through Brentano, Union Square at higher rate. Do not overlook the fact that the tonnage rule has had much to do with the scant beam of English yachts. Elephant is both deep and beamy, the result of measuring by length only. Her spars are: mast, deck to hounds, 38 ft.; masthead 4½ ft., topmast 18 ft. 9 in., boom 35 ft., gaff 20½ ft., bowsprit, stay to knightheads, 16 ft. Six to seven tons inside iron.

—Any subscriber or reader of FOREST AND STREAM in want of any kind of carpetings, oil cloths, rugs, etc., etc., can be sure of fair treatment at the hands of John H. Pray, Sons & Co., Boston. Call or correspond with them, and get their prices before buying. It will pay you to try them.—[*Adv.*

The Kennel.

DRAFT FROM

THE LAVERACK KENNEL FOR SALE.

A KENNEL OF CRACK FIELD AND BENCH SHOW DOGS.

The Laverack Kennel offers all its aged dogs for sale and will only retain a few young dogs for next year's Derby. Mr Shelienburg will visit Europe about May 1, hence is desirous selling ere he leaves. These dogs have run in public and first-class reference will be given as to their bench and field trial qualities.

1. THUNDER, pure Laverack Setter, color, blue Belton; whelped May 7, 1877; weight, 53 lbs.; winner of seven bench show prizes and one field trial; sire of Daisy, Lady, Dick and Mack Laverack.
2. PEERESS, pure Laverack; color, lemon Belton; whelped August, 1875; sister to the celebrated Princess, Puzzle, Phanton, Petrel, by Prince out of Lill II., in whelp to Thunder. She is a grand bitch, being the dam of Daisy, Lady, Dick and Mack Laverack; broken by Smith, of Canada, and a merry worker.
3. DAISY LAVERACK, pure Laverack; color, lemon Belton; whelped June 19, 1879; winner of second prize in the Nat. A. K. C. Derby, Vincennes, 1880. Daisy, I consider, a first-class field dog; has a remarkably keen nose and is very fast.
4. MAY LAVERACK, black and white; whelped May 31, 1879; winner in two field trials; is the fastest puppy I ever shot over. She is by Thunder out of Spot, a native bitch by Glass out of Pink. She will breed well to a large, well-made native or Llewellin dog.
5. DICK LAVERACK, blue Belton, pure Laverack; a handsome-bodied dog and much like his sire, Thunder; second in a large class at the late Pittsburgh dog show; beaten by his brother Mack. I consider him as good in the field as Daisy or May; whelped June 19, 1879; weight, about 48 lbs.

Price of No. 1, $600; No. 2, $250; No. 3, $300; No. 4, $200; No. 5, $250.

Sportsmen can rely that the dogs are as represented.

I refer, with permission, to the FOREST AND STREAM, or to any gentleman present at the late field trials. Dick, Daisy and May are two season dogs; broken in Missouri by H. M. Short, and have had a great deal of game killed over them. There are no better bred dogs in the world, as gentlemen posted in canine matters will admit.

I intend importing a pure Laverack dog that I think will nick well with Daisy and May, and should I keep Peeress would breed her to no other dog than Thunder.

Address, until April 1,
JOS. J. SNELLENBURG,
New Brighton, Pa.

After that, to
W. L. McCONNELL,
Newcastle, Pa.

Feb17,1t

Hotels and Routes for Sportsmen.

TO SPORTSMEN.

The Pennsylvania R. R. Co.,

Respectfully invite attention to the

SUPERIOR FACILITIES

afforded by their lines for reaching most of the TROUTING PARKS and RACE COURSES in the Middle States. These lines being CONTINUOUS FROM ALL IMPORTANT POINTS, avoid the difficulties and dangers of reshipment, while the excellent cars which run over the smooth steel tracks enable STOCK TO BE TRANSPORTED without failure or injury.

THE LINES OF

Pennsylvania Railroad Company

also reach the best localities for

GUNNING AND FISHING

in Pennsylvania and New Jersey. EXCURSION TICKETS are sold at the offices of the Company in all the principle cities to KANE, RENOVA, BEDFORD, CRESSON, RALSTON, MINNEQUA, and other well-known centers for

Trout Fishing, Wing Shooting, and Still Hunting.

Also, to

TUCKERTON, BEACH HAVEN, CAPE MAY, SQUAN, and points on the NEW JERSEY COAST renowned for SALT WATER SPORT AFTER FIN AND FEATHER.

L. P. FARMER, Gen'l Pass. Agent.
FRANK THOMSON, Gen'l Manager febl1-tf

"THE FISHING LINE."

TAKE THE

Grand Rapids & Indiana R.R.

Mackinaw, Grand Rapids and Cincinnati Short Line

FOR THE

Trout, Grayling, and Black Bass Fisheries,

AND THE

FAMOU SUMMER RESORTS AND LAKES OF

NORTHERN MICHIGAN.

The waters of the

Grand Traverse Region

and the Michigan North Woods are unsurpassed, if equaled, in the abundance and great variety of fish contained.

BROOK TROUT abound in the streams, and the famous AMERICAN GRAYLING is found only in those waters.

The TROUT season begins May 1 and ends Sept. 1.

The GRAYLING Season opens June 1 and ends Nov. 1.

BLACK BASS, PIKE, PICKEREL and MUSCALONGE, also abound in large numbers in the many lakes and lakelets of this territory.

The sportsman can readily send trophies of his skill to his friends or "club" at home, a nice for packing fish can be had at many points.

TAKE YOUR FAMILY WITH YOU. The scenery of the North Woods and Lakes is very beautiful; the air is pure, dry and bracing. The climate is peculiarly beneficial to those suffering with

Hay Fever and Asthma Affections.

The hotel accommodations are good, far surpassing the average in countries new enough to afford the finest of fishing.

During the season Round Trip Excursion Tickets will be sold at low rates, and attractive train facilities offered to Tourists and Sportsmen.

Dogs, Guns and Fishing Tackle Carried Free at owner's risk.

It is our aim to make sportsmen feel "at home" on this route. For Tourist's Guide (an attractive illustrated book of 80 pages), containing full information and accurate maps of the Fishing Grounds and Hunting Cards, address A. J. SMITH, General Pass. Agent, Grand Rapids, Mich.

To Hunting and Fishing Parties.

The Pullman Car Company

IS PREPARED TO CHARTER THE new cars "Davy Crocket" and "Izaak Walton," which are fitted up with dining room and kitchen, sleeping apartments, lavatories, etc., also provided with cooks and closets for guns and fishing tackle, and kennels for dogs.

Diagrams, rates and other desired information furnished on application to Gen'l Supt. P. P. C. Co., Chicago. je20 3mos.

Wild Fowl Shooting.

GUNPOWDER!

Dupont's Rifle, Sporting and Blasting Powder.

THE MOST POPULAR POWDER IN USE!

DUPONT'S GUNPOWDER MILLS, established in 1802, have maintained their great reputation for seventy-eight years. Manufacture the following celebrated brands of powder:

Dupont's Diamond Grain.—Nos. 1 (coarse) to 4 (fine) unequalled in strength, quickness and cleanliness; adapted for glass ball and pigeon shooting. Packed in 1lb canisters.

Dupont's Eagle Ducking.—Nos. 1 (coarse) to 3 (fine); burns slowly, strong and very clean; great penetration, with a close pattern; adapted for glass ball, pigeon, duck and other shooting, with either muzzle or breech-loaders. Packed in 1lb and 5lb canisters and 6¼ and 12½lb kegs.

Dupont's Choke Bore.—Specially adapted for "Choke Bore" Guns, and particularly for prairie and upland shooting. Burns slowly, strong and moist; does not cake or burn on the barrels, gives both a good penetration and a close pattern, will be found well adapted for glass ball and pigeon shooting. Made of two sizes, only No. 7 and No. 6, No. 7 being the coarsest. Packed in 6¼lb kegs and 1lb canisters.

Dupont's Eagle Rifle.—A quick, strong and clean powder, of very fine grain for pistol shooting. Packed in 1lb canisters and 6¼ lb kegs.

Dupont's Rifle Fg. "Sea Shooting."—FFg. and FFFg. The Fg. for long-range rifle shooting, the FFg. and FFFg. for general use, burning strong and moist. Packed in ½lb, 1lb and 5lb canisters, 6¼, 12½ and 25lb kegs. Fg coarse, FFFg. fine.

Dupont's Sporting, Mining, SHIPPING and Blasting Powders of all sizes and descriptions. **Special Grades for Export.** Also Rifle, Cartridge, Musket, Cannon, Mortar, Mammoth, Hexagonal, Cubical and Pellet Powder, U. S. Government Standard.

Powder manufactured to order of any required grain or proof.

Agencies in all the cities and principal towns throughout the United States. Represented by **F. L. KNEELAND, 70 Wall Street, N. Y.**

N. B.—Use none but DUPONT'S Fg. or FFg. for long-range rifle shooting.

The Hazard Powder Co.,

MANUFACTURERS OF

GUNPOWDER.

Hazard's "Electric Powder."

Nos. 1 (fine) to 6 (coarse). Unsurpassed in point of strength and cleanliness. Packed in square canisters of one pound *only*.

Hazard's "American Sporting."

Nos. 1 (fine) to 6 (coarse). In 1 lb. canisters and 6¼ lb. kegs. A fine grain, quick and clean, for upland prairie shooting. Well adapted to shot guns.

Hazard's "Duck Shooting."

Nos. 1 (fine) to 5 (coarse). In 1 and 5 lb. canisters and 6¼, 12½ lbs. kegs. Burns *slowly* and very clean, shooting remarkably close and with *great penetration*. For field, forest, or water shooting, it ranks any other brand, and it is equally serviceable for muzzle or breech-loaders.

Hazard's "Kentucky Rifle."

FFFG FFG, and "Sea Shooting" FG in kegs of 6¼, 12½, and 25 lbs. and canisters 5 lbs. FFFG is also packed in 1 and 1 lb. canisters. Burns strong and *moist*. The FFFG and FFG are favorite brands for ordinary sporting, and the "Sea Shooting" FG is the standard *Rifle* Powder of the country.

Superior Mining And Blasting Powder.

GOVERNMENT CANNON and MUSKET POWDER; also, SPECIAL GRADES FOR EXPORT, OF ANY REQUIRED GRAIN OR PROOF, MANUFACTURED TO ORDER.

The above can be had of dealers, or of the Company's Agents, in every prominent city, or wholesale at our office.

A Skin of Beauty is a Joy Forever.

DR. T. FELIX GOURAUD'S Oriental Cream or Magical Beautifier

PURIFIES as well as Beautifies THE SKIN

Removes Tans, Pimples, Moth-Patches and Blemish on beauty. It has stood the test of thirty years, and is so harmless we taste it to be sure the preparation is properly made. Accept no counterfeit of similar name. The distinguished Dr. L. A. Sayre said to a lady of the *haut ton* (a patient):—"*As you ladies will use them, I recommend 'Gouraud's Cream' as the least harmful of all the Skin preparations.*" Also Poudre Subtile removes superfluous hair without injury to the skin.

ANSWERS TO CORRESPONDENTS 92

TO CORRESPONDENTS.

The FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen.

Communications upon the subjects to which its pages are devoted are invited from every part of the country.

Anonymous communications will not be regarded. No correspondent's name will be published except with his consent.

The Editors cannot be held responsible for the views of correspondents.

All communications of whatever nature should be addressed to the Forest and Stream Publishing Company, Nos. 39 and 40 Park Row, New York.

FOREST AND STREAM.

Thursday, March 3.

WESTERN BIRDS FOR EASTERN SHOOTING.

A BRIEF note in last week's issue of FOREST AND STREAM called attention to a proposed movement of very high importance. A number of gentlemen, of Springfield, Massachusetts, have signified their intention of procuring from the West game birds of different species, which are to be liberated here in the hope that they may firmly establish themselves and serve to replenish our now depleted covers. Such a project deserves every encouragement, and we thoroughly believe that if this matter is taken hold of in the right way, and the importations are made on a scale sufficiently large, there is no reason in the world why it should not succeed.

Among the birds which first suggest themselves to us as desirable, and at the same time sufficiently hardy to bear our climate, are three species of grouse. The prairie hen, as is well known, is indigenous to Massachusetts, and was exterminated there, on Long Island and in New Jersey simply by overshooting. The sharp-tailed grouse is still more hardy than the pinnated, is more a frequenter of the timber and, so far as can be judged from the facts at our command, a bird likely to do better here in the East than the prairie hen. It is fond of cover, though found also far from the timber, and we have frequently in the Rocky Mountains killed it far up the mountain side among the quaking aspen sprouts and in high willow undergrowth. Along the Missouri we have often found it among tall timber, but it especially delights in the undergrowth that always fringes the streams in the country west of the Missouri. This species is indigenous to Wisconsin, Minnesota and to the high dry plains of the West, and its range extends into British America far to the Northward. It is thus able to endure a temperature much more severe than anything to which it would be exposed here. Whether the low elevation and more humid atmosphere of the Eastern States would operate unfavorably against the species is a question that can only be decided by experiment. We hope to see it decided.

From the time when we first became familiar with the dusky grouse in the grand old mountains of the Territories we have felt that the introduction of this superb species to the Eastern covers was something greatly to be desired. It is an inhabitant of the higher mountains of the West and seems to prefer just such localities as are frequented by our own ruffed grouse. Like the latter it is a swift flyer, and the man who starts a bird in the thick cover has no very great amount of time in which to decide whether he will or will not shoot. As a table bird it is quite the equal of its New England cousin and, like it, is white meated, well flavored and game. It is, however, more than twice the size of the ruffed grouse, weighing up to four pounds. On the whole, it is one of the very finest of North America's game birds and, if it could be naturalized in the East, would soon be as highly prized by sportsmen as any bird we have.

Besides these three grouse there are two of the Pacific Coast quails, the Mountain and the Valley that we feel confident would do well in sections of the East suited to them. But about these two species we have already expressed our views.

The first question that arises with regard to this proposed importation of game birds relates to the possibility of obtaining them in any quantity, but we think that in regard to the pinnated and sharp-tailed grouse and the two species of quail there should be no difficulty whatsoever in securing all that might be needed. It would be well, if possible, to obtain this spring eggs of the grouse, as well as to secure, at once if possible, a number of the old birds. No better time than the present could be chosen for the latter purpose, for in many parts of the country where they are most abundant the snow lies deep on the ground, food is scarce and the birds might be trapped without difficulty. We have no doubt that many of those who read these lines are in a position to furnish our Springfield friends with birds at a moderate cost. A few years ago live pinnated grouse could be bought in large numbers in this city, and we have no doubt that by a little exertion they might now be obtained. As to procuring the dusky grouse or their eggs, we confess that we are unable to give any suggestions. We know many localities where the birds breed, but they are not within easy reach of the sportsman now, or during the breeding season. If there are any of our readers who could obain either the birds or the eggs we should be glad to hear from them on the subject. The California quail could be obtained without difficulty and if properly treated would very likely breed in confinement.

If the eggs of the grouse could be obtained they might be hatched under small hens and attempt made to rear the young in confinment. We have no doubt that the pinnated grouse might be reared in this way, and in that case they would become as tame as ordinary fowls and would probably breed regularly. Some wild prairie chickens which we kept through part of a winter, a few years since, became so tame that in spring they came close to a man who was spading the garden and scratched in the fresh earth at his feet. We presume that the sharp-tailed grouse would be less easily tamed, but it seems reasonable to hope that they might eventually breed in confinement.

We know too little of the facilities which the gentlemen who propose to undertake this excellent work have, for keeping the birds in confinement, or for carefully protecting them, if they are to be turned out to shift for themselves, to be able to predict the success of this experiment. Surely, however, it is worth a trial. To undertake it with any hope of carrying it to a happy termination, however, it is essential that the work should be undertaken on a large scale. To turn out ten or twenty pairs of birds will simply be to waste so much money. We would not think of commencing operations with less than fifty pairs of each species, and one hundred pairs would be better. We are convinced that there are very many sportsmen in Massachusetts and indeed throughout the New England States who would be glad to contribute liberally in support of such a movement as the one contemplated, and we sincerely hope to see it carried through. Should it take definite shape and the managers proceed to secure their birds we shall be pleased to do anything in our power to aid them.

OPENING OF THE TROUT SEASON.

HOW many an old angler's heart will leap as he sees this heading! How visions of former seasons flit down the trail of memory of those who recall a half a century of trouting! Scarce a moccasin track is to be observed close at hand say for ten years or so, but with a raised eye the veteran glances past these and observes the trail broadening into a path which is well defined at a distance of three to five decades, and then slowly fades into the prairie grass of oblivion. The last figure is of a barefooted country boy who has thrown away his alder sapling and triumphantly brings home a string of trout on a piece of his fish-line. The boy looks as wholesome as the trout and his flush of health is not dimmed by the contrast as he lifts his prize to the height of his shoulder to show it to his mother, who has brought her knitting to the door in answer to his triumphant whoop. Blessings on his happy heart; that innocent face under the ragged straw hat does not look like the face which the old banker sees in the glass; is it possible that one has grown into the other? The boy is gone; he died when he first went to the city to dabble in other pools than those where the trout live. He did not feel the change, but as he now sits in his easy chair with a copy of FOREST AND STREAM in his hand announcing the trout opening, he feels that he was the boy who died and his heart beats as it has not beaten in months, and forgetting his gout, he opens a drawer and looks over his tackle.

The opening brings other views to the naturalist and the epicure who think of the display to be held in Fulton Market and how it has grown in size and interest from a few specimens from Long Island to its present state when the amber specimens from Long Island lie side by side with the dark Canadians and the rainbow-sided gems from California with perhaps a few specimens from abroad. Here our fishculturists love to congregate; and this reminds us that this year it is the intention of Mr. Blackford to make a display of fishcultural apparatus as well as fish, and he invites loans or contributions. Other species of fish which are cultivated will also be shown, if sent, but we caution our friends not to have their trout arrive in New York before the 1st of April or they will not be received, no matter where they are caught.

AMATEUR HANDLERS.

IN this country, and more especially in our large cities, where time is money—and there is no denying that much of that valuable commodity is egregiously cut into ribbons by "going a-shooting"—the task of training one's own dogs is no easy matter. Dog-training, therefore, has to contend against mercantile business habits and has become a business of itself. Most of our city men have not the time to train their own dogs nor are there within the easy access of our cities favorable localities which afford them opportunity for working their dogs. Therefore a very large class of men, lovers of the dog, turn over their puppies to be handled and brought up in the way they should go by professional dog-breakers, and indeed without this useful class of men many good sportsmen would either forego the pleasure of breeding their own stock, and relinquish the field altogether, or they would be entirely dependent upon the market which offers "full-grown and well-trained dogs" for sale.

In vast sections of our country, however, and in the rural districts, where there is time to breathe and where everything is not on the bounce and everybody on the bound, there is a large class of amateur sportsmen who can take a few hours almost at any time from their business and who do take a pleasure in breaking their own dogs. To those who can devote their leisure moments to the high art of dog-breaking we will say that if they choose they can learn much while giving instruction, for if the task of training a dog inculcates anything it preaches and practices patience, it enforces self-control, it eliminates irascibility, it displays the excellence of discipline and it is the "open sesame" to the field where the highest quality of sport is to be found.

To determine whether the amateur is content to give his dog an inferior education, or whether he will acquire great proficiency in the art of dog-handling, we cannot think of any better plan the one suggested by us a few weeks ago—the offering of prizes for amateur handlers. We believe that this should call out a number of proficients who up to this

time have hid their light under a bushel. Much may thus be learned in such competitions, and the various systems for the education of dogs can be practically compared. There are many men in the United States, natural geniuses, who have never seen Col. Hutchinson's book or other dog-breaking manuals, who have from inate intelligence turned out dogs of the most killing qualities. We have known many such, and with whom it was a pleasure to shoot, for the most enjoyable dog to shoot over is one that the owner has well trained himself. At the same time we must not forget how great a debt sportsmen at large owe to the professional dog-handler, and how much the latter have done for our dogs. Some of these men are among our very best sportsmen, and their services can scarcely be over-estimated.

OUR FOREIGN MATCH.—Earl Stanhope has received an answer from General Wingate, the Vice-President of the National Rifle Association of America, in response to his note of invitation sent in November last. This reply will be found in our rifle columns and represents the sentiments of the not inconsiderable section in the National Association who are such sticklers for form and order that they stand a good chance of being overwhelmed by their own foolishness. The Palma obstacle rises up to balk every good intention that they might have, and now when the simplest possible form of an invitation is sent for a friendly match this musty, dusty old piece of junk is hauled out of its oblivion and thrust forward with the taunt, "Come and take it, if you can." It is entirely overlooked that Earl Stanhope's note was for an international match, while the Palma, according to the original programme about it, issued on March 6, 1876, is the trophy of "an international long-range match for the championship of the world." According to the views embodied in the Wingate letter, there is never to be another long-range match in which American riflemen can with propriety engage unless the Palma be the object shot for. If so, then the prospect is a sorry one indeed, after the long chapter of wrangles and misunderstandings, of complications and even misrepresentations, which have formed so large a part in the history of this centennial offering. There was no suggestion of the Palma in Earl Stanhope's letter. America holds the championship in long-range team shooting, and would continue to hold it even if an American team had accepted the invitation of Lord Stanhope, visited Wimbledon and been defeated. British riflemen have themselves fixed the status of the Palma as the championship token, but they have what our American managers seem to lack—sense enough to see that many hearty matches may be shot outside of the championship records.

QUAIL, PARTRIDGE, BOB-WHITE, COLIN, or whatever we may choose to call him, there is no doubt that the little brown bird ought to have a settled and determined name and appellation by which it may be known throughout the land. The attempt of the Michigan Sportsmen's Association to furnish for the favorite little fellow, at present so overweighted with names, a designation at once suitable and likely to be generally adopted is most praiseworthy, and deserves warm support. We question, however, whether the recommendation of the association will be able to effect so desirable a change. The usage of two centuries has established the name "quail" in the North and "partridge" in the South so firmly that we see little hope of the general adoption of the name colin.

When sportsmen generally will consent to call our little cotton-tail a hare, and not a rabbit, and will speak of ruffed grouse, instead of partridges and pheasants, then we may hope to hear that field trials are to be run on colins and not on quails.

MOUNTAIN QUAIL FOR THE SOUTH.—The mountain quail referred to in our issue of two weeks ago as being at Ogdensburgh, N. Y., have been sent south and are to be turned out in Alabama. They are at present in the hands of President Spear, of the Montgomery Shooting Club, and will, in a short time, be put down in some favorable locality, where it is hoped they may do well and breed.

It is a pity that a good number of both mountain and valley quail could not be secured and introduced in various sections of the country. The former, being quite a hardy bird, would no doubt do well in our middle states, while the smaller but not less beautiful valley quail would with proper protection, we think, become acclimatized in the Southern States.

The testimony of Mr. F. J. Thompson, whose careful and accurate observations are always so interesting to the readers of FOREST AND STREAM, shows that these birds can endure a very severe temperature without any very great degree of inconvenience. Will not some of our gun clubs or game protective societies take this matter in hand?

JAMES R. TILLEY.—Very many of the readers of the FOREST AND STREAM will learn with sadness of the death of James R. Tilley, at Locust Valley, Long Island, last Sunday, Feb. 27. Mr. Tilley was widely known and highly esteemed among the sportsmen of the United States, and many a scene of most pleasant companionship in the past will be recalled by this note of the lamented death of a genial, whole-souled man.

STANDING COMMITTEE OF STATE ASSOCIATION.—Mr. Abel Crook, President of the New York State Association, has appointed Mr. M. A. Stearns, of Danville, N. Y., a member of the Standing Committee of the Association, in place of James F. Williams, deceased.

MICHIGAN SPORTSMEN'S ASSOCIATION.—We continue this week the report of the Michigan Sportsmen's Convention at Lansing. For the minutes of the meeting we are indebted to the courtesy of Secretary H. B. Roney. The various reports presented by the special committees, in particular those relating to the protection of game, reflect the highest credit upon the Association. We congratulate the sportsmen of the State of Michigan on the noble stand taken by their representative organization, and we premise that as the character of the Association becomes more clearly understood and better appreciated throughout the whole State, its influence for good will be advanced in equal ratio.

THE HAPPY SUGGESTION to the Cocker Club, printed in our kennel column, deserves the immediate attention of the members of that body. The gentleman who makes it is one of our best-known and most highly-respected authorities on kennel matters, and the recommendation presents an easy way out of such difficulties as may arise in the way of the formation of a standard for the cocker. There is plenty of time between now and the inauguration of the New York show to arrange all matters of detail as to standard and judging.

The Cocker Club unquestionably includes a majority of the breeders of this strain in America, and whatever this body has to say in regard to the cocker is entitled to great weight.

The Sportsman Tourist.

INDIAN FOLK-LORE.

THE RUNNER AND THE WHITE BEAVER.

IT was near the close of a beautiful August day that I awoke from my afternoon nap and stepped out of the lodge. Calling to my little servant—an orphan whom I had picked up in camp—I bade him light my pipe, and seated myself against the lodge for a quiet smoke and to enjoy the beautiful scene before me. Our camp, composed of about a hundred lodges of Blood Indians under the head chief Running Rabbit, was pitched at the foot of the Black Butte, a rocky spur of the Snowy Mountains. How picturesque, how primeval it all seemed. The smoke rose in graceful curls from the lodges and slowly drifted up the mountain side. The shouts of the children at play and the scrape, scrape of the flesher, as the women faithfully worked on a buffalo robe, filled the air.

On the sunny side of some of the lodges a group of men could be seen smoking, chattering and idling the hours away. Up on a little eminence a whole family were mourning for a lost one, who had been killed by the Sioux a few days before. "Oh, Bear child, you are gone; come back. You will never come back," they kept repeating, and their doleful cries seemed to affect the whole camp. Even the dogs seemed to feel it, and they answered back with their peculiar wolf-like howl.

Looking away to the north I could see a vast, boundless prairie, dotted here and there with several bands of buffalo and antelope, and on the very verge of the horizon the outlines of the Bear Paw, Little Rocky and Hairy Cap mountains could be seen, rose colored in the setting sun.

It was getting dark. From all directions the hundreds of horses were being driven into camp and tethered by the lodges of their owners. With them came mine, two beautiful wiry pintos, renowned as the best buffalo horses in camp, and they seemed to know it, for they shook their heads and switched their tails as if on purpose to make the little bells jingle, which had been placed in their hair as an insignia of their prowess. What sport I had had with them as I swept over the prairie in pursuit of a band of buffalo. I seemed to hear the thunder of the many feet pounding over the turf, the crack of rifles, the thud of the falling, the snorts of the dilated nostrils—I seemed to see the spurts of blood—the red, flashing eyes and the angry tossing of the shaggy hair as some master bull made a dash at me. Can it be that there is any more sport than this, more mad, breathless excitement? To me it is the most enjoyable of all sports. The very thought of it excited me, and I resolved that on the morrow I should try it again. "To-morrow goes!" I said to myself, and went into the lodge to eat the simple meal of boiled "hoss rib" and bacon, bread and tea which had been prepared for me.

After supper the head medicine man, Pe-nuk-wi-um, sent for me to pay him a visit. Going over to his lodge I found it filled with the renowned warriors, medicine men and chiefs of the tribe, smoking and telling stories. After saluting Pe-nuk-wi-um ("Pe-nuk-wi-um" means "I stand on a hill and, far off, see a single moving object") and being assigned the seat of honor by his side, a fresh pipe was handed me which I lighted and, with the utmost gravity, repeated a prayer to the Sun commencing with the usual words, "Hi-yu natose Kim-o ket," meaning "Take pity on me, oh, Sun!" at the end of which all exclaimed "Ah," as the Methodists do at a prayer-meeting.

"Ap-we-cun-na," said Pe-nuk-wi-um, "have you ever heard the beaver story?" I replied in the negative. "Then I will tell it to you," he said, and every one being comfortably settled and attentive, he began.

THE BEAVER STORY.

Long ago, before the white men came, the Bloods were camped one year at Yellow Creek, on the south side of the Missouri. At that time the ceremony of the Medicine Lodge was going on, and many valuable presents were given to the Sun, among which were thirteen white buffalo robes, so plenty were buffalo in those days.

Now, in the camp was a great medicine man named Wolf-Tail, who had five wives. The youngest one, who was very handsome, was named Antelope Woman. There were also in the camp two young men named The Runner and White Elk. The Runner was a very poor young man, and as he had no relations he lived about from one lodge to another. He and the Antelope Woman had always loved each other, but her father had obliged the poor woman to marry Wolf-Tail, who gave ten horses for her. Now the last day of the Medicine Lodge had come, when the women, dressed exactly like the one they spoke of, entered the lodge and told what brave deed their husband, lover or relation should do to keep their affections, for women do not love a man who is not brave.

The Runner had sat in the lodge all day waiting for some one to come and say what he should do, but no one came, and he began to feel very badly, thinking that no one cared for him, when all of a sudden the Antelope Woman came in and touching the medicine, said: "He who wears clothes like mine, he whom I love, will swim across the Missouri next spring, when the ice is running out, kill an enemy and bring him back to this side." Having said which she turned and went out. What joy The Runner felt when he saw her come in the lodge dressed exactly like him. But what was his grief and despair when he heard what she wanted him to do. He thought it impossible, and going out he sought a hill-top and commenced to lament and pray the Sun to help him.

Day after day he wandered among the mountains, on the prairie, along the rivers, asking each animal and object he met for help. He became poor and weak, and at last in despair lay down beside a spring to die. Just as he was becoming unconscious he was startled by the Spring speaking to him, saying, "Get up, you crazy man; what are you doing here? I know what is the matter with you, but cannot help you. Do you see that big beaver lodge over there?"

"Yes," the poor boy replied, "I see it."

"Well," said the Spring, "go over there and perhaps the King of Beavers will help you."

Trembling and weak, the young man arose and did as he was bid, and coming to the lodge tore a hole in the top, entered and closed the hole up again. What was his surprise, on looking around, to see a great White Beaver sitting on the logs, singing the most beautiful songs he ever heard. Presently the Beaver stopped singing and asked the young man what he wanted. The Runner told him his story.

"And how came you here?" the Beaver asked.

"The Spring sent me," The Runner replied.

"Ah! the Spring sent you, did he? The Spring is our very best friend; he furnishes us water to live in; it floats our food and we build our dams across it, but your people kill us; they tear down our houses and break our dams. On one condition I will help you. You must promise that your people will never molest us again."

"I promise," said The Runner.

"Well, then, take this little piece of wood and wear it at your side; never take it off. With it you can swim like a beaver. When you have killed your enemy and start to come back, your friend White Elk must run down to a bend in the river and back to a big rock, where you will come out of the water. Now eat these berries," giving him a great dish of bull-berries, "go to sleep, and to-morrow go home."

Next morning he returned to camp and found the war party all ready to start; so, putting on some war paint and his little finery, he joined them. While they traveled he told White Elk all that had happened to him, and earnestly enjoined him to follow the Beaver's directions about running down to the bend and back to the big rock.

When they came to the Missouri they saw a large band of Gros Ventres trying to cross, but the river was so high and so much ice running that they could not do it. One young Gros Ventre, more brave than the rest, stood up to his waist in water, brandishing his spear and yelling at the Bloods.

"I will kill him," said The Runner to White Elk, and dived into the water like a beaver.

Then the Gros Ventres laughed, thinking he was drowned, but he soon appeared right beside the young Gros Ventre in the water, who was very quick and threw his spear at The Runner, but it struck the medicine wood at his side and glanced off. Then The Runner threw his spear and killed the Gros Ventre and, grasping him by the hair, disappeared under the water. At the same time White Elk ran down to the bend of the river and back to the big rock, arriving there just as The Runner came out of the water with the body of his enemy. When the Gros Ventres saw this they commenced to howl and lament for their dead companion, but the Bloods only laughed and started back for home, The Runner taking his enemy's scalp with him.

When they arrived at camp they all commenced to sing war songs, and The Runner went ahead, telling of his victory and tossing the scalp in the air. The whole village came out to meet them, and Wolf Tail coming up, embraced The Runner and took him to his lodge. Giving him the best seat, he turned to the Antelope Woman, saying, "Why don't you go and sit by your husband?" But she thought he was jesting and began to cry. "Do not cry," he said; and, turning so The Runner: "You have been very brave and you are fit to be my son. I give you the Antelope Woman; she is your wife. I give you my lodge, my horses, my medicine; and all I ask is that you allow me to live with you and teach you the Beaver medicine songs."

So ended the Beaver story. I looked at my watch; it was 11 o'clock. Pe-nuk-wi-um had been three hours telling that story, of which I have given only a synopsis.

"Is it a good story?" Pe-nuk-wi-um asked.

"It is good," I replied, and went home to bed.

Next morning I still felt like a hunt. The camp had decided not to disturb the buffalo till the next day, so I took my rifle and started up the mountain after deer, elk or anything I could get sight of. For more than an hour I toiled up the steep rocks and through the underbrush. Then I got sight of a few elk scampering off around the mountain. They had winded me. I did not want to kill an elk anyhow. Of course not. "By George," I thought, "there must be sheep in this mountain. I'll see;" and I kept on climbing, resting now and then to get my breath, for it was pretty steep work. At last I reached an open space not far from the summit. Sure enough, there was a small band on the very highest point. With the utmost caution I proceeded, keeping a large boulder between them and me. I must see if they are there yet. I stepped one side. They saw me and bounded off down the mountain side. I felt amiable; I sailed sweetly to myself and said—never mind what. The sheep were gone. I climbed up to the place where they had stood. It was a satisfaction to know that they had been there. I sat down on a bed of larb, leaned my back against a rock and was soon asleep.

When I awoke it was near evening. I started to get up when I saw a sheep coming straight toward me up the mountain. When he came within range I fired and he dropped right in his tracks. It proved to be a fine fat yearling buck. Quickly cutting off its hind quarters I started for home tired, hungry and just in time to enjoy a meal of fat boiled antelope ribs.

AP-WE-CUN-NA.

Fort Benton, M. T., 1880.

JACK FROST IN A FLORIDA GARDEN.

Editor Forest and Stream:

Among the visitors this season at St. Augustine, Fla., was his honor, Jack Frost. He was a belated traveler, for the thermometer at 11:30 midnight quieted all apprehensions of his visit, marking 34 degs.—two degrees higher than his entrance ticket numbered.

I arose at 6, December 30, to find the thermometer at 20 degrees. I rushed to the orange grove. Alas for human hopes! Every leaf was curled by our frosty barber. He had rubbed his clammy hands over the cheeks of every orange—sending back to their very heart's core every vestige of their glory. The curled locks were only a prelude of the destruction to follow. Orange leaves admire to stand straight out, lifting their glossy faces to the sun. Curls didn't suit, and they would rather be cast out altogether than to seem to be what they were not.

This leads me to my garden. Pass this little wire gate. The first lamentation I offer you is: Look at these black guavas! They were my pride. Two years they have fought with all the variations of weather, having recovered from a well-nigh death blow in '78. There they stand, 15 ft. high, as dead as your walking stick, and the fruit, which was ripening on Christmas Day, still clings ruined. This tree, rearing its head above its leafless neighbors, is a "green bay tree." The fragrance of its lacerated leaves suggests bay rum. Like the orange, its leaf is dark green and glossy, and so are many of the trees South.

Here is a shrub of two summers, *Duranta*, which bears long sprays of lavender-colored blossoms, the yellow waxen berry at the base end contrasting finely with the petals at the tip. It too shares the fate of the guava. Possibly both may struggle for re-life, but it will be at the very root of themselves.

That trellis holds a vine grown from Hawaiian seed. Though coming from the tropics it holds it's own, and next summer you shall see large clusters of bloom with white petals and pink stamens.

Had you been here last winter you would have seen all these geraniums intoxicated with their own vivid colors. Ballgoers will find few blooms this winter to light up their raven tresses.

This broad-leafed plant, with each leaf sharpened to a pin point, is the American aloe. Its sister, the century plant, has white edged leaves, and will not grow half as fast. Near by is the *Yucca Filamentosa*, bear grass; this and the aloe each sending up a flower stalk which I have seen grow a foot a day—the aloe stopping at thirty feet, the bear grass at ten feet.

The aloe throws out on its flower stalk lateral branches at right angles with greenish, yellow flowers, the bear grass flower stalk forming a pyramid of pendant, tulip-shaped white flowers; base of the pyramid a foot in diameter. The gracefulness of this Myrsiphyllum Asparagoides (Smilax) vine drooped as old Jack suddenly passed by her, and again fairy dresses will miss the green festooning amid their folds. It was wonderful to see how the Olea (tea-olive) laughed at Jack's cold looks. She peeped out from behind her glossy sentinels and kept her own white petals pure and sweet as ever, as did her cousin.

Just over there Jack had it all his own way. He took full possession of that group of Alpinea nutans, and the broad leaves are dried up as though a furnace had found shelter in its thick foliage. As late as November I cut from it one of its own beauties. The blossom shoots from the base of the terminal leaf on a pendant spike with amber and creamy shell-tinted flowerets. The helmet shape of the floweret gives it its common name of dragoon plant. Fortunately this Tradescantia of Nassau was covered so it will revive again with its odd shaped flowers, its bracts forming a half open mouth showing the rows of white flowers within; these bract cups growing all around the plant, hugging close to its centre under its purple-lined, lance-shaped leaves. These borders of "witch lilies"—so called because the flower shoots up in a night after a summer shower—around the beds, were saved from the ravages of a curious caterpillar, long, smooth, black, with white rings the entire length of the body.

That reminds me, strangers from the North have most amazingly crude ideas about raising orange groves or roses, or anything else. Just as though Genesis iii., 19, did not apply as much to the tiller of the ground below Mason and Dixon's line as above it. One thing convinces me of the unity of the race: that curse is shared alike by all mankind. "Do you enrich the soil any?" they ask me. "Do you have any insects?" If there is a place on God's earth where eternal vigilance is the price of liberty it is just here in Florida. You admire the oranges, the roses, the lilies; but you shall go to your garden some lovely morning and find a cluster of rarest rose buds gimlet-bored to the very centre by some patient insect. One side of your bud shall look so tempting, but the other is pierced to the heart. You shall find the caterpillar crawling leisurely along the edge of your lily leaves. You shall imagine to yourself that next fall you will have a pecan tree to make sport for you as did the hickory tree in your youthful days at the North, but suddenly you awake to the fact that a secret foe is getting his fun first, and despite your efforts at discovery he day by day cuts off branch after branch as clean as could your pocket knife.

There are half a dozen acacias, some bearing white button ball flowers, of Northern white clover fragrance. This shrub, with locust tree-like foliage has clusters of gay yellow and red flowers, called by the Spaniards Walkamiah, and by the South Sea Islanders Pride of Barbadoes. The Rousellia juncea, with its sprays of red fairy drops and needle-like leaves, is burned like a wisp of tow, but here and there a green shoot tells us it was not quite conquered. The Virgin lilies, called so from blooming in Mary's month, convince doubting critics that the artist in the figured long tube of the lily was true to nature. In the month of May high carnival is held among the flowers in honor of Mary, and the cathedral is a font of lilies.

Here, too, on Easter Day, in striking contrast with the snowy rosebuds, you will find the *Amaryllis Johnsonii*, with its outspoken crimson face penciled with white. Those trees, with grace in every branch and twig, are the pepper from California—not the pepper of commerce, though its leaves are very aromatic. Here are palms of various varieties, and St. A. might become a modern Jericho. Must I tell you of the banana! If there was anything above another to give you a glimpse of a South Sea island home it was the waving fronds of the banana, standing fifteen feet high. But they made their obeisance to the northern king and have not dared to lift their heads again.

Right there, to combine utility with beauty, to gratify the palate as well as the eye and the nose—right by the side of my roses—I had strawberries. We were on a strife, my neighbor and I, to be first to set out the luscious fruit on our tea-table in December. But they, too, have stepped backward. It was the safest way to avoid being annihilated by that cold foot.

There was one flower, so modest that Jack did not deign to notice her—the English violet—so she laughs merrily at the joy she perfumes through the air. There was one glory in my garden that defied the artist's brush—the *Poinsettia*, ten feet high, with its great face of scarlet bracts and yellow flowers. It must have made old Jack exult to see how easily he could just blot those beauties out of my garden picture.

This front piazza stands a monument to the energy of Jack Frost. He was not satisfied with walking over the grounds, but climbed these vines and rent their barks from top to toe; and the bignonia, with its dark foliage and scarlet trumpets, and the Mexican creeper, with its almost etherial sprays of rose-colored dots, will not cheer us again this winter, though the festooning ivy mocks at the cold intruder.

I suppose some people will say there was a great spot on the sun's face that made this cold wave, but I know one thing—it will take months and years to undo what the chill king did in a few hours, though doubtless he has killed some insect pests as well. I cannot speak of the Japan plum, of the Pibiscus, of the "turkey turban," etc., etc., that fell victims to his cold sword. But Florida does not despair, for the rose bushes only gave their roses and buds to the destroyer. There will yet be Sarnarque, Cloth of Gold, Marshal Niel, Arch Duke Charles, Duchess de Brabant, Tea Sylphide, Saffrano, Solfiture, Duchess of Orleans, Zelia Pladelle, Souvenir De Malmaison, Gloria de Rosamond and many others. "Oranges on the ground free to all!" And all sizes and ages and colors and kinds flocked into Dr. Anderson's grove with wheelbarrows and pails and baskets and bags, school satchels and whatever could hold, and ran riot over the orange-carpeted acres. One colored brother was overheard to facetiously remark to another, as he saw the youngsters flying the oranges in every direction, at every conceivable target: "In that day shall a measure of fine flour be sold for a shekel," etc. The Doctor calmly pockets his loss. 'Twas all Jack left for him or us for the oranges he ate.

ONE OF THE VICTIMS.

"A TRIP THROUGH THE PROVINCES."

"Nothing is easier than fault-finding. No talent, no self-denial, no brains, no character are required to set up in the grumbling business. But those who are moved by a genuine desire to do good have little time for murmuring or complaint."—ROBERT WEST.

"For I am nothing if not critical."—OTHELLO, Act ii., Scene i.

To my aimable critic, "Mic-Mac," I heartily commend the above texts suggested by the perusal of his article in FOREST AND STREAM of Feb. 24 concerning mine of Feb. 10. He evidently belongs to the same school of critics as my quondom reviewer, "Manhattan," and by his own confession approves of this method of imparting information to the readers of FOREST AND STREAM.

If it shall happen that anything I have written shall mislead or deceive any brother sportsmen no one can regret it more than the writer. If stating my own experience as a fact and giving "hearsay" as hearsay is misleading then I fail to see it. But let us see for a moment whether the criticism is just. First, with regard to salmon, "Mic-Mac," in assuming the role as critic, exhibits his credentials to the effect that he has "passed the last three autumns in the country spoken of." Well, the writer has also spent three seasons there, and traversed almost the entire line where salmon abound, and with special reference to fishing. Two occasions were in the spring and one in the fall. Upon my fall trip which was my first I was advised that it was "out of season for salmon," that they only rise to a fly, to any extent, in the spring from the 10th of June to the middle of July and sometimes a little later. Now, isn't it presuming a little in a critic to venture upon criticism when confessedly he has never been "in the country spoken of" during the fishing season, but has confined his observations to a small portion of trips manifestly projected for hunting purposes. And *ex necessitate*, must not his information be not personal but hearsay? His informants advise him that there are few or no salmon, and mine, that there are many, coupled with our experience of taking eight salmon, each of which weighed over twenty pounds save one. This was in 1876; has it been noted in any sporting paper that that was an exceptional year? Is it so that salmon catching is so rare that to have a fair catch is an exception? Then truly those New Yorkers who paid "thirty odd thousand dollars" for "Fraser's pool" were most woefully deceived and taken in, and yet there are numbered among them some whose reputation for shrewdness has brought them a mint of money. But they are probably deceived, misled perhaps, by my former article, and went straightway and fooled away $30,000 on six miles of waste water where salmon are rarely taken. And yet the fact still stares us in the face that New Brunswick alone sends more salmon to market than all Canada and Nova Scotia combined. It is useless to discuss the question as to whether salmon abound in considerable numbers in the Restigouche, Miramichi and Nepisiguit rivers of New Brunswick. To deny it shows a woeful lack of information. For authority that they do I would refer my critic to "Hallock's Gazetteer," pp. 200, 201; "App. Cyclop." vol. xiv., p. 569; "Forest Life in Acadie," by Hardy, p. 238, *et seq.*, and in short to every sporting book published; and every sportsman knows that no streams in N. A. are more noted than those I have named. I appeal to authority because my assertion is attacked.

Now, with regard to fishing them. I fished upon all of the rivers named without objection and without license, except on the Restigouche, in 1876, and both the Restigouche and Miramichi last year without license or pay whatever. A nominal license is required, and a gentleman I met showed me one given him by the warden of the Miramichi, but for which he said no fee was exacted. Our party had none and no questions were asked.

But enough upon this head, my article guaranteed nothing and advised nothing—I simply said, and repeat again, that previous to last year salmon were yearly taken with a fly in the rivers named in sufficient quantities to repay the sportsman and that one experienced no difficulty in obtaining permits. Now, I will venture that "Critic" never took a salmon in his life and, second, that personally he knows little of the rivers named as regards their fishing qualities.

A word in regard to hunting in New Brunswick and Nova Scotia. Personally I know nothing about it and did not profess to in my article, and the careful reader knows it; and a critic certainly should. I wrote: "Moose and caribou are said to be plenty; deer not quite so much," etc. "As to the place to go for game, I was told you can hardly go amiss."

Will Critic point out wherein the "way of misleading" occurs?

But will my friend deny that game is very plenty there of all kinds except "deer" and "quail"?

The very number of FOREST AND STREAM in which his strictures appear, on page 70, is a communication from St. John, N. B., in which appears, viz.: "Moose have been quite plentiful, caribou very numerous and numbers of animals that are scarcely ever seen so far south as Nova Scotia have fallen before the hunter's gun. John Connell, of Bartibogue, in two days last week killed eleven caribou."

Does yo amiable Critic think the reader would deem himself mislead by the writer if he found no deer if he got caribou? As to feathered game, does Critic mean to insinuate they are not plentiful?

If so, then his experience has been "exceptional." The only trouble is its tameness, and you may pass near to it without putting it up unless you have a dog. Three years ago a party I was with came upon seven partridges and we shot them all, one by one, before they would fly, and that has always been my experience in the deeper wilderness. And in conversation with the natives upon my last trip they advised bringing bird dogs for bird shooting. They said the dogs there were "no good," and I fail to see why, if we go West with our dogs, which is getting to be quite common, we should not—if our purpose is bird shooting—take our dogs to New Brunswick or Nova Scotia, however Critic may view it.

Now, a word with regard to the expense of the trip, time required, etc. First as to time. Critic is very solicitous of the happiness of our "hard-worked young clerks," etc.

Now I assume at the outset that there are as many hours to the day in New Brunswick as in the United States. Hence if a clerk has ten days, or two or three weeks for Cape Cod, he has the same number for New Brunswick. My article, however, was written for the especial attention of those who yearn to go to the woods, and as only one day more is consumed each way in going to New Brunswick, than in going to Rangeley, for instance, I see no special difficulty as regards time, as the sporting grounds of the rivers named are all within three hours' ride from the stations on the Intercolonial Railroad.

With regard to expenses of the trip. When Critic says he is in doubt whether I meant $100 "apiece" or $100 for the "whole party," he displays the same lack of careful observation as he does elsewhere. A school-boy, by adding up the fares and hotel charges, would learn that it meant "$100 apiece." When I gave in my table the distance "Boston to Bangor, 244 miles," I meant that each man must travel 244 miles, and the other tabulated items are equally plain to any one not willfully critical. But he says if I mean $15 per day for three, then trout "does not seem to me to be so very cheap." Well, suppose it don't, what of it? That "clerk" I would impose upon may think a trip from Boston to St. John, Halifax, and return to Gulf of St. Lawrence, thence to Quebec and through White Mountains back to Boston, covering three weeks' time and 1,757 miles, is cheap, if Critic don't. Try a trip in the States covering that period of time and distance, stopping at hotels, and see if by comparison this is not cheap. At all events, if one can get a three weeks' vacation for that amount of money, in this to him *terra incog.*, he may like to know it. Hence I gave it, and will leave the reader to decide that question for himself.

But I do not care to discuss this matter further. I simply wrote this, hoping I might add to some one's pleasure and possibly profit. I wrote for neither money nor fame. I believe the FOREST AND STREAM to be doing great good in many ways. I have experienced much profit from it, and would repay in kind if in my power, and I have not assumed to "write as an authority" *de* "quail" in New Brunswick, and no one knows it better than Critic.

If all the writers of FOREST AND STREAM confined their articles within the narrow limits of criticism—and that behind the mask—what an interesting, entertaining and instructive sheet we should have. In a short time we should have another edition of "Junius' Letters."

My esteemed friend and critic assumes in his article to be deeply concerned in the welfare of "the number of hard-worked young clerks in shops, railroads, insurance offices, banks," etc., whom he is fearful will be "swindled out of their short annual holiday."

Now, are you as anxious they should have a good time as you profess? If so have you given your mite to aid them? You assume to know it all, why not try your hand at an article which shall give naked facts with no "rose coloring," and let one know just where they can go, what game there really is and what it will cost? Such articles are always welcome, and then you hold a ready pen, you know. You would not have us believe, I suppose, that you have fooled away "five, six and seven weeks in the country spoken of" for "the last three autumns" and found no game or fish. O, no! Of course not. Now, tell us frankly why you went the second and third time, and especially tell us if you do not intend still another trip, and tell us first what you got for game and about how much your trip cost, for perhaps some of the "clerks" may venture being swindled out of their holiday. It is too generous a thing upon your part, this vicarious sacrifice and reminds me of the scene in David Copperfield between David and the waiter concerning one "Top Sawyer—perhaps you know him."

"'He came in here,'" said the waiter, looking at the light through the tumbler, 'ordered a glass of this ale—would order it—I told him not—drank it and fell dead. It was too old for him. It oughtn't to be drawn, that's the fact. Why, you see," said the waiter * * * our people don't like things being ordered and left. It offends 'em. But I'll drink it if you like I'm used to it, and use is everything' * * But it didn't hurt him, on the contrary I thought he seemed the fresher for it." Perhaps my friend will make the application of the moral.

I have been a sportsman in an humble way some twenty years, have visited most places in the northern United States where fishing is desirable, including Adirondacks, Moosehead, Rangeley, Parmechene, etc., and have learned two things at least, that nowhere is everything rose-colored.

Good fishing is seldom to be had without more or less tramping and fatigue, and oftentimes not then; much depends upon the condition of the water etc. But this much I have learned, that trout are more abundant at tide water and larger also than in the lakes and rivers. However, he who goes into the woods must prepare for disappointment wherever he goes. He is no more liable to disappointment in New Brunswick than at Moosehead or Rangeley, and perhaps no less so.

I have also learned that there is a class of sportsmen who always decry places they visit themselves. We had that experience at Restigouche. We found two Englishmen camped at the junction of the Restigouche and Metapediac awaiting the run of salmon; they seemed quite disappointed when we arrived, assured us we should take no salmon, etc.; that we had better go on than waste our time; and afterward they were very much chargrined and vexed at our success. I

learned subsequently that they had fished this same pool some twelve years running.

Now, I trust my esteemed friend and critic does not belong to this class, but is really a friend of the overworked "clerk," and that he will add a leaf to the sportsman's library by giving us from his facile pen the result of his experiences *de* a band of which little is written.

He can maintain his *incog.*; we shall relish the truth even if we don't know the author, whom it would give me great pleasure to meet notwithstanding his criticism, of which I will not complain if only he will supplement it with a version of his own.

I intend to visit New Brunswick again soon, and hope to try for salmon at Gaspe Point, and I have no doubt my friend can furnish valuable information *de* the country with which he is so familiar.

In conclusion, let me ask my friend not to "go for him" It isn't pretty, it savors too much of a hostile spirit; but let us rather imitate the spirit of good old Ik. Walton, and endeavor to disseminate charity and brotherly kindness. Let's shake hands and be friends. GEORGE A. FAY.

Meriden, Conn. Feb. 28.

Natural History

MICHIGAN GAME NOMENCLATURE.

REPORT OF THE COMMITTEE ON NOMENCLATURE OF THE MICHIGAN SPORTSMEN'S ASSOCIATION.

THE careful analysis of classification with reference to certain genera submitted by your committee on nomenclature at the session of 1880 will, we think, sufficiently indicate the methods adopted by your present committee in arriving at the conclusions and nomenclature, "both popular and scientific," recommended in this report. It will therefore be unnecessary to occupy your time in the enunciation of our analysis of the genera herein considered, and we will proceed at once to our task, and continue the work of making a correctly named list of Michigan game animals of "fur, fin and feather," by naming a portion of our waterfowl. We do not intend to make a complete list of any order or family, but confine ourselves to such species as occur either habitually or accidentally in our State. As belonging to the latter class we may mention the swans. There are but two species that can be considered as belonging to our fauna, even accidentally. These are the whistling swan (*Cygnus americanus*), also called the American swan, and the trumpeter swan (*Cygnus buccanator.*)

Of the goose family there are but two genera containing species likely to be found within the borders of our commonwealth.

The goose genus, proper, all having bright or light-colored feet and bills, and white or much varied plumage—namely, the white-fronted goose (*Anser albifrons*), also called prairie brant and speckle belly. This is probably identical with the white-fronted goose of Europe.

Snow goose (*Anser hyperboreus*), also called white brant.

Lesser snow goose (*Anser hyperboreus*), variety *albatus.* Like the snow goose, only smaller.

Blue goose (*Anser cærulescens*), also called bald brant.

The brant genus, proper, all having black feet and bills, and the head and neck black with white spaces, the general color of the body being gray, namely:

The Canada brant (*Branta canadensis*), also called Canada goose, gray goose and common wild goose. This is the only goose, or, properly speaking, brant, that is common in Michigan. There is a variety, *leucopareia*, which is not known to have occurred in this State, while the

Hutchins brant (*Branta canadensis*), var. *hutchinsii*, is quite generally distributed, and is smaller than the Canada brant.

The brant (*Branta bernicla*), also called brant goose, barnacle goose. There is a well-defined variety of this brant, viz.:

The black brant (*Branta bernicla* var. *nigricans*), on which the black is more extensive.

Of our ducks there are three sub-families—viz., the *Anatinæ*, the river or fresh-water ducks; the *Fuligulinæ*, the sea or deep-water ducks, and the *Merginæ*, the fish ducks.

Of our shoal water or river ducks we will enumerate as belonging to our avi-fauna:

The mallard, *Anas boschas.* The male is also called the green-head, the female the gray duck.

The black duck, *Anas obscura*, also called dusky duck, and black mallard.

The pinnated duck, *Anas acuta*, also called the spritail.

The gadwall, *Anas streperus*, also called gray duck.

The widgeon, *Anas americana*, also called the American widgeon, and baldpate.

The shoveler, *Anas clypeata*, also called broad-bill.

The wood-duck, *Anas sponsa*, also called summer duck and tree duck.

Of the teal genus we have here:

The green-winged teal, *Querquedula carolinensis.*

The blue-winged teal, *Querquedula discors.*

Of the deep water or diving ducks found more or less habitually on our waters during their migrations, we notice:

The canvas-back duck, *Fuligula vallisneria.*

The red-head duck, *Fuligula ferina*, var. *Americana*, also called pochard, red-headed widgeon and rufus necked duck.

The blue-bill duck, *Fuligula marila*, also called big black head, greater scaup duck, raft duck, flocking fowl and shuffler.

The little blue-bill, *Fuligula affinis*; with the same local names as are applied to the next preceding species, with the word little prefixed.

The ring-necked duck, *Fuligula collaris*; sometimes improperly called blue-bill.

The golden eye duck, *Fuligula clangula*, also called garrot and whistle wing.

The buffle-headed duck, *Fuligula albeola*, also called butter-ball, spirit duck and dipper.

The Lake Huron scoter, *Fuligula bimaculata*, also called American black scoter and coppernose.

Of the fish ducks we have three species—viz.:

The goosander, *Mergus merganser*, also called merganser, fish duck and sheldrake.

The red-breasted merganser, *Mergus serrator*, also called fish duck and sheldrake.

The Hooded Merganser, *Mergus cucullatus.* Also called saw-billed diver.

This list embraces the more important species of the waterfowl that frequent Michigan marshes and waters, or that will be likely to be captured by the duck shooting members of this association. Yet there is no doubt but others do occur, and we here beg the privilege of requesting members of the Michigan Sportsmen's Association who may chance to secure any rare specimens of ducks or waders, or other birds, to send them with a statement of the time and place of capture and as near as may be the number of the same kind observed; also the color of the eyes, bill and feet when first taken. The specimens will be returned to the sender if desired. If we would all cultivate the habit of observing and carefully noting novelties, anomalies and unusual occurrences, it would add immensely to the pleasure of our recreation trips, and would give us something to think of besides slaughter and a "big bag."

Your committee ask the further attention of the association for a few minutes while we review a portion of the report on nomenclature made last year, which was accepted, and the recommendations adopted, excepting that part pertaining to *Ortyx virginianus*, called quail at the North and partridge at the South. We do not propose to go into a minute description of the three birds involved in this question, as they are too well known to intelligent sportsmen to require it. But we wish to submit a few generalizations. The name quail has been applied to the *Coturnix communis* for ages. No one disputes its correctness. It belongs to the European bird that has been quite largely introduced into this country within the last few years. It is equally true and undisputed that the quail, *Coturnix communis*, sometimes called "migratory" quail, is distinct from our American bird *Ortyx virginianus*, not only specifically but generically distinct. In habits these two birds differ as essentially as the barnyard fowl from the Guinea hen. It is manifestly improper to call two entirely different birds by the same name, and as the name quail properly and indisputably belongs to *Coturnix communis*, it certainly does not belong to *Ortyx virginianus.*

Again the name partridge as indisputably belongs to *Perdix cinerea.* No one disputes it. Now, although our *Ortyx* is nearer to *Perdix* than it is to *Coturnix*, yet it is likewise essentially different from the former. Ornithologists acknowledge it to be generically different. And as *Perdix* was christened partridge in the vernacular long before *Ortyx* was known to civilized man, he is certainly entitled to the name. As before stated, it is manifestly improper to call two distinct birds by the same name. Therefore our *Ortyx* should not be called partridge. In the light of this simple logic we see why the controversy that has been so warmly carried on for years as to whether our bird should be called a quail or a partridge has been so entirely unsatisfactory. The simple fact is, he should not be called either—because he is not either. The controversy has had just as much point as would a discussion of the question as to whether man should be called an ape or a baboon. He should not be called either, because he is neither.

Then what shall we call our *Ortyx*? The term Bob White has been proposed for him, and is occasionally used, but it is not euphonious, and does not seem to meet with favor. Although it is not inappropriate as applied to him it will not suit his cousins. It would be manifestly improper to say the California Bob White, and the mountain Bob White, etc. Their voices would belie the name. But the name recommended by your committee last year is not liable to any of these objections. It is euphonious, it is short, easily written and easily spoken, it is appropriate to all our American birds, of what has been called the quail genus. It sounds well, and is appropriate to say the Virginia colin, the California colin, the mountain colin, the Messena colin, etc. Then again, the name *Colin* has the right of priority. It was used in probably the earliest descriptions of our bird. It is given in both Webster's and Worcester's unabridged dictionaries as the name of our bird. Also in Chamber's Encylopedia, and in Henry Thornton Wharton's "List of British Birds," which is authorative, we find "*Ortyx virginianus*—Virginian colin." It seems quite important that an undisputed name should be adopted for all our game, so that when they are named in our laws there will be no ambiguity about the meaning of those laws. We therefore respectfully recommend the adoption of *Colin* as the vernacular or common name of *Ortyx virginianus.*

All of which is respectfully submitted.

E. S. HOLMES,
J. C. PARKER,
A. J. HOLT.

Moved by Mr. Higby that the recommendations embodied in the report of the committee on nomenclature be adopted as the sense af this association. Carried.

MASTICATING POWER OF SNAKES.—A valued correspondent calls our attention to the fact that in a recent article on the rattlesnake, the blacksnake is reported to kill the former, and after "biting off his head" to swallow him.

It will be evident to any one familiar with the dentition of serpents that the feat mentioned is one which could never be performed. The teeth of snakes are used solely as aids to swallowing and enable the snake literally to crawl outside of its prey. A snake holds its victim and can puncture and scratch its food, but cannot masticate it.

The same writer notes that more than one well known authority on Natural History state that the rattlesnake is a tree climber. Our correspondent decidedly doubts the truth of this statement, and in this we believe him to be right. We think that the fact that the rattlesnake is not a tree climber is well established. Many of our readers, however, will remember Audubon's spirited plate of the rattlesnake attacking the nest of the mocking bird.

FOX FEEDING WITH RAVENS—No. 4. Feb. 15.—*Editor Forest and Stream:* A few weeks ago two dogs chased a large buck on to the ice of one of the lakes near here and killed it. The carcass remaining on the ice soon attracted many ravens and foxes. Wishing to secure a raven for the purpose of having it mounted by a taxidermist, I thought this a good opportunity, so repaired to the spot for that purpose. On approaching the place where the buck lay I saw five ravens taking their morning meal, but was much surprised to see a fox also with the ravens, all feasting upon the same carcass at the same time. They did not appear to have any enmity or fear of each other, but were all huddled together, and seemed only intent on securing a good meal, each regardless of his strange neighbor. Is it not strange to see this depredator of the poultry yard associating with fowl; or is it common for them to mingle with carnivorous birds without any desire of molesting them? Can any of your numerous correspondents inform me. C. FENTON.

The occurrence reported by Mr. Fenton, though unusual enough here in the East where the carcasses of game animals are rarely permitted to lie on the ground, would not surprise any one used to hunting in winter in the country west of the Missouri River. It is no unusual thing in the Rocky Mountain region to see ravens, coyotes and foxes all feeding on the same carcass. Moreover, the wolf poisoners often find lying about an animal that they have put out as bait, gray wolves, coyotes, foxes, eagles, ravens and magpies. Hunger makes strange companions.

We do not think that the fact that a fox does not attack a raven feeding with him on a deer is very remarkable. We should lose a considerable portion of our respect for the judgment and acuteness of Reynard if he were to waste his time in killing ravens when he had an opportunity to fill his belly with good deer meat.

PINE GROSBEAK (*Pinicola enucleator*, (L.) V.) AND ROBIN (*Turdus migratorius*, L.) IN WINTER.—I am somewhat surprised to observe from the notes of certain correspondents that have been published in your columns of late that they consider the occurrence of the pine grosbeak during the winter months in the States of Maine and Massachusetts as something unusual. Their observations must surely be confined to the more cultivated and populous districts, which the birds rarely care to visit unless forced to do so by extreme severity of weather, from its usual haunts in the deep forest. It is quite a common bird in this Province all the winter, generally keeping in the woods, but in time of deep snow visits our gardens to feed upon the dried berries of the white thorn and mountain ash. I also observe that the wintering of the robin in Maine is considered unusual. Here we have small flocks frequenting the spruce woods every winter, especially in Point Pleasant Park, a tract of a few hundred acres covered with spruce and pine, which forms the northeastern portion of our Halifax peninsula, and is washed by the waters of the harbor on both sides. I often perceive stray robins about the shore and I have an idea that when berries fall short they try the shore at ebb tide for amphipods or any small marine invertebrates they can find.

Halifax, N. S., Feb. 22. J. MATTHEWS JONES.

ELMIRA, N. Y., February 22.—I secured yesterday, the 21st inst., a female pine grosbeak (*Pinicola enucleator*) from a flock of about a dozen that came to feed on the buds of the evergreens in our grounds. This is the first specimen I have secured or observed in this locality during the last four years in which I have been a collector and observer of birds. They were very tame and fed on the trees close to the house, uttering a soft, plaintive note as they moved about.

E. B. GLEASON.

HOW CALIFORNIA QUAIL STAND COLD WEATHER.—On Sept. 30, 1880, the society received by rail, from San Francisco, three pairs each of the mountain quail (*Oreortyx pictus*) and valley quail (*Lophortyx californicus*). They were placed in outside aviaries, the sides and backs of which were of plank and the tops and fronts of wire netting. As they were excessively wild, a small box, with one end entirely open, was placed in each aviary to serve as a hiding-place. When the cold weather commenced I felt no uneasiness about the mountain quail, as I had shot them in the Carson Valley, Nevada, in six inches of snow and the cold so intense that I got a frosted ear. About the valley quail I did not feel so sure, but determined to let them alone, and to-day they are all alive and in good condition. Three of the mountain quail killed themselves by floundering, the remainder are doing well, but remain as shy and wild as when first received. Therefore I cannot agree with "Chico," who says: "There is no doubt about it, the birds (valley quail) cannot stand the cold weather." If it has not been cold this winter I would like to know the definition of the word.

Zoological Garden, Cincinnati. FRANK J. THOMPSON.

A HIPPOPOTAMUS FOR PHILADELPHIA.—Some time since Mr. A. E. Brown, Superintendent of the Philadelphia Zoological Gardens, at Fairmount Park, purchased the female hippopotamus which last year was such an attractive feature of Cooper & Bailey's Circus.

The animal is now at the Central Park menagerie, in this city, where it will remain until the advent of warm weather. It will probably be sent to Philadelphia in May.

A Philadelphia paper thus describes the quarters which it is to inhabit at Fairmount Park:

The unwieldy creature, when received here, will be placed in the elephant house, where a cage has been prepared next to that of the rhinoceros. It is a roomy apartment, formerly occupied by the giraffes, but has undergone considerable alteration. A division has been made in the centre and one-half the inclosure converted into a tank, which will hold seven feet of water. The bottom has been cemented and along the sides of brick are steam pipes, with which the water will be kept at a certain temperature. At the rear end is a platform, which leads from the tank to a platform above, covering the other portion of the inclosure.

SPRING NOTES.—Saw first blackbirds in large numbers January 30; since then our section is immersed in another cold wave, which will make them wish they had remained a little longer in the land of Dixie. W. N. B.

Buffalo, N. Y.—The first robin of the season was noticed here this morning, February 24, at 8 A. M., while the thermometer was four degrees above zero. The bird was by no means subdued, but sang cheerily. CHARLES LINDEN.

GLASSES FOR SHOOTING—Lockport, N. Y.—I noticed "Anon's" inquiry for "short-sight shooting glasses." I think he will find relief by using spectacles framed with a very low "nose piece." If he wears straight "temples," for an experiment he can put them on up-side down. If he uses "riding temple" (which he should do while shooting), he will have to get frames made to order with low nose piece. If his eyes are both alike he can have frames made with double nose piece—one long and one in centre—and can reverse them at pleasure. Sometimes persons affected with myopia require lenses of different focus, when the latter frames would not answer. If "Anon" finds any relief by the above suggestion I hope he will acknowlege it in FOREST AND STREAM for the benefit of many of its readers similarly afflicted. J. L. D.

Game Bag and Gun.

THE FIRST EDITION of the FOREST AND STREAM'S pamphlet on the "Dittmar Sporting Powder" having been exhausted, a second is now ready. Copies will be mailed free upon application. The articles contained in the pamphlet were published in this journal as follows:

Sept. 23, 1880—The "Dittmar Sporting Powder."

Sept. 30, 1880—Evading Detonation.

Oct. 7, 1880—The Detonation of "Dittmar Sporting Powder."

Dec. 9, 1880—The Dittmars' Abracadabra.

HOUNDING DEER.—Three communications on this subject are deferred until next week. The discussion promises to be an interesting one. The points on which the experience of deer hunters is asked are as follows:

1st. What is the character of the country referred to?

2d. What is the prevailing method of hunting deer?

3d. Describe hounding deer, as practiced in the section referred to and its effects. Does it drive deer out of the country?

4th. Describe in like manner still-hunting and its effects.

5th. What class of men kill the most deer?—market hunters or parties of sportsmen?—residents or non-residents?

6th. Would resident sportsmen approve of a law prohibiting hounding deer? Would the residents assist in enforcing it?

7th. Would they approve of a law permitting hounding, but prohibiting the killing or capturing of the deer after it has been run into the water? Would such a law be practicable?

8th. What is the open season for deer?

9th. What are the winter habits of deer, so far as you have personally observed them?

"FLIRTATION CAMP, OR THE RIFLE, ROD AND GUN IN CALIFORNIA," is the title of Mr. T. S. Van Dyke's excellent book, a review of which will be given next week. We can supply the book at $1.50.

MICHIGAN SPORTSMEN'S ASSOCIATION.

[Tuesday Session, Continued from Page 49.]

THE Secretary's annual report gives the best of evidence that the Association is gaining the estimation of the people of the State, and thereby largely increasing its opportunities of usefulness. We give the greater part of the report as follows:

TO THE MICHIGAN SPORTSMEN'S ASSOCIATION:—Reviewing the work done by this association the past year, your Secretary would join with you in mutual congratulations upon the unmistakable evidences of the result of our work, which present themselves on every hand. Notwithstanding the increased edition, the demand for copies of our annual book for 1880 has been greater than ever before, so that of the 2,000 books published I am able to report but seventy-five copies left for future demands. This little missionary for good has been sought for far and wide, and wherever it has gone a better public sentiment is sure to follow. The past year has witnessed a marked change in public sentiment generally in relation to this association and its objects, and in no way is this more plainly manifested than in the discriminating and commendatory notices received from the State press. To our staunch friends, the leading newspapers, including the sportsmen's journals, our allies and supporters in the dissemination of knowledge and the overthrow of ignorant prejudice concerning this association, we return grateful thanks for their appreciative and encouraging utterances during the past year. It is but a few years since the term "sportsman" was considered in this State a synonym for all that was lazy and irresponsible, not to say dishonest and immoral—a gambler or vagabond without the pale of good society. There are too many so-called "sportsmen" still who but too closely fill this description, but thanks to the men of character and influence, who have stood at the helm of this association since its organization, and to our friends everywhere, the public have grown to recognize a vast difference between a "sportsman" and a "sporting man."

From a small beginning the Michigan Sportsmen's Association has grown to be an acknowledged State institution, respected and commended for its spirit of humanity, friendship and protection toward our game animals, birds and fishes, while its sincerity of purpose is no longer doubted. From friends and strangers in the East, West, North and South have come voluntary words of praise and encouragement for the good that is being accomplished and the faithful manner in which this society lives up to its professions and the purposes of its organization. It is not with any feeling of vanity or vain glory I recall the many complimentary words that have been spoken of this body since its last meeting, but rather with a feeling of thankfulness and deep satisfaction that the disinterestedness and sincerity of purpose, or, in other words, the spirit of "the greatest good to the whole State," which actuates each and all of us, has succeeded in making its influence felt, not only at home, but far beyond the confines of the peninsular State. Your Secretary has kept no record of the number of letters answered the past year, but they must amount to several hundred. Information has been asked upon every conceivable subject, and sometimes a stamp for reply was also sent. Several requests have been made for a form of constitution and by-laws for game protection clubs, both in and out of the State, which suggests that it would be desirable to have printed an approved form of articles of organization for the use of auxiliary clubs that may be formed. About 1,000 circulars for different purposes were printed during the year and mailed.

Our book for the current year promises to be larger and better than any of its predecessors, and judging from the material now in sight, will comprise two hundred pages or more, or about double in size the book of last year, while the edition will be doubtless increased to 2,500 copies.

This will enable us to carry out a plan we had arranged for the past year, but which failed owing to the great demand for copies, viz., the sending of a copy of our book for 1881 to the editor of every newspaper in both peninsulas, on the line of and north of the Flint & Pere Marquette R. R. These pioneer papers, the molders of public sentiment in their respective localities, could they receive and peruse this book, would soon become disabused of the erroneous idea which so many of them advance, that this association is endeavoring to secure game legislation for the benefit of a favored few at the expense of the hardy pioneer and actual settlers. And the co-operation of the settlers on the frontier of our pineries will never be secured until they can be made to see the wisdom of stringent laws to preserve for years to come this abundant food supply, to themselves and their families, against the wasteful slaughter of their neighbors or outsiders, and until they learn that the members of the Michigan Sportsman's Association are the best friends they have, and not their enemies.

The outlook for our usefulness was never more encouraging. The public is becoming aroused to the importance of protecting and preserving the noble denizens of our forests from the insatiate rapacity of outside market hunters, and the fiendish waste of beasts in human form who, for the paltry shillings the hide may bring, kill during nine months in the year, and leave to rot on the ground the entire carcass of the noblest animal that roams the Michigan forests.

For years we have labored assiduously, expended time and money to no small extent, to procure a code of laws for the protection of game and fishes, that would wisely perpetuate to us and to our children, the finny, feathered and antlered tribes with which a bountiful Creator has with so lavish a hand stocked our forest and fields, and our lakes and streams. Let us hope that the near future may bring the consummation of our cherished plans. H. B. RONEY, Sec.

REPORT OF THE PUBLISHING COMMITTEE.

Your publishing committee would respectfully report as follows: They procured the publication by the "Saginaw Courier Company" of 2,000 copies of the Michigan Sportsmen's Association's third annual book, containing the transactions in full of the fifth annual session at Bay City, Feb. 3 and 4, 1880, the game laws, etc., at a cost of $1.50 per page. The book contained 116 pages, making the total cost of publication $174. To meet this expense, advertisements were secured amounting to $175.50, entirely paying for the edition of 2,000 copies and leaving a surplus of $1.50, which was applied on expense account for stationery, circulars, etc.

The books were distributed as follows, in every instance a circular being sent requesting the recipient to distribute them with judgment and without delay:

St. Johns	25	Evart	12
Saginaw City	30	Galesburg	20
Hastings	20	Monroe	6
Eaton Rapids	6	East Saginaw	100
Pokagon	100	Indian Point	10
Grand Rapids and Western Michigan	375	Dowagiac	12
Howell	40	Whitehall	20
Jackson and Grass Lake	50	Orleans	12
Coldwater	7	One to every fish commissioner in the United States—total	100
Owosso	25	State Legislature	150
St. Louis	12	Sent to State press, sportsmen's papers in England and America and individual sportsmen throughout Michigan, the U. States, Canada and Great Britain	339
Bay City and vicinity	115	On hand	75
Mt Clemens	30	Total	2,000
Lansing	25		
Port Huron	12		
Traverse City	25		
Detroit	80		
Flint	50		
Battle Creek	105		
Marquette	12		

Two hundred and fifty circulars soliciting advertisements for the book were printed at an expense of $1.25 and the cost included in the Secretary's bill of expenditures.

Respectfully submitted.

H. B. RONEY, D. R. BROWN, C. M. NORRIS,
Publishing Committee.

WEDNESDAY MORNING SESSION—JAN. 26, 1881.

The chairman of the Missionary Committee, Mr. S. A. McLean, of Bay City, made the following report of the Missionary Committee:

"Owing to the late appointment of this committee we were unable to put into execution the plans agreed upon at Bay City last year, and owing to the unwillingness of the majority of the committee to act we became practically ineffective. We have made some progress, however, and would recommend the following as one of the ways of making our laws more effective."

Mr. Higby, of Jackson, another member of the Missionary Committee, and chairman of the Committee on Enforcement, then read the following, as a joint report for both committees:

ENFORCEMENT OF THE LAW.

This association is organized for the purpose of securing the enactment of judicious and effective laws for the protection, at proper time, of wild game of fur, fin and feather.

While this association has been diligent the past six years in preparing and presenting wise and judicious amendments to our game laws, it occurs to me that we have lost sight of, either directly or indirectly, one of the principal objects—the protection, at proper time, as before mentioned.

Gentlemen of the association, now is the time. Then let us cast about, one with another, that the best means may be devised for protection at proper times. There can be no better method than the enforcement of the law. We should not stop to scrutinize. A weak law, well enforced, is far more beneficial than a radical gone by default. If we fail in so doing we belie one of the express objects of this association.

It is useless for me to enjoin upon you the great necessity of immediate action in this direction. There is not a gentleman upon this floor who is not aware of the wanton and wholesale destruction of every species of game in and out of season.

It lies within the power of this association to say: "Thus far thou shalt go and no farther." I think I have not overdrawn the estimate. Let us fight it out on this line if it takes all winter.

The most effective way would be to establish a State game warden—an officer independent of any police or other measure—with salary sufficient to make it effective, with power to appoint one or more deputies in every county in the State, and to remove for disability or incompetency. In order to bring this matter properly before this convention I have prepared and hereby offer the following resolution:

WHEREAS, This organization is organized for the purpose of securing the enactment of judicious and effective laws for the protection, at proper times, of wild game of fur, fin and feather; and

WHEREAS, For want of proper protection by enforcement of the laws, the game districts of the State are becoming depleted by wanton and wholesale slaughter; and

WHEREAS, It becomes an important duty of this association to convince all parties interested that we are protectors, by making some special provision for the enforcement of the law; therefore

Resolved, That a committee of three be appointed by the President to confer with Gov. Jerome as to the importance and advisability of the appointment of a State Game Warden, thereby creating an independent office, with salary sufficient to make it effective, said Game Warden to have power to appoint one or more deputies in every county in the State, and to remove the same for disability or incompetency. The said committee of three to prepare and draft a bill defining the duties of the State Warden and his deputies; also the amount of compensation and manner of paying the same.

CYRUS W. HIGBY.

On motion the report was accepted, and the resolution looking to the appointment of a State Game Warden adopted. A motion was introduced by Mr. A. J. Kenney, and was carried, as follows:

Resolved, That the Legislative committee be and are hereby instructed to draft a section of the recommended game bill for the consideration of this association to prevent the shooting and killing of game in this State on Sunday, and providing for the arrest of offenders against the same.

REPORT OF THE COMMITTEE ON LAWS FOR THE PROTECTION OF GAME ANIMALS OF FUR AND FEATHER, AND INSECTIVOROUS BIRDS.

To the Michigan Sportsmen's Association:—Gentlemen: Your committee "On laws for the protection of game, animals of fur and feather, and insectivorous birds" beg leave to report as follows:

We have put our recommendations largely in a practical shape, and herewith submit to the consideration of the association drafts of two bills prepared for enactment. These bills upon a comparison with existing laws show the changes proposed thereto.

The object of the first bill is to amend the provisions of existing statutes.

The object of the second is to define the purpose for which game may be killed, and to prevent the killing of the same, or the shipment of the same if killed, for any use or purpose not permitted by law.

The association at its meeting in 1880 substantially passed the consideration of the subject referred to your committee until this session of the association. And these proposed bills are but an outgrowth of the bill which met the approval of this association in its meeting of 1879, improved, it is hoped, by amendments, mainly suggested by considerations which have arisen since that session.

And we take occasion to say here respecting the amendments proposed that they do not in any sense embody ideas original with your committee, for they may all be found enforced by able argument in the published proceedings of this association for the years 1878, 1879 and 1880, and we hereby cheerfully acknowledge the assistance derived from reading and considering the said proceedings, and hope we have embodied the ideas already advanced in a practicable shape for successful enactment. The necessity of their enactment needs no argument at our hands. A stronger argument than we can present is the knowledge which every member of this association has that our game, particularly our deer, are meeting with wholesale slaughter, largely to replenish the pockets of non-resident market hunters (who hunt in other States for sport, in Michigan for the market), and to enrich non-resident game dealers and tickle the palates of non-resident epicures. In fact, it may not be considered as stating the question too strongly to state that the above causes account for the greater portion of the unnecessary killing of deer.

A word as to the changes and the reasons for the same made in the bill of 1879, which, with the exception of a few purely verbal changes, are as follows: First, so much of the said bill as relates to elks is stricken out, for the reason that an act of the legislature of 1879 prohibits the killing of elks for ten years from the passage of that act.

Second. The amendment proposed by that bill to section ten of the existing law is dropped, and an additional clause drawn by Judge Holmes, of Bay City, is added to section one as amended, to take the place of said amendment to section ten. We call special attention to this valuable amendment.

Third. The subject of the shipment of game from the State is eliminated from the bill, and we indulge in the hope that the purpose of the clause on that subject is more fully met by the second bill herewith reported to this association.

The object of this second bill as well as the first, and indeed of the existing game laws, is to preserve and protect game, birds and animals.

There is nothing better settled than the position that laws enacted with such an object will be upheld as constitutional, unless they contain provisions which are unconstitutional for other reasons.

Is the second of these bills unconstitutional? It has been decided that a law which prohibited the shipment of game, lawfully killed, was unconstitutional, and it may be urged that this bill is unconstitutional upon the same reasoning. Waiving the point as to whether our Supreme Court would make the same decision on a similar law, the bills are clearly distinguishable on principle. And the bill proposed will, we think, be upheld by our Supreme Court, if enacted and called in question.

The following positions are well settled and have been sustained and declared constitutional by the highest courts of the land, viz.:

(1). It is permissible for the Legislature by legislation to entirely prohibit the killing of any given species of game, or any species of wild bird or animal.

(2). The Legislature may likewise define, limit, shorten or lengthen the time in which any species of wild game may be killed.

(3). The Legislature may prohibit the killing of all of any given species of game, animals, fish or birds under a certain given age or size, or prohibit the killing of any but males of a given age. There are numerous instances of such laws on the statute books in various States.

(4). Statutes prohibiting the killing or capture of given species of game and wild animals in a certain manner declared to be by such act unlawful, have often been held constitutional.

(5). And an act prohibiting the having in possession of birds of a kind specified in the act has been upheld even when it appeared that the birds in question had been lawfully killed in the open season either in the State where the suit was brought, or some other State

The principle on which such decisions could have been and doubtless were largely based as applied to our own State, may be stated thus: It is within the constitutional power of the Legislature of this State to pass laws which define the time in which, the manner by which and the purposes for which, wild game and wild animals may be killed; and to make unlawful the prohibited killing, or the having in possession, or the transportation of such as have been unlawfully killed.

Under the bill proposed there can be no lawful killing for any purpose except for food in this State. Hence, practically, there will be no lawfully killed game to transport out of the State. It will, we think, be a presumption of law that dead game in the possession of parties, consigned to parties out of

the State, or actually being transported out of the State, will be presumed to have been killed for that purpose. That the bill can be improved we have no doubt, and we hope it will be considered by the association for that especial purpose. It may be by the association deemed best to amend the bill by adding to it provisions which shall provide—

(1). That it shall be *prima facie* evidence of the fact that game has been killed for other than its proper purpose to find it in the possession of persons, consigned to persons, or being carried out of the State.

(2). Providing for the confiscation of game consigned to parties, or being carried out of the State.

As to what species of game shall be inserted in the blanks in the said bill herewith submitted, whether other than deer, such as ruffed grouse, quails or graylings, for instance, we submit to the good judgment of the association.

A general revision of the game laws, including a condensation and simplification of the same, and an improvement in many items of detail, for instance, inserting the correct scientific name of each species or kind of game protected, defining the meaning of "close season," "open season," etc., is desirable. It has not been attempted by your committee, for the following reasons: The suggestions herein proposed embody material changes and additions to existing laws, some of which are of a radical nature, and it is desirable that a part of these changes be enacted if all of them cannot be placed on the statute books.

Such a revision, embodying all of these suggestions and a simplification and condensation of all existing statutes, might fail to become a law, when all or nearly all of the same, if separately presented on their own merits, might be enacted. And such revision might be vetoed after its passage by the Legislature for a single objectionable clause—the bill would be no stronger than its weakest point.

Revision is the proper course, when no radical changes are contemplated, and simplification and condensation are the main objects. But separate and independent acts which can be separated and independently considered and acted upon are the proper mediums for engrafting new and material amendments on existing laws.

Respectfully submitted,

C. L. COLLINS.
R. J. BIRNEY.

(Judge Shaw, of Eaton Rapids, the second member of the committee, was not in attendance at the convention.)

The drafts of the two bills, as reported by the committee, were then read by sections and full and extended discussion followed and was participated in by nearly every person present. The results of this discussion were the following changes from existing and recommended laws adopted by the association, viz.:

1. Making the legal season for killing deer uniform as to time in both peninsulas, on the ground that the climatic differences between the two sections were not sufficient to warrant the legal season in the upper peninsula opening six weeks in advance of that in the lower peninsula.

2. Striking out the words "buck, doe or fawn" and inserting the words "deer, *Cervus virginianus*," it being held that the correct scientific name was essential to indisputable clearness.

3. Opening the legal woodcock season upon August 1, instead of July 5.

4. The interdiction of the killing of any prairie chicken until after September 1, 1883.

5. The commencement of the legal colin or quail season upon November 1, instead of October 1.

6. The prohibition of shooting from batteries and sink-boxes.

7. The prohibition of shooting ducks after sundown.

8. Allowing but five days for the transportation of game after the expiration of the legal season, instead of fifteen, and eight days in which to sell or expose for sale, instead of fifteen.

9. Prohibiting the taking or killing, save for the purpose of consumption as food, within the limits of the State, any deer, ruffed grouse, colin or quail, pinnated grouse, wild turkeys, speckled trout and grayling except such as are the product of private ponds or hatcheries or State or United States hatcheries.

10. The prohibition of killing deer in water in any of the ponds, lakes or streams in the State.

The bill of the Secretary for expenditures since September 13, for $17.06, and bill of the President for expenditures, $19.36, were allowed and ordered paid.

[To Be Continued.]

GAME AND SPORT IN NEWFOUNDLAND.

NEWFOUNDLAND is a country where a good deal of genuine sport may be had. Sparsely populated by fishermen, who reside near the seacoast, its vast interior abounds with wild animals, the chase of which often provides splendid sport to the hunter. Large herds of caribou (*Cervus tarandus*), a species of reindeer, still roam comparatively unmolested through its glades and woodlands, their only enemy, besides man, being wolves, which must be pretty numerous in the island, though our knowledge of the latter is very meagre. The flesh of those deer furnishes the choicest venison, pronounced infinitely superior to that of the moose or elk of Nova Scotia and other parts of the North American continent by persons who have shot and eaten of both. Our caribou is not nearly so large an animal as the latter, the maximum weight of a fat stag being about four hundred pounds, while the bull moose reaches double that.

Sporting gentlemen from Great Britain come to this country every fall to hunt the deer, and among others, we have had more than one visit from the sporting and distinguished author of "The Great Divide."

It has sometimes (whether rightly or wrongly) been laid to their charge that, not content with satisfying the demands of legitimate sport, they have slaughtered in some cases many head of deer that could not be utilized as food, these animals being most frequently shot in parts of the island, to and from which there are no means of transport save the backs of those who may happen to form the hunting party.

I regret to say that our own people do not always discriminate between what is rational and what is wanton in dealing with the caribou, for it is said that large numbers have been slain for their skins in some parts of the island remote from settlement, those skins and antlers having a small commercial value.

There can be no question that deer-stalking in this country affords fine sport, but requires stout thews and some means to prosecute it thoroughly, owing to the rugged physical character of the country and the absence of facilities of communication between the various parts of the interior and the seacoast. A set of antlers of an old stag caribou is a trophy fit to adorn the halls of the palace of a king.

Mic-Mac Indians, who have a small colony in one of the southwestern bays of the island, are generally employed by deer-hunters as guides and porters, being best qualified for it by their knowledge of the interior, acquired in their constant pursuit of hunting and trapping, which they have nearly all to themselves.

It would be more than a pity if those noble animals should ever become extinct from indiscriminate slaughter or other cause. Each successive year the army of hunters, still very small, appears to increase, the reports of success of those who have already occupied the field seeming to stimulate others to prove themselves as doughty Nimrods as those who preceded them. These agencies, in concert with the exploration of the island now going on, and its future opening up and settlement, will, at some future time, accomplish the extermination of the deer of Newfoundland.

It would be interesting to be able to form a tolerably approximate idea of the number of deer roaming through the country. The area of Newfoundland is about 42,000 square miles and the population dwell along the coast line, in scarcely any case more than half a dozen miles from the salt water, so that the vast interior still remains almost a *terra incognita*, through which many herds of deer may range unseen and undisturbed from year's end to year's end. It has been supposed by many persons in the colony that their number was becoming very much reduced, but a friend of the writer, who crossed the island the summer before last, told me he was informed by two of his Indian guides that in the preceding spring they had seen, from a rising ground on the southwestern part of the island, deer passing north in thousands; that they had leisurely watched their migration, which continued passing their point of observation for hours.

Such being the case, there need be no fear of their extinction for many years if ruthless slaughter be avoided and practical protective legislation be brought to bear against it.

St. Johns, N. F. TERRA NOVA.

THE PAST SHOOTING SEASON IN VIRGINIA.

NEVER has the season in this portion of Virginia opened with better promise of a good supply of birds, and never have sportsmen as a general rule been more bitterly disappointed. The disappointment, however, came not from the birds themselves, but from a source that in these favored localities we are hardly accustomed to take into our calculations—namely, the unprecedented and relentless persecution with which the weather dashed hopes and plans to the ground.

To many sportsman this quail season has been an absolute blank. Those whom business arrangements compelled to pin their faith on December or January, which in an ordinary year is a perfectly safe thing to do, were almost entirely cut off; while November itself was so chary of those sunny days that have ever made its name dear to the sportsman, that the latter end of it, which the writer devoted to his annual hunt with a small party in the counties of Pittsylvania, Halifax and Campbell, produced less than one-half of the birds per gun that under exactly similar circumstances and over similar grounds the last three years have done. The week's shooting in November '78 produced to our three guns 350 birds. The same week in '79 to the same three guns 400, while this year from very exasperation at the elements, at the unprecedented wildness of the birds, and at the everlasting, gloomy and dripping forests they clung to, we let away less birds than usual and only succeeded in accounting for 170 without even seeing so much as the tip of a woodcock's wing—a most unusual occurrence.

And this too when we knew from the experiences of the opening of the season proper, which in these counties is October 15 (though on account of the dry, warm weather of that season not often taken advantage of), that the coveys were unusually numerous.

In my opinion the cream of quail shooting comes when the birds scatter in the woods. But too much of a good thing is never desirable, and when you get nothing but cream it is apt to sicken, especially when accompanied by successive days of cold rain, alternating with hail and sleet. I have seen this fall in Virginia what I have never seen before, and should not have believed to be possible—namely, three coveys rise wild in different corners of a ten-acre stubble almost simultaneously before our party had well got over the fence, and that on ground, too, that had been strictly preserved, not only against the public, but had been left unmolested by the owner for our special benefit.

My friend and host in those parts who in bright weather is a splendid shot, but owing to defective eye-sight is heavily handicapped on dull days, was in a terrible state of mind as he insisted on taking upon himself some part of the responsibility of our unwonted ill luck, which was entirely due to the complete demoralization that the weather had spread among the birds; and he would not be persuaded that good roaring oak fires and pleasant reunions around them beneath his roof after the hardships of the day were over, quite compensated for the latter. So we left him making the most solemn vows that he would not merely never shoot again as long as he lived, but that he would destroy his gun and shoot every dog in his kennel—which, by the way, is a most serviceable one. In spite of these dire threats I have no doubt but that the gun and the dogs, with probably some additions and the cheery face of their owner, will be well to the fore in the fall of '81 at the old place.

Game preservation and sporting interests seem making considerable headway in Virginia as elsewhere. In the County of Bedford, for example, never has so much land been posted. It has generally been the custom for gentlemen owning any extent of land, whether they be sportsmen themselves or not, to exercise some sort of discretion, at any rate, as to who shoots their birds and hares, and rightly so. But this year even little holders of fifty acres, every mountain squatter within reach of the county, town or railroad, has plastered his trees with notices to the effect that the whole rigor of the law will be poured forth on the unlucky head of the trespasser, more especially, it might be added, if he has on good clothes, carries a breechloader and looks like a gentleman. There is a certain class of men, not common by any means to this county or State, who hate to see any one surrounded by the accompaniments of sport and deliberately bent on enjoying it. The motive is not easy to detect; but may, I think, be traced to a vague sort of idea that it is trifling or idling. But, of course, sitting the whole winter's day on a country-store counter, spitting tobacco-juice at the stove and talking about other people's business—not to speak of mean whisky—is not. Upon the whole, however, such growing jealousy about game, though often of the most dog-in-the-manger order, is beneficial to the future prospects of sport, as every resident is sure to have all the facilities for shooting through private sources; while for the stranger, even if he were introduced, there would be no more difficulty than of old in getting permission from gentlemen to hunt on their places.

With the class of people above alluded to his best chance of escaping molestation would be to stop his ablutions for a month, to let his hair and beard grow, to borrow a beggarman's every-day suit and a rusty muzzle-loading gun. Armed with these precautions he would probably meet with no opposition from the framers of the remarkable posters, whose orthography would render them a valuable collection.

Comparatively few quail have been shot this season out of what there is every reason to suppose was a full supply. I see by the papers a game association has been formed in Lynchburg, who offer premiums for the destruction of hawks—a capital idea and one which embodies the most important of all the measures that can be taken for the preservation of game. The amount of hawks one sees in a day's ride through the country here is incredible, and the damage done by them is far greater than by the shot gun.

No ducks or snipe have as yet arrived in this locality. March often brings them in considerable numbers, more especially, though, after mild winters. The number of "old bars," as far as I can learn, has generally been up to the average, while the continuous snows before and after Christmas afforded excellent facilities to that branch of the fraternity, abounding more or less in the neighborhood of schools, who look on "tracking" as the highest form of recreation.

To sum up, however, the quail season of 1880 in Virginia will be remembered by sportsmen as an unfortunate one and will not be that feast of memory redolent of bright skies and sunny days that other years have left in their track. It remains only now for those of us who are anglers to look up our trouting and bass tackle ere April proclaims that brook and river are ready to yield up their store. RINGWOOD.

JACK HUNTING AND "BUCK FEVER."

CAPT. BARKER'S DESCRIPTION OF THE MAINE NOVICE.

WHILE collecting material for an article for your most interesting paper in regard to the new role in which Capt. Frederick C. Barker, the famous guide of the Rangeley Lake region, has appeared, much to the delight of many a Boston boy and several members of the sporting fraternity (gentlemen who make Indian Rock and Camp Caribou at Lake Parmachene their home during their summer vacation) through the kindness and forethought of Mr. Wm. H. Ladd, of Chauncy Hall School, I find an article in your paper of February 10, taken from the Boston *Herald*, which robs me of a part of my communication; and just as I am about to launch at you with a full broadside I find a part of my guns spiked. But as I have some powder left you shall hear from me. Although this is the first appearance of Capt. Barker in the role of lecturer, yet his modest bearing, his plain, straightforward statements, and his power of description at once attracts and holds the attention of his listeners. His thorough knowledge of his subject, acquired by years of hunting, trapping and guiding, and the facility and ease with which he imparts that knowledge renders him not only interesting but exceedingly instructive; and the round of applause which greets his every appearance shows how thoroughly he is appreciated by his youthful hearers. I have attended all his lectures, and although an old sportsman possessing some knowledge of woodcraft, have learned many things of great value to me.

During the course of his lectures, first in number he has described the hunting of fur-bearing animals of Maine, their habits, the signs by which they may be found and the methods of trapping each. He also exhibited the skins of the beaver, otter, mink, fisher, sable muskrat and fox, and described the method of skinning them and stretching their skins.

He also gave a detailed description of camp life, the needs of the sportsman, the method of building camp and campfires for comfort and safety, illustrating each by mimic camp and camp-fire, as mentioned in your number of February 10. From him the boys have learned the signs to be observed in the woods, how to handle, load and trim a canoe, run rapids, use the setting pole, and the proper method of finding the best channel, all of which will be of great value to his listeners, requiring, of course, the addition of experience. He told the boys about his annual fall hunt with his friend John S. Danforth, of Camp Caribou, during which hunt of ten days' duration seven caribou fell at the crack of the rifle; how they skinned them, hung them up and got them out of the woods; also the habits of deer, moose and caribou; the Indian method of killing moose and drying or jerking their meat, and gave a clear description of the geography of the country between Indian Rock and Majantic Lake, illustrated by a map drawn by himself.

I wish to give his account in his own language of the youthful sportsman's first still-hunting by the light of a jack. Your paper has contained many accounts of the successful hunt, but none that I remember which will compare with this, and I doubt not that many of your readers will enjoy a quiet laugh, as this recalls to his mind a similar experience in which he was the principal actor.

"It is a curious sensation for a beginner to be paddled along the shore of some mountain lake or up some wild river in the dead hours of the night under the light of the jack. Not a sound does he hear from his guide, who is paddling in the stern. The canoe seems to glide along of its own accord. Everything looks odd and strange to him, and the place which he has passed twenty times by daylight he does not recognize when seen by the light of the jack. The hoot of the owls, high up on the mountain side, together with the occasional lonesome cry of the loon far out on the lake, all serve to nerve him up and make it seem more wild, and as the canoe passes along within two or three rods of the shore, everything that the light strikes upon looks to him like a deer. He sees a bunch of bushes close by the water's edge, imagines he can see a deer in them, can see his eyeballs shine, and almost makes his mind to shoot. Then as he passes an old upturned root he makes a deer out of that—antlers and all. A frog jumps from a lily pad into the water. He jumps too, and thinks that surely is a deer just entering the lake. The muskrats swimming along in front of the canoe, or diving under it as it approaches them, looks odd to him. The sentinel beaver that is stationed out in the pond to warn his working brethren of the approach of danger lies with just his noes and eyes out of the water, and wonders whether there is anything dangerous or not in the approaching light. When the bow of the canoe almost touches him he suddenly makes up his mind that something is not right and down he goes, strikes his tail on the water, makes a tremendous splash and spatters the hunter all over.

He nearly jumps out of the boat, and levels his gun. "Don't shoot! Don't shoot! That's nothing but a beaver," whispers the guide. Slowly he lowers his gun, tries in vain to draw a long breath, and wonders how in the devil a beaver can kick up such a commotion as that. He is just beginning to breathe regularly again, and his heart doesn't jump oftener than every sixth beat, when all of a sudden – "Slop-quork-quork," and he just gets a glimpse of something he is sure is a moose. Up goes the gun again. "Hold on, that's nothing but a crane," comes from the guide. The gun is again lowered, and a little more hard breathing follows.

Time and canoe pass along and for a time he sees and hears nothing. He is beginning to ache a little in his cramped position, is not sitting just right and carefully lays his gun across the gunwale of the canoe just ahead of him, places his elbows on the same and shifts his position a little; after waiting a minute or two, that does not feel just right and he changes back again. Soon he draws up one leg, then he straightens it out again. The guide whispers: "You've got to quit that if you want to get anything." He then sits still for a few minutes, which seems like hours to him. Occasionally he finds his eyes closed, try hard as he will to keep them open. He tips his head back, looks at the sky and makes up his mind that it is going to rain and that there won't be any deer in to-night. He drops his head and makes a few more nods, then turning half round toward the stern, places his hand edgeways up to the corner of his mouth and whispers loudly: "I think its going to rain; hadn't we better go to camp?" The guide whispers back; "No 'tain't, neither. Let's hold on a little while longer; I'll bet there will be one in inside of an hour." The hunter straightens himself round again, squirms down into the bottom of the boat a little snugger and says to himself that "he will bet there won't be one in in the next six years. He is soon nodding again, and at length his head tips forward again and does not came back again—he is sound asleep.

After a while the guide hears a deer and gently shakes the canoe, the signal agreed upon to let the hunter know that *that's* a deer and not a muskrat; but his man feels it not. Again he shakes; but with the same result. He then draws his paddle silently from the water, leans forward and gives the hunter two or three good pokes in the back with it. This brings him back to earth again and the guide softly whispers: "Be ready; I hear a deer." After some hesitation the hunter picks up his gun and makes ready.

The guide begins to work the canoe slowly toward the head of a little cove. Soon the nipping of a lilypod is heard, and the splash, splash, splash of some heavy animal walking in the water. The hunter hears it, and he cannot draw a long steady breath to save his life. He finds that the canoe as well as himself is shaknig. He ain't scared, but he is awful cold. The animal stops walking, but the canoe glides slowly along toward the place whence the sound proceeded, and after a little stops The hunter strains his eyes but can see nothing. At length the guide whispers, "Can't you see that deer right straight ahead, not two rods off? He won't stand there more than a year longer." Still the hunter does not see him. He changes his gun a little and accidentally hits the breech against the side of the canoe, then something which he had seen all the time, but had no idea it was a deer, gives a jump and a snort. He sees him now and he looks bigger than a meeting-house. The hunter blazes away without getting the butt of his gun near his shoulder and shoots a limb off a tree above ten feet above the deer. The deer bounds away into the bushes and the hunter lets drive with his second barrel, if anything a little straighter into the air than at first.

Up the side of the mountain goes the deer snorting at every bound. The guide now suggests that they might as well go to camp, while the hunter, as he is paddled back to camp, would give his best breech-loader for a chance to try that over again. He has had his first night's experience in floating, seen a deer, and it did not look a bit as he expected it was going to, and he has also had a very fair touch of the "buck fever."

The above I have given as nearly as possible in the exact language used by the lecturer, that you might gain some idea of the value of these lectures, as he was very careful to give a clear and detailed account of each separate topic taken up during the course.

By the way, my friend and former guide of the Coburn House, Eustis, Me., Mr. O. A. Hutchins, is to have a cook at his large camp at King and Bartlett Pond, and is to furnish sportsmen with board, lodgings and the use of boats, all for $1.25 per day, which is wonderfully cheap, considering that he has to transport his provisions sixteen miles through the woods on a sled, over the new road opened by himself and fellow-guides last fall, a description of which I sent you last September and which appeared in your issue of September 9, 1880. Trusting that this may be found worthy a place in your columns, I remain, E. D.

Hyde Park, Mass.

DAKOTA GAME.

I VERY much fear that the quail in Dakota and some of the adjacent States and Territories will be completely exterminated by the extreme cold and snow that covers our prairies from a foot to eighteen inches deep on a level.

Reports come from all directions that whole coveys of quail are being found frozen to death. Prairie chickens are also found dead, but I do not anticipate that any large number of chickens will perish from either cold or starvation, because, in the first place, they are a hardy bird and can endure an extreme degree of cold and, secondly, because large fields of corn remain ungathered in this territory and the prairie chickens need no invitation to help themselves. If, however, Vennor's prophecy of eleven feet of snow should be fulfilled (and at this writing it looks that way, judging from the manner the snow is falling) pinnated grouse will be scarce in Dakota next year.

We have had a severe fight in our Legislative Assembly to kill a bill presented by a granger allowing hunting, trapping, snaring, etc., of prairie chickens, quail, etc., for shipment and market purposes. I am happy to be able to record the fact that half an hour ago that bill was defeated by a decisive vote.

I am not ashamed to say that I lobbied against this infamous measure with all my ability.

Our Territorial Game Protective Assocaition requested me to draft a more stringent act than the present law, which, although admirable so far as it goes, does not cover the whole ground. I have done so, but the average legislator is scarcely educated up to the point of perfect game and fish protection, as understood by the most advanced associations, and I fear the bill will not be adopted. If not, we shall try again at the next session.

Our markets are filled with jack rabbits, many of them with hair or fur white as snow.

The depth of snow prevents the bringing in of deer and antelope. Usually at this time our markets are glutted.

Preservation of deer, antelope, jack rabbits, etc., will soon become a necessity with our people. In 1870 Dakota had less than 15,000 people; by the census of last spring she had over 135,000, increased to, by this time, probably 150,000. Naturally the destruction of game has been, and will in the future be, correspondingly larger as the population increases. I. E. W.

Yankton, Dakota, Feb. 14.

[Dakota, in common with the other Western States and Territories, must before long adopt stringent laws to limit the market exportation of game. The Territorial Game Protective Association will find that they must take the lead and be prepared for persistent and determined effort.

HOW TO AIM THE HUNTING RIFLE WITH OPEN SIGHTS.

IN order to more clearly explain this mysterious subject, let us take four shots with an average hunting rifle and partially point out the course pursued by the ball along the range, that we may note the standing errors of the rifle as they appear in a drawing of the trajectory. The same elevation and charge will be used. I select for my illustrations the 100 yards range, because, by common consent, this is the most important of all for general purposes; and I will here add that to this range the open sights of the hunting rifle should be accurately trained and firmly fastened to the barrel. When once well adjusted they should not be altered, but remain as standard sights.

100 YARDS. At this point blank range let the rifle be aimed with a fine sight at the centre of the bullseye and fired, and let the centre be struck. By this shot the exact conditions of the best aimed rifle and the best shooting are attained. The aim here being on the centre, and the centre struck, this constitutes a true point blank shot. The novice with the rifle, in making this shot, would exclaim: "My rifle holds up right on the centre and shoots as straight as a line!" This exclamation is not surprising, for from this shot alone it would appear that the rifle does shoot straight. This calls for another shot.

8 YARDS. Now let the position of the target be changed to about 8 yards from the piece and let the centre of the bullseye be fired at with the same fine sight as at 100 yards. The ball will strike the centre at this short distance the same as at 100 yards, because at 8 yards is the near point blank; it is here that the ball, in ascending from the muzzle of the piece, first cuts the line of sight. But this point blank is not the one recognized in science. The recognized one is at the end of the range, where the ball, in its descent, cuts the line of sight the second time. The 100-yard shot affords an example of this. The novice, in making this 8-yards shot, will exclaim: "You see that my rifle carries straight to the centre again!" From these two shots, made with the same fine sight, it would appear as if the rifle did shoot straight. But this is a common delusion which I wish to expose by a clear analysis of the subject. These two shots present the following important truths, which should be recognized by every one who professes to shoot the rifle understandingly, for they are strictly in accordance with the laws which govern all rifle shooting:

First. That the rifle which makes a centre shot (or "holds up") at the end of the range will also make another centre shot (or "hold up") near the piece. The principle is general.

The near points blank will all occur within the extreme limit of about 30 yards. This limit has regard to rifles sighted high with peep and globe sights. For hunting rifles with low sights the limit is about 20 yards. It is a quantity which varies with different guns and charges. Near points blank vary in distance from the piece with the elevation; the greater the elevation the closer to the piece is the near point blank, as, for instance, it is about 1 yard distant under an elevation for 1,000 yards, while under a low elevation it vanishes at 30 yards.

Second. That the same uniform sight, whether it be fine or coarse, is required for both distances, 8 and 100 yards, in order to strike the centre. The principle is general.

This fundamental truth shows why the rifle, with the same aim, will kill a little sparrow when near by as well as at 100 yards away. At both distances the bullet cuts the line of sight, hence the two centre shots. Thus far in our experiments the rifle appears to carry straight, therefore another shot becomes necessary.

55 YARDS. Now let the target be removed to 55 yards from the stand. This distance is selected because at about 55-100 of the range the greatest error in the flight of the ball occurs. Let the rifle be aimed and fired as before, with the same fine sight on the centre of the bullseye; the bullet will not strike the centre as before at 8 and 100 yards. It will strike about two inches above it, measuring always from the centre of the bullet-hole; and mark, these two inches are a standing error of the rifle at this particular point of the range.

By this shot the novice with the rifle will learn that the rifle does not shoot straight; no, not for one yard. The standing error of the rifle is practically the same for 50 and 60 yards, for the path of the ball along mid range very closely approximates to a straight line. At 30 and 80 yards the standing error is about one and a half inches, and from these points the errors diminish to zero, both at the near point blank 8 yards, and at the true point blank 100 yards. To correct these errors of shooting too high a finer sight (than the standard) is required along mid range than for the first 30 and the last 20 yards of the range. We thus see that the aiming requires to be varied in order to meet the standing errors of the rifle. The trajectory changes in curvature at every point, and strictly speaking, the aiming should change with it, but in practice this is impossible, nor is it always necessary. Between the two points blank, a distance of 92 yards, the rifle shoots too high, and this fundamental truth explains why, in our misses of game, we shoot over instead of under four times out of five. The prevalent belief and common rule for aiming is to take a "coarser sight the farther off the game is off;" the consequence is over shooting and that millions of game have escaped with their lives. The very essence of this article is to point out a remedy for this great evil of shooting over.

We have now shown how the rifle shoots when the ball cuts the line of sight, also when it is above it. It now remains to be shown how it shoots when the ball is below the line of sight. It is below it until, under the elevation of the piece, it rises and makes the near point blank. If the shooter could see the bullet at this instant its centre would exactly cover the centre of the bullseye a hundred yards away; it would eclipse it. After this it would be seen to rise a little above the line of sight, then to fall and approach it, and lastly to merge with it in the centre of the bullseye. Thus we have a true point blank shot, while the barrel points nearly 9½ inches above the centre of the target.

1 YARD.—If the rifle be aimed and shot as before at the target placed at but 1 yard from the piece, the ball will strike below the centre of the bullseye, varying in distance according to the construction of the rifle, whether it have high or low sights, or a thick or thin barrel. No practical aim, however coarse, will enable one to make a centre shot so near the piece. If such a centre were made, the elevation of the piece would have to be so great (as in Creedmoor shooting) that it would produce a point blank nearly 1,000 yards off, for every near point blank, be it remembered, has always its counterpart, the true point blank. From this shot the novice will again see that the rifle does not "shoot straight." We see that it shoots too low near the piece, hence a coarse sight must be taken here in order to get the best shooting possible. We all aspire to this, therefore we should know exactly how it is to be reached.

BEYOND THE RANGE.—Beyond the range the ball is found below the line of sight, and lower and lower as the distance increases. To correct these increasing errors of shooting too low, we must sight coarser and coarser or aim higher and higher, the farther the object is off. All sportsmen will readily agree in this respect.

Having now quite fully shown the path of the ball along the line of sight, which I make the prominent line in this article, as it truly should be, I will next embody some primary rules, which if followed in practice will give the very best results.

First. To avoid shooting over a finer sight than the standard is always required at about 55-100 of the range than at any other point in it.

This same sight may safely be used also between 40 and 70 yards, since the trajectory is very flat.

Second. The same uniform sight used at all distances up to 100 yards will give no greater error at any point than the greatest error of the rifle (two inches in this case). Ergo—

Third. If the greatest error of the rifle is known, the same uniform sight may be used throughout the range, unless a finer sight is necessary to obtain the desired result.

On large objects such as deer and turkey a finer sight is not necessary, but on smaller ones, as the squirrel, robin, crow and hawk, it will be if they are at mid range.

Fourth. In hunting the same uniformly fine sight may generally be used within the first 30 yards, and also at a distance of from 80 to 100 yards.

This is because the standing errors (1.50 and 1.40) of the rifle at these distances vary from only about 1¼ inch to zero, and hence may be entirely disregarded unless the game is very small.

SUMMARY. The sight should be coarse very near the piece (within 8 yards), changing to fine at 8 yards, which is the near point blank; then to very fine at 55 yards, which is the point greatest error; from this to fine at 100 yards, the true point blank, and beyond the range, coarser and coarser, the further the object is off.

Different rifles produce different errors, but I find these differences to be very small at this short range. They will all fall between 1¾ and 2½ inches, which is the greatest error at 55 yards. This includes the military, long range, mid range, express and all good hunting rifles, which I suppose to be well loaded.

There are two methods of aiming the rifle among sportsmen: One by changing the sight taken from fine to coarse and *vice versa*, and the other by not changing the sights, but by aiming higher or lower on the object. Which of these modes is the best I will not pretend to decide; each has its advocates. For myself, I never vary the sight, but aim higher or lower as the case may require.

I have omitted to state that 52-100 yards approximately shows the point in the range where the trajectory is the highest and 55-100 the point of greatest error.

The distances I have given above are approximately correct, but will vary slightly under different conditions.

New Rochelle, N. Y., Feb. 14. Maj. H. W. MERRILL.

CORRECTION.—The words "blank range" in the second line of my definition for "point blank range," in FOREST AND STREAM of Feb. 3, are superfluous and should be omitted.

HINTS ON BRANT SHOOTING—Chicago, Ill.—I have a well-trained French poodle dog that retrieves very nicely from the water. Do you think it will be worth my while to take him to North Carolina with me this spring, where I intend going for brant and duck shooting? How many decoys are used for brant shooting? Is the shooting done from the shore or afloat? By answering the above questions you will oblige an old subscriber. FOWLER.

Many years ago in England, France and Holland the French poodle was used by amateur sportsmen, but the professional fowl shooters of the coast used Newfoundlands. For inland ponds, marsh and narrow stream shooting the poodle could, of course, be used; but an Irish water spaniel is preferable. The poodle is useless for inlet and deep channel shooting, as he is apt to become cold and seasick. The best dogs for this work are Chesapeake Bay dogs and Newfoundlands. From seventy to one hundred and twenty decoys or "stools" are used for one "rig," according to the weather and making of the tides. In rough, windy weather the smallest number should be used, as they are difficult to handle—that is, to set out and take up. To set stool in broad waters, bays and channel edges, have all the stools stowed in the boat tails to the bow, with the anchor lines wound loosely around the body of the decoys. As stools are always set to windward of the blind in sea shooting, row up to the point to windward where the head of the flock should ride and plant a long pole firmly in the mud; around this pass a small line, one end of which is fastened securely to the bow of the boat, and the rest coiled in the bottom. With one hand toss the stools from the boat, between it and the pole, and with the other play out the line. You will thus be enabled to control the boat and set your stools at regular distances apart, and if properly managed a large number can be set out in this way in a very short time, without fear of fouling them and tangling the lines, and moreover they will ride in the proper position. When all the stools have been anchored, draw the line in the boat and take up the pole. The stools can be picked up in the same way. The shooting is done almost entirely from blinds made of cedar trees planted on the feeding flats, in an oblong shape, that the gunning skiff will fit very tightly inside.

DEER KILLED WITH NO. 9 SHOT—Toms River, N. J., Feb. 23.—There appeared in your issue of Feb. 17 an article

from Mr. Geo. Lyman Appleton, of Byron County, Ga., in which he states that he had killed a deer with No. 9 shot, and that this is the only case that he ever heard of where a deer was killed with that size shot while on the run. During the winter of 1877 I was located in Salinas Valley, California, shooting for market. Part of the season I shot with a gentleman, Capt. P., who has made a business of shooting in that section for a number of years. One evening about dusk we parted company, having been quail shooting all day, he going to his cabin, I to mine. We had been separated but a few moments when I heard the report of his gun. On visiting his house a day or two later I observed a fresh deer skin thrown over the limb of a tree. On inquiring of him where it came from he informed me that the shot which I heard a few moments after we last parted was the death signal of the deer; that his dogs had started the deer, which ran directly toward him, and that he had killed it within five yards of himself with a charge of No. 9 shot, which size we used exclusively for quail. Capt. P. used a 6½ pound gun, and I will say was the best shot on California quail that I ever had the pleasure of shooting with. Let me here remark that the California quail is a much more difficult bird than his eastern brother. H. C. G.

WORK OF THE GAME PROTECTORS—Utica, Feb. 24.—*Editor Forest and Stream:* State Game Protector Dodge, of Prospect, has been bringing the game dealers of Utica up to the "Captain's office to settle." Last Saturday he had four of them before Justice Edwards for examination, two of them settled by paying $25 and costs, which they ought to consider getting off easy, for the full penalties in these cases range from $50 to $750. The other parties got an adjournment for a few days, but they will probably settle as they have no possible defense. Other parties in Utica have been sued for selling game out of season, and their cases will come off this week. The only excuse that has been offered thus far is that they were ignorant of the law, and for that reason they have been favored as above stated in the settlement, but for a second offence they must expect to suffer the full penalties. These cases, together with indictments found against six offenders at Oneida Lake who made such war-like demonstrations last fall, tend to give the people in this part of the State to understand that the game laws are going to be enforced. We hope Mr. Dodge will continue the good work, and that all true sportsmen will lend him a helping hand. MACK.

NEW JERSEY GAME LAWS—Newton, Sussex Co., N. J., Feb. 17.—I must say the proposed new laws astonish me, as I am glad to see the opinions expressed by the FOREST AND STREAM, which I consider the foremost of sporting journals. As far as my experience goes, most, if not all, illegal shooting occurs just before the season opens and just after it closes. For, if one season is to be divided into two, it does not require such a great knowledge of higher mathematics to see that the amount of illegal shooting in the first case will be to that in the last in about the ratio of one to two. If I am not mistaken, the chief, or perhaps one of the chief objections raised to the last law was that it could not be enforced. Now how much harder will it be to enforce a law which allows a man to shoot for a month, then forbids it for ten weeks, and finally permits it again. I believe it to be a generally conceded fact that the more complicated a law is, the more difficult to enforce. In my opinion, any sane law, properly enforced, will do more for the preservation of game than all the wordy, voluminous bills that ever passed the Legislature of a State. It's protection the birds want, not legislation. M.

THE SOUTHERN DOG FARES—Jacksonville, Fla, Feb. 19.—I think your correspondent's (Kenorc) letter published in your issue of Feb. 10 apt to mislead the Florida bound sportsman. It met my eye on the eve of my departure for New York for this State where I have stayed two days prepared for war on the quail. The charges though high, are not, according to my experience, so excessive as to warrant the "throwing away" of three tickets from Charleston to Jacksonville as Kenorc and his friends did "thereby making a clear saving of $12 on dogs." I had the misfortune to find the connection between Charleston and Savannah severed by the freshets, and was forced to travel 157 miles out of my way to get to the latter place for Charleston; so with this additional, or substituted expense—the heaviest of the trip—my expenses for carriage of dogs amounted to $25, divided as follows: New York to Washington, $3; Washington to Charleston, $12.50; Charleston to Augusta, $1.50; Augusta to Savannah, $5; Savannah to Jacksonville, $3. How there would be any economy then in throwing away three tickets, as your correspondent did, I do not see. S.

THE GAME LAW TINKERING—*Editor Forest and Stream:* I see in the FOREST AND STREAM that the annual tinkering of game laws has commenced and, judging from what has been done by some "associations," legislation upon the subject is to be rigorously pursued. Now, in the name of the public and the sportsmen of the State, for one I protest against any changes of the laws. As a rule they are explicit, the penalties are right and the manner of enforcement is sufficiently plain. There are not enough important changes needed to again take the time and subject our Legislature to further enactments What is needed is the enforcement of present laws. In this one thing lies the important part in protecting and preserving the game and fish of New York State. Let the New York State Association, the Long Island Sportsmen's Association and all the numerous clubs say with one voice, and do it, too, that our present game laws shall be enforced, and I will guarantee there will be no more raids upon the Legislature for changes in the law, and that within two years a bill for the protection of game and fish will have no hearing in our legislative halls, because there will be no necessity for it. SYRACUSE.

MAINE—Marshfield, Feb. 4.—Woodcock are scarce in this vicinity. One may travel through our woods from day to day and seldom, if ever, get sight of one. Ducks are quite plenty in some of our lakes during September and October. Quail are new birds for our people, having been introduced into the State within two years Last summer, for the first time, their notes were heard and now and then a stray one seen in the haying fields. But we trust that they will rapidly increase. I think an amendment to the deer and moose law, as proposed by Messrs. Stillwell and Smith, making the time for killing September, October and November, would be a good move, for the reason that sometimes in December the snow gets dow so deep—at Machias River, for instance—that lumbermen have run down deer on snow-shoes. H.

"A WINTER VISIT TO THE ADIRONDACKS."—A party of young men, consisting of John B. Marie, J. Abraham Theriot, Edward P. Coogan, George A. Williams, Francis E. Splain, Harry Hilliard, Joseph M. Phelan and Hamilton Parker, started last evening for the Adirondacks and Lake George, where they will spend a week or ten days hunting. Just before their departure they dined with several friends at Delmonico's.—*New York Sun, Feb.* 20.

As these young gentlemen must now have returned from their hunting trip, will they inform the FOREST AND STREAM what game they found in the woods which they could lawfully kill?

IOWA—Glenwood, Iowa, Feb.—Judging from the reports of many sportsmen and farmers and my own observations, the quails and chickens have weathered the winter so far. We have not had any deep snows, and the birds have obtained food; but it has been far different fifty miles north. There they have suffered greatly and great numbers have frozen. The quail's greatest enemy here is the prairie wolf (*Canis Latrans*). But few birds are trapped, I am glad to say. As the bluebird (*S. Sealis*) has arrived we expect the ducks and geese soon and anticipate rare sport this spring. W. H. R.

PHILADELPHIA NOTES.—Our bay and river is now full of marsh ducks and shooting is good. Purple grackles and bluebirds have appeared. Yet to-day we are having freezing weather, but when spring comes it will be ushered suddenly, and we look for a quick passage through our section of all migratory birds.

Joe Krider is about starting on his collecting tour to the Northwest. If he had not decided to take the journey, Uncle John, old as he is, would have attempted it and succeeded, for all say he has a new lease of life. HOMO.

GALVESTON GUN CLUB—Galveston, Texas, Feb. 19.—At a regular meeting of the Galveston Gun Club the following officers were elected to serve the ensuing year: President, H. A. Seeligson; Vice-President, H. P. Redmond; Secretary and Treasurer, W. J. Hughes; Directors—C. C. Pettit, D. Hall, A. Cannon, H. DaPonte and W. H. Hodges We claim for the Texas State Tournament to take place in this city, commencing May 3 and lasting four days W. J. HUGHES.

A MICHIGAN POACHER'S PLEA.—Menomanee, Mich., Feb. 19.—A hunter arrested for killing a deer out of season—offence proven—J. P. allows the prisoner to be sworn. Prisoner swears that he was out with his gun, and he saw a deer coming at him with his mouth wide open, and he was afraid the deer would hurt him, so he shot him. The prisoner was discharged. Is that good law in the "White Settlements?" I think the J. P. should have one-half of the deer at least for conscience sake. GUYON, JR.

THE PENNSYLVANIA ASSOCIATION—Meadville, Pa.—The name of our club has been changed from the Madison Sportsmen's Club to the Crawford County Game and Fish Protective Association. The State Association meets in our city on the 7th of June next, and we would like to see all of the clubs of the State represented. O. H. K.

LOUISIANA—Mile Creek, Feb.—We have game here in abundance—deer, turkeys, quail, ducks, fine fish, worlds of beaver in the streams. This is the sportsman's Paradise. M.

My wife and daughter was made healthy by the use of Hop Bitters and I recommend them to my people.—Methodist Clergyman.

Sea and River Fishing.

FISH IN SEASON IN FEBRUARY.

FRESH WATER.

Pickerel, *Esox reticulatus.*	White Bass, *Roccus chrysops.*
Pike or Pickerel, *Esox lucius.*	Rock Bass, *Amblopltes.* (Two species).
Pike-perch (wall-eyed pike) *Stizostethium americanum, S. griseum,* etc.	War-mouth, *Chænobrytius gulosus.*
Yellow Perch, *Perca fluviatitis.*	Crappie, *Pomoxys nigromaculatus.*
Striped Bass, *Roccus lineatus.*	Bachelor, *Pomoxys annularis.*
	Chub, *Semotitis corporalis.*

SALT WATER.

Sea Bass, *Centropristis atrarius.*	Smelt, *Osmerus mordax.*
Striped Bass, *Roccus lineatus.*	Pollock, *Pollachius carbonarius.*
White Perch, *Morone americana.*	

FISHING RODS.

THEIR MANUFACTURE, CARE AND PROPER USE.

(Read by S. W. Goodridge before the Michigan Sportsmen's Association.)

TIMBER for making all fishing rods should be selected with great care; the varieties of timber used or recommended are almost endless. I shall confine myself to such as I consider the best.

For butts there is nothing superior to white ash, which, although one of our most common woods, is not always what the rod maker would have it, and it is at times extremely difficult to procure an article suitable for fine fly rods. Our experience teaches us that the best is from small second growth trees not over one foot in diameter. It should be grown in a sheltered position, protected by the surrounding forest from high winds, which are the cause of crooked and cross-grained timber to a much greater extent than is thought. The grain should be fine and straight, and should be springy and recover its place at once after being bent. The white part (the sap) only should be used, and that taken from not too near the bark. The heart is liable to be too heavy, and will warp, which is not desirable.

Hickory and maple are much used by English rod makers for second and third joints, but these woods do not find much favor with American anglers, or rod makers for fine work.

Hornbeam has been highly recommended, and does very well for large joints, but when worked down for second joints and tips does not keep its place, but will warp and not recover itself.

Green heart was much sought after several years since, but does not appear to hold its own against lance wood. We have used specimens from several lots and have never been able to find that which is reliable, and have therefore given it up.

Lance wood is imported from the West India Islands; the best comes from Cuba, and is now generally admitted to be the best timber that can be procured for fly, bait or black bass rods. It is sometimes very difficult to procure this wood of the best quality, and its imperfections can only be discovered by actual working it on the bench under the plane. This wood is frequently full of minute knots no larger than a pin, one of which passing through a second joint or tip weakens it greatly; these cannot always be discovered until a joint is nearly finished, and then only on the closest inspection. It is also sometimes cross-grained, the grain crossing a small piece, a tip for instance, within an inch or less of its length. By working by hand all such imperfections are discovered, while by turning in a lathe the tool will go over it leaving it perfectly smooth, and to appearance a sound and good piece of timber.

THE TROUT FLY ROD.

This rod should be in length from ten and one-half to eleven and one-half feet, and should weigh from eight to ten ounces. The reel should be placed behind the hand near the extremity of the butt. The handle above the reel should be one inch in diameter and eight inches long. Immediately above the handle of the rod the size should diminish suddenly for about two inches, and from that point run on a perfect taper to the end of the tip.

The rod should be made of three joints—viz., butt, second joint and tip. The joint ferrules on all rods should be made seamless; all soldered or braized ferrules are liable to open on the seams and cannot be made as smooth on the inside as mandril drawn ferrules, and consequently as good fits cannot be secured. The second joints and tips should be made of the best selected lance wood, and if any imperfection should show itself it should be rejected. In English rods the tips are usually made of two or more pieces spliced. It is claimed for them that they keep their place better, and are not as liable to warp with use. I do not think that there is any objection to the spliced tip.

The rings on the rod should be two on butt, four on second joint and five on each tip. There should always be an extra tip with each rod.

The joint ferrules should never be riveted on a fly rod. They should be closely fitted and set with the best orange shellac, which should be applied to the wood over the flame of a spirit lamp, and the ferrule then crowded on, heating the ferrule over the lamp. Whenever a ferrule thus set becomes loose it can usually be tightened by warming it in a flame revolving the joint while doing so. It may be necessary to draw the ferrule off and apply more shellac.

All rods of whatever kind should be made with close-fitting metal dowels, and the sockets into which the dowels fit should be accurately bored to the size and taper of the dowel.

Rods should have their handles wound with fishing line or split rattan, either of which gives a good grasp.

The split bamboo fly and bass rods when made by a good maker are as near perfection as possible. The best are made from selected Calcutta bamboo, and should be what is known in the East Indies as the male bamboo. They should be made in six strips and all the enamel of the wood preserved; cutting away from the inside all the softer parts.

These rods can never be produced of good quality at a low price, but there are thousands of inferior rods of this kind on the market which are sawed out of bamboo promiscuously without any selection. Such rods are worse than useless, as they soon come to grief.

THE TROUT BAIT ROD.

Taking the fly rod as a standard of excellence we should look for something as nearly like it as may be consistent with the additional work which the bait rod is expected to do.

This rod should also be of three joints made of ash and lance wood. The handle should be below the reel seat, one inch in diameter, and from eight to ten inches long. The taper should commence immediately above the reel bands, and run as in the fly rod to the extremity of the tip

The joint ferrules now used on bait rods are smaller than formerly. In the old style of four joint rods, there was but little elasticity in butt and second joint, nearly all the spring coming on the third joint and tip, and many cheap rods both of three and four joints are now made in that manner, the lower half being firm and rigid, while the upper part is withey but limber. Such rods are to be avoided. They are a source of vexation and annoyance and are constantly out of order and breaking. By using smaller ferrules and dividing the strain throughout the rod, a much larger fish can be landed, and much more pleasure derived, as by a properly constructed rod every movement of the captive is as distinctly felt by the angler as with the delicate fly rod. The bait rod should be from ten and one-half feet to twelve feet in length and from twelve to fifteen ounces in weight. Such a rod will do as much execution, properly made and properly handled, as a much heavier one of the old pattern. Such a rod as I have described is amply strong for all ordinary boat or pond fishing for any kinds of fish that do not weigh upward of twelve to fifteen pounds.

The demand for rods suitable for black bass fishing has within a few years been greatly increased, and it has not until recently been very well understood what constitutes a good bass rod, and there were until recently about as many different ideas on the subject as there were different fishermen. Rods were ordered by anglers of all descriptions from a light bait rod to a salmon rod of twenty feet in length

It now, however, appears to be pretty well settled that a short stiffish rod is the best for bait fishing and throwing the minnow for black bass, and all anglers are under great obligations to Dr. J. A. Henshall, of Cincinnati, for his ideas of what a perfect rod should be. Through the columns of FOREST AND STREAM he has given much valuable information on the habits of the black bass and the best methods of capturing them.

He recommends a rod of three joints, ash butt second joint and tips of lance wood. The handle one inch in diameter and about eight inches long. The reel seat to be placed immediately above the handle, and the taper of the rod starting directly above the reel, and continuing true to the end of the tip. The length of the rod to be eight feet and three inches, and the weight to be from eight to ten ounces. With such a rod a very long cast can be made with bait or minnow, and in striking and killing the fish it is very efficient. This style of rod is now coming into general use. Some, however, insist on a longer rod. Ten feet is, I think, as long as they ever should be made. When one once becomes accustomed to Dr. Henshall's pattern, we think they will thereafter use no other.

The country is perfectly inundated with cheap rods, with a good outside finish, but made from worthless timber, stained and varnished so as to conceal all imperfections; they are made entirely by machinery, and many are sold at high prices.

While gentlemen anglers who can afford it will always have a well balanced and highly finished and high cost rod, there are thousands who cannot afford such, and it is next to an im-

possibility for them to procure a decent rod at any price which they can afford to pay. There are makers who make as good a rod for service, brass mounted, and in every way as strong as the best for from $5 to $6, which is as low as good work can be furnished.

THE CARE OF FISHING RODS.

More rods are ruined by the want of proper care than in any other way. In jointing up a rod for use it is a good plan to first put together the second joint and tip, as you will not be so liable to strain the lighter joints as when first (as is usual) putting the butt and second joints together; before putting on the reel see that the joints are firmly together, and never under any circumstances allow a rod to be handled when showing or using it without it is firmly put together. When through using your rod, first wipe it to remove all moisture, then unjoint it and see that each joint is straight, and if not, straighten it at once. Don't fail to keep and use the plugs which belong in the joint ferrules; they keep out moisture from the most exposed parts of the rod (the dowell sockets), also the dust and dirt. A single grain of sand will ruin the fitting of the best rod. Never put a rod away in a damp case, tie it loosely in the case; tight tying will bend the tips and second joints. When laying away at the end of the season's fishing, place it where it will be as nearly as possible in a uniformly cool temperature. Never stand it in a leaning position, but lay it down.

The best of all varnishes for rods is simply shellac dissolved in alcohol. It is perfectly waterproof, dries immediately, and is easily applied with a bit of soft sponge. A coat of this applied once or twice during a season will add greatly to the appearance and durability of your rod. It should be used quite thin. By following these directions you will always find your rod in a serviceable condition.

HOW I FOUND A NEW LAKE.

READING in a late number of the FOREST AND STREAM about the supposed discovery of a lake never seen before by a white man, in the Adirondack Region, put me in mind of a discovery I made one bright October day when that country was new to me. It was late in the month, there was about six inches of new snow on the ground and I was out on a still-hunt. I had struck a monster deer track near the mouth of Cascade Brook, which empties into the upper part of Lake Utowana, and followed it up far in the mountain to the east, where it joined a couple more smaller tracks. I wanted that buck. I had promised a big pair of horns to a friend in New York and believed I would find them if ever I drew sight over my Lewis rifle on the animal that made the track. The day was fearfully cold, but I kept in motion and hardly felt it.

Reaching the crest of a steep ridge, along which the tracks led, I looked down over what seemed to be a small beaver meadow, covered with snow. There, about two hundred yards away, on an opposite ridge, nearly on a level with me, was my buck and two does, all picking away at some moss in a rocky ledge under which they stood.

They had not seen or heard me and I took a good look at them while resting to steady my nerves for a sure shot.

The buck was the largest I had ever seen in the North Woods. His horns spread out like a brush-heap. I knew that if not hit exactly in the right spot he would carry off all the lead I could put into him. So I made up my mind to take a dead rest and to shoot as fine as I would in a rifle match. And we had some sharp shooting up there in those days—1857 and 1858.

My rifle, made by Lewis, of Troy, was a muzzle-loader, double-barreled. One barrel was smooth-bore, carrying nine No. 1 buckshot, or, as it was then loaded, an ounce, round bullet. The other barrel carried a half-ounce spherical ball and was good for five hundred yards range when held well up. I never raised a surer-sighted gun to shoulder. It weighed fourteen pounds, having the metal for a good charge of powder with slight recoil.

Watching a chance when the buck stood about half front, with both barrels cocked, I aimed high for his shoulder with the smooth-barrel and let drive Without meaning it, some way I touched the other trigger too and off went both barrels at nearly the same time.

The buck gave a tremendous leap and, fairly turning a sommersault, came plunging and rolling down the side of the ridge toward the level below, while the frightened does scudded off with white flags flying beyond the ridge.

Seeing the buck yet struggling and plunging to regain its feet, I hurried a load into one barrel of my rifle and started down the steep ridge to get one where he was. Seeing a place clear of underbrush (I expect it had been an otter slide in summer), I sat down, leaned back and, holding my rifle well up, slipped down the soft snow just as easy as "sliding on a cellar door" in boyhood's days. A little easier in fact, for I went down that thirty or forty yards like an arrow shot from a well-strung bow—went down quick as thought, and brought up at the bottom of a "new-found lake!" Yes, up to my neck in ice-cold water, for the thin ice softened by snow broke easier than pie-crust under one hundred and sixty pounds' weight of sorrowful humanity.

I have taken cold baths by choice, but never one quite as cold as that. Luckily I was within reach of some overhanging birch limbs, and I pulled myself out of that icy surrounding as quickly as I could, hanging to my rifle all the while. Then, with the thermometer at zero or thereabouts, every thread on me wet and freezing as I came into the air, I was anything but comfortable. Fortunately I saw dry ground under a huge ledge of rocks near by, and I got to that as soon as I could. I stripped some birch bark from trees close by, got some twigs, and with matches from a waterproof box that I always carried with me, got fire. Not until I had every dry limb within reach of me piled on a huge pile did I think of looking for my buck. But he was safe. He lay stark and stiff on the further edge of the little lake which I had supposed to be an old beaver meadow.

I did not trouble him, however, for the next two or three hours. It took all that time to dry out my soaked clothes, get my gun fit for use and fix for the night, for Eagle's Nest was three or four miles off, and I knew I could never get home that night if I started. And I was bound to carry those horns with me when I went.

After I had dried out, collected a good lot of dry wood and made all snug for camping, I went around the little lake, cut a good lot of steak from the buck, got the horns and came back just in time to see the light fade away into darkness when I sat down to broil my supper.

That night a gang of wolves took care of the rest of the venison, making such noisy work over that I could not have slept had I tried. I had to keep my fire up any way or freeze.

Any one who now follows Cascade Brook to its source can find where I had that adventure and got the seven pronged horns which for years adorned the sanctum of a Sunday newspaper in Gotham. But I would advise the seeker to look for the lake in the summer time, with a good rod and hook of flies in his possession, for he will find it well stocked with speckled beauty, or it was, the last time I was there.

NED BUNTLINE.

THE GREAT FISH EXTERMINATOR.

WITHIN six miles of this city (New Bedford, Mass.) there must be at least fifteen pounds, traps, wiers—nets running out from the shore to a pound or pocket at a distance of six hundred feet to twelve hundred fathoms. These are put into the water in the early spring and kept in until fall, catching everything except the very smallest fish, waging a continual, uninterrupted warfare on everything that swims—fish that are good for food and fish that are not.

The rule is to keep the food fish and let the others go—hence the fish of prey are protected to continue war on the food fish that escape the traps. Each year sees a great diminution of the best food fish along the whole Atlantic board, where nature had been so prolific—more so than in most any part of the civilized world. This great enlightened government, when wise legislation is boasted of all over the world, allows a constant war of extermination to continue without an effort to check it.

In FOREST AND STREAM of December 2 is an article on "A Gigantic Fish Trap," where fish are to be kept yarded to supply and control the fish market. When the price is too low for profit they propose to hold back the supply until the price rises, then draw from their large yard—a rich harvest, no doubt, if it works well. Having seen a good deal of this sort of thing—keeping fish in weirs alive—I will give you a faint idea of one where fish have been kept a few days. On first going alongside, you are surprised at the dense mass of fish moving round and round, huddling together at times, so that you cannot see the bottom. You will notice light spots on them—some well covered—and wonder what they are, having never seen them on fish caught with hook. As you watch more closely you will notice some that move more lazily than others and will discover the spots around or near the gills, the eyes are discolored and that the fish are blind. Occasionally catching a sight of the bottom, you discover dead and dying ones, and about this time a disagreeable odor arising from the water; your presence has frightened them, and in trying to escape they have stirred up the vile, decayed and decaying mass on the bottom. Take one of these and examine the spots and you discover them to be a fungus growth similar to what the physicians describe as a sure sign of diphtheria in the human being, only much larger. These live fish the weir owners propose to send to market for fish-eaters, providing they will pay a price high enough. Take these fish, clean off the fungus, pack them in ice and who will ever know the difference, for whoever examined to see if the fish was in a healthy condition or would know after the fish was dressed.

Again, if the fish have just got into the trap and are taken out to send to market, the rushing and dashing about, trying to escape, cutting and piercing each other with their sharp spears, then piled together and taken away in this manner, dying in their slime, which works into the fish, they become heated and diseased in dying and are delivered to market in this shape and disposed of to the consumer. If carried alive in wells or cars, of course they are much better off until kept in the dirty, filthy water about the piers of a city to sicken in the sewer-poisoned water. The largest catches are in the spawning season, when, moving along the shores for places to shoot their spawn, they are caught in incredible numbers. Whoever has seen the herring run up shallow streams to spawning beds can form some idea of the spawning fish along our sea shores. Millions of fish loaded with spawn are killed every spring that never find the way to market, but are turned out to die along there. Such is a faint idea of the destruction going on around us that is surely exterminating the food fish of our coast.

Is it not time to awaken the public to this question, that there may be some wiser legislation in the matter? For one State to move will not amount to anything—there must be a national law, applicable to the whole coast, either to prohibit trapping altogether or have the traps taken up, say from Thursday to the following Monday of each week. In localities where the traps have been set for several years the fish have been so generally exterminated that it only pays to set them when they are sure the fish are migrating along there—this in localities where, before traps were used, a boat could load any day during the season with nice, large fish. They were sent to market fresh and only caught in such quantities as to keep the stock on hand fresh all the time.

I hope gentlemen interested will take this matter up, and that the papers—the principal dailies—will take hold, for surely it is high time a move was made, or our fish supply will be cut off; and I beg the FOREST AND STREAM to use its utmost efforts in this matter, and also all gentlemen, whether fond of angling or not, for it is a matter of political economy. Where fish are caught in large quantities with nets, weirs, etc., they are never, nor can they be, cared for so that they can come to market in prime first-rate condition—they are sure to become heated and injured. I have the word of some of some of the most experienced of mackerel fishermen and successful owners of the craft used for that fishing, and they tell me they only have No. 1 mackerel when they are caught with hook, and that the catching of them with seines has ruined the business, for their former customers cannot be furnished with the real No. 1 fish, because the fish are all caught in such quantities with seines that they become more or less heated before they can be taken care of. If this is so with mackerel when the crew of the fishing craft are right on hand to care for the catch, how much more so will it be with fish caught in pounds, when there are only two or three men to take care of the fish, which have first to be taken from the pound, then packed into vessels or boats, then taken to the nearest point for ice, repacked and shipped to market?

I wish no injury to any one, but much benefit to many, to the whole fish-eating community in fact; and I believe the abolishing of pound-nets will in the end be of most pecuniary benefit to the trade also. J. E. JR.

New Bedford, Jan. 8.

FLY FISHING.—A small volume entitled "Fly Fishing in Maine; or, Camp Life in the Wilderness," by Charles W. Stevens, is before us. It is not in the least technical, but is filled with anecdotes of fishing trips, camp experiences and stories of trout. A pleasant, readable book for a leisure hour. Published by Rand, Avery & Co., Boston. Price, $1.

STRONG BAIT FOR CATFISH.

INDIANAPOLIS, Ind.

THE hunting season closed here on the 1st inst. The last two or three days of the season were too cold and disagreeable for a hunt, and now we have to sit around the fire and, toasting our shins, dream of days gone by and patiently await the return of better days. The FOREST AND STREAM reaches us regularly every Saturday, and is read with pleasure for the information it alway contains, and we always rejoice in the experience of brother sportsmen chronicled therein. Perhaps you will be willing for us to add our mite.

The catfish has been attracting considerable attention of late. Whether he will rise to a fly, I am not prepared to say, but know he will bite freely at grasshoppers. However, that has nothing to do with my story. It was my good fortune to be living in San Antonio, Texas, not a great many years ago, and I whiled away many a long day on the banks of the Leona and the banks of the Salado, streams which at that time were noted for black bass, called "trout" in that section of the country. Once I accepted the invitation of an old fisherman to go with him catfishing, he agreeing to furnish the bait. Leaving the old city one morning before sunrise, we journeyed down the road along the San Antonio River until we reached the old Mission Espada, some ten miles from the starting point. Here we stopped and began the day's sport. Supplied with a jointed bamboo rod, reel and silk line, I approached that old fisherman and asked him for a bait. He gave me some, enough in fact to last all day. Ye gods! what stuff! How it did stink! I had never seen or imagined anything like it before. What is it? Limburger cheese and flour! "Will the fish bite that?" "Try it." "How do you put it on the hook?" The old fisherman gave me the needed instruction, and I cast the bait into the stream in swift water at the head of a deep pool. Hardly had it sank below the surface before a long pull and a hard one informed me something had tho cheese; a smart stroke with the rod fastened the hook, and in a short time I landed the first catfish with cheese bait, and it weighed something over five pounds. I continued the sport or rather slaughter for two or three hours, and then had to quit from exhaution. I never saw any fishing like it before or since. I enjoyed it hugely at the time, and write this hoping some of my friends may some day have a like experience, but desire to warn them in time, to be sure to take along some one to handle the cheese and bait the hook. My wife would not let me come into the house for a week after that excursion.

It is an actual fact that in less than four hours that old fisherman and myself caught over one hundred pounds of catfish; they were nearly all large fish, scarcely any weighing less than three pounds, the largest between five and six pounds. The paste was made thusly: One pound Limburger cheese and two pounds flour, mixed and worked over until of the consistency of putty. For we break off a piece as large as a piece of chalk, flatten it between the thumb and forefinger, and fold it around the hook. The larger the bait the larger the fish; no gammon.

Now don't despise the catfish. In Texas they are better than the black bass. When you get one clean it carefully, boil in water with a little vinegar added, just enough vinegar to bleach the flesh and not flavor it. When cooked, put on a strainer; after all the water has drained off put the fish on the ice, and when it is thoroughly cooled and hardened cover it with a mayonaise dressing greenish with pickles and chow-chow, and he is worth eating. GRINGO.

GRAYLING IN TROUT STREAMS.

THE fact that the grayling and trout are not found in the same stream in Michigan where the grayling streams contain no trout and *vice versa*, has been used as an argument against grayling being placed in trout streams. On this subject it is well to listen to what Mr. Francis Francis, the veteran fishery editor of the London *Field*, says of streams which have contained both fishes for generations.

One of his correspondents writes: "My experience of the Itchen has led to the observation that it is useless to try much for grayling, except about a particular date in the autumn, viz., Sept. 15. Others say after a frost, but their luck may have been different, as in a sport which requires so much of skill and observation is often the case. Is there any reason for this date? I think that, next to the trout, we have no finer fish. It is a pity to see it despised on account, as some affirm, of destroying their spawn. Has the fact of its spawning at a different time and leaving it free in September anything to do with the matter, or is it an authenticated fact that any of the Salmonidæ prey on the spawn of each other."

To this Mr. Francis replies in an editorial note as follows: "Our experience does not coincide with that of our correspondent. We have had good sport on the Itchen with the grayling quite in the end of October, and have heard of fair baskets in mid-winter. In the best parts of the Itchen the grayling run often very large, and the large fish are not good risers at the fly, particularly the small winter duns. That grayling do devour a good deal of trout spawn we fear is true. They are in the height of condition and season when the trout are spawning, and naturally, being a ground-rooting fish, they would pick up all the spawn they could; but, doubtless, when the grayling have their turn on the redds, the trout retaliate. We have always held that, for the sake of lengthening the season of fly fishing, and even for the sake of the grayling itself, which is an unquestioned delicacy, it is worth while to have grayling in your waters, and if it is found that the trout are too heavily handicapped with the grayling, it is the easiest thing in the world to start a little hatching apparatus and to rear a few thousand of fry, so as to put them past the notice of the grayling. Indeed every trout stream of any note or value should have such an apparatus attached. If, by any chance, you get too many stores in the stream, they are an exceedingly valuable and marketable commodity."

This appears to us to hit the mark and we especially commend the two last paragraphs to all who own trout streams.

VERMONT TROUT LAW—Grafton, Vt.—We have lots of trout here (*Salmo fontinalis*) which come from Canada, the depot for the sale of them is said to be at St. John, just over the line, and as we have no law to prevent the sale of them in this State, the dealers keep at it all the time. One dealer at Bellows Falls receives about 150 pounds per week, and they are hawked about in wagons all over the country.

They come from the lakes on the north side of the St. Lawrence, which are now accessible by railroad from Montreal to Quebec. I have fished one of those lakes in the St. Leon district for several years, and until last June with great success. In the fall of 1879 it was netted, and apparently

every fish over half a pound was captured. I was there in September last and found that they were making preparations for netting many of the best accessible lakes. Lake Carolus has been quite celebrated for its large fish, and has been a favorite resort for many Vermont anglers, Senator Edmonds among others, and I found that the poachers were preparing to skin it. S. W. GOODRIDGE.

BROOK TROUT IN OCEANA COUNTY, MICHIGAN.

[Read by L. G. Rutherford before the Michigan Sportsmen's Association.]

DURING the winter of 1877, L. G. Rutherford, of Hart, opened a correspondence with J. G. Portman, of Watervliet, upon the subject of trout growing in Michigan, which resulted in the purchase of a few thousand from the hatchery of the last named gentleman by a few of the citizens of Hart. Owing to an accident to Mr. Portman, the fry were forwarded to Hart in the care of another, and when they arrived fully one-half were found to be dead, and the balance of them were not in good condition. They were, however, planted in four different streams. This was a mistake. Experience has shown that one plant in large numbers is far better than to divide it up into many small ones. Every one of the plants have been heard from, but in two instances they are known to have thriven beyond the most sanguine expectations of those interested. Last spring (1880) two members of the Hart Club discovered in the largest stream in which they had planted young fry, showing unmistakably that the trout had not only thriven but had begun to propagate their species. The results of the first plants were carefully watched, but no more were planted until the spring of 1880. In the meantime Mr. Portman had become identified with the State hatchery, accepted an invitation to visit Hart, and here with his own eyes beheld one of the "speckled beauties" (pardon the term, but I know of none better) only eighteen months old, which measured nine inches in length. Seeing was to believe; and to believe was to furnish the club with ten thousand fry from the State hatchery. These the club received at New Buffalo, and by dint of unceasing care they were safely deposited in their new home in Oceana. We were yet experimenting and, as usual, the plant was divided and thirteen different streams were honored with their presence. Another mistake was also made in several instances—the fry were placed at the head of very small streams and when the winter closed in they had not grown to more than half the length of those in streams where there is a strong volume of water, with holes of one or more feet in depth. We are forced to the conclusion that in the smaller brooks the fish cannot pass up and down with the same ease and consequently do not obtain the same amount of nourishment. In seven of the places of the last plant we know that the result is all that could be desired, and we have heard satisfactory accounts from two others. In some instances no fish have been seen. Two of the streams in November last exhibited fish four inches in length; they were only eight months old.

We are of the opinion that trout will flourish in nearly all the streams north of Grand River, unless such as are fed by lakes, in which case the water becomes too warm in summer and it may be too cold in winter to suit their dainty tastes. The people of Oceana County generally are becoming deeply interested in this subject and are giving the club substantial assistance. There are, however, a few whom we will call "pot-hunters" who think it cunning to steal from the streams, thinking that they are thereby too smart for the club.

On the question of legislation, we think the law for the protection of game and fish should be more stringent. Some people need to be punished by imprisonment, as the payment of a fine is no disgrace, but while a discretion is left with the justice of the peace no one will ever go to jail for the violation of the game law.

All of the larger streams of Oceana County formerly abounded with grayling, but there is now none seen save in one branch of Pentwater River, which runs through Hart. They have been driven from the other by the use of dams for flooding in driving logs. This one stream shall not be sacrificed if in the power of the club to prevent. Many are caught every year, but the supply does not perceptibly diminish, and it is noticeable that more small grayling have been seen last year than ever before. As to the vexed question, "When do grayling spawn?" we are not prepared to give any positive information. This, though, we do know, that they were taken every month of the last season with spawn in every stage of development.

THE COLORADO COMMISSION.

DENVER, Colorado, Feb. 14.

HEREWITH I hand you copies of four bills passed by our Legislative Assembly, which closed its session yesterday, pertaining to fish and fish culture. The measures provoked a most stubborn opposition and were carried through only by persistent work. They embody really the first effective laws we have ever had upon the subject, and make the first decent appropriations which will enable a start in the right direction.

W. E. Sisty was reappointed Fish Commissioner, as he deserved to be. The passage of the fish bills was due almost entirely to his efforts. Respectfully, W. N. B.

The following are the main points in the bills:

It shall be the duty of the Governor, immediately upon the taking effect of this act, and every second year thereafter, by and with the advice and consent of the Senate, to appoint a person skilled in fish culture and the habits and nature of food fishes, to be State Fish Commissioner, and who shall hold his office for the term of two years. And said Commissioner shall give bond in the sum of five thousand dollars, conditioned for the faithful performance of his duties. Said Commissioner shall have supervision of all fishcultural matters of a public nature and shall receive and provide for the proper care and distribution of such food fishes or ova of the same as shall come into the possession of the State. He shall determine the necessity for fishways, the location, form and capacity thereof, directing their construction and maintenance. He shall furnish to any person, association or corporation owning any lake or reservoir as private property, such stock of fish as they may desire for the purpose of stocking such lake or reservoir at the actual cost thereof. The cost thereof to be determined by said Commissioner. All moneys received by the Fish Commissioner from sales of fish as aforesaid shall be returned by him to the State Treasurer to the credit of the general revenue fund of the State.

Said Commissioner shall receive a salary of five hundred dollars per annum and all expenses actually disbursed by him while necessarily engaged in the service of the State, which said sum so paid for his expenses shall not exceed the sum of five hundred dollars per annum. The Commissioner shall have power to appoint deputy commissioners throughout the State and remove the same at his pleasure, who shall have full power and authority to enforce the fish laws of this State and prosecute any violators of the same, but such deputy commissioner shall serve without compensation from the State. All accounts under this act to be approved by the Governor.

The sum of four thousand dollars is hereby appropriated for the purpose of paying the salary and necessary expenses of the State Commissioner during the year commencing July 1, 1881, and ending June 30, 1882, in performing the duties required of him by law in relation to the propagation and preservation of food fishes, which sum the State Treasurer shall, from time to time, pay to the said Commissioner on the warrant of the Auditor, as vouchers therefor shall be duly exhibited to said Auditor and approved by the Governor.

SECTION 2. The further sum of thirty-five hundred dollars is hereby appropriated for the above purposes for the year commencing July 1, 1882, and ending June 30, 1883, to be audited, paid and allowed in like manner.

SECTION 1. It shall be the duty of the Governor, within thirty days after the passage of this act, to appoint a suitable person, resident of this State, who, with the Governor and Fish Commissioner, shall constitute a board, whose duty it shall be to select and purchase a suitable location for a State establishment for the breeding and propagation of the better class of food fishes adapted to the waters of this State and to erect thereon suitable buildings for said purpose at as early a date as possible.

Answers to Correspondents.

T. P. M., Harrisburg.—For live quail write to W. W. Titus, Monticello, Florida.

K. K. C., Somers.—For result of Carver-Scott match see last issue of this paper.

J. W. W., Boston.—The license fee for non-residents shooting in Nova Scotia is $50.

S. A. M., Saginaw.—Prices of Kemp's books have advanced. Exact figures in a few days.

J. F. F., Alta, Iowa.—The process you refer to is probably the heliograph, which is for sale by most stationers.

W. B. C., Ithaca, N. Y.—We know nothing of the rifle. There is a rifle attachment to the Baker gun, but it is not a repeater.

C. W. L., Northfield, Vt.—The guns are of good make and the attachment is useful if you are shooting where large game may be met.

TWENTY-EIGHT FEET.—Our time is fully occupied for a month with similar work. Refer you to yacht designers advertising in our columns.

S., Troy.—The originator of the boiler can advise you best. It would be a good deal of an experiment Write to the source of your information.

C. D., Portsmouth, Va.—See article in FOREST AND STREAM, Feb 24, on "Breeding, Training and Care of Beagle Hounds." Please send full name and address.

J. H. M., East Saginaw.—What kind of pistol (maker, calibre, length of barrel and weight) is used in the principal galleries of your city? Ans. 10 inch barrel, 22 cal., generally Stevens make. Very light pull.

A. D. E., Irvington, N. Y.—Yesterday while sleighriding I saw five robins and a blue bird. Is it not unusual to see either of the above birds as far north as this at this time of the year? Ans. No, not particularly so. See recent issues of FOREST AND STREAM.

W. R. A.—Can a gun chambered for the long .38 cal. cartridge be chambered for the extra long cartridge of the same cal. and do as good shooting with the latter cartridge as it made for it, or if not how much would be lost from its original accuracy? and would it be accurate enough for hunting and general purposes? Ans. Yes.

G.—1. What do you charge per vol. for binding FOREST AND STREAM? 2. Will fish after being frozen in a cake of ice be alive when thawed out? 3. Will a gun burst or injure you if it has say an inch of snow or mud in the barrel near the muzzle? Ans. 1. $1.50. 2 Sometimes, see FOREST AND STREAM, vol. 15, page 428. 3. Extremely likely to.

S., Woonsocket.—You applied the correct receipt. Perhaps your canvas was of too open a texture. Another receipt is: Boil 12 ozs. beeswax in 1 gal. of oil for two hours; paint with this a couple of times. A third is to add 6 ozs of best yellow soap to 1½ pint of water and when boiling add 5 lbs of ground spruce ochre, 5 lbs of boiled linseed oil and ½ lb patent driers.

S. J., Pittsburgh, Pa.—I have just bought five dozen of live quail Please be so kind and let me know what month of the year is the best to put them out, as I intend using them for stocking purposes and how to put them out, whether in pairs, or how? Ans. Do not turn the birds out before May and then four at a time; two males and two females. Spread them over as much ground as possible.

F. W. V., Elizabeth.—Two parties shoot a match at 100 Birds, Hurlingham rules to govern. They shot a tie and, no provision having been made for a tie, the referee declared the match a draw and all bets off. A bets B that had odds been bet, say 2 to 1, that the money should have been divided, and not declared off. Will you please have the question decided? Ans. The referee was right. Bets were off and each man's money should be returned.

W. H. Y., Poughkeepsie, N. Y.—1. Are the salmon rivers on the Island of Anticosti leased to individuals? 2. Is the fishing (salmon and sea trout), in your opinion, enough better on the Island to compensate for the trouble of the trip? 3. When do the packets leave Gaspe for the Island, or is the time uncertain, depending upon the wind, etc.? 4. How many canoes are necessary for a party of four, and how many Indians should we take? 5. Is it the best plan to take our tents with us from the States, or can we hire tents at Gaspe? Can we get any accommodations on the Island at the houses of any of the settlers near the fishing grounds? 6. How is the climate? 7. Are the flies particularly bad? 8. Can you give us the name of any responsible party at Gaspe, or anywhere else, who has been on the Island or Anticosti, or is posted as to the fishing? Ans.—1. They are offered each year for lease. They are controlled by the Government. Write to W. F. Whitcher, Esq., Commissioner of Fisheries, Ottawa, Ont., for specific information 2. Yes; if you like to get out of the beaten path. 3. They are irregular, they wait for wind, tide and passengers; you can't tell until you get there. 4 and 5. The number of canoes and Indians depends somewhat on your tastes and the amount of your luggage. Some parties of four would get along with one canoe and two men, but this does not allow much baggage, four canoes and four men would be better, and if you go with big tents, much clothing and canned goods you will need more. Take your tents with you unless you stop with the natives, and then when you would want them for excursions. 6. Good. 7. No; except at certain times when weather has been damp for a while and clears up suddenly. 8. Write to the Postmaster.

—Any subscriber or reader of FOREST AND STREAM in want of any kind of carpetings, oil cloths, rugs, etc., etc., can be sure of fair treatment at the hands of John H. Pray, Sons & Co., Boston. Call or correspond with them, and get their prices before buying. It will pay you to try them.—[Adv.

Fish Culture.

REPORT OF THE MAINE COMMISSION.

THE report of the Commissioners of Fisheries and Game of the State of Maine, for the year 1880, has been received and we have made some extracts from it, in a former number, relating to the game. They report that the result of the year's work has been satisfactory and an unusual amount of work done. Four large and important fishways have been built on the Penobscot and its tributary branch, the Mattawamkeag. Two have been built on the Kennebec, one at Augusta and one at Waterville, and one on the Androscoggin, at Brunswick, where no salmon have been seen above the dam since its erection one hundred years ago.

Shad were placed in the Kennebec and Penobscot and half a million of whitefish eggs have been received from the U. S. F. C.

The Commissioners disclaim having more to do with the sporting side of fish and game than the farmers have, their duties being to produce food, yet since their appointment there has been an increase of fish which has drawn anglers into the State who have left more money behind them than the value of the fish taken, to which they refer as follows: "For the importance of this travel, its gold-bearing results as compared to our mines, and to our other industrial resources, we must refer you to our hotel keepers and our railroad superintendents."

The run of salmon in the Penobscot in 1879 was larger than for many years, but the run of 1880 was larger, a fact attributed to artificial culture by Mr. James M. Treat, of Stockton, who owns the large salmon fisheries at Cape Jellison. There has been a large return of salmon to the Mattawamkeag, where they have been shut out for many years, which goes some way toward proving that the fish return to their place of planting, and the Commissioners, to confirm this, quote from an article by Prof. Henry Youle Hind on "the egg of the salmon," written for FOREST AND STREAM in the number for October 7, 1880.

Salmon have taken the fly on the Penobscot and the Wassattaquoik, in spite of stories afloat that they would not, the commissioners having so taken as many as ten in one afternoon. A hotel at the Hunk farm is already projected and a rush of anglers is predicted over the railroads to Mattawamkeag and the East branch of the Penobscot. The success of salmon restoration is now beyond all cavil an accepted fact, as much as wheat culture, or any other food product and they say that they can never again trust to the natural production of the fish fields for salmon or trout crops.

Their dividend of salmon eggs, this year, from Orland, will be 330,000, to which Prof. Baird has added 250,000, making 580,000. Dividend of land-locked salmon eggs from Grand Lake stream, is 120,000, and they are promised 1,000,000 young shad for the Kennebec and Penobscot, 500,000 Michigan whitefish eggs, (for Rangeley,) and 50,000 California trout, (*Salmo iridea*). They require a hatching house for the Penobscot, at either Mattawamkeag, Bancroft or Danforth. The salmon eggs this year will be hatched at Bangor, from necessity, the temperature of the water in Orland being so high that the fish would be ready for distribution before the ice was out of the streams. A hatching house has been extemporized at Bangor, in a store on Broad street, using the Holly water in the troughs. For the Kennebec, the salmon eggs will be hatched at the house built for and owned by the Kineo House proprietors. The total number of fish eggs to be hatched in Maine this winter will be about 2,000,000.

Several hundred salmon taken at Bucksport for purposes of propagation have been labelled with platimm tags affixed to the dorsal fin, a record of each of these salmon has been kept, and each tag has a reference number.

Any one obtaining possession or knowledge of any of these marked salmon at any future time is requested to send the tag to the Commissioners, or to C. G. Atkins, Esq., Bucksport, with such account of it as may be possible, and it is hoped by yearly marking all the adult salmon caught and liberated in the Penobscot River to learn more of their habits.

Besides their desire to obtain a report of every marked salmon that may be caught in the future, they wish especially that, whenever possible, some of these salmon may be delivered *alive* to Mr. C. G. Atkins, at Bucksport, to be placed in the breeding establishment at Orland. An extra price will be paid for these fish.

A TERRAPIN FARM.

A FEW days ago an article clipped from a Washington paper appeared in the *Register*, giving a description of Senator Dennis's terrapin farm in Maryland. As we have something of the sort to boast of in the neighborhood of Mobile, it may not be amiss to give our readers a description of Mr. Mulford Dorlon's great terrapin farm at Cedar Point. This projection of land is on the western shore of Mobile Bay, about thirty miles below this city, and is inhabited principally by oystermen who reap golden harvests from the many beds which furnish nearly every oyster brought to the port of Mobile. Mr. Dorlon, who keeps a store at this point, has about three acres fenced in with strong pilings. Leading to this inclosure are two canals, one on the bay side and the other on the gulf side, which supply with salt water a number of ditches ten feet wide and 100 feet long. The sand accumulating from the excavation of these ditches is thrown on each side, and used by the terrapin to sun themselves and lay their eggs in, which, if counted, would go up in the millions, and can be raked up by the bushel. In the winter season the terrapins remain imbedded in the sand of the ditches where they stay until spring time, never touching a morsel of food. A system of sluices enables Mr. Dorlon to keep the ditches full of salt water, or drain them at pleasure, and he is not at all dependent on the tide.

The number of terrapins on the farm, as can be ascertained and by the closest calculation, is between 20,000 and 25,000, and in the course of the next three or four years will be something hard to calculate. About May 1 Mr. Dorlon makes his purchase of terrapins from the country people of the Mississippi Sound, and takes all he can secure at $3 a dozen, and that generally averages about 8,000 a year added to his farm, outside of those bred therein. The inhabitants of Mississippi and Alabama hunt the terrapins with dogs trained for that purpose. The dog barks when he finds one, and the hunter immediately secures it by going to the spot where the dog points.

The cost of feeding the terrapins, which, as we have said, is only done in the summer, is about $1 per dozen for the season, and the price per dozen in New York has varied from $18 to $8. The food, which consists of crabs and fish, is caught with a seine, in front of the farm, and really very little expense is attached to the raising of these valuable land tortoises. Mr. Dorlon begins to ship about Oct. 1, and then on to about May 10. He generally sends his to Savannah by rail, and thence to New York by steamer, averaging about 12,000 a season, and, had it not been for a disastrous hurricane, which some time ago washed out Mr. Dorlon's farm, it would to-day be the greatest terrapin farm in the world. He can always ship all he can get, for there is a ready market for these delicacies.—*Mobile (Ala.,) Register.*

I have just heard of an instance where a United States Senator is supported by terrapins. Senator Dennis, of Maryland, as my information goes, has about twelve acres of land put down in a pond that is fed by salt water. This pond makes the largest terrapin farm probably in the world, and is the source of a heavy income. In it terrapins are raised for the market, and it is said that over 12,000 "counts" have been sold from it in one year. It may be noted, for the benefit of the uninitiated, that a "count" is a terrapin over seven inches in length, and that "counts" are sold by number, bringing from $10 to $14 a dozen, or about $1 each. In market they retail for about $20 a dozen, and in the fashionable restaurants are served at $1.50 a plate, one terrapin filling about three plates. Smaller terrapins are sold at lower figures, but all bring good figures, and are "diamond" backs in fact as well as in name. There are several terrapin ponds in Maryland, and they grow in importance as "terrapin stew, Maryland style," is becoming more and more popular among high livers.—*Atlanta, (Ga.,) Constitution.*

PACKING EGGS.

GRAND LAKE STREAM, Maine, Jan. 28.

Editor Forest and Stream:

Possibly some of your readers may be interested in the results of some experiments I have tried in materials for the protection of packages of fish eggs *in transitu*.

Several years ago I packed some boxes, holding about one cubic foot each, with wet and dry sawdust and wet sphagnous moss and exposed them to the outer air on a cold winter's night, the temperature ranging from 2 degs. to 8 degs. On opening them it was found that the frost had penetrated the dry sawdust in the box through and through, freezing a bit of wet moss in its centre; that it had penetrated the wet sawdust one and five-eighths inches from the sides and the wet moss one inch from the sides. I suppose the theory of latent heat given out by freezing objects explains the superiority of the wet over the dry materials.

A few days since we packed large cases, such as we use in shipping eggs, with egg-boxes full of wet moss, surrounded severally with dry sawdust, dry moss and dry forest leaves, and exposed them for thirty-six hours to a temperature averaging 10½ degrees Fahrenheit. The envelope of sawdust, moss and leaves was in each case three inches thick and the other cases made of half-inch pine. At the end of the period of exposure the cases were opened and found to be all penetrated by the frost to the inner boxes, in which the wet moss was frozen to the following depths: in the sawdust case; three-eighths of an inch; in the dry-moss case, one-eighth of an inch, nearly; in the dry-leaves case, one-eighth of an inch, nearly—showing the inferiority of the sawdust and the approximate equality of the leaves and moss. It requires a very careful test to determine whether the moss is at all superior to the leaves. The leaves used were mainly beech. The moss was *Sphagnum* from a bog, or "heath," as it is universally called by the inhabitants of this region.

The sphagnum moss I have always used for the inner packages of fish eggs. For two years past I have employed it largely for outside packing, for which purpose we have to pull and dry it in August—a very troublesome operation, which we would gladly avoid. I am pleased to find that forest leaves stand the test so well, for they are very easily gathered at the proper season. Wet moss would doubtless be the most complete non-conductor of heat, but it would be so heavy that I question the economy of using it.

I think that for protection of egg packages against heat the best available means would be an envelope of frozen moss. It could be frozen in the case, or perhaps more expeditiously, in broad, thin plates, which would hold together well enough to be afterward put in position in the case. This would surely outlast several packings of ice. In warm weather doubtless the moss could be frozen by some easy process. It occurs to me that this mode of packing might, in many cases, be profitably applied to the transportation of fish and meats in hot weather. C. G. ATKINS.

A NEW TENNESSEE COMMISSIONER.—The Nashville *American* says: "Mr. H. H. Sneed, of Chattanooga, has been appointed Fish Commissioner for East Tennessee. He is a thorough scholar and an earnest advocate of fish culture and protection in our State. His able lectures have contributed materially to the advancement of this new industry. With such Commissioners as Mr. H. H. Sneed, for East Tennessee, Col. Geo. F. Akers, for Middle Tennessee, and Judge W. W. McDowell, for West Tennessee, we may expect good results; and, with the aid of our present General Assembly to give us good and wholesome laws, our streams may soon be filled with every variety of fish in their primitive abundance."

GROWTH OF CARP IN CALIFORNIA—*San Francisco, Feb. 9.*—I have been much interested in the report of the growth of carp in America as collected by Mr. Fred Mather from the reports in FOREST AND STREAM and read before the Central Fish Cultural Society, at Chicago. We have also some carp which have grown rapidly and when we draw our ponds this coming summer for young fish we will have something to report in this matter of rapid growth. In the meantime we can say that the carp have grown in our ponds to an average of eight inches in length in ten months from the egg.

The evidence is beginning to accummulate that carp and catfish, *Amiurus albidus*, do not do well in the same pond. I think that the catfish increase at the expense of the carp and my suspicion is that the catfish eat the eggs of the carp. I will know more of this in a few months, however. R. B. REDDING.

Commissioner of Fisheries.

SMELTS FOR FRESH WATER.—Now is the time for our inland friends who contemplate planting this delicate fish in their spring lakes to make arrangements. The fish lives equally well in salt or fresh water and always comes into the latter to spawn. Otsego Lake, N. Y., has begun it and Mr. Fairbank is contemplating their introduction to the waters of Geneva Lake, Wis. The excellent little smelts of the Hackensack and Raritan rivers, N. J., are deservedly the favorites, notwithstanding they seldom grow over five inches in length. They sell in the markets for twenty-five cents per pound, when the large Eastern smelts of a quarter of a pound only bring five to ten. The large striped bass, *Roccus lineatus*, would also be a grand addition to large lakes, even to Lake Michigan and the other great ones.

A FALSE REPORT.—A short time ago we read in the Cape Ann *Advertiser* that Captain J. W. Collins, of the U. S. Fish Commission, was about to proceed to Lapland in the fishery interests of the German Government, and recently saw in the Fischerei *Zeitung*, of Stettin, Germany, an account of the Captain having received an order from the Swedish Government to go to Lapland and establish a fish hatchery. Thinking it queer that we should have to go so far from home to learn the news, we dropped the captain a line, and he replies under date of Washington, D. C., Feb. 22d. "You see the item before you about Lapland. I *have not* received any order from the Swedish, or any other government, to build a hatchery in Lapland, and the statement that I have received such an appointment is as much a surprise to me as to you, and one that I am in no way responsible for. Should such an unlikely event ever occur I shall certainly give you the facts for the FOREST AND STREAM. J. W. COLLINS."

CASTRATING CARP.—We have often heard of this mode of producing large carp, but never had a very clear idea of it, and have not yet, for that matter, but our attention has just been called to an article in the London *Fishing Gazette*, by Mr. J. Harrington Keene, who says: "For the purpose of accelerating the growth and improving the size of carp, a method of castrating carp—a sort of capousing process—was shown Sir Hans Sloane by a Mr. Tull. Sir Hans subsequently showed it to George IV., and gave a full description to Mr. Geoffrey, of the Paris Academy of Science. It appears from this that the ovary leads out of the part termed the cloaca, and the experiments consists in severing its ligamentary muscles and the membrane, and after closing the wounds by means of a silk thread. The fish is afterward returned to the water and the result is said to be an increase of voraciousness and a decidedly superior flavor when brought to the table.

CARP IN UTAH.—Prof. Joseph L. Barfoot, Fish Commissioner of Utah, is introducing the carp and notifies all who have ordered them to be in readiness to receive them. Prof. Barfoot labors under the disadvantage of having no funds provided by the Legislature to enable him to work. Still he is entitled to great credit for perserving and working up public opinion to the great advantages of fish culture, and for introducing the carp without funds to meet the transportation bills unless those who wish them for their own waters relieve him of the burden. Utah should give the Professor a helping hand in his good work.

THE FISH COMMISSION.—A few days ago, Maj. Ferguson, of the U. S. F. C., came to New York and, with the assistance of State Com'r. Blackford, chartered a well-smack to take 1,000 live cod to Hampton Roads, where they will be kept until ripe and their eggs hatched for deposit in the Chesapeake. It is expected to make new fishing grounds for this fish in Southern waters. There have been lively times on the "Fish Hawk" and "Lookout" for some time, and they are now in readiness for business. Early this month they will begin shad hatching in Albemarle Sound.

The Kennel.

April 1, at Columbia, Tenn.—Close of entries, National American Kennel Club's second American Field Trial Derby. Joseph H. Dew, Secretary.

April 26, 27, 28 and 29, at New York City.—Westminster Kennel Club Fifth Annual Bench Show, American Institute Building. Third avenue and Sixty-third street. Entries close April 11. Charles Lincoln, superintendent, No. 138 Fulton street, or P. O. Box 1,709, New York City.

NEW YORK BENCH SHOW.

RULES.

This Bench Show will be held under the following rules:

1. The term dog, where used in these rules, is general in its application, and includes bitches and puppies, unless they are otherwise mentioned. The term puppy is restricted to dogs under one year of age.

2. Every person who enters a dog for exhibition must be the *bona-fide* owner (or the duly authorized agent of the owner) at the time of closing the entries, and must identify it in the entry by its name, and, if known, its age, and also, if known, the names of its sire and dam. If the name of a dog which has won a first prize has been changed, its name at the time of its winning any and every such prize, and the place thereof, as well as its present name, must be given. If the names of its sire and dam are not known, it must be entered, "pedigree unknown."

3. If a dog shall be entered without being identified as directed in Rule 2, it may, in the discretion of the Board of Managers, be disqualified from competition.

4. Puppies may compete in grown classes, except in classes where they are specially excluded, and will be judged as if matured, but cannot compete in more than one class.

5. A dog which has, when a puppy, won a first prize in a puppy class, is not thereby disqualified from competition in a class where first-class winners are excluded.

6. A dog, to compete in a champion class, must have won a first prize in an open class at Springfield, New York, St. Louis, Philadelphia, Baltimore, Boston, Detroit, St Paul or Pittsburgh; and a dog, having won a first prize at any show held as above, cannot compete in an open class when there is a champion class for its kind, but must compete in such champion class.

7. A dog affected with mange or other contagious disease is disqualified from exhibition, and may, in the discretion of the Board of Managers, be excluded or removed from the show, and forfeit any prize which may have been awarded to it.

8. In any class where there is only one dog entered for competition, if it possesses sufficient excellence to deserve a prize, the judge will award to it the prize which he is deserving of, whether it be first, second or third; and they are not to award a prize in any class where no dog possesses sufficient excellence to entitle it to a prize. In case two dogs in the same class possess equal merit, the dog with the better pedigree will be preferred in awarding the prize.

9. The decision of the judges will be final in all cases, except where mistake, fraud, misrepresentation or collusion can be shown. In any such case the Board of Appeals must decide all cases, and the dog may be rejudged.

10. Any question involving the merit of a dog to receive a prize can be brought before, or be determined by, the Board of Appeals.

11. All protests and charges must be made to the Board of Appeals in writing, and delivered to the Board of Managers.

12. Any person who has misconducted himself in any way in connection with dogs, dog shows, or field trials, may, in the discretion of the Board of Managers, be disqualified from exhibiting any dog at this show.

13. The Board of Managers shall have the right to exclude or remove any dog from the show for any cause appearing to the committee sufficient.

14. An imported English setter is understood to be one directly imported, or whose sire and dam were both imported.

15. Native English setter dogs may be entered in the imported classes, but no imported dog may be entered in the native classes.

16. No dog can be entered for competition in more than one regular class.

In addition to the foregoing, the following regulations will be strictly enforced:

1. No dog belonging to the Westminster Kennel Club will be entered for a premium; but members have the privilege of entering their own dogs.

2. It must be distinctly understood by all exhibitors that the managers will not be responsible for loss or damage to any dog exhibited, whether the result of accident or any other cause.

3. It is desired that with each entry the exhibitor will state the price at which he is willing to sell his dog; a prohibitory price being, of course, permitted.

4. An entry fee of $2 will be charged for each animal entered, and no additional fee will be charged for entries for special prizes. The entry fee *must in all cases* accompany the entry, and includes care and feed for dogs during the exhibition.

5. All entries must be made on blanks furnished by the superintendent, and can be had on application at his office, 138 Fulton street.

6. The entries close on Monday, April 11, and as soon thereafter as practible each exhibitor will receive a ticket of identification and a numbered tag corresponding with the stall number of his dog. When the dog is brought to the exhibition-hall the tag *must* be attached to the collar, and the person accompanying the dog must show his ticket of identification before the animal will be received. Therefore exhibitors are requested not to lose their tags, nor to put them on the dogs, when practicable, until a few moments before they are presented at the door; and in case of dogs coming by express, their tags must be firmly nailed to the crates.

7. Each exhibitor will receive a separate ticket of identification for every animal entered, which must be carefully preserved, as no dog will be permitted to pass out of the building at night until its owner deposits five dollars and surrenders this ticket to the check-clerk.

8. Exhibitors will be permitted to take home their dogs every evening after ten o'clock, upon leaving a deposit of five dollars with the check-clerk and surrendering their identification-tickets, both of which will be returned on the reproducing of the dog in the morning before nine o'clock. If prize-winners should be taken out and not returned, the prizes will be forfeited.

9. All dogs must be removed and returned by the Sixty-fourth street entrance.

10. Exhibitors need not accompany their dogs. They can be sent direct to the exhibition hall.

11. The managers will use due diligence for the care and safety of all dogs exhibited—watchmen will be on duty both night and day.

12. The members of the committee and managers will be in constant attendance, and especial attention will be given to the care of pet dogs, commodious boxes with wire netting being provided for the same. Each of these boxes will have a hasp and staple attached, so that the owners may, if they see fit, keep their dogs under padlock and key.

13. The managers will meet every afternoon to receive complaints. Cases for the Committee of Appeal will be submitted through the managers. All communications must be made in writing and deposited in a box at the office, provided for the same.

14. No dog will be received unless supplied with a suitable leather collar and chain.

15 Bitches with pup, and small pups weaned, will be provided with suitable pens, if application is made at time of *entry*.

16. No dogs, except those from abroad, will be received before 7 A. M., Monday, April 25, or after 8 A. M., Tuesday, the 26th. All dogs will be received at the Sixty-fourth street entrance.

17. The show will be open from 9 A. M. to 10 P. M. each day.

18. The judging will commence promptly each morning at 10 o'clock and continue until 1 o'clock, and also from 2 P. M. until 6 P. M. During these hours no dog shall be taken out of its stall, not even by its owner; and if any dog is not found in its stall when called by the judges, the judging will proceed without it. *This rule will be rigidly enforced, in order that the judging be not retarded.* Owners are requested to be near their dogs, and, when the class is called, to bring their animals into the judging-ring. Owners who cannot be present should notify the superintendent, that their dogs may be taken in the ring for them.

19. Ribbons will be attached to the stalls of the prize-winners as soon as practicable after the awards have been made.

20. Railway arrangements for the transportation of dogs are in course of completion with all railway companies centering in New York, and will be duly announced.

21. Exhibitors, whose entrance fees amount to $4 or more, will be furnished with a season ticket free.

22. All disputed questions, except those of merit, in any way connected with the judging, will be referred to and decided by a committee composed, if possible, of members of the Massachusetts, Philadelphia and Westminster Kennel Clubs, who will act as a Board of Appeals.

23. No dog can be permanently removed from the building until 10 o'clock on Friday night.

The judges will be requested to make their decisions in conformity with the scales of points given in the third edition of the "Dogs of the British Islands;" but exhibitors are reminded that the decisions will not be reconsidered, except in the cases provided for by Rule 10. And should a judge fail to comply with the above request, it will not be deemed such a mistake as is provided for by the said rule.

PREMIUM LIST.

In the following list where one prize is named it is for the best; where two, they are for the first and second; and where three, for the first, second and third.

Class 1. Champion Mastiffs—Dogs, silver medal.
Class 2. Champion Mastiffs—Bitches, silver medal.
Class 3. Mastiffs—Dogs, $15, $10, silver medal.
Class 4. Mastiffs—Bitches, $15, $10, silver medal.
Class 5. Mastiff Puppies—Dogs or bitches, $10, silver medal.
Class 6. Champion Rough-Coated St. Bernard Dogs, silver medal.
Class 7. Champion Rough-Coated St. Bernard Bitches, silver medal.
Class 8. Rough-Coated St. Bernard Dogs, $15, $10, silver medal.
Class 9. Rough-Coated St. Bernard Bitches, $15, $10, silver medal.
Class 10. Champion Smooth-Coated St. Bernard Dogs, silver medal.
Class 11. Champion Smooth-Coated St. Bernard Bitches, silver medal.
Class 12 Smooth-Coated St. Bernard Dogs, $15, $10, silver medal.
Class 13. Smooth-Coated St. Bernard Bitches, $15, 10, silver medal.
Class 14. St. Bernard Puppies—Dogs or bitches, $10, silver medal.
Class 15. Newfoundland Dogs, $10, silver medal.
Class 16. Newfoundland Bitches, $10, silver medal.
Class 17. Newfoundland Puppies—Dogs or bitches, silver medal.
Class 18. Siberian or Elm Dogs or Bitches, $10, silver medal.
Class 19. Greyhounds—Dogs or bitches, $10, silver medal.
Class 20. Deerhounds—Dogs or bitches, $10, silver medal.
Class 21. Champion Pointers, over 55 lbs.—Dogs, $30.
Class 22. Champion Pointers, over 50 lbs.—Bitches, $30.
Class 23. Pointers over 55 lbs.—Dogs, $25, $15, silver medal.
Class 24. Pointers over 50 lbs.—Bitches, $25, $15, silver medal.
Class 25. Champion Pointers, under 55 lbs.—Dogs, $30.
Class 26. Champion Pointers, under 50 lbs.—Bitches, $30.
Class 27. Pointers, under 55 lbs.—Dogs, $25, $15, silver medal.
Class 28. Pointers, under 50 lbs.—Bitches, $25, $15, silver medal.
Class 29. Pointer Puppies, under 12 mos.—Dogs, $10, silver medal.
Class 30. Pointer Puppies, under 12 months old—Bitches, $10, silver medal.
Class 31. Champion English Setters—Dogs, $30.
Class 32. Champion English Setters—Bitches, $30.
Class 33. Imported English Setters—Dogs, $25, $15, silver medal.
Class 34. Imported English Setters—Bitches, $25, $15, silver medal.
Class 35. Native English Setters—Dogs, $25, $15, silver medal.
Class 36. Native English Setters—Bitches, $25, $15, silver medal.
Class 37. English Setter Puppies, under 12 months—Dogs, $10, silver medal.
Class 38. English Setter Puppies, under 12 months—Bitches, $10, silver medal.
Class 39. Champion Black and Tan Setters—Dogs, $30.
Class 40. Champion Black and Tan Setters—Bitches, $30.
Class 41. Black and Tan Setters—Dogs, $25, $15, silver medal.
Class 42. Black and Tan Setters—Bitches, $25, $15, silver medal.
Class 43. Black and Tan Setter Puppies, under 12 months—Dogs, $10, silver medal.
Class 44. Black and Tan Setter Puppies, under 12 months—Bitches, $10, silver medal.
Class 45. Champion Irish Setters—Dogs, $30.
Class 46. Champion Irish Setters—Bitches, $30.
Class 47. Irish Setters—Dogs, $25, $15, silver medal.
Class 48. Irish Setters—Bitches, $25, $15, silver medal.
Class 49. Irish Setter Puppies, under 12 months—Dogs, $10, silver medal.
Class 50. Irish Setter Puppies, under 12 months—Bitches, $10, silver medal.
Class 51. Irish Water Spaniels—Dogs or bitches, $10, silver medal.
Class 52. Field Spaniels (large size), dogs over 28 lbs.; bitches over 25 lbs.—$10, $5, silver medal.
Class 53. Cocker Spaniels—Dogs, under 28 lbs., $10, $5, silver medal.
Class 54. Cocker Spaniels—Bitches, under 25 lbs., $10, $5, silver medal.
Class 55. Cocker or Field Spaniels, Puppies under 12 months—Dogs or bitches, silver medal.
Class 56. Foxhounds, $10, $5, silver medal.
Class 57. Beagles—Dogs, $10, $5, silver medal.
Class 58. Beagles—Bitches, $10, $5, silver medal.
Class 59. Dachshunds—Dogs or bitches, $10 silver medal.
Class 60. Champion Fox Terriers—Dogs, silver medal.
Class 61. Champion Fox Terriers—Bitches, silver medal.
Class 62. Fox Terriers—Dogs, $10, $5, silver medal.
Class 63. Fox Terriers—Bitches, $10, $5, silver medal.
Class 64. Fox Terrier Puppies, under 12 months—Dogs, silver medal.
Class 65. Fox Terrier Puppies, under 12 months—Bitches, silver medal.
Class 66. Champion Collies—Dogs, silver medal.
Class 67. Champion Collies—Bitches, silver medal.
Class 68. Collies—Dogs, $10, $5, silver medal.
Class 69. Collies—Bitches, $10, $5, silver medal.
Class 70. Bulldogs—Dogs or bitches, $10, $5, silver medal.
Class 71. Bull Terriers—Dogs or bitches, over 25 lbs., $10, $5, silver medal.
Class 72. Bull Terriers—Dogs or bitches, under 25 lbs., $10, $5, silver medal.
Class 73. Bull Terrier Puppies—Dogs or bitches, silver medal.
Class 74. Champion Skye Terriers—Dogs or bitches, silver medal.
Class 75. Skye Terriers—Dogs or bitches, $10, $5, silver medal.
Class 76. Champion Pugs—Dogs, silver medal.
Class 77. Champion Pugs—Bitches, silver medal.
Class 78. Pugs—Dogs, $10, $5, silver medal.
Class 79. Pugs—Bitches, $10, $5, silver medal.
Class 80. Pugs (Puppies)—Dogs or bitches, silver medal.
Class 81. Rough-Haired Terriers—Dogs or bitches, $10, silver medal
Class 82. Black and Tan Terriers—Dogs or bitches, $10, silver medal.
Class 83. Dandie Dinmont Terriers—Dogs or bitches, $10, silver medal.
Class 84. Irish Terriers—Dogs or bitches, $10, silver medal.
Class 85. Champion Yorkshire Terriers, Blue and Tan, over 5 lbs.—Dogs or bitches, silver medal.

Class 86. Yorkshire Terriers, Blue and Tan, over 5 lbs.—Dogs or bitches, $10, $5, silver medal.
Class 87. Champion Yorkshire Terriers, Blue and Tan, under 5 lbs.—Dogs or bitches, silver medal.
Class 88. Yorkshire Terriers, Blue and Tan, under 5 lbs.—Dogs or bitches, $10, $5, silver medal.
Class 89. Toy Terriers, other than Yorkshire, under 5 lbs.—Dogs or bitches, $10, silver medal.
Class 90. King Charles or Blenheim Spaniels—Dogs or bitches, $10, silver medal.
Class 91. Japanese Spaniels—Dogs or bitches, $10, silver medal.
Class 92. Italian Greyhounds—Dogs or bitches, $10, silver medal.
Class 93. Miscellaneous (or Foreign Class)—Dogs or bitches, not specified in the above classification—$15, $10, $5, silver medal, silver medal.
Entries close April 11.

NEWPORT DOG SHOW.

THE first annual Poultry and Bench Show held under the auspices of the Aquidneck Agricultural Society, was held at Newport, R. I., on February 23, 24 and 25, 1881. The following is a brief of the rules governing the exhibition:

All dogs must be at the hall at 10 o'clock on the morning of the 24th of February, when the entries will close. An entrance fee of fifty cents charged on all dogs, which includes their food, water and care, as well as ticket for the exhibition. Every dog must be supplied with collar and chain. Exhibitors will be permitted to take home their dogs after 10 o'clock each evening, after receiving permission from the Superintendent. The judging in all classes will be done by gentlemen competent for the position. Dogs will be judged by rules of the Westminster Kennel Club, and poultry by the American Standard of Excellence. Mr. Michael McCarty will have entire charge of the dogs during the exhibition and his long experience well fits him for the position. The managers will use due diligence for the care and safety of all dogs exhibited, watchman being on duty day and night.

Considering that very few dogs were exhibited which did not belong to Newport, the show was really very good. There were about ninety entries, very nicely gotten up. Diplomas were given for first and second prizes, but no money. It is rumored that there will be another show in September. The judges of setters, pointers, foxhounds, New Foundlands, collies and spaniels, were Messrs. Russell Forsyth and George L. Collins, of Newport, R. I., and Dr. Handy, of Fall River, Mass. Of terriers, bull terriers, and other non-sporting dogs, Messrs. Al. Watts and John P. Barnard, Jr., of Boston, Mass.

The judges from Boston stated that the exhibition in some respects exceeded any which have been given in that city for the past two years, for quality, although, of course, the number was much smaller. The show was governed by the following gentlemen who constituted the officers and committee of the society: President, Mr. Albert C. Landers; Secretary and Treasurer, Mr. Melville Bull; Committee of Management, Messrs. James H. Hammett, Howard Smith, William O. Green, John T. Trip, George P. Lawton, H. P. Hamilton, Henry T. Easton and James A. Greene, all of Newport R. I.

The Beacon Kennel of Boston was represented by Mr John P. Barnard, Jr., who exhibited three English bulldogs, Bonyboy, Southbank and Judy. A Yorkshire terrier weighing four pounds, the property of Mr. Al. Watts, of Boston, attracted much attention; its hair which touches the ground after being parted on the back, measures seven and a half inches in length. There was a fine English setter bitch, Belfast, the property of Mr. H. V. Blankenship, of Fall River, Mass.

Subjoined is the full list of awards, the names of the dogs having been omitted in many cases:

LIST OF AWARDS.

English Setter Dogs—1st, Dash (N. Hathaway, Fall River, Mass.); 2d, R. M. Livingston, New York; 3d, Count Morris (A. Mercer Fell, Newport, R. I.).
English Setter Bitches—1st, Opal (N. Hathaway, Fall River, Mass.); 2d, Geo. L. Collins, Newport, R. I.
Gordon Setters—1st, A. P. Baker, Newport, R. I. Puppies—1st, Geo. L. Collins, Newport, R. I.
Irish Water Spaniels—1st, Sam'l Engs, Jr., Newport, R. I.
Cocker Spaniel Dogs—1st, J. E. Kline, Newport, R. I.
Cocker Spaniel Bitches—1st, J. E. Kline, Newport, R. I. Puppies—1st, J. E. Kline, Newport, R. I.
Ulm Dogs—1st, Sultan (A. V. Schade, Newport, R. I.).
Ulm Bitches—1st, Tiger (A. V. Schade, Newport, R. I.). Puppies—1st, Poppy (A. V. Schade, Newport, R. I.); 2d, Sam (Mr. McLeod, Newport, R. I.).
Newfoundlands—1st, Benj. Bliven, Jr., Newport, R. I.
Fox Hounds—Dogs—1st, A. Wilbor; 2d, John T. Tripp, Newport, R. I.
Dachshunds Dog—1st, Wm. H. Mayer, Newport, R. I.
Scotch Stag Hounds Dog—1st to E. B. Harrington; Newport, R. I.
Collie Dogs—1st, Wm. Maher, Newport, R. I.
Collie Bitches—1st. W. Andrews, Newport, R. I.
Scotch Collie Puppies—1st, W. Andrews; 2d, Wm. Maher.
Welch Collie Bitches—1st, Mrs. Lily S. Clymer, Newport, R. I.
Black and Tan Bitches—1st, James R. Palmer, Newport, R. I.
Kennel Terrier—1st, J. Fox, Newport, R. I.
Fox Terrier Bitches, with pups—1st, B. Foxhall Keene, Newport, R. I.
Large Yorkshire Terriers—1st, Arnold Freeborn; 2d, P. Fagan, Newport, R. I.
Yorkshire Terriers—2d, Miss E. H. Stimson, Newport, R. I.
Black Terrier Puppies—1st, James Carey; 2d, W. S. Cooper, Newport, R. I.
Blue Terriers—1st, W. H. Dewick; 2d, James Carey.
Toy Terriers—1st, Robert Carey, Newport; 2d, W. S. Cooper; 3d, James Carey.
Dalmatian Dog—1st, T. T. Bowler, Newport, R. I.
Bull Terrier Bitch, with pups—1st, W. P. Davenport, Newport, R. I.; 2d, W. C. Davenport, Providence, R. I.
Bull Terrier Dogs—1st. Wm. C. Davenport; 2d, William Slavin, Newport, R. I.
Miscellaneous Class—W. P. Davenport, bull mastiff; John Black, Newport, R. I., Swiss bloodhound; Samuel McLeod, one-half St. Bernard and Newfoundland; John Carridan, Newport, R. I., St. Bernard; J. P. Barker, Newport, R. I., Newfoundland bitch with pups.

POINTS FOR JUDGING THE POINTER.

[From Vero Shaw's "Book of the Dog."]

The Head should be rather wide between the ears, and of substantial appearance. It should not be in one straight line from occiput to nose; on the contrary, there should be a decided fall at the stop, which should be well developed, as also the occipital protuberance should be.

The Muzzle should be long, wide and blunt.

The nose must be large and moist, not black, but dark liver or flesh colored. A black nose is an especial blemish in a lemon and white dog.

The Jaws should be powerful, with the teeth meeting evenly.

The Lips should be fairly well developed, but not to any great extent, as in the bloodhound.

The Eyes.—The color depends upon the color of the dog, and are therefore either dark or light, as the case may be. They should be moderately well developed, as a pig-eyed pointer is an abomination few can stand.

The Ears should hang flat to the sides of the head, and be soft and thin, low set on and long, may be to reach the throat.

The Neck should be arched, and any dewlap is a serious fault.

The Shoulders moderately sloping, and well set up.

The Chest must not be too wide, as if so the dog's pace will be injured. It should be very deep.

The Body must be powerful-looking, and not too short, which is a fault, and well ribbed up. Loins particularly strong, and a little arched.

Fore-legs very strong and heavy in bone, and placed well under the body.

Fore-feet round and compact. Many authorities express admiration at the long hare-foot, but in our opinion there can be no question but that the cat-foot is infinitely preferable.

Hind-legs should be very muscular in thighs, with stifles turning out a little. Hocks powerful, and turning inward very slightly, on account of the outward turn of the stifle joints.

The Stern short, and thick at root, but gradually tapering toward the tip. It must not be set on too low down, and should be carried straight out from the neck.

The Coat should be soft, but at the same time weather-resisting. Color is a point which has been already discussed above. Though many judges prefer to ignore the question of color, we are certainly of the opinion that liver and whites and lemon and whites are by far the most preferable on the show bench, if only on account of their beauty.

In General Appearance the pointer should show every evidence of a combination of strength and refinement. A coarse-looking dog should be avoided, as also should a light-boned one, for reasons already given.

According to custom we append a

STANDARD OF POINTS FOR JUDGING POINTERS.

Skull	5
Nose, ears and eyes	5
Neck and shoulders	5
Chest, depth and breadth	5
Body	5

MORE COMMENTS.

JOCKEYING AT FIELD TRIALS—Brooklyn, N. Y., Feb. 23.—I was disgusted at Whitford's own cheap advertisement; it was all about W., and what he could do. It was the emptying of ooze and slime of a "Western slough." I believe he never wrote a word of it. It is sufficient to converse with W. for but fifteen minutes to ascertain how illiterate the man is.

Columbia, Tenn., Feb. 10.—I have read with much pleasure the editorial comments on "Jockeying at Field Trials" in the FOREST AND STREAM of the 3d inst., and I thank the editor in behalf of all honest sportsmen for his well said and well-timed remarks, and the just rebuke he gave the dog-jockey Whitford. I hope he will handle all such in like manner.

Memphis, Tenn., Feb. 10.—I think you have done the fair amateur, genteel sportsman a signal service in writing up and down the sly trickeries of Whitford & Co. The trials should either be purged and purified utterly, and all such felons cut off by the scalpel of fairness, or else relegated to the jockeys who may then snarl among and prey upon each other. As the trials were to be run as between two gentlemen shooting regularly alongside, it is plain no friend would throw his dog in ahead on another dog's birds already found, but would cause him to back or take the trail of side runners, not wearing another's laurels. I have heard others commend your article and many copies have been mailed to the sportsmen of the land, owners of the soil. You may reasonably expect to hear a howling wail from the stricken; the harder they are whipped the more painful the yell; but go for them whenever needed. The better and the larger portion of the sportsmen are with you and the right.

Memphis, Tenn., Feb. 14.—I have heard many gentlemen express their thanks to you for your showing up in such a fearless way the sneaking trickery of Whitford. It may be agreeable to know you are sustained by those who are above all frauds, proven by stainless lives.

GORDON SETTERS.—The origin of the setters goes back to a very distant period and one which it is rather difficult to specify. They were used (says *La Basse Cour*) long before the pointers, who were not known very much before the beginning of the century, and they appear to have always been taken great care of in England. There are many points of resemblance between the setters and our large French spaniels and it is very certain that these dogs have the same origin. By careful selection and judicious pairing the English have, however, succeeded in giving a more elegant shape, more silky hair and, more than all, a keener scent and a swifter pace to their setters than we can boast. Half-bred setters are very common in England. The best known among them are the Gordons, the Laveracks and the Irish setters.

The Gordon setters should be placed in the first rank, because they appear to be called upon in our country to render more service than the others on account of the facility with which they can accommodate themselve to our sports and to different ground. Gordon setters of pure breed are magnificent animals, vigorous, very energetic and well made and they unite strength with great elegance. Their hair, though rather coarse, is generally less long than that of the other setters and this enables them to make their way more easily among the briars and furze; while, at the same time, as their feet are firm and well covered with hair, they do not hurt themselves on the hard and flinty ground which they have to go over in the rougher sports. They are able to endure great fatigue and they can bear the intense heat of summer better than any other kind of spaniel. The quest of the Gordons, though extensive and very active, is wise and prudent and is suited to the nature of the country which we live in. These dogs are usually so mild and docile that it is exceedingly easy to tame them and most satisfactory results are to be obtained by those who are willing to give a little attention to the business.

The color of the Gordons is a fixed one. They are black and yellow and many of them have a white mark on the chest. Breeders appear to have given their attention for a long time toward eliminating this white mark from the coats of their dogs. It is, however, well known that the setters of the Duke of Gordon were black, yellow and white and that the white color is only a sign of greater or less purity of blood. We think, therefore, that it is not reasonable to attach so much importance to this mark, which is certainly no disfigurement to a fine animal.—*Live Stock Journal.*

GREATEST WEIGHTS OF DOGS—San Francisco, Jan. 15.—I am a great lover of the dog and endeavor to own (as many as my limited means will allow) the best specimens of certain breeds. My object in addressing you this note is to give the dimensions of a splendid specimen I possess of the species known in natural history as the "Great Dane" (a smooth-haired dog), but erroneously classed at bench shows as the "Siberian blood hound." I am anxious to ascertain, through your courtesy and columns, if any of your many readers know of any larger dog, of any breed, and if so I will be very much obliged if they will send me his measurement. The dog I refer to took the first prize at the bench show in New York in 1879. His name is "Bruce." He stands 33 inches high at shoulder, 32 at the rump; is 6 feet 5 inches long from end of nose to tip of tail, 42 inches round the girth and 13 inches across the chest. He weighs, when in good condition, about 175 pounds. Just now he is in poor health; suffering from a skin disease. I have tried all sorts of remedies—sometimes with success. He is not four years old and yet his front upper and lower teeth are going fast. I give him few bones and feed him on oatmeal mush, soup meat and vegetables and cannot account for this loss. Perhaps one of your readers who owns this breed may know what causes it. I hear it is a peculiarity of the species. Bruce is the grandest looking dog I ever saw, gentle and active and looks like a young stallion when head and tail are erect. He goes into the water for sticks like a Newfoundland dog. I have seen notices of big dogs in your paper of the "Leonberg" breed, one of which stood, if I recollect aright, 34 inches at shoulder. But I never saw so large a dog, and now write to call out some information on the subject. I am very fond of big dogs and want to own the biggest and think we should do all in our power to improve the larger breeds in size and sagacity. A friend of mine is anxious to purchase an animal of this or any other good breed of grand proportions, and perhaps you can kindly assist him in his desire.
STUART M. TAYLOR.

NOTES FROM OUR FOREIGN EXCHANGES.—The well-known smooth-coated St Bernard bitch Jura is dead. She was for a long time the property of the late Miss Aglionby. At the time of her death Jura belonged to Mr. W. H. Goddard, of Barrow-in-Furness. She was the winner of fifty-one firsts and forty-nine second prizes and was ten and a half years old.

It is said that the Rev. J. Cumming Macdona has withdrawn his name from the list of members of the English Kennel Club.

On the 18th January a valuable Newfoundland bitch belonging to Mr. T. Loader Brown, of Chardleigh Green, escaped from a crate in which she was traveling and was lost in the snow. For several days nothing was heard of the wanderer, but on Sunday, the 25th, two laborers, while passing over Beaminster Down, discovered the poor creature in a snowdrift. The dog appears to have been stopped, the chain attached to her collar having become entangled in a large root, which, to gain liberty, she had bravely gnawned through; but while doing this the chain became frozen to the ground within about six inches from the collar, so the poor animal was scarcely able to move. The men probed the snow with a pick, but the dog, not liking this mode of examination, growled and showed her teeth. The men, terrified, proceeded to Beaminster and asked Superintendent McHale to bring a gun to shoot the "devil," who was surely out on the Downs. Superintendent McHale quickly comprehended the case and, accompanying the men to the spot, soon relieved the imprisoned dog, which was returned to its owner, apparently none the worse for her six days' fast in the snow.—*Live Stock Journal.*

Regarding the Alexandra Palace Show, a correspondent writes to me: "I think the election of judges system should be altered. The Kennel Club Committee elected several of themselves as judges, while eight others of them exhibited thirty-four dogs and won £60. If don't look well."—SIRIUS, *in the Stock-Keeper.*

The report and balance-sheet of the Fox Terrier Club for the past year have just been issued and there is a balance of £119 13s. 7½d. to improve the fox terrier.—*The Stock-Keeper.*

BENEDICT.—We had a look the other day at the Lachine Kennel Club's recently imported black spaniel dog Benedict, Mr. G D Macdougal kindly bringing him, at our request, to our office. We found Benedict all that had been claimed for him, and a remarkably fine dog of his breed. He is about one year old. The Lachine Kennel Club imported him direct from the kennels of Mr. T. Jacobs, of Worlborough House, Newton Abbot, Devonshire, England, which have recently been so successful on the bench. Benedict is own brother to Squaw and Lass o' Devon, and brother in blood to the magnificent Kaffir, Zulu and Mr. A. H. Moore's imported Dash.

Subjoined we give the measurements of several celebrated English winners, contrasted with those of Benedict:

	Brush Bona.	Bach.	Bene.	Cock.	Cock.
			slor.	dict er	Nell er
Weight	40lbs	32lbs	36lbs	31lbs	23lbs
Height at shoulder	15in.	15in.	15in.	15in.	9in.
Length from tip of nose to set on of tail	38	35	32	33⅜	30
Length of tail	5	4	6	6½	13
Length of head from tip of nose to occiput	9¼	8	9¼	5¾	8½

As we shall publish at an early date the chapters on spaniels from the advance sheets of Mr. Vero Shaw's "Book of the Dog," our readers will then have an opportunity of seeing what is said of this breed, which of late years has almost monopolized the classes provided at dog shows in England for spaniels other than Sussex and Clumbers. As a beautiful dog the black spaniel ranks very highly, while as a companion to the sportsman he is invaluable.

PHILADELPHIA GOSSIP—Philadelphia, Feb. 23.—The report is becoming quite general that a dog show is to be held in Philadelphia under the patronage and direction of a canine lover in our city, and one of my informants even went so far as to state that Mr. Chas. Lincoln would be the Superintendent. I give the news as I learned it—not on my own authority. None of the Philadelphia Kennel Club appear to know anything about it, nor do I think they will take a part, for the exhibition given not long since at the Industrial Art Building so thoroughly annoyed the gentlemen of the committee on account of its endless detail that it has several times been declared that nothing would induce them to take an active part again. Disputes arose during the exhibition, which were exceedingly distasteful to them, and they were forcibly obliged to resent unfounded charges made by dissatisfied exhibitors against the judges of their careful choosing—judges who were acting gratuitously (at least some of them) and whose position in society precluded any idea of unfair awards with their names. This they say they did not expect, when the names of the committee should have been a guarantee that the judges acted according to their honest convictions. Errors should not have been openly called frauds, as they were by some. Your correspondent need not comment upon the success of a well-managed bench show in this city. All that is necessary to insure a large display and attendance in our very conservative Quaker town is a co-operation on the part of the projector with the leading kennel-owners of the country and to insure the public that the exhibition would be such a one as a lady might attend without distate; for be it known that a great part of the display of non-sporting dogs is made by the fair sex and the interest taken by them and their fair friends in their pets' success runs very high at such times. HOMO.

VACCINATION—Piermont-on-Hudson.—In your issue of December 9 "Homo" writes that the French have recently inoculated young hunting dogs with vaccine virus to protect them from a disease (distemper) which decimates them when quite young, and it has proven quite successful. The French can hardly claim prior discovery in the use of vaccine virus as a preventive to distemper, as that prince of sportsmen, Col. Hawker, speaks of it in his work, "Wild Fowling." I have do doubt but it will prove a great benefit as a preventive, having vaccinated all my young dogs but one for the last ten years. Of those vaccinated none died of distemper; the one I neglected to vaccinate died of pneumonia. I have lately vaccinated Mr. F. Meyer's beautiful pure Laverack bitch puppy Rose Laverack, by Young Laverack out of Petrell II., and his lemon and white pointer bitch Snowflake, by Glenmark out of Girl. The mode of doing it is as follows: Get the points or quills, which generally have directions for use with them, but if they have not, dip one in clean, cold water and lay it aside; then scarify the skin under the foreleg, close to the body, or, as I prefer, the small knob in the ear. Either should be scraped with a sharp knife until a very small quantity of blood appears through the pores of the skin; then rub the convex side of the quill you have dipped in water on the scarified surface about a minute and the job is done, not occupying more than three minutes' time. If you expect a large sore and big scab you will be disappointed; it may be a very little larger than the place scarified, but not much, and the pup will not mind it in the least. W. F. STEEL.

BREAKING DOGS WITHOUT A WHIP.—An esteemed correspondent asks us if it is possible to train dogs without the use of the check collar and whip, adding that he owns a dog that has been timid from his youth. We choose to reply in the words of a once well-known authority. A paragraph in his choicest of quaint books gives our views in a nut shell. "If a dog" says he, "will not stand the whip, I can do nothing with him. Assuredly, if he cannot be brought to endure something under the shadow of discipline, he is utterly out of the sphere of my system; and I would acquire the credit by generously giving him away, to increase the valuable kennels of your gentlemen, 'whose breed never wants breaking in; take it all of themselves, but you must never use a

whip: O no, sir! they are too high bred to bear it.' When I have been obliged to hear this, I own I have smiled at the different notions of the sublimation of breed. As soon should I think of finding a general officer out of some snivelling booby, who, for every rap on the knuckles to awaken attention will creep away to blubber and suck his thumbs in a corner." No delicacy of nose can compensate the manifold mortifications a man must undergo in waiting and watching the whims of some trifling, shivering, whimpering, indecisive, half-witted animal of this class. Life is too short; we would not squander the time and patience on such materials.

DO PIGS EVER POINT?—A correspondent writes us, do pigs ever point? Did you ever hear of one being trained for the field? Do dogs other than pointers and setters ever point? The system of making any dog stand is a simple matter. We have known of dogs for both of "high and low degree" taught "the trick of standing," from the greyhound to the bulldog, and mongrels and curs of every description. In the "History of Animals" by the Rev. Bingely, published in London, at the begining of this century, he speaks of a case where a pig was made up into a pointer. The story runs as follows: "It (the pig) had formed an intimate acquaintance with some young pointers, belonging to a keeper on the New Forest in Hampshire, fed and slept along with them, and when they were taken out on training, it regularly followed them into the field. Hence a whimsical idea occurred to the breaker, that he would try his hand in teaching him the trade of his companions, and with the help of a parcel of stones in one pocket and of lumps of pudding in the other, he very early succeeded in his attempt and the pig did his part to admiration. We are further furnished with strong certificates from a Sir Henry Mildmay concerning these extraordinary performances."

NATIONAL AMERICAN KENNEL CLUB'S STUD BOOK.—The entry-fee for single registry to the Stud Book is twenty-five cents and the annual dues, now payable, of members to the N. A. K. Club, is five dollars. We learn from Mr. Jos. H. Dew, the Secretary of the club, whose address is Columbia, Tenn., that he is overwhelmed with letters of inquiry. We therefore would suggest to the sporting world that as the secretaryship of the organization is an onerous one, from which the Secretary receives no emolument, it would be no more than courteous to assist him in the compilation of the Stud Book by sending in their entries in a proper form, which is substantially as follows: 1. Name of breed; 2. Name of dog; 3. Name of owner; 4. Residence of owner; 5. Breeder's name; 6. When whelped; 7. Color of dog; 8. Pedigree.

ESSEX COUNTY HUNT—Montclair, N. J., Feb. 26—*Editor Forest and Stream:* We are pleased to learn that you have kindly offered special prizes for beagles to be exhibited at the coming Westminster Kennel Dog Show, for we have always felt that the merry little beagle has never received the attention and appreciation he so well deserves. We trust a competent person will be appointed this year to award the prizes for this class, as in last year the judge evidently did not know the difference between a beagle and a harrier, so wrongly were his awards given. We are now in correspondence with Dr. Gordon Stables for the purchasing of some fine beagle stock from the kennels of Sir Asheton Ashburnham or Sir John Montfield Bennet and hope to receive our importation in time for the April exhibition. F. M. WHEELER, *Sec'y.*

BENCH-LEGGED BEAGLES—Baltimore, Feb. 21—*Editor Forest and Stream:* In your last issue you state that the FOREST AND STREAM will give two special prizes at the coming New York show to straight-leg and "bench-legged" beagles. When the awards at the late Pittsburgh show were awarded I was much astonished to hear the classification for beagles—"Maryland bench-legged"—a strain I never had heard of had, after diligent inquiry among men who had owned beagles for years, am still unable to find a single man who had ever heard of them, much less seen one. My inquiries were addressed to sportsmen resident in different parts of the State and the invariable reply has been: "Never heard of them, and, as a particular strain, do not believe they exist." The Westminster Kennel Club should sift this matter thoroughly before adding a new class to sporting dogs, for if already there exists a perfect dog in the straight-legged, why mar the classification by adding an imperfect dog. No one would object to any improvement in our field dogs, but that improvement must conform to the standard, and that all hounds must be straight-legged is an accepted fact. HARE.

SUGGESTION TO THE COCKER CLUB.—Philadelphia, February 26.—Don't you think now is the golden opportunity of the "Cocker Club" to settle their differences of opinion as to the typical cocker. Let them appoint a committee empowered by the club to act as a jury, at the coming Westminster Kennel Club Show, the committee to select a specimen as their ideal, and from that animal erect a standard and scale of points. Newspaper controversy will never settle the question, and as they seem to have ignored Stonehenge in their wordy war, something will have to be done. As the case now stands it will be difficult to find a judge willing to adjudicate the class, unless they (the club) furnish a standard. This is what the Chesapeake Bay dog breeders did at Baltimore in 1877, when they were in a similar quandary. How would it do for the Cocker Club to nominate the judge for this class? LEPCS.

CALIFORNIA DOG SHOW AND FIELD TRIALS.—Several well-known enthusiastic sportsmen of the Pacific Slope are discussing the advisability of holding a bench show and a field trials meeting at an early date in California. There are many finely-bred dogs in the State, prominently Mr. Tristam Burgess' Queen Mab and Daisy, Mr. Rice's Belton and Belle, Mr. Aldrich's McGregor, sired by Rob Roy, and Messrs. Bartlett and Briggs have imported a brace of the renowned Carlowitz and Prince stock, besides many other fine breeds of sporting and non-sporting dogs. San Francisco has a coterie of sportsmen from which competent judges can be selected and we trust at an early date to have the pleasure of announcing that arrangements have been made to carry out this very "happy thought."

BEAGLE SPECIAL PRIZES.—It has been suggested to us that the wording of a paragraph in our editorial last week on this subject may possibly lead to its misconstruction. We therefore wish to state that all entries for these prizes must be made in the regular way to the Superintendent of the show and not to the FOREST AND STREAM.

The managers of the show have expressed the opinion that the publication of the competitors for these prizes before the closing of the entries may interfere with the plans of the club. We recognize the force of this suggestion and have therefore consented to forego our intention of publishing the entries for the beagle specials until after the closing of the entries to the show.

OFFICERS OF THE COCKER CLUB.—We have been informed that the committee of the Cocker Club have chosen as their President Mr. A. H. Moore, of Philadelphia, and as Secretary Mr. Geo. D. Macdougall, of Whitestone, L. I. It is to be hoped that a meeting of the committee will be called at an early day.

FOREST AND STREAM TROPHIES.—The special prizes offered by the FOREST AND STREAM at the Westminster Kennel Club's bench show, to be held this spring, will be to the best bench-legged beagle of any age or sex in the show, a silver mounted hunting horn. To the best straight-legged beagle of any age or sex in the show, a silver mounted hunting horn.

KENNEL MANAGEMENT.

82 C. P. P., Hartford, Conn.—I have a setter dog two years old that has had the distemper very badly and it has left him with a dry scaly nose. I have been using vaseline; it has done no good. What shall I apply to cure it? Ans. External applications are of no use. Give the dog plenty of exercise and feed him properly. Give him also little sulphur, now and again, with his food.

83 H. B. V., Bradford, Pa.—My setter dog three years old has a large lump in his throat the size of a turkey's egg. The lump has been there about a month. He coughs occasionally, and sometimes throws up a green froth. His appetite is not changed and I do not see any serious effect of the lump. Ans. Give a little sulphur each day for a week, and now and again a dose of sulphate of magnesia. Paint the swelling every day with tincture of iodine. Stop for a time when the skin gets sore. Give the dog exercise at regular hours.

84 E. T. B., Springfield, Mass.—I have an English setter dog three years old. Some time ago he commenced to grow fat and a few weeks ago I noticed his nose became dry and an eruption appeared near the end of it. I have also noticed within a few days that the muscles in his legs jerk considerably. He pants a great deal when quiet and sneezes when his chain is taken off. At times his eyes look inflamed. What shall I do for him? Ans. Has probably suffered from over feeding; a mild course of sulphur and saltpnate of magnesia combined low diet, and plenty of exercise will put him all right.

85 DANIEL, Newark, N. J.—Yes, your dog has internal canker of the ear. Pour a little of the following lotion in his ear three times a day: Calomel, one scruple; lime water, twelve ounces. Give the dog a little cooling medicine every week.

86 A. P. V. B., Rondout, N. Y.—What can I give my setter to improve his coat? He is well feathered on legs and stern and hair good on head and neck, but the hair on his back and across his loins seems to be dead, and looks as though the ends were broken off. He seems to be perfectly healthy. Ans. Wash only twice a month. Dress coat daily with a brush (not too hard a one). Dress the parts referred to twice a day with a compound of oxide of zinc ointment and give teaspoonful of sulphur in food every day for a short time. Mix vegetables with ordinary diet. Greens are especially recommended when dogs cannot get grass.

87 J. O. F., Hornellsville, N. Y.—When my puppies get a chance they eat wood and cool ashes. Will it hurt them? What do they need? I have been feeding bread and milk, bread and meat, jelly, some bread made of graham flour, corn meal and boiled meat, no grease. They have always been kept in a warm room. Ans. Your puppies are suffering from acidity of the stomach. Give bi-carbonate of soda, one scruple; compound with one half drachm of pulverized charcoal made into pills with mucilage. Two a day, night and morning. Give plenty of exercise and feed healthy food, such as oatmeal and corn meal boiled in beef tea. To make the food, boil the water and take in the meal until no more can be stirred in.

88 J. H. M., Poughkeepsie, N. Y.—I have given my cocker bitch (she will weigh about 15 lbs.) about 20 grains of areca nut, but she vomits it up every time. Twelve long white worms have come from her. Her symptoms are: Eyes bright, nose moist and dry alternately. Sometimes she will twitch and jerk. Her head will bobble about, and she will reel in walking. My other cocker bitch has lost the use of her limbs; she has quite a little appetite, looks bright as can be, sleeps well and appears to be well, only troubled with weakness. Ans. For both dogs discontinue the nux vomica, they evidently have had too much. Give to one troubled with worms 5 grains of calomel with bismuth, say 8 to 10 grains, for two days, one dose per day. Follow with castor oil. This will prepare her for the vermifuge. Then give 20 grains of areca nut next day, and repeat dose of oil. Give both dogs 2 grains of quinine three times a day, and feed the one that cannot walk with good broths and strengthening, well cooked food.

KENNEL NOTES.

*** *Breeders and owners of sporting dogs are invited to send memoranda of names claimed, bred, whelps, sales, etc., for insertion in this column. We make no charge for the publication of such notes; but request in each case the notice be made up in accordance with our form, that the name of both owner and dog be written legibly, or printed, and that the strain to which the animal belongs be distinctly stated.*

NAMES CLAIMED.

Leigh Doane—Mr. J. H. Roberts, of Philadelphia, claims the name of Leigh Doane for his Irish setter bitch, whelped Nov. 27, 1879, out of Dr. Jarvis' Rose by champion Elcho.

Dash—Dr. Bidwell, of Winsted, Conn., claims the name of Dash for liver and white pointer puppy out of Grace by Gay, purchased from Mr. N. Elmore, Granby, Conn.

Rough—Mr. Gard. G. Hammond, Walnut Grove, New London, Conn., claims the name of Rough for his Chesapeake Bay dog, whelped June 4, 1880, out of owner's Rose by Blue.

Cartouche, Count Plover and Lookout—Mr. Frank B. Fay, of Boston, Mass., claims the names of Cartouche, Count Plover and Lookout for setter puppies out of Countess Gay by Coin.

Roxella—Dr. H. B. Wygant, of Peekskill, N. Y., claims the name of Roxella for lemon and white pointer bitch puppy, whelped Dec. 30, 1880, out of Countess Nellie (Snapshot-Gypsey) by Sam (Caper-imported Kate).

Count Warwick—Mr. R. M. Briggs, Gilroy, Cal., claims the name of Count Warwick for black, white and tan setter dog puppy by Warwick (N. A. K. C. S. B. 277) out of Belle (N. A. K. C. S. B. 299).

Leah II.—Mr. H. D. Bartlett, Gilroy, Cal., claims the name of Leah II. for black, tan and white ticked bitch puppy by Royal Duke (Carlowitz-Titus) out of Leah (Boybell-Livy II.).

Bright III—Mr. Thomas Kelleher claims the name of Bright III. for his Yorkshire terrier, sired by his champion Willie.

Nettie II.—Mr. Thomas D. Burke claims the name of Nettie II. for his Yorkshire terrier, sired by champion Willie.

Trump—Mr. Robert Maher claims the name of Trump for his bull terrier puppy out of Mr. Charles Armstrong's bitch Friday by Fred. Duncason's Rocks.

Jewett—Mr. Fred. F. Smith, of Woonsocket, R. I., claims the name of Pearl for white, black and tan beagle bitch puppy, whelped Dec. 22, 1880, out of Best by Victor. Purchased of Mr. N. Elmore, Granby, Conn.

Duke de Luvois II.—Mr. C. C. Donglass, of Philadelphia, claims the name of Duke de Luvois II. for black and white setter puppy, whelped Nov. 1, 1880, out of Sam Barr's Fannie (W. W. Colket's Echo-Barr's Lill) by J. H. Robert's Duke of Luvois.

Ring—Mr. W. E. Shedd, Waltham, Mass., claims the name of Ring for black, white and tan beagle dog puppy, whelped Nov., 1880, out of Sill by Dodge's Rattler.

Hazard, Hermit, Regent, Royal, Dixie, Fannie, Ruin, Tinkle and Zeal—Mr. C. B. Wight, of Mooleyville, Breckenridge, Ky., claims the names of Hazard, Hermit, Regent and Royal for dog foxhounds; Dixie, Fannie, Ruin, Tinkle and Zeal for bitch foxhounds, imported *in utero*, whelped Jan. 21, 1881, out of imported Bluebell (forwarded by Dr. Gordon Stables) by Mr. Garth's Senator.

Gypsey—Mr. Frank Sowers, Tamaqua, Pa., claims the name of Gypsey Maid for a black and white setter bitch pup, whelped Dec. 7, 1880, out of Shuster's bitch Wynne by Champion's Bow.

BRED.

Meg-Sensation—Mr. Wakeley's (Levana, N. Y.,) Meg to Westminster Kennel Club's Sensation, Feb. 21, 1881.

Leigh Doane-Berkley—Mr. J. H. Roberts' (Philadelphia, Pa.,) Irish setter bitch Leigh Doane to Mr. A. H. Moore's champion Berkley, Feb. 8, 1881.

Bess-Thunder—Mr. J. T. Margerum's Bess (Belton-Nellie) to Mr. J. J. Snellenburg's pure Laverack setter Thunder.

Lill D.-Coin—Mr. Frank B. Fay's Lill D. (Dash III.-Madjeska) to his Coin, on Dec. 28, 1880.

Belfast-Coin—Mr. H. V. Blankenship's Belfast (Dash III.-Opal) to Mr. Frank B. Fay's Coin, on Jan. 24, 1881.

Ninette-Coin—Mr. Frank B. Fay's Ninette (Thunder-Minna) to his Coin, on Feb. 6, 1881.

Desdemona-Coin—Mr. Frank B. Fay's Desdemona (Leicester-Nellie) to his Coin, on Feb. 10, 1881.

Fly-Music—Dr. H. B. Wygant's (Peekskill, N. Y.,)- liver cocker spaniel Fly to his liver and white cocker spaniel Music, on Feb. 14, 1881.

Cricket-Racket—Mr. James T. Walker's (Troy, N. Y.,) orange and white cocker bitch Cricket (McKoon's Captain-Beauty) to owner's Racket (McKoon's Sam-Fanny Fern), on Feb. 19, 1881.

Eden-Grouse-Moll III.—Mr. G. K. Munger's (St. Thomas, Ont.,) black and tan setter Eden (Grouse-Moll III.) to Dr. Niven's Blosson, on Feb. 12, 1881.

Vic-Pontiac—Mr. N. Trumbull's English setter bitch Vic to Mr. John C. Higgins' pure Laverack setter Pontiac, on Jan. 23, 1881.

Collette-Flute—Mr. N. Elmore's beagle bitch Collette (imported Chanter-Beauty) to Flute (Rattler-True) on Feb. 23, 1881.

Hazel-Dash—Mr. J. H. Winslow's (Baltimore, Md.,) cocker spaniel bitch Hazel to Mr. A. H. Moore's black cocker spaniel Dash.

Kit-Lock—Mr. J. Frank John's (Haverhill, Mass.,) Gordon setter bitch Kit (Tom-Bess) to owner's Gordon setter dog Lock (Doane's Tom-Gay's Pansy).

Nellie-Nick—Mr. James K Boyd, of New York city, has bred his lemon and white English setter bitch Nellie to Mr. H. Bainbridge's orange and white Laverack setter Nick, on Feb. 22 and 24.

Rose-Leicester—Mr. J. N. Dodge's English setter bitch Rose to Mr. A. H. Moore's champion Leicester.

WHELPS.

Minnie—Miller & Co.'s Minnie (white English terrier) whelped two bitch pups on the 19th, only one alive, sire Mr. P. Sharky's Trouble.

Gyp—Mr. Dave Gibson's cocker spaniel bitch Gyp (Blackey-Jewel) whelped on Feb 19 six puppies, four dogs and two bitches, one dog pup died, sired by Mr. O. T. Stone's Max. Max is from the kennel of Mr. M. P. McKoon, Franklin, Del. Co., N. Y.

Kate—Mr. Harry Mattes' (Philadelphia, Pa.,) Gordon setter bitch Kate whelped Feb. 24, 1881, ten puppies, eight dogs and two bitches, by Mr. W. Schelm's Gordon setter dog Rod.

Bonny Kate—The Montview Kennels Bonny Kate whelped Feb. 8, 1881, six puppies, four dogs and two bitches, all white and lemon, by Lincoln.

Belle—Mr. J.C. Bishop's (Monson, Me.,) foxhound Belle whelped Feb. 23, 1881, ten puppies, seven dogs and three bitches, by Rochester's Ben.

Nellie—Mr. P. J. Sharkey's (New York city) pure white imported bull terrier bitch Nellie whelped Feb. 27, 1881, five puppies, by same owner's imported Trouble, grandson of Henry Hammond's celebrated dog Sting, of Manchester, England.

SALES.

Bounce—Mr. E. Le Roi Willis sold his bull terrier puppy Bounce (first prize at late bench show puppy class) to Mr. A. Wishardt, of Bank of New Brunswick, St. John, N. B.

Mazeppa—Mr. W. P. Todd, of Portland, Me., has bought of Messrs. Shelenberg and McConnel, New Brighton, Pa., the pointer bitch Mazeppa (Button-Fan).

Gay-Grace Whelp—Mr. N. Elmore, of Granby, Conn., has sold a liver and white pointer dog puppy out of Grace by Gay to Dr. Bidwell, of Winsted, Conn.

Warwick-Belle and Royal Duke-Leah Whelp—Mr. H. D. Bartlett, of Gilroy, Cal., has purchased of Mr. F. A. Diffenderfer, Lancaster, Pa., a black, white and tan setter dog puppy by Warwick (N. A. K. C. S. B. No. 277) out of Belle (N. A. K. C. S. B. 299) whelped May 1, 1880; also a black, white and tan ticked bitch puppy by Royal Duke (Carlowitz-Fern) out of Leah (Boybel-Livy II.), whelped May 6, 1880.

Warwick-Belle Whelp—Mr. H. M. Briggs, Gilroy, Cal., has bought of Mr. H. D. Bartlett a black, white and tan setter dog puppy by Warwick (N. A. K. C. S. B. 277) out of Belle (N. A. K. C. S. B. 299), whelped May 1, 1884.

Nell—Mr. Joseph A. Malone, of Tremont, N. Y., has sold his Irish setter bitch Nell, of imported stock, to Mr. Chester B. Corbin, of Westford, Conn.

Lincoln-Blaze Whelps—The Montview Kennel has sold to Mr. Charles DeHonge two puppies, out of Blaze by Lincoln.

Music—Dr. H. B. Wygant, of Peekskill, N. Y., has sold to Dr. J. W. S. Arnold, of New York city, his cocker spaniel dog Music for $125. Dr. Arnold advertised last week in FOREST AND STREAM for a thoroughbred, well-broken cocker spaniel. By that means he found Music. The dog cannot be bought to-day for $500.

PRESENTATION.

Sun-Countess Nellie Whelp—Mr. John L. Martin, of Milford, Mass., has presented to Dr. H. B. Wygant, of Peekskill, N. Y., a lemon and white pointer bitch puppy, two months old, out of Countess Nellie by Sun.

Grip—Mr. Robert Blackhall presented his field spaniel Grip, winner of second prize at late bench show, to Mr. J. McGill.

Lincoln-Bonny Kate Whelp—The Montview Kennel, Columbia, Tenn., has presented to Mr. Charles DeHonge of this city, a fine setter puppy, out of Bonny Kate (Carlowitz-Daisy Bean) by Lincoln.

Dan-Wynne Whelp—Mr. Wm. Boehm, Philadelphia, has presented Mr. F. Sowers, Tamaqua, Philadelphia, with a handsome setter bitch pup out of Mr. W. H. Shuster's bitch Wynne by Harry Champion's Gildersleeve Don.

NAMES CHANGED.

Jerry D.—Boston, Mass., Feb. 21.—As Mr. Cambell, of Spring Hill, Tenn., claimed the name of Jerry some thirteen months ago I change the name of my red setter dog, whelped July 18, 1880, out of Norah (now Norah O'More) by Rory O'More to Jerry D. J. J. DONOVAN.

DEATHS.

Dan II—Mr. T. Davey, of London, Ont., has lost from congestion of the lungs his liver and white ticked dog puppy, out of Belle by Paris.

Turk—Mr. Addison Child, of Childwold, N. Y., lost by the distemper his Gordon setter Turk, out of Mr. Ellerton L. Dorr's Lady by Don (both imported) on the 12th inst.

Nora O'Neil—Mr. Erastus Corning, Jr., of Albany, N. Y., has lost his cocker spaniel bitch Nora O'Neil; inflammation of the bowels the cause.

Ask any good doctor if Hop Bitters are not the best family medicine on earth. See notice.

Yachting and Canoeing.

THE TWO TON CRUISER.

ALTHOUGH the experienced yachtsman will be able to discover the faults and virtues of the two-ton cruiser illustrated in our recent issues, a few words showing how we were led to her particular form will help many to whom yachts of her type are a novelty. If we go over ground familiar to some they must bear with us, as the object is to give these remarks as wide a popularity as possible.

The problem was virtually to design a safe, comfortable, weatherly, handsome and fast boat about a given amount of accommodation. The latter was to consist of a couple of berths, a small cockpit and stowage for a week's cruise or more. The design was to be, so far as qualities were concerned, a ship on a small scale—not a makeshift, a machine or an extemporized affair—and she was to be handled in all weathers by a single person with a reasonable amount of labor. She was designed as a yacht, not as a boat for hunting, fishing, exploring or for exploration of creeks, nor was she to sail on dew, it being presumed that a person building a yacht would use her as intended, for *sailing*, and would not be so obstinately perverse as to insist upon doing his sailing on flats, bars or meadows, when a few minutes' travel will land him alongside of hundreds and thousands of miles of water fathoms deep. We can see no reason why a yachtsman should not be expected to select his water quite as much as he will choose the roads, and the best at that, when handling the ribbons ashore, without insisting upon racing his team across field and stubble, ditch and gutter.

Seven feet of cabin and about four or five for cockpit, with enough more for ends, furnished us with a length of 17 ft. for the design. A little experimenting with midship sections gave us 6 ft. on the load line as a beam, and here we could get 6 feet 2 inches and have a two-foot floor, eighteen inch berths and sitting room under it. This with more beam the depth would have had to have been decreased, or the displacement would have become too large and the boat too much of a tub. Seven feet for cabin and midships convenient for "sitting height," and the beam adopted, was found to be two feet, measured from load line down to rabbet. With the three chief dimensions settled upon, the boat was gradually sketched in in such a way as to combine fairness of body, easy lines, the most accommodations, the cheapest form of construction and lightliness. No pride was allowed to force itself upon the design without due consideration of its effects. As an illustration we may mention that our first choice was for 16 ft. water line only, but we found it impossible to combine the necessary depth and beam in so short a length with anything like an easy body. A foot more was then taken and found to overcome the objection. Again, we had desired to give the boat a longer counter, but could not accomplish it, owing to the depth, without a sharp hollow or drop to the sections of lines, equivalent to an unfairness in the model as a whole. In consequence a shorter and elliptical stern was substituted. The round up aft to the rabbet line was governed by reasons of fairness and economy, and forward with the desire partly of making both ends match in displacement in the ratio of the lengths of fore and after body, partly of aiding the handiness of the yacht and of making her more weatherly, without too large a longitudinal section, by transferring the gripe out aft into rocker to the keel amidships, thereby bringing the ballast lower down as well. The keel was rounded up, and the post raked for similar purposes, a small effective longitudinal area always being preferable to a large and less effective one, as a reduction in area means a reduction in skin friction, and greater speed in light winds where friction is the main source of resistance. The ends of the lower water lines are found become more obtuse in consequence, but it should be borne in mind that the lower lines are always out of proportion sharp compared to those above. When a sailing yacht attains her maximum speed under canvas, the lower lines add but little to her resistance more than in proportion, its "wave-making" propensity being so much less than that of the much wider body above. We believe that in thus cutting away useless deadwood, for deep-threated floors are little else, the speed is favorably affected, and a keel-boat can be made to work like a cat. The freeboard was made ample, without being more than necessary to lift the boat out well so as to keep her as dry as possible. The sheer is moderate and will show less in relief than in the plans. Her nose has been kept high, not by undue sheer, but by keeping the flush freeboard well aft and giving relief to the eye by a sweep nearly horizontal. The cabin house has been proportioned for appearances, sufficient room below and as much clear deck as we could gain. The cockpit is small and shoal, and the slit of the cabin door is carried up flush with the deck, a single adjustable panel taking the place of doors. If a sea washes fore and aft unexpectedly, the cockpit may fill without drenching the skipper's duds down below. We gave the boat a tiller, as she seemed too small for the more expensive wheel, and a good keel is so easy to steer compared with a wild centreboard that a tiller is all that is required, besides some prefer to "feel" their boats. For rig, the sloop, with pole mast, has been adopted as the least expensive and simplest for so small a ship. The

mast was stepped well forward to reduce the size of the jib and to sail as a cat when boxing about, and a little weather helm is no objection. A storm jib, say 8ft. on the foot and 14ft. on the luff, No. 4 canvas, can be set on its own luff by hooking into an eyebolt or temporary rope strap 4½ ft. out on the bowsprit. The mainsail has two rows of reefs, 5ft. 6in. apart, with which the canvas can be snugged down for a stiff gale. Should the cruiser be caught out of reach of a harbor, in the very worst of it he can extemporize a storm trysail out of his storm jib. The lower sail may be of heavy duck, the topsail of stout drilling. The latter has been made large for light weather, but a simple working jib-header may be all that some would want. The relation of the various areas and centres to one another can be gathered from the table published. The centre of buoyancy with the boat inclined was found to be in the same longitudinal position as when plumb, so that we may conclude a proper distribution of volume "between wind and water" has been obtained, the bare forward and quarter aft balancing fairly, doing away with "rooting" or "squatting" propensities. The co-efficient of displacement, representing the proportion to which the solid circumscribed about the three dimensions of the underwater body has been cut away, is moderate, the skin has been kept at a minimum, the bow is fine and easy, the run clear and the midship section well forward, all within hand at the bilge. If is a fair inference to claim good speed for the design, if built, balanced and rigged for that purpose. We have allowed in the calculations for extra heavy scantling and outfit and find the centre of gravity sin. above the load line with the lower deck, the hold, skipper sitting on the cockpit coaming. With a lighter frame, etc., from two to four hundred pounds could be saved for additional ballast, and nearly the whole amount put on the keel. In that case a foot and a half more lead would be required, and the spar and rigging would not be out of proportion, while a regular topmast and whacking balloomers would make the two-tonner him. The meta centre, 11ft. above the centre of gravity as calculated, shows the boat to be sufficiently stiff at initial angles, and that under the most pressing to obviate crankiness. As the yacht heels, the centre of buoyancy shifts rapidly to leeward and the stiffness is increased by an increased meta-centric height as it is wanted. With hatches down there is no doubt but that the little boat will right when knocked over beam ends, but we may soon publish her curve of stability, to exhibit this in a more indisputable way, and to illustrate the great effect a low position of ballast has upon stability, enabling us to build of much more moderate form than customary in a centre-board yacht, and yet retain her advantages in the way of comfort, owing to moderate heel. The emersed, immersed and diagonal lines are of a very satisfactory nature as shown in the cut, all of them corresponding closely in their features and proving the design to be a unity in concerning throughout, and a pattern of how, middle body and stern, or underwater and above water bodies having no relation to one another. The frames, every other one only being represented, likewise show "the same boat" all the way through, and are the cheapest to get out.

In the cut we have made a comparison between the displacement and a curve of wave areas showing a close coincidence of the two. Although the value of "wave areas" has not been definitely demonstrated by actual experiment, a resolution of the wave form of Scott Russell's clothes a defined approximation to such a curve, and we regard it at least as a valuable standard of comparison. That a proper distribution of a boat's bulk has much to do with economic passage through the water seems rational enough. Having in this instance at either end would retard speed, and in boats varying from the general run the wave curve is useful in pointing out divergencies which should receive the consideration of the designer. A series of experiments are to be undertaken in England for the purpose of obtaining data on this subject. It is said that a curve of versed sines represents nature's law of economically performing work. Commencing at 0 the work accomplished is gradually added to in proportion to the time expended until a maximum is reached, when a gradual decrease sets in, owing to the same cause that the object moved has been allowed to come to a state of rest in its new position. Thus the water is parted and moved aside, and above the level, slowly at first, receiving a gradual acceleration until half the bow has passed, when the inertia of the water to be moved is overcome, the passage again gradually until the midships or largest section has passed. At this point the water has come to a rest, and is prepared to glide in again under the stern. It has been driven off no further than necessary, and no force has been expended to give it more velocity than not required for the passage of the boat. From amidships the displaced water again flows into the wake, slowly at first, then reaching its maximum speed and once more subsiding into a state of rest when the boat has passed. In order to apportion the displacement according to such a curve a base line representing the length on load-line is first drawn, the station of the greatest section marked off and a vertical drawn at that point. With a radius selected according to the type of the boat, draw a circle. Divide the forward part of the line into any number of equal parts, say six. Divide the half circumference of the circle into the same number of parts. Then draw through these points lines parallel to the base. Their intersection with the verticals of corresponding divisions gives a number of points through which a fair line is drawn for the curve. The areas, lengths or sections used in the plans are then drawn up from the base at their proper positions and measured by a scale. The resulting figures indicate the areas to be apportioned to those sections. The scale is obtained by regarding the diameter of the circle as representing that area of the midship section found from its outline in the body plan. The diameter to be used can be ascertained from the following figures determined by Mr. Colin Archer, of Laurvig, Norway, from the examination of a number of good boats of known qualities, as being the height of the after body and ft. the radius of the generating circle:

TYPE.	L. R.
1.—Light and)	(13.48
2.—Shallow,)	(12.58
3.—Light)	(12.14
4.—to)	(11.45
5.—Medium)	(10.56
6.—Powerful)	(10.1
7.—Sea-going)	(9.51

For the after body we proceed in like manner, but give to the sections a more liberal curvature, by making the areas correspond to a wave of the second order, or oscillating wave, the bow wave being one of translation, having to carry off water and deposit it in another place, while the filling in of the wake is due only to the difference in height of the columns of water at the sides and bottom of the boat. The curve for the after body is obtained by adding beyond the intersection of horizontals and verticals: distances equal to the length of the horizontals inclosed between the half circumference of the circle and the diameter. We then locate the centres of the sections and measure areas by the scale already established.

In practice, as we sketch in the areas an occasional test can be made best by a plan suggested by Mr. Ripley. He uses shot, a quantity of which, after covering the area to be measured, is weighed and the drawing heard on a close-headed scale, the number of squares covered giving the measure of the area. With a little experience it will be found necessary only to regulate a few areas, as the rest can be run in by eye with all the accuracy required. Of course, the water areas considered refer only to the under-water body. In a well-shaped boat they should preserve their relation when the boat is inclined.

In the sail plan we have illustrated the method of "balancing" or "hanging" a boat. This plan works well in practice, and is universally followed by designers. The sails having been sketched in according to preference are divided into triangles and "referred" to any plumb line, such as XY. The centre of each triangle is found by drawing a line from one angle to the middle of the opposite side and laying off two-thirds its length from the angle. Lines from the bottom of each area perpendicular from one angle to the opposite side and multiplying half its length by the side or base. Then multiply each area by the distance of its centre from XY, and these "moments" and divide by the sum of the areas. Thus, for example, if the distance of the centre of all the sail is from XY. Draw a vertical at that distance. Proceeding in a similar manner, but referring to the load line, we obtain the height of the centre above the latter.

This height on the vertical gives the point marked C.E. in the cut, known as the centre of effort: Fsails. It should be situated approximately over a similar centre of the immersed hull considered projected on the plane of the paper, and known as the centre of lateral resistance, the C. L. R. of the plan. The more bulky the bodies, much flare and little drag, the centre of sails should be kept forward of the C. L. R. For long, sharp, flat sided vessels about over it, and for sharp-bowed, easy-lined, deep-legged craft a trifle abaft.

The scantling of the cruiser was made extra heavy for strength, rough usage, and so as to keep the calculated centre of gravity at the highest likely. We allowed for oak keel, stem, post, garboards and sheer strake, yellow pine deadwood, knees and beams, cedar plank, hackmatack frames, white pine deck, spruce spars. The keel is 7in. on top, 4in. at bottom of iron amidships, tapered at ends and moulded as shown in the sheer plan. Stem and post 3in. sided; frames, double, sawed, each 1½ x 2¼ at keel; beams, 1¼ x 1½; main beams to have hanging and lodge knees; deck plank, ⅞in. side plank, ⅝in.; ceiling, 6-8in.; bilge strakes, 1in.; clamps, 1¼in.; hooks of 1in. oak, to be varnished; waist, ¾in.; transoms and lockers ¾ and ⅞in.; decks to be kept bright or paid with marine glue. Butts of oak or locust, 4 x 6 at deck. From 1,000 to 1,200 lbs. iron cast in a mould to carry the taper of the keel down and fore and aft. Cored holes for say 1in. bolts, composition is best but more expensive. These bolts are set up on top with nut and washer. Part of the inside ballast may consist of a long casting to go over the floors a couple of inches thick and six inches wide. Fill underneath with hard wood chocks between the floors and run the keel bolts up through all. Deadwood bolted with ⅞ or 5-8in. galvanized iron, both ends headed, as shown in the plans. Main throat, peak, sheet, jib halliards and sheets of ⅞in. manila. Topsail gear of ¾in. manilla. Shrouds 5-16in. wire, and bobstay ⅝in. round iron. Anchors 65 and 40 lbs. with 25 fms. ⅝in. best chain and a coil of whale line. Frames spaced 12 in. between centres and beams about 15 in.

THE SHARPIE AND HER POINTS.

Editor Forest and Stream:

The communication in No. "H. B. R." in your edition of Feb. 10, attracted my attention, especially the sentence about sharpies not going about when working to windward. I have owned sharpies for the last fifteen years, and have one at present, 30 feet long, named Hopeful. You will find her in your published list of winning boats for 1880, and I claim her, and all sharpies properly rigged, to be the surest and quickest boat in coming about in the world, and that without the assistance of an oar. We use a rudder on all our boats owned below the bridge, and they work as sensitive as any cat boat. If by accident in rounding up in a sea she loses her headway and should take a sea on her weather bow, when most boats would pay off and fill away on the same tack again, all that is necessary on board the sharpie is for the helmsman to take hold of the foot of the mainsail, pull it to windward, and she will come to on the other tack, close by on the other tack, and she is off in a second. I can work my boat out of a narrow slip or channel, not over 75 feet wide, by giving her a rap full, and then hard down with the tiller, pull the mainsail over to windward, haul in, with the rudder hard down, will forge her ahead almost her length every tack. I will turn a 36-ft. sharpie around in 75 ft. five or six times without the use of an oar or rudder, merely by trimming the foresail, then jibing the mainsail, trimming the mainsail and then jibing the foresail, which makes a complete circle, done by one man at the stern with the fore and mainsheet. Before the wind they certainly take advantage of every foot of sail when winged out, or, as we call it, "split open," mainsail on one side, foresail on the other. They will carry sail in this way, and go like the wind all day blue, being so evenly balanced. If it comes to the worst, let go the sheet and the two sails will swing around in front of the mast, like two flags, which makes her very easy. But this is not often necessary, unless trying to go slow over a long course, when under a low, hard down, and back come the sails ready to be trimmed in. Care should be taken always, if the wind is a little on the quarter, to have the mainsail on the leeward side and the foresail on the windward; if the other way, the mainsail will come over with a jibe to measure. A great many scrub races are lost here by amateurs in that one particular. The oystermen at Fair Haven use an oar, as they have to go through two bridges, and some of them through four. The tide runs very strong, and, with the draw open, just enough to let the mast through, and a cross tide, it is necessary very often to scull. That is another point in her favor: She being so long and narrow, it is very easy to scull her when the wind dies out. We always carry an oar for that purpose. I am not an enthusiast on sharpies, nor do I propose to go to England in one or pay a bet with a cutter. But for smooth water, I mean by that Long Island Sound, in a good sailing breeze, and for short work and shoal water they are very convenient, and it is my delight to get her in a tight place where a jib and mainsail boat of 30 ft. long cannot work, and then bring out some of her fine points. RUDMAN.

MEASUREMENT IN A NUTSHELL.

WE are in receipt of numerous communications concerning measurement. Most of these we have concluded not to print, as they go over oil ground and present nothing new. The gist of nearly all consists in more or less weak efforts in favor of length or some measure of stability—called power by many—such as area of sails.

Measurement is no complicated question of abstruse science, if you only start with a clear head unprejudiced by existing customs. It is very easy to show how to construct a length basis is, and how little length by itself really has to do with the matter:

	Length.	Beam.	Depth.	Relative Size.
A	90	20	8	128,000
B	72	15	7.2	93,312
A1	80	13	6	81,000

We will suppose in this table that two yachts, A and B, have been built from the same lines, one 8ft. long the other 72. Eliminating slants, A will outsail B, and should allow the latter time. No one will dispute this. But why? Because she is *longer* or because she is *larger?*

A plain answer to this question can be obtained by bringing a third boat, A1, to the start. She is as long as A, but owing to less beam and depth is smaller. If length were a logical basis of comparison, A1 should allow B just as much time as A. Certainly no one will maintain that A1 has a smaller length than B—has the same advantage over her that A, a larger boat than either of the remaining two has, yet length measurement implies that she has, or there would be no object in changing her with the same allowance.

We will now, however, in order to show that length by itself is by size will work in harmony, because between the two boats a difference in length happens to express the true relation of their sizes. As between B and A1 length no longer represents that relation, and in saddling the smaller of the two with the same allowance that B has to the larger vessel, as the preceding paragraph indicates. If length is a logical measure, A1 should be able to outsail B the same distance A can, which no one will be likely to assert. There is, then, something else which we must consider besides length.

The difference in the sailing of A and A1, compared with B, must lie in other directions. The table shows the boats to differ in beam and depth, the remaining factors of size. For this difference we must also have consideration in the comparative allowances tables, and are to be logical and work with like fairness to yachts of any shape.

We submit that a little consideration of the above ought to be enough to abolish length as a basis and to convince persons of concise reasoning capacity that size should be the standard for rational competitive sailing. This is all the "theory" there is to the question.

When it comes to the practical application of the rule, any modifications, not multiplying the *raison d'etre*, can be engrafted for the purposes of simplicity. Thus, a limited arrangement of models to which preference is to be given should it be necessary.

In a few words, give to a number of designers ten tons, a thousand cubic feet, bulls of putty, or equal bulks gauged by any standard of volume, and let them build what they are pleased to and as they choose. All have an equal start. No resulting shape has been taxed; every one proportions as he pleases without let or hindrance. But say length and you at once put a value upon the result of their labor, that is upon model. Tax stability or sail and you do the same. You make a boat of fair stability pay to a cranky one. The designer should be at liberty to derive stability as he wishes from choice of form, but he should not in equity be allowed to appropriate more size than his neighbor, unless he is willing to pay for the use of it.

YACHTING NEWS.

POSSIBLE MATCH FOR THE AMERICA CUP.

Editor Forest and Stream:

Cuthbert, of Trenton, N.J., has stretched the keel for a new centre-board sloop of 56 ft. over all, 18½ ft. beam and 6 ft. deep. Her model is said to be a fine one, and it is whispered that she is to show fighting colors for the America Cup this summer. She will have to be a mighty good one to dispose of Mischief and Gracie, and, if she can, I suppose she can be sent south of the St. Lawrence will begrudge us the international trophy. BELLEVILLE.

WANTED.—Parties having a 35-ft. keel yacht for sale are referred to our advertising columns.

FLEETWING.—Mr. R. S. Elliott has purchased this schooner. She will remain in the N. Y. Y. C.

DREADNAUGHT.—Mr. Nickerson is fitting out his big schooner for a cruise to the South.

FOAM.—This schooner has been sold by Mr. T. D. Boardman to Mr. F. Cunningham, late of the Eastern Y. C.

WORCHESTER YACHT CLUB.—Fixtures for the season: June 17, off Nahant; July 16, off club house; Sept. 3, off club house.

CUTTERS.—The Cosette of Boston has been purchased by Mr. Davis. She is to shed her rig and come out as a cutter, thus adding yet another to the rapidly growing tribe.

COMPLIMENTARY.—A contemporary says that our indorsement of the cod boiler in "Honeyden's Naval Encyclopedia" is worth thousands of dollars! We blush to the very roots.

TORONTO CANOE CLUB.—A room for the club has been engaged, and a library will be attached where models, drawings, etc., can be deposited. The membership is increasing.

"LE YACHT."—We have received the annual hand-book published by our French contemporary. It contains much information, including a copious vocabulary of French-English nautical terms.

BUFFALO YACHT CLUB.—*Editor Forest and Stream:* We have recently dropped all non-paying members, and will not elect officers until spring, so that the new element brought into the club will have representation. PENSANT.

SALEM BAY YACHT CLUB.—*Editor Forest and Stream:* Mr. D. H. Rice has been elected Commodore of the Salem Bay Yacht Club, and Mr. G. W. Benson Vice-Commodore, in place of A. L. Huntington, resigned. Dates for regattas not yet fixed. M.

NAUTILUS YACHT CLUB.—The election resulted as follows: Commodore, C. Dodge; Vice-Commodore, C. A. Reynolds; Fleet Captain, Smyrnes Rich; Secretary and Measurer, Frederick Rice; Regatta Committee, Capts. Rogers, Raymond, Dudley, Weymond and Newcomb.

PADDLE.—Mr. Rushton has sent us a fine sample of his lightweight double-bladed paddle. It is made of the clearest of spruce, jointed in the centre with nickel-plated sleeves, having slide and button so that the two blades may be kept in the same plane or "feathered" as desired.

KELPIE.—The sloop Kelpie, built by Herreshoff of Bristol, and for a long time owned in Boston, has been purchased by Mr. J. N. Winslow and will fly the burgee of the N. Y. Y. C. She is 31 ft. over all, 25 ft. 10 in. water line; 11 ft. 3 in. extreme beam; 3 ft. 4 in. deep, and draws 10 ft. with board.

CRUISE OF THE AMERICA.—General Butler is bound on an extended cruise in his schooner. She will visit the leading ports of the West Indies, and is to be gone five or six weeks. The party includes the General, his two sons, Thomas Pierce, Henry Hastings, Sydney and Drake DeKay and others. The crew numbers fifteen hands.

SALEM BAY CHALLENGE CUP.—*Editor Forest and Stream:* Some curiosity is felt among our yachtsmen to know what manner of the cup will be offered by the Salem Yacht Club for somnarship, etc. Some thought that the Vice-Commodore was to have it, but not whether it was awarded to him or to some other member of the club does not seem to be known. A decision is in order. A. A.

INTREPID.—This schooner was at Nice the earlier part of February. The French papers hope she will race at the Algiers International match. A gentleman recently home from a long cruise in the Intrepid, reports her as a very fine seaboat and fast as well. The fleet of English yachts in the Mediterranean is the largest ever seen in those waters, and many races from port to port, and international regattas are to be arranged at Marseilles and other ports are announced.

BEVERLY YACHT CLUB.—Officers for the year: Commodore, W; Lloyd Jeffries, Bluebell; Vice-Commodore, S. W. Burgess, new cutter, Secretary and Treasurer, R. D. Sears, Psyche; Measurer, F. E. Cabot; Regatta Committee, G. P. Gardner, R. D. Sears, F. C. Lowell, T. H. Coolidge, C. Minot, Jr. A new rule of measurement has been adopted by the club, two-thirds the length on water line plus extreme beam. The club now owns quite a number of cutters, and is to be congratulated upon breaking loose from length measurement. Other Eastern clubs will no doubt follow suit as soon as there is a chance that out of the shaking up the question will receive something like an equitable rule will result. Mr. Sears' Psyche has been matched for $50 against Mr. H. K. Norman's Baby of Newport, the race to be sailed in August.

WINNERS FOR 1880.—The *Bellefonte Intelligencer* (Pa.) says: "FOREST AND STREAM publishes in its issue of January 27 the list of winning yachts for 1880. This list is very valuable to yachtsmen, as it is completed with great care, but some errors have crept in with regard to the R. B. V. C. fleet. The Emma is owned by Mr. Geo. Lord, instead of Capt. Cuthbert; the Gracie started in three races, not one, and was disqualified in one for touching a buoy; and the Katie Gray did not start in three races, winning two, but in two regattas, winning first prize in each, and in another match she also won. FOREST AND STREAM finds it necessary to reduce the size of its type in order to accommodate its army of contributors. It is by far the best weekly sporting journal in America.

DETAILS OF A SHARPIE.—*Editor Forest and Stream:* The following details of a fast sharpie may be of interest to you: Length over all, 30 ft.; beam, 11 ft. 8 in. on deck; depth, 2 ft. 6 in. at midship section; depth at stern; depth at bow, 3 ft. 2 in.; amidships, 27 in.; draft, 6½ in.; centreboard, 10 ft. 6 in. long, 5 ft. wide at after end; cockpit, 22 ft. long, with yellow pine grating on floor. All bulkheads of black walnut 1 inch thick. Working sails, dressed with 10 ft. club, and the working foresail with 5 ft. club for a main sail. Foremast, 38 ft. long; mainmast, 35½ ft. long, 6 in. at partners, and 1½ in. at head, with sheaves for halliards. Mast steps are brass collars, with centre-line for working gear under the oilskin that protects the cockpit floor. Skylight 4 ft. 7 in. wide, 9 ft. long, 3 ft. high. Lockers, gear, oars, etc., complete. W.

CANOEING IN THE CHEAT RIVER.—A correspondent sends the following: "... Started from X. Saturday morning down the river Cheat, and we did come down it; but of all the infernal rivers I ever saw the Cheat will take first prize. From Sunday noon until Wednesday afternoon we did not see a living human being or a sign of human habitation, and the river is one succession of falls, rapids and pools, but the falls and rapids predominated. We would go down some rapids like a bullet from a gun, and at the bottom the waves would be so large that when we would strike them our canoes would swamp first one end and then the other and the heads and tails of the canoes, in spite of aprons being fastened down. One day we worked eighteen hours and only made two miles. A week or two after my return home I was taken sick, and for eight weeks was flat on my back with a fever. I can say that the trip for my health to my home trip was not a success, but for all the hard work and sickness I am glad I made the trip....." S.

PORT JEFFERSON.—It is to be hoped that the new management of the Long Island it. will give us better accommodation to Port Jefferson. The inhabitants in that neighborhood should insist on obtaining more consideration than empty promises. As the shipbuilding trade has unfortunately declined of late, much more attention is being given to yacht work, and the large appropriations now on hand will give a fairway into a harbor of ample depth for the largest keel schooners. We believe Port Jefferson is at no distant day to become the Cowes and Medina of America, but much depends upon the interest of the people in their own welfare. The S. S. Stranger is cutting down spars 5 ft., and gaffs about 5 ft., for sound work this year. Mr. Wicks' yacht Nellie is also being cut under decks. The schooner Sylph is receiving her joinerwork, which was not supplied last year. The Active is to have a new mainsail and spinaker. Allen comes out with a suit of compromised head rig; her skipper having become dissatisfied with the cut of his sails. Owen's sails are not distributed throughout. Wilsons have their loft busy with new orders, and this enterprising firm are supplying the greater part of the fleet laid up.

THE TWO TONNER.—*Editor Forest and Stream:* I like the two-tonner very much, and I think she will meet the wants of a large class of yachtsmen. But why not have a "Bermuda" rig, and if she is tried to say what I could in the same cause of cruising and real work instead of machine sailing. I think that if such boats become a success and "take," they will do more to build up yachting than a dozen "Bay of Quinte" and "Shark" pot boats. A good word for the balancing for small boats. I have been preaching its merits for some time. W. P. S.

Editor Forest and Stream:

Hurrah for the little two-tonner! You're struck the nail on the head! All deep yachting friends should take to FOREST AND STREAM, and it will open their eyes as to small cruisers. C.

Editor Forest and Stream:

Your design is exceptionally good, and many so-called experts and professionals could do well to copy it. Such a coursing boat as being built for deep water cruisers here is amusing to one who has made a study of yachting for fourteen years. HONEST BOAT.

MEASUREMENT.—Some of the junior clubs of England, with a view to furthering the interests of small yachts, have held a conference to devise some fair and logical rule of measurement which should not handicap form. After considerable discussion size was agreed upon, to be determined by length and the greatest girth, as follows: The yacht is being brought to her ordinary racing trim, to the satisfaction of the measurers, the length shall be taken in feet and tenths of a foot in a straight line from the fore end to the after end of the load water-line. If any part of the vessel (excluding the rudder) project beyond the load water-line, the length over such projection shall be added to the length. The girth shall be taken in feet and tenths of a foot, where it is greatest, including any projection upon the vessel's side, but not coamings, bulwarks or any other projection not forming part of the hull of the vessel. The vessel shall not to exceed three-quarters of an inch per each foot of length upon the load water-line, then the girth shall, for the purposes of this measurement, be corrected by deducting from it twice the difference between the actual girth and the girth as measured, calculated as in the rule above mentioned; and if the actual freeboard falls short of the freeboard so assumed, then twice such difference shall be added to the girth. The girth so corrected, if necessary, shall be divided by four, the quotient squared, fractions of .5-100th of a ton or more being reckoned as a tenth of a ton, and smaller fractions being disregarded. The result shall be deemed the yacht's true racing measurement, so long as she does not undergo any such considerable alteration of structure or of ballasting as shall, in the judgment of the measurers, require her to be remeasured. The tonnage of a yacht shall be expressed in tons and tenths of a ton, and shall be determined by dividing the number of cubic feet by seventy-two, fractions of .5-100th of a ton or more being reckoned as a tenth of a ton, and smaller fractions being disregarded. The conference met again on the 10th inst.

Rifle and Trap Shooting.

RANGE AND GALLERY.

AMERICA DECLINES.—General Wingate has sent the following response to the invitation of Earl Stanhope for the visit of an American team to Wimbledon during the coming summer:

"My Lord.—Your letter of the 26th November, to Hon. H. A. Gildersleeve, the former President of the National Rifle Association of America, was received and referred by him to his successor, Major-General W. S. Hancock, U. S. A.

"As General Hancock will be prevented from assuming the duties of his office until March he has requested me, as Vice-President, to reply to it.

"In doing so I would state that our association and, indeed, all American riflemen, are desirous that a long range match may be had during the year between American and British representatives. At the same time, having instituted the match for the 'Palma,' and provided that prize (which has obtained an additional value by the various contests which have taken place for it), they feel that the proposed match should be for that trophy and be shot in this country.

"This feeling is the stronger as, in deference to what was understood to be the desire of your association, as expressed by Sir Henry Halford, the terms of the competition for the 'Palma' were changed in April, 1880, so as to exclude any but a British team organized by your association from representing any part of the United Kingdom —a change which was made in the belief that the attendance of such a team, if not in 1880, then certainly in 1881, would be thereby secured, and the match kept alive.

"So strong is the feeling that, at the recent annual meeting of our association, a resolution declaring it inexpedient to send a team to Wimbledon was adopted by a unanimous vote of those present. If, however, a British team were to visit Creedmoor in September there would, I think, be but little difficulty in arranging for a return visit to Wimbledon in 1882.

"I have stated the situation here very frankly, and trust that your Lordship will inform me as soon as convenient whether, in view of the national character and importance of these contests, it is not possible to arrange for a British long range team coming to America this fall.

"It might further suggest that, in addition to the match for the 'Palma,' our association has in September a match for the 'Hilton Shield—open to Regulars or Volunteers (teams of twelve) from any State or country; any military rifle; 200, 500 and 600 yards, seven shots at each—which is now our most important match; and we would be much more pleased to welcome a team of British Regulars or Volunteers from any part of Great Britain to compete against our army and State National Guards for this trophy than to receive a team of small-bore men in a competition for the 'Palma.'

"I have the honor to be, very respectfully yours,

"GEO. W. WINGATE.

"To the Right Hon. Earl Stanhope, Pres. of the Council of N. R. A."

BOSTON, Mass., Feb. 26.—The meeting at Walnut Hill to-day was not so large as usual, but the shooting was of the best. Mr. E. F. Richardson made 50, the full score, which had been made previously only by Messrs. W. H. Jackson, O. M. Jewell, W. M. Farrow, J. S. Sumner and L. L. Hubbard. The wind gave no unnecessary trouble, coming from the northwest steady and reliable. At the beginning of the match it was blowing between 11 and 12 o'clock, settled back to 8 o'clock, remaining quite steady during the balance of the shooting, enabling the marksmen to roll up excellent records. The snow, as usual with its brightness, which has given so much trouble to the riflemen, was particularly unpleasant, although the score appended shows what good work was done. A. C. Adams was so dangerously close to Mr. Richardson that the former gentleman was shaky on his last shot; and Mr. Adams was left by only one point, 49, while Lee scored 47 and Frye 46, Dodge and Boyden securing 45 each —capital results all of them. Appended are only the best scores:

Record Match (Creedmoor).

Richardson	5 5 5 5 5 5 5 5 5—50	Williams (mil)	5 4 5 3 5 4 4 4 4 5—43
Adams	4 5 5 5 5 5 5 5 5—49	Dunlap	4 3 4 5 4 4 4 5 5—42
Lee	4 5 5 5 5 4 4 4 5—47	Frost	4 4 5 4 4 4 4 4 4—41
Frye	4 4 5 4 5 5 5 4 5—46	White	4 4 4 4 4 4 4 4 4—40
Dodge	5 4 4 4 5 4 5 5 5—45	Borel	4 4 4 4 4 4 4 4 3—39
Borden	4 5 4 4 5 4 5 5 5—45		

Record Match (Massachusetts Target).

Richardson	10 11 12 12 11 11 12—79	Claxton	9 9 12 11 9 11 9—70
Gould	11 11 11 11 12 11 10—77	Dunlap	7 9 12 6 5 9 7—54

Badge Match (No. 2).

Gray	4 5 5 5 5 5 4 4 4—46	Joslyn	5 4 4 4 5 5 4 4 5—44
Fellows	4 4 4 5 5 5 4 4 5—45		

THE BOSTON GALLERIES.—The fourth week in the February Allcomers' match at the Magnolia gallery has shown brilliant results. A new match will be opened March 1, for which $25 in cash will be offered. Conditions, five scores to win. In the new pistol match, on the same date, $10 in cash will be offered, three scores to win. E. C. Arthur is still at the head of all comers in the FOREST AND STREAM match, his total being 215. Below is a summary of the best work during the week in all the matches:

All Comers'.

Wyman	48 50 48 50 49—245	Lawrence	43 46 48 47 46—232
Harris	48 49 49 49 50—245	Arthur	46 46 46 46 50—230
Fordyce	48 48 49 49 48—242	Max	44 48 45 45 44—226
J Merrill	48 48 48 48 48—241	Thomas	46 46 46 46 46—226
Ames	49 47 48 48 48—240	W M Merrill	43 35 45 46 45—224
Fellows	46 46 48 48 48—236	Law	45 44 44 46 44—222
Jones	47 47 47 48 47—236	West	43 44 44 43 44—218
Fogg	47 49 45 46 47—234	King	42 40 43 41 42—208

Pistol Ring Targets.

Ames	92 94 92—278	Farnham	88 91 81—260
Wyman	97 90 90—277	Fordyce	86 87 88—251
Harris	88 88 80—263	Gross	72 56 70—198

FOREST AND STREAM Match.

Arthur	49 49 48 49 48—243	Farnham	44 47 45 40 48—223
Harris	47 48 48 48 48—240	Gilman	47 45 47 47 46—232
Cummings	46 47 47 48 47—235	Wright	48 46 46 45 47—232

In the Every body's match at the Mammoth Rifle Gallery Mr. N. W. Arnold succeeded in making ten consecutive bullseyes. Following are the best scores:

Richardson	38 39 39 38—193	Williams	37 37 37 37 34—185
Merrill	38 39 39 38 38—192	Ames	36 36 37 37 37—183
Arnold	37 37 37 38 39—188	Warren	36 36 36 36 36—180

In the Silverware match there has been considerable interest taken by the three leading men, each of them having increased his score one or more points:

Brown	36 37 37 37 37—184	Norcross	36 36 36 36 36—180
Warren	36 36 36 38 36—183		

In the pistol match F. J. Rabbeth still holds first place. The score follows:

Rabbeth	36 37 37—110	Warren	34 34 35—103

In the FOREST AND STREAM match Mr. D. N. Sherburn heads the list with 238, or 183, W. H. Harrington coming next with 236, or 183, or 113; J. J. Ross, S. Fogg and N. W. Arnold with 37 each, and O. T. Hart, H. H. Daily, C. R. Bartlett, G. D. Edson and A. C. Goodspeed with 36 each.

March 1 will begin new matches. The first for $25 will be known as the Expert match, is open to all, same conditions as the other matches. The second, the amateur badge match, is for a silver badge and cash prizes; prize winners in any gallery barred. The FOREST AND STREAM match for the meerschaum pipe will continue, as will the pistol match for three cash prizes.

MEDFORD, Mass., Feb. 26.—The Bellevue range was the scene of some good 200 yards shooting on Washington's birthday, out of 86 entries made, and up to date over 500 entries have been made in the Silverware matches. The live organization at Bellevue has never presented such an attractive programme and Mr. Teel, the President, is to be congratulated upon the success of his management. Below is the standing of the leading contestants to date, with their handicap added:

Charles	49 49 47 49 49—243	Jacobs	45 45 44 42 44—232
Hollis	49 49 49 48 48—243	Russell	45 45 46 45 45—226
Teel	46 47 47 46 45—231	Whitney	46 43 43 45 44—221
Gould	46 46 48 46 46—238	Archer	46 44 45 46 44—231
Webb	45 45 45 46 46—237	Whitler	44 44 44 44 44—220
Withington	45 46 46 46 45—237	Clafin	41 47 41 42 38—209
Ames	46 45 45 44 46—237	Green	42 43 44 44 43—227
Richardson	46 48 47 45 46—235	Cushing	44 44 42 44 44—226

CONLIN'S SHOOTING GALLERY, 1,222 Broadway, New York.—The sixth week of the pistol shooting tournament for the championship ended Saturday, Feb. 26. According to the conditions the match was to be held for ten weeks, the championship of each style of pistol shooting to be competed for during a specified week and the winner of the most championships during the tournament to be declared the champion. Of the six matches already contested Dr. E. T. T. Marsh has won four, leading all competitors. The four contests yet to be shot, however, will be the decisive ones, and the mettle of the leading competitors will no doubt be thoroughly tried. The last contest was for the championship of small object shooting at seven paces. The mark shot at was a medium-sized tack, stuck head toward the shooter. The style was the least, a novel match for such for tack driving, but a large number of them were driven, head and all, hastily too, into an inch and a half of pine board. The contest throughout the week was very spirited, and the scores speak sufficiently for the shooting. Dr. E. T. T. Marsh won his fourth bar, hitting thirteen tacks out of twenty shots. Col. J. J. Dunn scored eleven tacks, winning the Expert's gold badge, followed by D. A. Davis, who scored nine tacks. The contest for the week ending Saturday, March 5, will be at the Wimbledon target, ten shots at ten paces.

SCHUETZEN SCORES.—A champion match was shot at the U. S. Park' Union Hill, N. J., on Washington's birthday, Feb. 22, under the following conditions: Ring target, 22 centres, 200 yards distance, offhand, 100 shots, entrance $10 each, open to all comers; the first best receiving 40 per cent. of the entrance money, second best, 30 per cent. third best, 20 per cent., and fourth best 10 per cent. The following scores was the result of the match:

Farrow	22 18 21 24 22 21 20 21 22 19—210		
	23 23 24 18 18 23 22 24 24 21—220

	24 16 withdrew		

Mr. Brown shot with regular Creedmoor 10-lb. gun, 3-lb. pull. By the closing of the match it was agreed to that a match under the same conditions will be shot at the Newark Schuetzen Park, Newark, N. J., on Good Friday next.

ALBANY, N. Y.—At the recent annual meeting of the Third Division Rifle Association General J. Hampden Wood, President, delivered an address and the reports of the Secretary and Treasurer were received, showing a satisfactory condition of affairs. The eleven directors for the ensuing year were then elected and the following named gentlemen were chosen: General J Hampden Wood, Colonel M. J. Severance, Colonel Amasa J. Parker, Jr., Captain William E. Fitch, Lieutenant William D. Taylor, Lieutenant Benjamin B. Speiman, Jr., Sergeant Howard Batcheider, Corporal W. V. Denison, Joseph N. McDonald, Charles H. Gaus and William T. Miles.

EXPRESS BULLETS WANTED—Troy, N. Y., Feb. 21.—Why, by bringing up the subject in your columns, could not the Winchester Arms Co. be induced to make an express bullet of about 230 grains for their .45-.60? The Sharps make a .45 express and recommend it above the .50 in some respects. I have a Winchester .45-.60 and find it satisfactory and I think it the gun for Eastern shooting. I find by filling the shell through a 30in. tube I can get in 70 grains powder, by weight, without crowding. Now, by driving out the bullet to 230 grains I have about the same proportion as in the .50-.85. If the Winchester people would make a bullet like this and a rear sight such as "Tirador" speaks of, I think both would have large sales. I found that an express bullet of 230 grains, with 70 grains powder, flattened the trajectory considerably and gave very good results. If any one else has made any experiments with a .45-.60 Winchester let us hear from him. QUIER.

THE TRAP.

RIDGEWOOD, Feb. 22.—The Saddle River Gun Club:

G V Hopper	1 1 1 1 1—5	R Van Riper	1 0 1 0 1—3
H Van Emburgh	0 0 1 0 1—2	J Van Emburgh	0 1 1 0 0—3
W H Jersey	1 0 1 0 0—3	F Blackledge	0 1 0 1 0—3
J J Bush	0 0 0 1 1—2	John G Berdan	1 0 1 0 0—3
John Eckerson	1 1 0 0 0—3		

This is the first time the club has shot at pigeons. G. V. H.

THE LYNN TOURNAMENT.

THE Lynn Central Shooting Club held a tournament on their grounds, Revere Beach, Tuesday, February 22. The attendance was large, many clubs from other places being represented, and some excellent records were made. Previous to the opening of the tournament John C. Haskell, a member of the Lynn Central Club, attempted to break 500 balls thrown from two Bogardus traps, in 29 minutes. Mr. Haskell used two 10-gauge breech-loading shot guns, with 2¾ drams of Bridesburg powder and 1¼ ounce shot. Major L. G. White, of Worcester, was selected as referee and Eugene Barry, of Lynn, acted as scorer. E. W. Webster pulled the traps and H. Mortimer, of Boston, attended to the cooling of the guns. The record was broken and 23 birds were killed in 24 min. 15 sec. Mr. Haskell was warmly congratulated on his success.

The first shoot of the day then commenced with a sweepstake of 5 balls each, 27 entries. The second shoot was a grand sweepstake of 10 balls, 22 entries. The third shoot was a two-man team shoot with ten entries, $5 entrance. The fourth shoot and last one was a sweepstake with 24 entries. All was class shooting and divided into three prizes, 50, 30 and 20 per cent. Card's rotary trap was used in all the matches. It was a fine day for shooting and every one seemed to enjoy it finely. The Central furnished chowder, coffee and other refreshments to all their visitors. The scores were as follows:

First Sweepstake.

F A Johnson	1 1 1 1 1—5	W S Brackett	0 1 0 1 1—3
W W George	1 1 1 1 0—4	H Mortimer	1 1 1 1 1—5
L G White	1 1 0 1 0—3	H W Eager	1 1 1 1 1—5
Ira Randall	0 1 0 1 1—3	M E Tucker	1 1 0 1 0—3
N G Rowell	1 1 1 0 1—4	A P Pond	1 1 0 1 1—4
F L Paine	1 1 1 1 1—5	F H Landon	1 1 1 1 1—5
D F Howe	0 1 1 0 1—3	W Mitchell	0 1 1 0 1—3
E T Smith	1 1 1 1 0—4	A Houghton	1 1 1 1 1—5
J G Howe	1 1 1 0 1—4	H Merrish	1 1 1 1 1—5
T J Beaudry	1 1 1 1 0—4	W S Perry	1 1 1 1 1—5
O F Belcher	1 1 1 1 1—5	A F Cooper	1 1 1 1 1—5
Geo Monk	1 1 1 1 0—4	H Smith	1 1 0 1 1—4
C Prescott	1 0 1 1 1—4	E Barry	1 1 1 1 1—5
J F Witherel	0 1 1 1 1—4		

Ties on 10: Johnson, Payne, Mortimer and Cooper tied again on 10 each and divided. Ties on 4: George, E T Smith and Monk tied again on 6 each and divided. Ties on 3: White, Howe and Tucker tied again on 5 each and divided.

Second Sweepstake.

Webster	1 1 1 1 1 1 1 1 1 0—9	Pond	1 1 1 1 1 1 1 1 1 1—10
Belcher	1 1 1 1 1 1 1 1 1 0—9	Gerrish	1 1 1 1 1 1 1 1 1 1—10
Perry	1 1 1 1 1 1 1 1 1 1—10	Lander	0 1 1 1 0 1 1 1 1 1—8 – 7
Houghton	1 1 1 1 1 0 1 1 1 1—9	Witherell	1 0 0 1 1 1 1 1 1 1—8
Barry	1 0 1 1 1 1 1 1 1 0—8	White	1 1 1 1 1 1 1 1 1 1—10
Eager	1 1 1 1 1 1 1 1 1 0—9	Smith	1 1 1 1 1 1 1 1 1 0—9
Randall	1 0 1 0 1 1 1 1 1 1—8	D F Howe	1 1 1 0 0 1 0 1 1 0—6
Johnson	1 0 1 1 1 1 1 1 1 1—8	J G Howe	1 0 1 0 0 1 1 1 1 1—7
Smith	1 1 1 1 1 1 1 1 1 0—9	Payne	1 1 2 0 1 1 1 1 1 1—7
Haskell	1 1 1 1 1 1 1 1 1 1—10	George	1 1 1 1 1 1 1 1 1 1—10
Beaudry	1 1 1 1 1 1 1 1 1 1—10	Cooper	1 1 1 1 1 1 1 1 1 1—10

Ties on 10: Perry, Eager, Smith, Beaudry and Cooper tied again on 10 each and divided. Ties on 8 won by Johnson with 9. Ties on 4: Webster, Belcher and Payne tied again on 11 and divided.

Third Sweepstake.

Haskell	1 1 1 1 1 1 1 1 1 1—10	D F Howe	1 1 1 1 1 1 1 1 1 0—9
Kirkwood	1 1 1 1 1 1 1 0 1 1—9	Prescott	1 1 1 0 1 1 1 1 1 1—9

SUNBURY, Pa.—Match for breech-loading shotgun; 10 balls, 18 yds. rise.—The gentlemen who could not be present had their chance shot as follows: For John Peeler, Frank Grover; E. M. Bucher Samuel Baxley; Lewis Dewart, John Colket; A. F. Clapp, S. E. Slaymaker; H. Clark, John Colket; J. K. Davis, John Peeler.

Landis Fry	1 0 1 1 1 0 1 1 1—8	Dr Richstine	1 1 0 1 1 0 1 1 1—8
G A Sleeder	0 1 1 1 0 1 1 0 0—6	L Dewart	1 1 1 1 1 1 1 1 1—9
J Peeler	1 1 1 0 0 1 1 0 0—5	A F Clapp	1 1 1 1 1 1 1 1 1—10
G M Lyons	1 1 1 1 1 1 1 1 1—10	P Clark	1 1 1 1 1 1 1 1 1—10
J Leyden	1 1 1 1 1 1 1 1 1—9	Sunbury	1 1 1 1 1 1 1 1 1—9
H Nodecker	0 0 0 1 1 0 1 1 1—6	H J Waltz	1 1 1 1 1 0 1 0 1—7
F Grover	1 0 1 1 0 1 1 1 1—8	S Basley	1 1 0 1 1 1 1 1 1—9
J Slough	0 1 1 1 1 1 0 1 1—8	J K Davis	1 1 0 1 1 1 1 1 1—9
T Fry	1 0 1 1 1 1 1 1 1—8	J Reed	1 1 1 1 1 1 1 1 1—9
E M Bucher	1 1 1 1 1 1 1 1 1—10	M L Fisher	1 0 0 1 1 1 1 0 1—6
S E Slaymaker	1 1 1 1 1 1 1 0 1—9		

A. F. Clapp, owning one of the ties, purchased the other four and took the gun. The gentlemen who shot in this match are all good field shots, as the scores will testify; but not more than four or five of them had ever shot before from the trap, and for this reason think it a very creditable performance. A. F. C.

PORT MORRIS, Feb. 23.—Several matches were shot by the members of the Knickerbocker Gun Club on the K. Y. C.'s grounds at Port Morris on Washington's Birthday. The first match was at pigeons, five birds, five traps, five yards apart, eighty yards boundary, handicap rise. Mr. E. P. Mowton proved the winner, killing four out of five birds, from the 27-yard mark. The next event was a sweepstake glass ball match, ten balls, eighteen yards rise, rotary trap:

A Steinke	0 1 1 1 1 1 1 1 1—8	Mr. Chubb	1 1 0 0 1 1 1 0 0 1—6
W Potter, Jr.	1 1 1 1 1 0 1 0 1—8	K Whitehouse	1 1 0 1 0 1 1 0 0—6
C E Baker	1 1 0 1 0 1 1 1 1—8	E Miller	0 1 0
D F Caughlan	1 1 0 0 1 1 1 1 1—8	G R Hobby	0 0 0

Mr. C. W. Lumb acted as referee. Judges—F. Fitzpatrick and D. M. Winne. Three or four scrub matches were shot during the afternoon and afforded considerable amusement to the spectators. Six gentlemen that had never shot at glass balls arranged a sweepstake match, five balls, eighteen yards rise, rotary trap. Mr. R. H. Miller won the stakes, breaking one ball by accident. The other five scored nothing.

Temperance clergymen, lawyers, ladies and doctors use Hop Bitters, as they do not intoxicate, but restore brain and nerve waste.

The *Nebraska Farmer* says: "No efficient bounty law has been in effect in this State for five or six years, and in the interval wolves have increased to an alarming extent; even the most populous and thickly settled counties in the State are overrun by them, and destruction is daily wrought by them among sheep, pigs, poultry and even calves, and disabled horses and cattle. More than $1,000 worth of stock has been destroyed by them in the year within fifteen miles of this city. This state of affairs exist all through the eastern and central part of the State, and no doubt they are as fully troublesome on the great prairies in the western part of the State as they are hereabouts, and great apprehension is felt by grazers in that section lest thousands of their cattle, already much decimated by the hard winter and heavy snow, and wholly unable to protect themselves, shall fall easy victims to the horde of hungry wolves that dog the steps of the half-starved cows day and night waiting for starvation to make them an easy prey."

COMMON-SENSE CHAIRS.

SPORTSMEN, TO HO!

Put away the fine breech-loader,
Well wiped out and oiled with care;
No farther use for it at present,
Game has climbed the legal stair,
Brother sportsmen who are weary,
And have now some time to spare
Enjoying FOREST AND STREAM'S weekly treasures,
You should have a Common Sense Chair.

You will find them almost as "easy" as the top-rail of a fence about 4:30 P. M. of a warm September day. Send for catalogue to F. A. SINCLAIR, Manufacturer, Mottville, N. Y.

Eaton's Rust Preventer.

FOR GUNS, CUTLERY, AND SURGICAL Instruments. Safe to handle, WILL NOT GUM, and will keep in any climate. Sportsmen everywhere in the United States pronounce it the best gun oil in the market. Judge Holmes, of Bay City, Mich., writes: "It is the best preparation I have found in thirty-five years of active and frequent use of guns."

The trade supplied by sole manufacturer, GEO. B. EATON, 540 Pavonia Avenue, Jersey City Heights, N. J.

Sold by principal New York dealers, and by Wm. Read & Sons, Boston, Mass.; B. Kittredge & Co., Cincinnati, O.; E. E. Eaton, Chicago, Ill.; Brown & Hilder, St. Louis, Mo.; Thos. W. Parr, Cleveland, O.; Trimble & Kleibacker, Baltimore, Md.; Cropley & Sons, Georgetown, D. C.; Jos. C. Grubb & Co., Philadelphia.

FOR SALE.—Fifteen Foxhounds, first-prize stock, the finest and best. Address, with stamp, L. M. WOODEN, Rochester, N. Y. Sept.23,tf

The Kennel.

DRAFT FROM

THE LAVERACK KENNEL FOR SALE.

A KENNEL OF CRACK FIELD AND BENCH SHOW DOGS.

The Laverack Kennel offers all its aged dogs for sale and will only retain a few young dogs for next year's Derby. Mr Suelenburg will visit Europe about May 1, hence is desirous selling ere he leaves. These dogs have run in public and first-class reference will be given as to their bench and field trial qualities.

1. THUNDER, pure Laverack Setter, color, blue Belton; whelped May 7, 1877; weight, 53 lbs.; winner of seven bench show prizes and one field trial; sire of Daisy, Lady, Dick and Mack Laverack.
2. PEERESS, pure Laverack; color, lemon Belton; whelped August, 1875; sister to the celebrated Princess, Puzzle, Phanton, Peirel, by Prince out of Lill II., in whelp to Thunder. She is a grand bitch, being the dam of Daisy, Lady, Dick and Mack Laverack; broken by Smith, of Canada, and a merry worker.
3. DAISY LAVERACK, pure Laverack; color, lemon Belton; whelped June 19, 1879; winner of second prize in the Nat. A. K. C. Derby, Vincennes, 1880. Daisy, I consider, a first-class field dog; has a remarkably keen nose and is very fast.
4. MAY LAVERACK, black and white; whelped May 11, 1879; winner in two field trials; is the fastest puppy I ever shot over. She is by Thunder out of Spot, a native bitch by Glass out of Pink. She will breed well to a large, well-made native or Llewellin dog.
5. DICK LAVERACK, blue Belton, pure Laverack; a handsome-bodied dog and much like his sire, Thunder; second in a large class at the late Pittsburgh dog show; beaten by his brother Mack. I consider him as good in the field as Daisy or May; whelped June 19, 1879; weight, about 43 lbs.

Price of No. 1, $600; No. 2, $250; No. 3, $300; No. 4, $200; No. 5, $250.

Trotter, with permission, to the FOREST AND STREAM, or to any gentleman present at the late field trials. Dick, Daisy and May are two-season dogs; broken in Missouri by H. M. Short and have had a great deal of game killed over them. There are no better bred dogs in the world, as gentlemen posted in canine matters will admit.

I intend importing a pure Laverack dog that I think will nick well with Daisy and May, and should I keep Peeress would breed her to no other dog than Thunder.

Address, until April 1, JOS. J. SNELLENBURG, New Brighton, Pa.

After that, to W. L. McCONNELL, Newcastle, Pa. Feb17,1t

FOR SALE CHEAP, thoroughly broken Setters Pindee (Dash III.-Dora II.), Count Dan (Cariowitz-Queen Bess); Frost II. (Gladstone-Frost), Dog pup, three months (Gladstone-Frost), black Spaniel bitch Madcap, two prizes, and best spaniel pups LACHINE KENNEL CLUB, Whitestone, L. I Feb17,1t

FOR SALE, a liver and white (Sensation-Flirt) pointer, 2 years old; drops to shot and will wing and retrieves well from land or water; a strictly first-class dog; satisfactory reasons given for offering him for sale. Address Lock Box 16, Rome, Georgia. Feb10,4t

AGENTS IN THE UNITED STATES FOR

Westley Richards Hammerless Guns.

SPECIAL ANNOUNCEMENT!

We have just received a superb assortment of these matchless weapons, choked on Westley Richards new system, for extra close hard shooting, giving marvelous results with light charges, as the following scores will show:

On May 5, 1880, in the contest for the Allegheny Sportsmen's Association's prizes, and a place on the team to represent this association at the State shoot, at 50 wild pigeons, 26 yards rise, from 6 ground traps 5 yards apart, out of 55 competitors, 3 of the 5, Messrs. Register, O'Neil and Bell, made the following score, winning places on the team:

J. Register	11111	11111	11111	11111	11111	01111	11111	11111	11111	11011—48
J. Palmer O'Neil	11111	11111	11111	11111	11110	11111	11111	11110	11011	11111—47
W. S. Bell	11111	11111	11111	11111	11110	11111	11101	11111	11111	11011—47

And in shooting off the tie for second Mr. Bell killed 16 straight at 31 yards rise.

On April 10, 1880, the following score was made at 50 glass balls thrown from Mole's patent rotating trap, 18 yards rise:

J. Register	11111	11111	11111	11111	11111	11110	10101	11111	11111	11111—47
W. S. Bell	01011	11011	11111	11111	11111	11111	11 11	11111	11111	11111—47

On May 26, 1880, same trap and rules:

W. S. Bell	10111	11111	11110	11111	11111	11111	11111	11111	11111	11111—48

On June 2, 1880, same trap and rules, the following remarkable score was made at 50 glass balls:

W. S. Bell.....11111 11111 11111 11111 11111 11111 11111 11111 11111 11111—50

At Toledo, Ohio, on June 29, 1880, match, 7 wild pigeons at 21 yards rise, Ohio rules; Mr. Bell killed 1111111—7. Tie, 26 yards rise, 3 birds: 111—3. Tie, 31 yards rise: 111 111 111 111 111—15, winning.

One peculiarity of the Westley Richards new system of boring is the small charges required. In the match of May 5, above referred to, Mr. O'Neil used a 12-gauge, 7-lb. Westley Richards Hammerless Gun, loaded with 3 drs. powder and 1⅛ ozs. of shot. Mr. Bell, in all his shooting, used a 10-gauge, 9-lb. Westley Richards Hammerless Gun, loaded with 4½ drs. powder, 1⅛ ozs. shot. Mr. Register used a 10-gauge, 9½ lb. Westley Richards Hammerless Gun, loaded with 4¼ drs. powder and 1¼ ozs. shot.

PRICES OF WESTLEY RICHARDS HAMMERLESS GUNS:

Highest quality, elaborately engraved and finished, best gun made	$450
B quality, not so highly engraved	350
C quality, well engraved and finished	250
C quality, no engraving	190

These guns have Anson & Deeley's Patent Hammerless Cocking Action and Automatic Safety Bolt. No possibility of an accidental discharge, as the safety bolt is worked automatically, securely locking the tumblers whenever the lever is moved to open or close the gun.

Send Stamp for large 36-page Illustrated Catalogue.

"THE FISHING LINE."

TAKE THE

Grand Rapids & Indiana R.R.

Mackinaw, Grand Rapids and Cincinnati Short Line

FOR THE

Trout, Grayling, and Black Bass Fisheries,

AND THE

FAMOU SUMMER RESORTS AND LAKES OF

NORTHERN MICHIGAN.

The waters of the

Grand Traverse Region

and the Michigan North Woods are unsurpassed, if equaled, in the abundance and great variety of fish contained.

BROOK TROUT abound in the streams, and the famous AMERICAN GRAYLING is found only in those waters.

The TROUT season begins May 1 and ends Sept. 1.

The GRAYLING Season opens June 1 and ends Nov. 1.

BLACK BASS, PIKE, PICKEREL and MUSCALONGE, also abound in large numbers in the many lakes and lakelets of this territory.

The sportsman can readily send trophies of his skill to his friends or "club" at home, twice for packing fish can be had at many points.

TAKE YOUR FAMILY WITH YOU. The scenery of the North Woods and Lakes is very beautiful; the air is pure, dry and bracing. The climate is peculiarly beneficial to those suffering with

Hay Fever and Asthma Affections.

The hotel accommodations are good, far surpassing the average in countries new enough to afford the finest of fishing.

During the season Round Trip Excursion Tickets will be sold at low rates, and attractive train facilities offered to Tourists and Sportsmen.

Dogs, Guns and Fishing Tackle Carried Free at owner's risk.

It is our aim to make sportsmen feel "at home" on this route. For Tourist's Guide (an attractive illustrated book of 80 pages), containing full information and accurate maps of the Fishing Grounds and Time Cards, address A. B. LEET, Gen. Pass. Agent, Grand Rapids, Mich.

To Hunting and Fishing Parties.

The Pullman Car Company

IS PREPARED TO CHARTER THE new cars "Davy Crocket" and "Izaak Walton," which are fitted up with dining room and kitchen, sleeping apartments, pantries, etc., also provided with racks and closets for guns and fishing tackle, and kennels for dogs.

Diagrams, rates and other desired information furnished on application to Gen'l Supt. P. P. C. Co., Chicago. je23 3mos.

GUNPOWDER!

Dupont's Rifle, Sporting and Blasting Powder.

THE MOST POPULAR POWDER IN USE!

DUPONT'S GUNPOWDER MILLS, established in 1802, have maintained their great reputation for seventy-eight years. Manufacture the following celebrated brands of powder:

Dupont's Diamond Grain.—Nos. 1 (coarse) to 4 (fine) unequalled in strength, quickness and cleanliness; adapted for glass ball and pigeon shooting. Packed in 1lb canisters.

Dupont's Eagle Ducking.—Nos. 1 (coarse) to 3 (fine); burns slowly, strong and very clean; great penetration, with a close pattern; adapted for glass ball, pigeon, duck and other shooting, with either muzzle or breech-loaders. Packed in 1lb and 5lb canisters and 6¼ and 12½lb kegs.

Dupont's Choke Bore.—Specially adapted for "Choke Bore" Guns, and particularly for prairie and upland shooting. Burns slowly, strong and moist; does not cake or burn on the barrels, gives both a good penetration and a close pattern, will be found well adapted for glass ball and pigeon shooting. Made of two sizes, only No. 7 and No. 5, No. 7 being the coarsest. Packed in 6¼lb kegs and 1lb canisters.

Dupont's Eagle Rifle.—A quick, strong and clean powder, of very fine grain for pistol shooting. Packed in 1lb canisters and 6¼lb kegs.

Dupont's Rifle Fg. "Sea Shooting."—FFg. and FFFg. The Fg. for long-range rifle shooting, the FFg. and FFFg. for general use, burning strong and moist. Packed in ½lb, 1lb and 5lb canisters, 6¼, 12½ and 25lb kegs. Fg coarse, FFFg. fine.

Dupont's Sporting, Mining, Sporting and Blasting Powders of all sizes and descriptions. **Special Grades for Export.** Also Rifle, Cartridge, Musket, Cannon, Mortar, Mammoth, Hexagonal, Cubical and Pellet Powder, U. S. Government Standard.

Powder manufactured to order of any required grain or proof.

Agencies in all the cities and principal towns throughout the United States. Represented by

F. L. KNEELAND, 70 Wall Street, N. Y.

N. B.—Use none but DUPONT'S Fg. or FFg. for long-range rifle shooting.

The Hazard Powder Co.,

MANUFACTURERS OF

GUNPOWDER.

Hazard's "Electric Powder."

Nos. 1 (fine) to 6 (coarse). Unsurpassed in point of strength and cleanliness. Packed in square canisters of one pound *only*.

Hazard's "American Sporting."

Nos. 1 (fine) to 6 (coarse). In 1 lb. canisters and 6¼ lb. kegs. A fine grain, quick and clean, for upland prairie shooting. Well adapted to shot guns.

Hazard's "Duck Shooting."

Nos. 1 (fine) to 5 (coarse). In 1 and 5 lb. canisters and 6¼ and 12½ lb. kegs. Burns *slowly* and very clean, shooting remarkably close and with *great penetration*. For field, forest, or water shooting, it ranks any other brand, and it is equally serviceable for muzzle or breech-loaders.

Hazard's "Kentucky Rifle."

FFFG, FFG, and "Sea Shooting" FG in kegs of 25, 12½, and 6¼ lbs. and cans of 5 lbs. FFFG is also packed in 1 and ½ lb. canisters. Burns strong and *clean*. The FFFG and FFG are favorite brands for ordinary sporting, and the "Sea Shooting" FG is the standard *Rifle* Powder of the country.

Superior Mining And Blasting Powder.

GOVERNMENT CANNON and MUSKET POWDER; also, SPECIAL GRADES FOR EXPORT, OF ANY REQUIRED GRAIN OR PROOF, MANUFACTURED TO ORDER.

FOREST AND STREAM.

Thursday, March 10.

NATURALISTS' PERMITS

IN many State game laws a wise and just provision is made whereby students of natural history and taxidermists are allowed to kill song and insectivorous birds "for natural history purposes." This privilege has been outrageously abused, particularly in the neighborhood of large cities. Long Island is infested the year round with song-bird shooters and nest robbers who slaughter the song birds and steal the eggs "for natural history purposes." The traffic in birds' skins and eggs is much greater than most people have any conception of, and the number of "specimens" collected by these vagrant robbers almost exceeds belief. The abuse is not confined to Long Island. In their very able report, the Maine Fish and Game Commissioners call attention to the same evil existing in that State, where, they say, "the office or license of taxidermist is more sought for purposes of traffic in the skins of birds and animals, and even for the destruction of game during close time, than the legitimate purposes of scientific study. Our song birds in particular are most eagerly coveted during the mating season, as they are then in their gayest plumage." Doubtless the same state of things exists elsewhere.

So great has been the destruction of song birds on Long Island that those who have framed the proposed new game law introduced a change in this respect, partially revoking this naturalists' license. This change, if we are not misinformed, was suggested by a collector, who, in his wanderings over the island, has learned the extent of bird destruction worked by the vagabonds from New York and Brooklyn. That these fellows should be debarred from their practices is certainly much to be desired alike by the farmer, land owner and naturalist; but it would, perhaps, be wiser to have framed the law so that responsible students of natural history and *bona fide* collectors might still have the privilege of right belonging to them. They should not be made to suffer because of the lawless doings of the robbers who stray out from the city's slums. There are many gentlemen in New York and Brooklyn—the members of the Linnean Society, for instance—who ought not to be debarred from prosecuting their favorite pursuits. The best law on this point would be one still allowing the privilege and cutting off the possibility of its abuse. This may be done by providing for licenses and strictly regulating the granting of them to applicants. The control of the licenses should be put into the hands of responsible parties—preferably natural history societies and scientific institutions. The seventh section of the proposed Massachusetts law, quoted elsewhere, makes just such a provision. The only material change, which it might be wise to make in such a law, would be a limit of time to the certificates, so that the holders would be required to renew them at given intervals, when those which had been abused might be rescinded.

THE MASSACHUSETTS GAME BILL.

THE Massachusetts Fish and Game Protective Association represents, we believe, the best informed, most experienced and practical element of the sportsmen in that State. Its headquarters are at Boston, where, during the years of its existence, it has had an ample field for effort in the cause of game protection. The vigorous manner in which prosecutions for the violation of the game laws have been pushed and the determined activity of the society have inspired respect for its character and confidence in its judgment. The society has been engaged in the actual work of enforcing the game law. By experience and practical test it has proved the weak and and the strong features of the statute.

As the result of this experience of several years we have the draft of the bill for a new game law—published in another column. This bill has been drawn by the Massachusetts Fish and Game Protective Association. It represents what they believe to be the best game law possible and practical in Massachusetts. The bill has been under consideration by the members for a long time; unusual care has been taken to make it comprehensive and effective in its operation. It has been submitted to able criminal lawyers and indorsed by them as strong and without flaw.

Having been prepared in the manner designated, and embodying as it does the points acquired by the experience of the Massachusetts Society this bill should receive the hearty sanction of the sportsmen of that State. It may not suit all; in some points it is open to objection. To frame a bill which shall meet the unreserved approbation of all is an impossibility, and one great obstacle to efficient legislation in Massachusetts has been that bills which were good as at first presented have been manipulated to suit individual notions until utterly worthless.

The Massachusetts Association have fairly earned the confidence of the sportsmen of the State, and this confidence should be extended to their efforts in legislation. For this reason it is to be hoped that the sportsmen of Massachusetts will urge upon their representatives at Boston the passage of the bill as it stands. We understand that it comes before the House this week, and we hope in a future issue to record that it has become a law.

GAME BIRDS FOR MASSACHUSETTS.—It is satisfactory to learn that the movement of the Springfield sportsmen, which has for its object the stocking of the Commonwealth of Massachusetts with game, is likely to be extremely popular in all sections of the State. Although the movement was inaugurated at the rooms and among the members of the Rod and Gun Club of Springfield, it has now so far exceeded the bounds originally marked out for it that it can be said to be under the auspices of no association. Contributions have been offered in the most liberal way by men who had no connection with any gun club, and it really looks as if the brotherhood of sportsmen in the old Bay State were going to carry this thing through with old-fashioned New England push and vigor. The fund to be applied to this purpose has already attained quite respectable proportions and is constantly growing. Sportsmen hearing of the project for the first time instinctively thrust their hands in their pockets, fish out one, five or ten dollars and contribute it to the fund; so attractive does the project appear to practical sportsmen. We understand that the managers of the undertaking have already purchased in Tennessee three hundred quail and purpose, if it be possible, to secure as many more. They have obtained some pinnated grouse, and have arranged for some sharp-tailed grouse and some California quail. They propose also to obtain some of the eggs of the sharp-tailed grouse and to hatch them under bantam hens, and will endeavor to rear them.

MIGRATION IS MADE EASY for certain birds, if all we hear be true, and if it be not true we have here a very curious similarity of belief in two widely separated and utterly diverse races. We venture to say that Dr. Merrill's note in another column will interest not our ornithological readers alone, but many others as well. That a belief of the Bedouins of Africa should receive confirmation from the savages of our Western wilds is a noteworthy if not a significant fact. Such a tale as that of the wagtails crossing the Mediterranean on the backs of storks, and the similar one of the sandhill cranes transporting the "cranes back" in their migrations would have been scouted a few years since. But in these days, while we may all doubt, he is wise who refrains from denying. While the story of the "crane's back" may be without foundation, it may also have a very substantial basis of truth. We shall watch with interest for further information on this subject.

WE NOTICE that the New York *Herald* is "down on" what it is pleased to term the pedestrian infliction, and it manifests its disapprobation of the walking matches by giving place to only exceedingly meagre reports of their progress. This attitude of the press is a pleasing sign of the times. If now our highly-esteemed contemporary will only curtail the space devoted to Philadelphia cock-fights and Long Island dog-fights that will be equally gratifying and significant of an increasing disregard for the indecencies which mar our civilization

THE RIGHT MAN IN THE RIGHT PLACE.—Among the names of the new Cabinet sent in by President Garfield and confirmed by the Senate was that of Col. Thomas L. James as Postmaster-General. This is a fit recognition of Col. James' ability and of the successful manner in which he has conducted the postal service of this city. The appointment is unqualifiedly indorsed by the business men of New York and the press of the country irrespective of party.

Col. James, although a politician of no mean order, has received this high honor strictly on his merits. With an executive ability almost phenomenal, courteous in bearing, and of a strict integrity which twenty years of political office has not tarnished, Postmaster-General James will enter upon his new and larger sphere of duty indorsed by the best men everywhere without regard to politics. Our best wish for him is that at Washington he may serve the whole country as faithfully and as successfully as he has served this city, and that the recognition of his efforts there may be as general and decided as that of his services here.

It is highly desirable that the efficient postal system perfected by Col. James in this city should be continued by those who have co-operated with him in the past. The hope is expressed in business circles, and we share it, that Col. James' able assistant, Mr. H. G. Pearson, may be put at the head of the New York Post Office.

MORE MIGRATORY QUAIL.—Many interested readers will learn with satisfaction from the letter published elsewhere that Mr. Horace P. Tobey, of Boston, again proffers his services to assist in the further importation of migratory quail. As we have already pointed out, the success of this enterprise depends upon conditions which demand that the importation should be on a large scale; and it is to be hoped that the response to Mr. Tobey's note may insure an importation equal to those of other years.

It should be understood that this is purely a labor of love on the part of Mr. Tobey, whose repeated efforts in this direction merit—and we trust receive—the very highest appreciation.

THE AMERICAN FISHCULTURAL ASSOCIATION.—Do not forget the meeting of this association to be held at Fishmongers' Hall, Fulton Market, New York, on the 30th and 31st of this month. Prepare a paper on some important subject, if you have such a subject, and send its title to the Secretary, Mr. Barnet Phillips, office of the New York *Times*, so that it can be put upon the programme. Bring collars enough to last while you stay over the first two days in April to see the trout opening, and you will return home and be an authority on trout and fishculture for your neighborhood for years to come. You will read the signs on the oyster-houses which tell you to "Take home a fry in a box," and, treasuring the hint, may go home with a hat full of trout.

WILLIAM W. WINCHESTER.—William W. Winchester Vice-President of the Winchester Repeating Arms Company, died of consumption at his home in New Haven, Conn., last Monday, 7th inst., aged 44 years. Mr. Winchester had been connected with the company of which he was an officer since its inception. He was an able and energetic business man, and commanded the respect of his associates. Socially, Mr Winchester was a generous-hearted and true friend. He will be mourned by a very wide circle of friends, in New Haven and elsewhere.

SEVERAL GAME BILLS have been introduced into the Connecticut Legislature and referred to the Committee on Agriculture It is probable that the present law will not be changed. One of the bills provides for legalizing the trap shooting of pigeons. We have the best of reason to believe that this will not be made a law.

"WHY DID HE DO IT?"—This question is satisfactorily answered in another column, together with some further particulars of who did it, what it was he did, where he did it, when he did it, how he did it, what he did it with, who saw him do it, what it cost him to do it, and all about it.

"MARSTRAND" has drawn a pleasing picture of the rare angling days on the "Unknown," and he is wise in not divulging the local habitation and names of the guides who might conduct the envious angler to those favored pools.

MR. THEO. MORFORD, of Newton, N. J., has returned from his Southern sporting and health-seeking excursion. He reports game abundant, and his trip a most pleasant and enjoyable one.

The Sportsman Tourist.

THE SQUATTIC AND TULADI LAKES.

A NEW BRUNSWICK FISHING EXCURSION.

ONE of the most difficult things to decide in a country so full of lakes and trout streams as New Brunswick is, where to go. All the places of easy access are fished to death, consequently if one wants good sport one must go long distances to obtain it.

Early in July, 1879, an English friend, H. S. B., and myself determined upon going where we would be reasonably sure of good sport—"but where?" That was the question. We did not care to take any of the well-known routes, and perhaps follow immediately in the wake of some party who had taken all the cream leaving us the milk, so after pestering the life out of everybody in the least likely to give us the right tip we were fortunate enough to meet a lumberman from the upper St. John who told us wonderful stories of fishing to be had in a chain of lakes that lies in the extreme N. W. part of the province called the Squattic or Squat-took and Tuladi lakes. But as it does not always do to take everything one hears for gospel, especially when relating to fish, we made further inquiries, and found that our informant had not multiplied the numbers and size of the fish by more than two, and that even by knocking off the fifty per cent. the sport would be worth going any distance for, so we determined upon the Squattic route.

To reach these lakes from St. John, New Brunswick, the most pleasant way is to take the day boat up the river to Fredericton, where the sportsman will be obliged to stay over night as the St. John and Fredericton and New Brunswick railroads seem to have gone to infinite trouble to make antagonistic time-tables, and the consequence is that a journey that ought only to occupy fourteen hours cannot be done in less than two days. From Fredericton the New Brunswick R. R takes you to Grand Falls, which alone are worth going the whole distance to see. Thirty-nine miles above Grand Falls is Edmundston, the terminus of the railroad, and from that point the remainder of the journey is by boat, either birch bark canoes, pirogue or batteau, the latter being far the best, both as regards safety and comfort.

Now, when an individual or party has decided upon this it is absolutely necessary that their boatmen should be energetic, obliging and, above all, thoroughly acquainted with every inch of the route, for it is strange, though nevertheless a fact, that the very best looking streams and pools are destitute of trout, while the best fishing is to be found where the most experienced angler would never think of wetting his line. William Malcolm and Bernard McLaughlan have been my men on both the trips I have made through these lakes, and better men in every respect it would be hard to find. Their address is Grand Falls, New Brunswick. Their terms, too, are most reasonable. They furnish batteau, good new tent, cooking utensils, etc., for $3 per day for one passenger, or $4 for two or more. If expense is no object, an extra man with canoe to carry tent, provisions, etc., will make things more comfortable, as this will make more room in the batteau, and the third man can go ahead, make camp, do the cooking and many other things. Tom Ryan, also of Grand Falls, is just the man for this work. Before leaving St. John lay in what canned goods will be necessary, not forgetting condensed milk and a few bottles of pickles; and if there are any thirsty souls in the party, a small keg of something to dilute the water with. Everything else can be bought at Edmundston, good and cheap.

Bear in mind that the lighter the load is the lighter the work will be. Another very necessary article is a preparation sold by A. Chipman Smith for keeping off the flies and mosquitoes. This, if rubbed on about once every hour, is an effectual check to these pests.

Any man who values his personal appearance or whose complexion is too delicate to be trifled with has no business here, for the sun, black flies, mosquitoes and midges will, in one day, make such an alteration in him that his most intimate friends would hardly recognize him, and even his intended, unless she had a remarkably well-balanced head, would be ashamed to be seen in his society. In fact, unless a man is a thorough sportsman he had much better stay at home.

The most killing flies for these waters are Jenny Linds, brown fairies (trout size), and hackles, red, brown, gray and black. Baillie or Scribner of St. John tie good flies and know the best sizes When arranging for the men give them a week's notice, and when you leave Fredericton telegraph them, and they will have their batteau and traps ready to go on with you to Edmundston from Grand Falls. You can lay in your provisions the same evening and be ready for an early start next morning. Ten pounds of ship biscuits per man will be found sufficient. You must guess at the quantities of the other stores.

The first day's poling takes you up the Madawaska River to Griffin's, seventeen miles, where you make your first camp, having previously stopped six miles below at Lynch's, and secured him with his oxen to portage you over to Beardsley's, better known as Mud Lake.

The outlet from this lake is called Basley's Brook, but there was not water enough in it this year to float the batteau, and it took us from noon until 9 P. M. to do seven miles, as we had to drag batteau and load the whole distance, and a harder day's work I never put in. A mile or two below our camp we struck the Squattic stream, and from this time until our journey was finished it was all beer and skittles, as we had plenty of water.

From the forks to the first lake is ten miles, with a good current running, and enough trout may be picked up while going to the lake to suffice for the next meal, but they are generally small.

I am told that there is sometimes very good fishing where this stream enters the first lake, but that has not been my experience and, though you may get a few good trout trolling, it is not until you get to the foot of the lake, twelve miles, that the fishing improves. By camping at the foot of the lake you are certain of fair sport, but it is not until the Squattic lakes are passed that you get the good fishing. Tuladi, weighing from five to thirty-five pounds, are often killed at the foot of the big lake with a troll. If ever I go over this route again I intend taking a salmon rod, with stiff tip, and spinning for them, either with a phantom minnow or small spoon, and feel convinced that good sport can be had in this way. Tuladi, or, as they are called by many, Togue, are identical with the lake or salmon trout of the upper lakes and have no equal, in my opinion, for the table. The thoroughfare between the first and second Squattic is ten miles long and the fishing does not amount to much. By keeping along the right hand shore of the second lake, near the lower end, a fine brook will be seen and as pretty a camp as there is on the whole route. I have taken some splendid trout at this spot that would average two pounds each, but from eight to a dozen will be a good take here.

It is best when leaving this camp not to stop until you have passed the next two lakes, as they are not worth wasting time upon.

The angler will have observed that up to this time there has been very little fishing, but when he has passed the last Squattic and enters the thoroughfare, called the Tuladi stream, he can put up his very best tackle, for believe me he will have it well tried.

If either of the men I have named as boatmen have been employed they will show exactly where to commence fishing, and one fly will be found sufficient, as the fish are very large and game as any fish I ever saw. One is apt, the first few casts he makes, to have a fish on each fly, and this sometimes severely tries both rod and temper. In these holes I found that after killing two dozen or two dozen and a half with the fly that they got shy and would not rise. Then you want a good, stout Stewart's tackle and put up a live minnow, any quantity of which can be caught on the upper side of the bar, behind which the large fish lie, and you can kill as many more. I am not romancing when I say that I have frequently seen, when I have had a large fish in play, three or four other trout, as large, and often larger, chasing the poor beggar about and worrying him like dogs, and when I got my fish into the landing-net would find his throat all scarred by their teeth. The fish taken from this hole will average a pound each—scarcely any under half a pound and a good many from three to four pounds each. A short distance below this place the Haughton branch runs in, and Barney (Bernard), who has fished it, says it is the best place by far he ever saw, but there is a bad jam a mile or so from its mouth, over which it is impossible to take a boat. There is an easy way of getting up along the bank, I believe, and then fishing it down. I did not try it this year, as my time was limited.

Less than a mile below this branch is another ripple very much like the last I have described and which is fairly alive with big trout from one pound to four each, and the fishing can all be done by wading, which does not disturb the fish nearly so much as a boat does. The best plan is to camp at the upper ripple, where there is a first-rate chance, and as the places are within easy reach, go from one to the other in the boat. After leaving this camp there will be no use fishing any more until the Tuladi lakes have been passed, as there is no fishing in them, but at the foot of the last lake, where the Temisquatta stream leaves it there is a magnificent series of rapids and falls, through which the boatmen I have named will take you, and where you can kill all the trout you wish. Camp here by all means for one day at least.

After passing these rapids the fishing is done, and a four-mile paddle, with rapid water most of the way, takes you into Lake Temisquatta, the largest of the chain, being twenty-seven miles in extreme length, though only ten from where you enter it.

Mr. Terrican, member for that district, built a house a couple of years ago, and this is occupied by a French family. We stopped there in passing, as it was the first house we had seen since leaving Griffith's, and saw one of the worst sights I ever remember. There were several children and grown people, all of whom were more or less covered with sores from fly bites, but one poor little fellow was literally scalped, for he had not one hair or a bit of skin on his head

We had a fair wind down the big lake, so we rigged one of my waterproof sheets for a sail, and while we were booming along Bill enlivened us with songs, of which he seems to have an inexhaustible collection. One of his heroines must have been unique in her dress, though I should not like to have to foot her dress-maker's bill.

> "For red and rosy was her cheeks
> And coal-black were her hair,
> And costly was the robes of gold
> That this fair maid did wear.

The grammar, it will be seen, is a little defective, but that is nothing. Near the foot of the Temisquatta there are some very fine echoes, some of which, on a favorable day, will repeat three and even four times. An easy day from the head of the Madawaska takes you back to Edmundston, and any body who has gone this route and is not satisfied with the sport must be hard to please indeed. The time required to do it properly is fourteen days from St. John and back again, though of course more time can be profitably spent upon it, but nothing less than a fortnight will do. E. F. T. H.

"A TRIP THROUGH THE PROVINCES."

NEW YORK, Feb. 28.

Editor Forest and Stream:

I never intended to assert that no good salmon fishing could be had in Canada, as Mr. Fay says in his very interesting account of a trip there, in yours of 10th inst. I did say no good salmon fishing could be depended upon by any one having only the open and public waters of the Nepisiguit and Restigouche or any other salmon river, and only two weeks at that, at his disposal. I also said that few could make a salmon trip for so small a cost as Mr. Fay mentioned.

I repeat that, in nine seasons out of ten, it is waste of time and money to expect to get good salmon fishing in Canada without several weeks and hundreds of dollars at your disposal. Salmon are proverbially fickle in the time of their arrival at the pool, where they are usually taken.

If a man has not time and money and, above all, a permit from the lessee to fish upon the private part of a salmon river in Canada, he had better save his energies, unless he be content with trout fishing and to make a hasty traveling tour, stopping a few days in each place. It is a question of preference

"A rolling stone gathers"—no salmon. I prefer to spend my time on one river, camped out in the woods and wait for the salmon if they have not arrived as soon as I. To fly fish for salmon properly, also, each angler requires a canoe managed by two canoemen. This costs money. I cannot comprehend any enjoyment or success in having two anglers in one canoe, as must be done if the trip is to cost within or near Mr Fay's figures. Fancy two lines, each with a 20-pound salmon on, from the same canoe! Or fancy a man traveling "1,757" miles and then taking turns with three friends in fishing from the same canoe!

I have leased salmon rivers and been salmon fishing many years and I know that proper enjoyment of the noble sport takes time and money. Still, if any one prefers to take his sport "on the pun," why *de gustibus*, etc. MANHATTAN.

SADDLE MOUNTAIN.

"WILL you set down and take a bite with us?"

It was a wild scene in a wild country, where this rude but sincere invitation to partake of frontier hospitality was given. A small and roughly built log cabin, located at the foot of Saddle Mountain, in the heart of an Oregon forest and about twenty-five miles from Astoria. A building without a door or window, its outside walls ornamented with several half dried elk and bear skins; a roof of shakes with a hole in the top, through which the blue smoke was slowly climbing up among the heavily fringed boughs of hemlock that towered to the height of more than 200 feet above the ridgepole. But rude and primitive as it was I assure the reader that it was one of the most welcome objects the writer had gazed upon for at least twenty-four hours preceding that cold, damp October morning, when, shivering with cold and extremely hungry, he stood at the entrance of the cabin and was greeted with the welcome with which I have opened my tale of adventure.

A year's incessant toil in one of the quartz mills upon the great Comstock lode of Nevada, had so reduced me physically that I determined upon a few weeks' recreation in the coast range of Oregon. Accordingly I went down to the "bay," purchased a Mississippi Yeager, a Colt's dragoon revolver, some trout lines and an ample suply of ammunition, bought a ticket for Astoria on the steamer "Oriflamme," and a week later found myself sipping a glass of Bass' ale at the "Columbia Bar," located immediately upon the wharf of that historic town. I had heard a great deal about the terrors of the "Columbia Bar," its heavy seas, its shifting channels and its dangerous currents; but before I was half through with that glass of ale I was satisfied that the whole thing was a put up job or a means of self-gorification used by those who had been there when intent upon awe inspiring the louts who had only heard of this Scylla and Charybdis of the far northwest. To be sure some of the passengers chattered vociferously about some kind of a bar we had passed over the night before, but as this was the only bar I saw, and as there was no mistake about this being the "Columbia Bar," I speak only of things whereof I know.

From some of the old shellbacks who were hanging about the wharves, I learned that elk and bear were very plenty at Saddle Mountain, that there was an old trail leading directly to it from the town, and that two hunters, known as "Old Dawson" and "Happy George," had built a cabin at its base, intending to pass the winter hunting and trapping there. This was exactly what I had been looking for, and as the trail was impassable for horsemen on account of the fallen timber, I set out the next morning on foot and without a guide for the hunters' camp. The first few miles were made with comparative ease, but as I penetrated deeper and deeper into the immense forest of spruce, hemlock and yellow fir, the undergrowth kept encroaching upon the trail until finally it formed but a narrow path beneath a complete archway of foliage. Everything was dripping with moisture from the heavy fogs rolling in from the sea, and the fallen timber was covered with a heavy growth of moss that entirely prevented any drying process, and soon transformed every fallen tree into a soggy, rotten mass of punk, green and beautiful on the outside, but treacherous to the feet, and useless for fuel. These monsters of vegetation, some of which were 300 feet long by 8 or 10 feet in diameter, were lying so frequently directly across the trail that traveling soon became very laborious, and early in the afternoon I became satisfied

that I should not be able to accomplish more than twenty miles that day. The moist and slippery trail gave constant evidence that it was also a favorite thoroughfare for wild animals. The great cow-like footprints of the elk were mingled with the negro-shaped track of the black bear, and the broad, cat-like spoor of the cougar or mountain lion.

Gigantic ferns, ten or twelve feet high, grew abundantly along the low depressions of the trail and the undergrowth in many places was as dense as any I have ever seen upon the Isthmus of Darien. Hour after hour passed and found me still toiling along the narrow trail, sometimes clambering over and sometimes crawling under those mighty prostrate monarchs of the forest, lying so frequently directly across my line of travel, until the slowly-fading light in that sombre wilderness warned me that I must prepare to pass the night in the most primitive style possible, more especially as I had no blanket and nothing to eat but a few apples purloined from an orchard on the outskirts of Astoria. The first thought, after this became a settled conviction, was for fuel, and my anxiety in this respect grew greater every moment as I traveled mile after mile and could not find a stick that looked dry enough to burn.

The idea of lying out that night was certainly not a very inviting one. The numerous tracks of wild animals, of both the ursine and feline orders, which I had observed upon every mile of the trail during the afternoon, suggested a possibility of unwelcome intruders, and the cold, moist and penetrating night air, whose influence already began to make itself unpleasantly felt, precluded, in my thinly clad condition, any very luxurious anticipations of the night's repose, even to the most romantic temperament. My spirits, however, came to the surface with a bound when, upon ascending a slight swell or ridge, I saw the great, sail-like slivers of a lightning-shattered tree lying in heaps about its stump, small enough to handle and apparently dry enough to burn. A short distance beyond two dead trees lay, crossing each other at right angles, and half an hour later I had a tolerably comfortable bed arranged in the corner, with a pile of slivers at my feet and a not very enthusiastic fire burning in front.

Slowly wore the night away. The fire, unless frequently stirred, threatened to go out, and the strange noises of the night in those deep solitudes kept my mind so active that upon consulting my watch at nearly 12 o'clock I found the night was half spent and, weary as I was, sleep had not yet visited my eyelids. I sunk into a light slumber, however, soon after and awoke with a start at 4 o'clock to find that the fire had died down to a dull bed of coals and that the few stars visible directly over my head, through the tops of the tall trees, were shining as brightly as ever. Anxiously I watched the pale light announcing the coming of the day-king steal over the heights, and as soon as I could fairly see the trail I was again on my way.

Two hours later found me standing in the doorway of the cabin I have already described, at the foot of Saddle Mountain - and what a welcome sight presented itself to the shivering and nearly famished hunter! Dawson sat upon one side of an immense bed of lively coals, with a long-handled frying-pan, frying huge slapjacks in bear's grease, and upon the opposite side sat "Happy George," roasting and basting the fat ribs of an elk.

"Will you set down and take a bite with us?"

Dear readers of the FOREST AND STREAM, devotees of the rifle and untiring followers of those antlered monarchs of forest, grove and glen, it is superfluous to ask you if you have been there, for I know you have, every last one of you, and it is only necessary to say that on that particular occasion I was there too. Half an hour later, as I lay reclining upon a bear skin, and my entertainers put the h use in order, I began to take notes of my companions. Dawson was a light-built, light-complexioned man, of medium height, about forty years of age, had lost his left eye and was at that time the most famous hunter in all those parts. He carried the most terrific rifle I ever saw—muzzle-loading and throwing a round ball fourteen to the pound. "Happy George" was at least fifteen years younger, dark-skinned, broad-shouldered and evidently of herculean strength, having nothing peculiar about him, except, perhaps, the enviable disposition from which he derived his sobriquet. He was armed with a Springfield rifle.

The day was spent in eating, smoking, lounging, running bullets for Dawson's artillery piece preparatory to an elk hunt on the morrow and in general conversation, while my interest in this wild country and especially in its fauna was not easily appeased. The two hunters were equally desirous of hearing about the great silver-bearing lode of Nevada and the methods for extracting the precious metals in vogue there. I found that Saddle Mountain and its vicinity was a favorite resort of some of the mightiest of wild animals to be found upon our continent. Deer were very scarce or entirely unknown there, but elk, bear, panther and cougars were to be found in abundance, some of the former of which would dress upward of 600 lbs.

We were off by daylight the next morning, our course being directly up the side of the mountain, which at this point was so steep that the climbing was exceedingly laborious. Not a word was spoken by either of us as we toiled slowly upward, for the fresh tracks of elk were visible in every direction. None of the animals themselves, however, were sighted until we had nearly reached the summit, where we emerged into a charming little glade with an area of about two acres. Here we beheld one of the most imposing sights it was ever my good fortune to contemplate. Right in the centre of the little meadows, as if framed in a picture, with his beautiful head crowned with a magnificent pair of horns raised seven or eight feet high, his great nostrils and eyes distended in alarm, stood a buck elk of the largest size. He was standing with his side toward us, but his head was turned in our direction, and not being over thirty yards distant I stood perfectly lost in the contemplation of the spectacle. Not so, however, with my companions. Both rifles cracked simultaneously and the noble animal, with a bound that brought him to the edge of the meadow, plunged headlong down the almost perpendicular cliff with the blood spurting in purple streams from his side. We heard him go crashing down among the firs and underbrush, and it being impossible to follow him in safety by the direct route we descended to the place where he had lodged by an easier grade. There lay the splendid fellow doubled up in a heap at the foot of a great tree, dead, his horns broken and ruined, and the situation he was in rendered it very difficult for us to get out with any considerable portion of the carcass.

We left him where he had fallen, and, ascending to the summit, crossed to the opposite side where we had a fine view of the dense forest around the sources of Young's River. Far, far below us the clear, singular whistle or bray from a numerous band of elk, floated up to our ears from that vast sea of dense, dark green foliage, and went reverberating off among the hills like the blasts from a hunter's horn. The descent upon that side was accomplished with great celerity, and in half an hour we were in the midst of the band which numbered thirty or forty elk. We got two shots apiece with our old muzzle-loaders before the band broke and ran, leaving four male elk dead within 200 yards of where we stood, the timber being so dense that no shot was at a greater range than fifty yards. Here was meat in abundance, and it would be wasteful if not sinful to continue the slaughter. We therefore took the finest pair of horns with as much meat as we could conveniently carry and, hanging the choice portions of the remainder in the trees, set out on our return to the cabin, going around the mountain, however, instead of over it. We passed within a few rods of several elk before we had gone a mile, but we refrained from shooting at any of them.

Nothing astonished me more than the wonderful skill in woodcraft shown by Dawson and Happy George, the great fir and hemlock trees standing so thick and tall, not only looked alike to me, but rendered it utterly impossible to locate even the cardinal points of the compass; but they took their course with such unerring fidelity that could hardly have been surpassed had they been walking the thoroughfares of a city. They recognized localities and even trees in places where I learned from their conversation that they had been only once before, and we all arrived safely at the cabin an hour before dark, and the hunter's feast, the evening cigar and the wild tales of that honest, hospitable pair of leatherstockings made a fitting termination to my first and last day's experience upon Saddle Mountain. FORKAD DEER.

Mason Valley, Nev.

Natural History

VISITORS TO AN ENGLISH BACK GARDEN.

DURING our last hard winter my little back garden—yard, perhaps, would be a better word—in the suburbs of London swarmed with birds eager to pounce on the crumbs and crusts, cold rice and potatoes, bones and scraps of meat thrown out to them. Nine blackbirds at a time—including hens—were to be seen down in the yard and even more quarrelsome than usual the golden-billed cocks proved themselves, fighting on the ground and leaping up fluttering in the air to fight; and, I am sorry to say, their brown-gowned wives sometimes followed their bad example.

Part of the skeleton of a goose, well picked before it was thrown out, the blackbirds pecked at and hustled about in a most amusing fashion; and one big, bullying cock made a point of leaving the crust or scrap on which he might be feeding and deliberately shouldering away any of his fellows who attempted to feed in his neighborhood. A long, real garden stretches behind the little back gardens of our row of houses, which in ordinary weather furnishes blackbirds with a pretty good supply, according to the season, of grubs, worms, snails, chrysalides, etc., although there are not many apples to give them their dessert for their meritorious labor in devouring these gardeners' pests. Accordingly, the birds breed about the garden, and very pleasant it is to hear them piping in the morning and the evening dusk—that is, when they will condescend to sing, and in their own voices. But for the most part they are very lazy. It is not only in summer that the "silver tongue" is dry, and when they do sing they are generally "hoarse as when a hawker hawks his wares." This hoarseness in these birds (the male being a great mocking-bird) I attribute to their imitation of the harsh scolding of a next door parrot. Under the slates of that next door house a pair of blackbirds nest every year, just at the top of a water pipe, in company with a colony of sparrows, which slip in and out of the holes left in the side wall for the ventilation of the loft under the roof like dingy Londoners in and out of the mouths of their dark courts. The country blackbird's nest is made of grass and roots and clay, plastered with smoother clay inside or lined with finer grass; but I have never seen my suburban neighbors carrying in clay for their housebuilding, although there is plenty of it about. What a different place to lay their spotted, bluish green eggs in from that in which a blackbird's nest rises in my mind's eye! A clump of hazels in a Welsh park, peeping over a rough, mossed, lichened, ivied limestone wall upon a shaded, rocky lane, down which zigzagged a clear, tinkling runlet, between wet, mossy rounded blocks of stone.

Bigger blackbirds visited us—rooks, probably, from Ken or Highgate Wood or Lady Burdett-Coutts's park. Now and then we had a robin among our visitors, but I think not so frequently as in milder winters. A titmouse often made his appearance. I saw him on the roof of the scullery, pecking away at a bone which bigger flesh-relishing birds, although bold enough to light upon the ground, had been afraid to touch because within eyeshot of a first floor window. Tit finished off his dinner with some little bits of cheese which for days the other birds—sparrows included—had left untasted. All the birds have turned an almost scornfully cold shoulder upon cold potatoes as long as there was anything else for them to get. When water has run out under the scullery door into the frozen yard most of the birds have made a rush for it. A solitary, stray starling and bright-eyed, bold thrushes—the last looking like smart young men of the last century in their smooth brown coats and speckled waistcoats—were also on our visiting list, the thrushes three and four at a time.

But the sparrows were, of course, the most numerous. All round about they build. In the breeding season, over and anon, down comes and smashes one of their spotted white eggs—perhaps ejected from the nest by a felonious neighbor abstracting its material; or an unfledged, white-mouthed nestling drops gaping, and afterward when the young ones have begun to try their wings every now and then one tumbles down the chimney like an inexperienced little sweep. Bold at all times during the hard weather the sparrows have, save when prowling cats were in the way, shown themselves almost totally devoid of fear. They have leaped into windows and tapped with their bills upon the panes to call attention to their wants.

They have to rise up like barnyard fowls to snatch scattered crumbs, and scarcely take more trouble than pigeons to get out of the way of human feet. It has been prime fun to see two of them at a time tugging away at a crust like rival porters at a passenger's portmanteau, and to note the insolent coolness with which every now and then one has swooped down upon and carried off for his own repast upon a distant roof that big scrap on which another has been engaged, the robber staggering along with his spoil like a ship "down by the head." W. R.

Quebec, March, 1881.

THE "CRANE'S BACK."

I NOTICE that in the FOREST AND STREAM of Dec. 23 you reprint a letter published in the *Evening Post* on the subject of wagtails crossing the Mediterranean Sea on the backs of cranes and storks. This has the indorsement of the eminent ornithologist von Heuglin, and induces me to report a general belief among the Crow Indians of Montana that the sandhill crane performs the same office for a bird they call *napite-shu-utle* or "the crane's back." This bird I have not yet seen, but from the description it is probably a small grebe. It is "big medicine," and when obtained is rudely stuffed and carefully preserved. I hope to have one brought to me soon for identification.

The Indian's account of the bird is as follows, and I give it for what it may be worth, adding that I have been assured by a very intelligent and observing hunter, who has lived in Montana for eighteen years, that he has noticed the same habit:

The "crane's back" arrives and departs with the sandhill crane, and except when nesting is rarely seen far from that bird. About ten or fifteen per cent. of cranes are accompanied by the "crane's back," which, as the crane rises from the ground flutters up and settles on the back between the wings, remaining there until the crane alights.

Such is the Indian account, and many of their hunters and chiefs have assured me that they have frequently seen the birds carried off in this way. At these times the bird is said to keep up a constant chattering whistle, which is the origin of the Crow custom of warriors going into battle each with a small bone whistle in his mouth; this is continually blown, imitating the note of the "crane's back," and, as they believe, preserves their ponies and themselves from wounds, so that in case of defeat they may be safely carried away as is the *napite-shu-utle*. The Cree Indians are said to observe the same habit in the white crane. J. C. MERRILL.

Fort Custer, Montana, February, 1881.

JIM CROW.

THIS was his name. Andy was the name of the other. I had them from different nests in different years, and found them both most interesting and affectionate pets. I loved them living, I mourned them dead. I am a friend of the crow and would say a good word for him in spite of his unfortunate reputation. I would not shoot nor kill a crow. They are useful birds and, I believe, honest birds and so entitled to live. Injustice has ever been done the crow, both in ancient and modern times. "Æsop" has not only slandered him, but tries to make a fool of him by representing him as being wheedled out of his cheese by a fox. No fox ever outwitted a crow nor never will. He is a bird with brains and his eyes and ears are always open. I do not claim that he is a wit, but he is a wag, full of "infinite jest and humor." Few birds are his equal, none are his superior. I presume that many, if not all, the readers of FOREST AND STREAM look upon the crow as vermin, destructive to game—an Ishmaelite against whom the hand of every man should be raised. If this presumption is correct I think it arises from a want of knowledge of his merits or a hereditary prejudice against him. He is called a thief and a robber, but he is neither, unless the taking that which satisfies his hunger, and no more, makes him such. He provides for himself and his household, as every good crow should—he does not steal for the mere pleasure of stealing. Every crow has his own individual character; no two are alike; some are sober, others are merry, but all are fond of practical joking. He is as affectionate as a dog, and in the daytime quite as useful, for no tramp, stranger, dog or cat can come on the premises where he is that he will not give a note of alarm. I have said that I had two—Jim, named after the popular song, and Andy, after a prominent citizen who once stood well with his countrymen. Jim was a very sociable crow, fond of ladies and children, but had his favorites, and never hesitated in showing his likes and his dislikes. Jim was brought up in a Republican family, but, droll enough in one of his color, he could never abide a negro, and while he would be chatty with white folks he would have nothing to say to a black man. He at one time formed a friendship with a workman who daily passed the house where Jim lived and wore a heavy white beaver, which one day he had dyed black. This was too much for Jim; he looked at his old friend in silence and never afterward took any notice of him. He disliked dogs and availed himself of every opportunity to give them a nip. He would sit in solemn silence near the front gate, apparently waiting for some dog with more curiosity than wit to thrust his nose between the bars, when he would give him a blow with his horny beak that would send him howling away, a sadder if not a wiser dog, to remember the difference between *cave canem* and *cave corvum*. Andy was conservative and inclined to be aristocratic in his intercourse with society, and was shy of the *ci pollot*. He was fond of ladies, especially those who wore bright or gay colors. He was fond of flowers, but pansies were his favorites. He would fill his mouth with them and strut around the garden walks in the sunshine as proud as a peacock. He was always perplexed with Sunday -its stillness and the Sunday coat, gown and bonnet were too much for him, he was quiet and silent. J. C.

Bangor, 1881.

We agree most heartily with what our correspondent says. We know of no bird that makes a more interesting pet than the crow, and there is none more easily reared or that better repays in intelligence and affection the care bestowed upon him. We remember especially two that we had one year—Jim and Sam. They were never confined, and as the weather in fall grew colder, and less attention was paid them they became wilder, and finally, one cold November day, flew away never to reappear. It was fun to watch these birds. They did not know what fear was, and their impudence was something sublime. From the time that they became able to fly they were the companions of the children, and would join in their games with as much spirit as any one. They were greatly attracted by any shining object and had to be carefully watched to prevent their stealing any object of metal and hiding it. When the children were not out of doors to play with them they used sometimes to amuse themselves by alighting on the backs of the gardeners working on the lawn or over the flower-beds, and then trying to remove the metal buckles from their vests or the bright suspender buttons from their pantaloons. With their stout beaks they would pound

and punch until the irritated victim would strike viciously at them, when they would fly away with loud cawings of amusement and derision. If for any reason their meal was delayed beyond its accustomed hour the pair would proceed to the kitchen door and raised such a tumult as never failed to call forth some one to satisfy their wants.

OREGON QUAIL IN ALABAMA.

YOUR correspondent, "Morse," in your issue of the 17th instant, wrote in a descriptive way of a bevy of what you advised him are mountain quail, *Oreortyx picta*. Very considerable interest has been created in the birds here, and despite the rigors of the climate many places were suggested for colonizing or domesticating them. These were but the expressions of enthusiastic wishes, however, serious thoughts of the birds passing through one of our winters being out of the question.

The gentlemen to whom they were sent here have finally sent them to the sunny South, and they are now in the care of the Montgomery Sporting Club, Montgomery, Alabama, of which Mr. Charles Spear is President. Advices say they arrived there in fine condition and are greatly admired. The bevy of twenty-one are to be divided, a part liberated in a locality favorable to their propagation and protection, and a part upon private lands under the surveillance of the proprietor

In the interest of true sportsmen and of all interested in colonization and domestication of foreign birds, please insert this in FOREST AND STREAM. It will surely merit the attention of the gentlemen having the birds in charge and secure in your attractive columns reports of this experiment.

The narrative of the advent of these beautiful birds, from its very inception, is interesting. Twenty-four birds, caught near Oregon City, Oregon, in late fall or early winter—in what manner I know not—were there cooped in a pine box about three feet square, with a single partition, or deck, slatted on two opposite sides, and shipped by steamer to San Francisco and thence sent by rail to this city. Two birds were missing on their arrival here and one was found dead in the coop. The twenty-one survivors were in good heart and condition. They were liberated in a large cage constructed to receive them, with a floor, and of about twenty-five square feet, and about five feet high, slatted on all sides and the top, and with cross-pieces placed for the birds to roost on. The cage was kept in an apartment heated pretty uniformly above the freezing point, and a few days in this habitation restored the birds in spirit and appearance from the effects of their long journey. Their habits were watched so far as could be for about six weeks with curious interest, and they developed, seemingly, every trait that could encourage hopes of their complete domestication.

What beautiful birds, to be sure! The first impression from them, seen huddled in fear and apprehension—heads erect, the slender plumes in their crowns at a perpendicular, nodding, flitting, their beautiful plumage displayed in their strut and *chasse*—is charming. I wonder if this long, delicate plume is peculiar to the mountain quail?

In size, full-grown, the bird is about that of a pigeon. The breast is very full and dimpled and of a rich blue, fading into a dusky brown on the sides of the neck and upward over the crown and all over the back, wings and tail, save that the contour of the wings is marked by dottings of white. Below the wings the feathers are of a lustrous maroon, barred with white downward and backward. The throat is ornamented with lustrous maroon, shield-shaped, bordered with white, the upper points reaching the auriculars, and the lower point terminating about an inch below the base of the bill. The plume is about two inches long when fully developed, and when the bird is undisturbed slopes backward and close to the neck and back. When animated the bird erects it to a perpendicular, and it is seen to consist sometimes of one and sometimes of two long, slender, dark brown feathers. To observers here there was nothing to indicate sex in the birds but a dominating action and expression.

What game to entice the true sportsman from office and shop! Dinsmore, to whose attention the birds were fortunately committed while here, declares he will go to Alabama next season and identify his pets and the progeny. MAC

Ogdensburg, N. Y., February, 1881.

THE GIANT SQUID ON THE GRAND BANKS.

BY PROFESSOR A. E. VERRILL.

FROM Capt. J. Collins, now of the U. S. Fish Commission, I learn that in October, 1875, an unusual number of giant squids were found floating at the surface on the Grand Banks, and mostly entirely dead and more or less mutilated by birds and fishes. In very few cases they were not quite dead, but entirely disabled. These were chiefly seen between N. lat. 44 deg. and 44 deg. 30 min., and between W. long. 49 deg. 30 sec. and 49 deg. 30 min. 49 deg. 50 min.

He believes that between twenty-five and thirty specimens were secured by the fleet from Gloucester, Mass., and that as many more were probably obtained by the vessels from other places. They were cut up and used as bait for cod fish. For this use they are of considerable value to the fishermen.

Capt. Collins was at that time in command of the schooner Howard, which secured five of these giant squids. These were mostly from ten to fifteen feet long, not including the arms, and averaged about eighteen inches in diameter. The arms were almost always mutilated. The portion that was left was usually three to four feet long, and at the base about as large as a man's thigh.

One specimen when cut up was packed into a large hogs head tub, having a capacity of about seventy-five gallons, which it filled. This tub was known to hold 700 pounds of cod fish. The gravity of the Architenthis is probably about the same as that of the fish. This would indicate more nearly the actual weight of one of these creatures than any of the mere estimates that have been made which are usually much too great. Allowing for the parts of the arms that had been destroyed this specimen would perhaps have weighed nearly 000 pounds.

Among the numerous other vessels that were fortunate in securing this kind of bait Capt. Collins mentions the following: The schooner Sarah P. Ayer, Captain Oakley, took one or two; the E. R. Nickerson, Captain McDonald, secured one that had its arms and was not entirely dead, so that it was harpooned. Its tentacular arms were thirty-six feet long. The schooner Tragabigzands, Captain Mallory, secured three in one afternoon. These were eight to twelve feet long, not including the arms.

These statements are confirmed by other fishermen, some of whom state that the "big squids" were also common, during the same season, at the "Flemish Cap," a bank situated some distances northeast from the Grand Banks.

The cause of so great a mortality among these great Cephalopods can only be conjectured. It may have been due to some disease epidemic among them, or to an unusual prevalence of deadly parasites or other enemies. It is worth while, however, to recall the fact that these were observed about the same time in autumn when most of the specimens have been found cast ashore at Newfoundland in different years. This season may perhaps be just subsequent to their season for reproduction, when they would be so much weakened as to be more easily overpowered by parasites, disease, or other unfavorable conditions.—*American Journal of Science.*

THE AMERICAN JOURNAL OF SCIENCE.—The March number of the *Journal* contains a number of articles of great value, most of them on physical subjects. The number opens with an article on the Phosphorograph of a Solar Spectrum by Prof. J W. Draper, following which is a discussion of the Structure and Affinities of *Euphoberia* of Meek and Worthen, by S. H. Scudder. Mr. S. P. Langley writes of the Actinic Balance. The wonderful mineral deposit at Branchville, Conn., which has furnished so much interesting material to the mineralogists, calls forth two articles in this number. Mr. G. W. Hawes gives an interesting paper on Liquid Carbon Dioxide in Smoky Quartz, and Prof. Arthur W. Wright one on Gaseous Substances contained in the Smoky Quartz of Branchville, Conn.

Other articles in the March *Journal* are: Origin of New Points in the Topography of North Carolina, by W. C. Kerr; On the Solubility of Chloride of Silon in Water, by J. P. Cooke; Papers on Thermometry, from the Winchester Observatory of Yale College, and others.

Scientific Intelligence is very full and varied, and the number, as a whole, is extremely interesting.

UNUSUAL DEER.—Bozeman, Montana Ter., Feb. 18.—I have noticed in a recent number of FOREST AND STREAM "Cork's" letter about a "horned doe." In the winter of 1873 74, while hunting at the head waters of McDonald's Creek—a tributary of the Musselshell River—Montana Territory, I happened to kill a large white-tail doe with four horns—or, rather, four spikes—each from 2½ to 4 inches in length. They were produced in pairs, one pair on each side of head. In the fall of 1873, while trapping at the head of Flat Willow and McDonald's creeks, I also killed two large white-tail deer with a black line along backbone and two rows of white spots, the latter of the size of a copper cent, on each side. Have not seen any like it since. A. G.

In the autumn of 1878 we killed, in a dry lake, near the head of the Dismal River, Nebraska, the biggest and handsomest buck we ever saw. He had on each side of the backbone a row of spots somewhat smaller than a five-cent nickel, which were very much paler than the rest of the coat. We never saw one marked like him, though there is no doubt that adult deer are sometimes more or less spotted.

NECTURUS LATERALIS.—Catskill, Feb. 26—*Editor Forest and Stream:* This afternoon while a party of men were fishing in the river they caught a very curious looking "affair" It looks about as I should imagine a cross between an eel and a lizard would. Is about one foot six inches long from tip to tip; is of a dark-mud color on the back; its sides are lighter and have small, dark-blue spots; its belly a light-yellow, and quite rough; has a broad, flat head, small, dead-looking, gray eyes; its legs are very much like a lizzard's. Just ahead of forelegs are two spongy like substances (one on a side) of a dark-red color. Has a tail very much like a bullhead. "Is as slippery as an eel." Is it fish or lizard?

W. K. H.

The animal which you mention is easily recognized from your description. It is neither a fish nor a lizard, but an amphibian, and belongs to the same class with the frogs, toads, siredons and so on. It is called mud-puppy, water-dog or menobranchus in the vernacular, and *Necturus lateralis* by scientific men. It is not uncommon in the Northern United States, though not very often seen, and sometimes reaches a length of two feet. The "spongy-like substances" are the gills.

A TAME RUFFED GROUSE—Cortlandt, N. Y., March 3—*Editor Forest and Stream:* I have now in my possession a tame partridge. Hearing remarkable stories about such a bird having been secured, that having been placed in the coop with the chickens it had conformed to their habits and mode of life, I had the curiosity to drive with a friend about a mile from town to see this domesticated partridge.

Upon arriving at the house the farmer led the way to the hen-house, cautioning us, as we opened the door, not to approach too near the bird, as it did not like strangers. He had the grouse confined in a coop in one corner of the hennery. Upon opening the lid the bird walked out with the familiar kluck! kluck! "and with many a flirt and flutter" flew to the floor, taking his place familiarly with the cock and hens, they seeming to recognize him as one of the family.

We were told that the bird had flown into the house about five months ago early one morning, the family supposing it had passed the night in one of the balsam trees near the house and that the cat, prowling about, had startled him, when he flew blindly through the open door into the room. He was immediately placed with the fowls, with the result before stated.

He is fed only with the chickens and eats with them with apparent unconcern, and at night would take his place on the roost with them, but for fear of accident his owner has of late each night placed him in a small, slatted coop. The bird allows Mr. H—— to take him in his hands to be shut in quarters for the night. What seems to me the most remarkable is that the bird should know Mr. H—— from others, as it was very evident that he did. MIG.

ANIMALS RECEIVED AT CENTRAL PARK MENAGERIE FOR WEEK ENDING FEBRUARY 26.—Two Raccoons, *Procyon lotor*, presented by Mr. Julius Graü, N. Y. city. One Horned Owl, *Bubo virginianus*, presented by Mr. C. W. Baxter. Captured at New Hamburg, N. Y. One Canada Porcupine, *Erethizon dorsatus*, presented by Mr. Douglas H. Stewart, N. Y. city. Two Opossums, *Didelphys virginiana*, presented by Mr. W. Irving Snyder Captured at Rutherford, N. J. One Long-eared Owl, *Otus wilsonianus*, presented by Mr. Charles H. Dorlinger, N. Y. city. One Fournier's Capromy, *Capromys pilorides*. *Hab.* Cuba Presented by Captain William H. Taylor, Barge Saginaw.

W. A. CONKLIN, Director.

Game Bag and Gun.

"DITTMAR SPORTING POWDER."—The FOREST AND STREAM's pamphlet, explaining the dangerous nature of the Dittmar detonating explosive, will be sent to any address upon application. The articles contained in the pamphlet were published in this journal as follows:

Sept. 23, 1880—The "Dittmar Sporting Powder."

Sept. 30, 1880—Evading Detonation.

Oct. 7, 1880—The Detonation of "Dittmar Sporting Powder."

Dec. 9, 1880—The Dittmars' Abracadabra.

DUCK SHOOTING OFF THE VIRGINIA CAPES.

CAPERVILLE, VIRGINIA, October, 1880.

DEAR SIR: You asked me last summer to notify you when was the best time for duck shooting off the Capes. From all indications the brant and black ducks will be in heavy force about the 1st of December. If you want good sport make your preparations to come about that time. Cold weather will have set in, and the birds will be young and not shot at. It would be necessary for you and your friend to go aboard a schooner and anchor off near the blinds so that in rough weather you would be on the spot; for if you boarded on the mainland your expenses would be heavy and the shooting not worth the while, to say the least of it, for on windy days the ducks fly up to the decoys and you could not reach the blinds were you on the mainland. There are millions of winter snipe, too, so you had best bring a large supply of No. 10 shot. I cannot promise you luxurious fare, but can give you plenty of good bread, butter, eggs, beef, bacon, oysters, clams, stewed terrapin, ducks, snipe and wild geese. Bring a heavy supply of ammunition, waterproof boots and clothing, and come down on the steamer Northampton on the 3d proximo from Cherrystone and across the main to Caperville is ten miles. I will have an ambulance waiting for you and your traps. My schooner, well furnished, will be ready, and you can embark at once.

My terms are $4 per day each, I to furnish everything. All game can be expressed to any point you desire. It would be best for you and your friend to make some arrangement with a Baltimore commission house to dispose of your surplus game, for after your friends are remembered you can probably pay all your expenses and have enough funds left over for Christmas. I would expect you to remain at least ten days, as my expenses in getting ready for the trip will be considerable. Very truly yours, MAC.

P. S.—Bring two breech-loaders with you, as one is apt to get so hot with rapid firing as to necessitate an extra piece; also, your rifle to shoot at long distance at the wild geese. There are acres of them. M.

NOW, I appeal to every lover of the gun if this letter was not calculated to make any sportsman go off at half-cock, to make business distasteful for the time and turn his thoughts, waking, and his dreams, slumbering, to visions of slaughtering the wild fowl? With such a letter in his pocket a man might be pardoned for ignoring "the partner of his bussom and the sweet offsprings of mutual affection," as Mr. Micawber pathetically expresses it, and let his gaze wander lovingly and longingly at his pet breech-loader that sits so solitary and alone in the corner.

Dark hints are made in the family circle of failing health and failing appetite, glowing descriptions of successful duck-hunts in the FOREST AND STREAM, from the pens of enthusiastic Nimrods, are read aloud and, like a skillful engineer preparing the approaches for the erection of his batteries, so the shootist breaks ground for his intended departure—and then it becomes known that he is about to leave on a great duck-killing trip. Like Hector preparing for a foray upon the Grecian host, he is surrounded by admiring friends, the warriors help him to arm—buckler, casque, javelin; the fair Trojans give him helpful words and smiles And, like the favorite son of Priam, as he goes out to slay and conquer, he deals in liberal promises, not like Hector, though, in giving this one a love-lock from Paris' brow, that a golden gorget from Belus' shield, or the gilt eagle that adorns the top of the Thracian standards; instead, he pledges his solemn word to forward hampers of game to every acquaintance, a pledge, if carried out, would load down every steamboat on the Chesapeake Bay. But in the midst of all this exultant preparation comes the boding voice of some Cassandra in breeches, who croaks of bad luck, of wild shooting, of stormy days, of bitter, biting weather, of colds, rheumatism and neuralgia, of false, fleeting and perjured guides, that make the word to promise to the ear only to break it to the hope.

But who ever heeds the warning voice when bent on an enterprise, whether it is of conscience, of our creditors or of our friends?—Allah Bakalum! What is to be shall be, and so we and our friend James Fox, of Richmond, a direct descendent, by the way, of the famous Charles James of King George's time, proceeded to lay in our stock of ammunition. Just here, by the way of digression, I would like to ask my fellow-sportsmen why there is always such a wide difference between the estimated and actual expense of fitting out for a hunting expedition? It seems a very simple and inexpensive affair—powder and shot don't cost much. A mere bagatelle not worth a moment's consideration, says the huntsman, as he stuffs his roll of notes in his watch-pocket, those same promises to pay being the expenses of the round trip. A mere nothing, is it?—not worth a thought? Well, reflection comes when buying a ticket to your destination—Where is the money? Surely some of it is lost! You search in each pocket, knit your brow and then, after a moment of brown study, a new light breaks upon your bewildered mind. Your paraphernalia—that your gunmaker has beguiled you into purchasing—is about ten times more than you dreamed of, and as you think of your bank account and supply yourself with blank checks you register a mental vow to be more cautious in future. Everybody cuts the suit according to the cloth but a sportsman never does.

Fox and myself compared notes. The expenses were already as much as the whole trip ought to have cost, and we had not even left Richmond: But when a man finds himself in that position called "in for a penny in for a pound" he gets as reckless as a poker player who sees a heavy blind or a bob tail flush.

Thursday evening we left the capital city for Norfolk, taking as a lesser of the two evils the all-rail route via Petersburg. The fare is more than by the steamer Ariel, but no man who ever traveled once on that old ice-box that bears the name of Prospero's sprite would ever knowingly or willingly take passage on her again. Gentlemen sportsmen who love their comfort, their dogs and their guns, I warn against this ancient arctic hulk that plies between Richmond and Norfolk. Mark Twain's canal boat is a palace steamer in comparison. Come to think of it, the New York steamers that leave on irregular days or at high water are the only decent modes of communication between the two cities. On the Ariel you and your dogs will be treated like tramps or vagrant rouxtabouts, on the latter everything that can be done to make the passenger comfortable is carefully undertaken by the officers of the Old Dominion Steamship Company. This is not a puff, for I don't know any of them, I only write in the interest of my fellow friends of the gun, and *noblesse oblige* is nowhere stronger than among the votaries of the field, forest and stream.

From Norfolk the route to the capes and to Cobb's Island is to Cherrystone, thence by land across the peninsula.

Leaving the wharf at seven o'clock in the morning we reached Cherrystone by noon. This place is a little village situated on an inlet that runs into the Chesapeake Bay, but a few hundred yards distant. This same small hamlet, obscure as it is, has yet a name as much of a household word in America as Waterloo or Gretna Green in Britain, for it is here that the finest bivalves in the world are grown. The Cherrystone oyster is a thing of joy and delight to every epicure and gourmand in the country. They sell at $4 and $5 a barrel, and the demand exceeds the supply tenfold. But few reach the public as private clubs, and customers generally contract with the oystermen for all they can gather.
